116 The love of knowledge belongs to the essence of spirit. Far from being, as Baconian pragmatism would have it, a love of power, it is a love of imagination; only that imagination needs to be fed by contact with external things and by widening vital rhythms. When the great explorers sailed in search of gold and of spices, imagination within them was dreaming of the wonders they might find, and of the splendours they might display

at home after their return. The voyage too would be something glorious, to be described in fabulous books and woven into tapestries. This is a healthy love of knowledge, grounded on animal quests, but issuing in spiritual entertainment. Had the world turned out to be very small and handy, and the science of it as simple as it seemed to Descartes, spirit would have suffered no disappointment; there would have been more than matter enough for all the wit of man. Perhaps the environing blank would have positively helped to frame in the picture, and make it easier for a religion of the heart to understand and envelop existence.

There is a snare, however, in the very essence of knowledge in that it has to be a form of faith, and faith is something psychic rather than spiritual: an expectation and hope addressed to things not seen, because they would match potentialities in the soul. Actual belief (the expectation or affirmation in it) is a state of the spirit; but spirit could never fall into that state or maintain that assertiveness by a purely spiritual insight, since intuition is of the given and spirit is pure actuality. In knowledge, as distinguished from intuition, Acre is therefore a postulating element, an element of hunger unsatisfied; the datum hangs in the air, not being accepted for what it is, but taken as an index to a dynamic object that is perhaps nonexistent. This adventurous intent, this sense of the ulterior and potential, strains the spirit, spoils intuition, and opens the door to doubt, argument, error, and presumption. Faith belongs to earth and to purgatory: in heaven it would be a lapse into distraction.

Santayana, Realm of Spirit, VII

6.2 Experience

Although it is a term that no one can avoid using, experience is seldom defined by those who use it. It would appear to be co-extensive with consciousness—the flow of experience from moment to moment being identical with what William James called "the stream of consciousness." It would appear to be impossible to be a sentient or conscious being and not to have experience at every waking moment and even when one's sleep is interrupted by dreams. To understand this much about experience is to recognize how much of what we know is somehow born of experience, and also to realize how special is the knowledge that some philosophers call transcendental because it is independent of and goes beyond experience.

A few of the writers quoted—namely, Aristotle, Hobbes, and Harvey—use the word "experience" in a more restricted sense. They point out that from repeated perceptions, memories are generated; and that from many memories, experience emerges. It is in this sense of the term that a man of experience about certain matters is said to have competence to judge about such matters, a competence comparable to, though perhaps inferior to, that of the artist or scientist with respect to the same matters. The latter, it is noted, have a knowledge based on experience that they can teach others, whereas the expertness of the man of experience is not similarly conveyable to others.

The value of experience is differently appraised in relation to different kinds of knowledge; it is of much less

utility, or much less experience is needed, in mathematics, for example, than in ethics or politics. That is why, as some writers point out, young men with little experience can become experts in certain fields of learning, whereas in others we prefer to listen to older men and women whose counsel or wisdom reflects long and varied experience.

The human appetite for experience would appear to be as insatiable as the desire for knowledge. This craving for every variety of experience is celebrated by the poets, and especially by Goethe in his characterization of Faust's search for the uniquely satisfying experience in which he will gladly come to rest. For the poets, as the quotations indicate, experience is more likely to be valued for its own sake and not merely as a factor indispensable to the attainment of knowledge.

Two other points should be noted, especially for their bearing on the relationship between experience and knowledge. One is that experience, however indispensable it may be as a source of knowledge, is never by itself a form of knowledge. The other is a point to which Francis Bacon first called explicit attention; namely, that scientific method is a systematic effort to obtain and control experience by carefully planned observations. Philosophers may appeal to experiences that they have in common with other men; only scientists "manufacture" the special experiences they amass and interpret for their own purposes. The reader will find more detailed discussion of this point in Section 17.2.

■ ■ ■

- 1 A man that hath traveled knoweth many things; and he that hath much experience will declare wisdom. He that hath no experience knoweth little: but he that hath traveled is full of prudence. When I traveled, I saw many things; and I understand more than I can express.

Ecclesiasticus 34:9-11

- 2 Sing in me, Muse, and through me tell the story of that man skilled in all ways of contending, the wanderer, harried for years on end, after he plundered the stronghold on the proud height of Troy.

He saw the townlands and learned the minds of many distant men, and weathered many bitter nights and days in his deep heart at sea, while he fought only to save his life, to bring his shipmates home.

Homer, Odyssey, I, 1

- 3 On their road to Susa they presented themselves before Hydarnes. This Hydarnes was a Persian by birth, and had the command of all the nations that dwelt along the sea-coast of Asia, He accordingly showed them hospitality, and invited them to a banquet, where, as they feasted, he said to them: —

"Men of Lacedaemon, why will ye not consent to be friends with the king? Ye have but to look at me and my fortune to see that the king knows well how to honour merit. In like manner ye yourselves, were ye to make your submission to him, would receive at his hands, seeing that he deems you men of merit, some government in Greece."

"Hydarnes," they answered, "thou art a onesided counsellor. Thou hast experience of half the matter; but

the other half is beyond thy knowledge. A slave's life thou understandest; but, never having tasted liberty, thou canst not tell whether it be sweet or no. Ah! hadst thou known what freedom is, thou wouldst have bidden us fight for it, not with the spear only, but with the battle-axe."

So they answered Hydarnes.

Herodotus, History, VII, 135

- 4 *Socrates*. Well, then, if you and I, Callicles, were intending to set about some public business, and were advising one another to undertake buildings, such as walls, docks or temples of the largest size, ought we not to examine ourselves, first, as to whether we know or do not know the art of building, and who taught us?~ ~ would not that be necessary, Callicles?

Callicles. True.

Soc. In the second place, we should have to consider whether we had ever constructed any private house, either of our own or for our friends, and whether this building of ours was a success or not; and if upon consideration we found that we had had good and eminent masters, and had been successful in constructing many fine buildings, not only with their assistance, but without them, by our own unaided skill—in that case prudence would not dissuade us from proceeding to the construction of public works. But if we had no master to show, and only a number of worthless buildings or none at all, then, surely, it would be ridiculous in us to attempt public works, or to advise one another to undertake them. Is not this true?

Cal. Certainly.

Soc. And does not the same hold in all other cases? If you and I were physicians, and were advising one another that we were competent to practise as state-physicians, should I not ask about you, and would you not ask about me, Well, but how about Socrates himself, has he good health? and was any one else ever known to be cured by him, whether slave or freeman? And I should make the same enquiries about you. And if we arrived at the conclusion that no one, whether citizen or stranger, man or woman, had ever been any the better for the medical skill of either of us, then, by Heaven, Callieles, what an absurdity to think that we or any human being should be so silly as to set up as state-physicians and advise others like ourselves to do the same, without having first practised in private, whether successfully or not, and acquired experience of the art! Is not this, as they say, to begin with the big jar when you are learning the potter's art; which is a foolish thing?

Plato, Gorgias, 514A

- 5 *Socrates.* Bear in mind the whole business of the midwives, and then you will see my meaning better:—No woman, as you are probably aware, who is still able to conceive and bear, attends other women, but only those who are past bearing.

Theaetetus. Yes, I know.

Soc. The reason of this is said to be that Artemis —the goddess of childbirth—is not a mother, and she honours those who are like herself; but she could not allow the barren to be mid wives, because human nature cannot know the mystery of an art without experience; and therefore she assigned this office to those who are too old to bear.

Plato, Theaetetus, 149A

- 6 The animals other than man live by appearances and memories, and have but little of connected experience; but the human race lives also by art and reasonings. Now from memory experience is produced in men; for the several memories of the same thing produce finally the capacity for a single experience. And experience seems pretty much like science and art, but really science and art come to men *through* experience; for 'experience made art', as Polus says, 'but inexperience luck'.

Aristotle, Metaphysics, 980b25

- 7 With a view to action experience seems in no respect inferior to art, and men of experience succeed even better than those who have theory without experience. (The reason is that experience is knowledge of individuals, art of universals, and actions and productions are all concerned with the individual; for the physician does not cure man, except in an incidental way, but Callias or Socrates or some other called by some such individual name, who happens to be a man. If, then, a man has the theory without the experience, and recognizes the universal but does not know the individual included in this, he will often fail to cure; for it is the individual that is to be cured.) But yet we think that knowledge and understanding belong to art rather than to experience, and we suppose artists to be wiser than men of experience (which implies that Wisdom depends in all cases rather on knowledge); and this because the former know the cause, but the latter do not. For men of experience know that the thing is so, but do not know why, while the others know the 'why' and the cause.

Hence we think also that the master-workers in each craft are more honourable and know in a truer sense and are wiser than the manual workers, because they know the causes of the things that are done (we think the manual workers are like certain lifeless things which act indeed, but act without knowing what they do, as fire burns,—but while the lifeless things perform each of their functions by a natural tendency, the labourers perform them through habit); thus we view them as being wiser not in virtue of being able to act, but of having the theory for themselves and knowing the causes. And in general it is a sign of the man who knows and of the man who does not know, that the former can teach, and therefore we think art more truly knowledge than experience is; for artists can teach, and men of mere experience cannot.

Aristotle, Metaphysics, 981a13

- 8 While young men become geometricians and mathematicians and wise in matters like these, it is thought that a young man of practical wisdom cannot be found. The cause is that such wisdom is concerned not only with universal but with particulars, which become familiar from experience, but a young man has no experience, for it is length of time that gives experience; indeed one might ask this question too, why a boy may become a mathematician, but not a philosopher or a physicist. It is because the objects of mathematics exist by abstraction, while the first principles of these other subjects come from experience, and because young men have no conviction about the latter but merely use the proper language, while the essence of mathematical objects is plain enough to them?

Aristotle, Ethics, 1142a12

- 9 We ought to attend to the undemonstrated sayings and opinions of experienced and older people or of people of practical wisdom not less than to demonstrations; for because experience has given them an eye they see aright.

Aristotle, Ethics, 1143b11

- 10 Prove all things; hold fast that which is good.

I Thessalonians 5:21

- 11 Medicine, to produce health, has to examine disease, and music, to create harmony, must investigate discord; and the supreme arts of temperance, of justice, and of wisdom, as they are acts of judgment and selection, exercised not on good and just and expedient only, but also on wicked, unjust, and inexpedient objects, do not give their commendations to the mere innocence whose boast is its inexperience of evil, and whose truer name is, by their award, simpleness and ignorance of what all men who live aright should know. The ancient Spartans, at their festivals, used to force their Helots to swallow large quantities of raw wine, and then to expose them at the public tables, to let the young men see what it is to be drunk.

Plutarch, Demetrius

- 12 The object of hope is a future good, difficult but possible to obtain. Consequently a thing may be a cause of hope either because it makes something possible to a man or because it makes him think something possible. In the first way hope is caused by everything that increases a

man's power; for instance riches, strength, and, among others, experience, for by experience man acquires the possibility of getting something easily, and the result of this is hope. Therefore Vegetius says: "No one fears to do that which he is sure of having learnt well."

In the second way, hope is caused by everything that makes man think that something is possible for him; and thus both teaching and persuasion may be a cause of hope. And in this way also experience is a cause of hope, in so far as it makes him consider something possible which before his experience he looked upon as impossible. However, in this way, experience can cause a lack of hope, because just as it makes a man think possible what he had previously thought impossible, so, conversely, experience makes a man consider as impossible that which hitherto he had thought possible. Accordingly experience causes hope in two ways, despair in one way; and for this reason we may say rather that it causes hope.

Aquinas, Summa Theologica, I-II, 40, 5

- 13 "I [Odysseus] departed from Circe, who beyond a year detained me there near Gaeta, ere AEneas thus had named it,
neither fondness for my son, nor reverence for my aged father, nor the due love that should have cheered Penelope,
could conquer in me the ardour that I had to gain experience of the world, and of human vice and worth;
I put forth on the deep open sea, with but one ship, and with that small company, which had not deserted me.

Both the shores I saw as far as Spain, far as Morocco;
and saw Sardinia and the other isles which that sea
bathes round.

I and my companions were old and tardy, when we
came to that narrow pass, where Hercules assigned his
landmarks

to hinder man from venturing farther; on the right
hand, I left Seville; on the other, had already left Ceuta.

‘O brothers!’ I said, ‘who through a hundred thousand
dangers have reached the West, deny not, to this the
brief vigil of your senses that remains, experience of the
un-peopled world behind the Sun.

Consider your origin: ye were not formed to live like
brutes, but to follow virtue and knowledge.’ With this
brief speech I made my companions so eager for the
voyage, that I could hardly then have checked them;

and, turning the poop towards morning, we of our oars
made wings for the foolish flight, always gaining on the
left.

Night already saw the other pole, with all its stars; and
ours so low, that it rose not from the ocean floor.

Five times the light beneath the Moon had been
rekindled and quenched as oft, since we had entered on
the arduous passage,

when there appeared to us a Mountain, dim with
distance; and to me it seemed the highest I had ever
seen.

We joyed, and soon our joy was turned to grief: for a
tempest rose from the new land, and struck the forepart
of our ship.

Three times it made her whirl round with all the
waters; at the fourth, made the poop rise up and prow go

down, as pleased Another, till the sea was closed above us."

Dante, Inferno, XXVI, 91

14 "Now listen, Troilus," replied his friend [Pandarus],
"Perhaps I am a fool, yet it is so,
That folly oft can helpful counsel lend,
Whereby the wise the better way may know.
For I myself have seen a blind man go,
Where he would fall who sees both far and wide;
Sometimes a fool can be the safest guide.

"A whetstone is no carving instrument.
And yet it maketh sharp the carving tool;
And if you see my efforts wrongly spent,
Eschew that course and learn out of my school;
For thus the wise may profit by the fool,
And edge his wit, and grow more keen and wary,
For wisdom shines opposed to its contrary.

"For how might sweetness ever have been known
To him who never tasted bitterness?
Felicity exists for those alone
Who first have suffered sorrow and distress;
Thus white by black, honor by shame's excess,
More brightly shines by what the other seems,
As all men see and as the wise man deems.

"By opposites does one in wisdom grow,
And though I have in love vain effort made.
Then all the better I thereby should know
To guide thee on thy path when thou hast strayed.
Spurn not with scorn, therefore, my proffered aid,

For I desire nothing but to share
Thy grief, and make it easier to bear."

Chaucer, Troilus and Cressida, I, 90-93

15 Those who strive to obtain the good graces of a prince are accustomed to come before him with such things as they hold most precious, or in which they see him take most delight: whence one often sees horses, arms, cloth of gold, precious stones, and similar ornaments presented to princes, worthy of their greatness.

Desiring therefore to present myself to your Magnificence [Lorenzo di Piero de' Medici] with some testimony of my devotion towards you, I have not found among my possessions anything which I hold more dear than, or value so much as, the knowledge of the actions of great men, acquired by long experience in contemporary affairs, and a continual study of antiquity; which, having reflected upon it with great and prolonged diligence, I now send, digested into a little volume, to your Magnificence.

And although I may consider this work unworthy of your countenance, nevertheless I trust much to your benignity that it may be acceptable, seeing that it is not possible for me to make a better gift than to offer you the opportunity of understanding in the shortest time all that I have learnt in so many years, and with so many troubles and dangers; which work I have not embellished with swelling or magnificent words, nor stuffed with rounded periods, nor with any extrinsic allurements or adornments whatever, with which so many are accustomed to load and embellish their works; for I have wished either that no honour should be given it, or else that the truth of the

matter and the weightiness of the theme shall make it acceptable.

Machiavelli, Prince, Dedication

- 16 There is no desire more natural than the desire for knowledge. We try all the ways that can lead us to it. When reason fails us, we use experience . . . , which is a weaker and less dignified means. But truth is so great a thing that we must not disdain any medium that will lead us to it. Reason has so many shapes that we know not which to lay hold of; experience has no fewer. The inference that we try to draw from the resemblance of events is uncertain, because they are always dissimilar: there is no quality so universal in this aspect of things as diversity and variety.

Montaigne, Essays, III, 13, Of Experience

- 17 Whatever may be the fruit we can reap from experience, what we derive from foreign examples will hardly be much use for our education, if we make such little profit from the experience we have of ourselves, which is more familiar to us, and certainly sufficient to inform us of what we need.

I study myself more than any other subject. That is my metaphysics, that is my physics.

Montaigne, Essays, III, 13, Of Experience

- 18 *Antonio*. Tell me, *Panthino*, what sad talk was that
Wherewith my brother held you in the cloister?

Panthino. 'Twas of his nephew Proteus, your son.

Ant. Why, what of him?

Pan. He wonder'd that your lordship
Would suffer him to spend his youth at home,
While other men, of slender reputation.
Put forth their sons to seek preferment out:
Some to the wars, to try their fortune there;
Some to discover islands far away;
Some to the studious universities.
For any or for all these exercises
He said that Proteus your son was meet,
And did request me to importune you
To let him spend his time no more at home,
Which would be great impeachment to his age.
In having known no travel in his youth.

Ant. Nor need'st thou much importune me to that
Whereon this month I have been hammering.
I have consider'd well his loss of time
And how he cannot be a perfect man,
Not being tried and tutor'd in the world:
Experience is by industry achieved
And perfected by the swift course of time.
Then tell me, whither were I best to send him?

Shakespeare, Two Gentlemen of Verona, I, iii, 1

- 19 *Rosalind.* To have seen much and to have nothing, is to
have rich eyes and poor hands. ... I had rather have a fool
to make me merry than experience to make me sad.

Shakespeare, As You Like It, IV, i, 23

- 20 Another error hath proceeded from too great a reverence,
and a kind of adoration of the mind and understanding of
man; by means whereof, men have withdrawn
themselves too much from the contemplation of nature,

and the observations of experience, and have tumbled up and down in their own reason and conceits. Upon these intellectualists, which are notwithstanding commonly taken for the most sublime and divine philosophers, Heraclitus gave a just censure, saying, "Men sought truth in their own little worlds, and not in the great and common world"; for they disdain to spell, and so by degrees to read in the volume of God's works: and contrariwise by continual meditation and agitation of wit do urge and, as it were, invoke their own spirits to divine and give oracles unto them, whereby they are deservedly deluded.

Bacon, Advancement of Learning, Bk. I, V, 6

- 21 The foundations of experience (our sole resource) have hitherto failed completely or have been very weak; nor has a store and collection of particular facts, capable of informing the mind or in any way satisfactory, been either sought after or amassed. On the contrary, learned, but idle and indolent, men have received some mere reports of experience, traditions as it were of dreams, as establishing or confirming their philosophy, and have not hesitated to allow them the weight of legitimate evidence. So that a system has been pursued in philosophy with regard to experience resembling that of a kingdom or state which would direct its councils and affairs according to the gossip of city and street politicians, instead of the letters and reports of ambassadors and messengers worthy of credit. Nothing is rightly inquired into, or verified, noted, weighed, or measured, in natural history; indefinite and vague observation produces fallacious and uncertain information. If this appear strange, or our complaint

somewhat too unjust (because Aristotle himself, so distinguished a man and supported by the wealth of so great a king, has completed an accurate history of animals, to which others with greater diligence but less noise have made considerable additions, and others again have composed copious histories and notices of plants, metals, and fossils), it will arise from a want of sufficiently attending to and comprehending our present observations; for a natural history compiled on its own account, and one collected for the mind's information as a foundation for philosophy, are two different things. They differ in several respects, but principally in this: the former contains only the varieties of natural species without the experiments of mechanical arts; for as in ordinary life every person's disposition, and the concealed feelings of the mind and passions are most drawn out when they are disturbed—so the secrets of nature betray themselves more readily when tormented by art than when left to their own course. We must begin, therefore, to entertain hopes of natural philosophy then only, when we have a better compilation of natural history, its real basis and support.

Bacon, Novum Organum, I, 98

- 22 As soon as age permitted me to emerge from the control of my tutors, I entirely quitted the study of letters. And resolving to seek no other science than that which could be found in myself, or at least in the great book of the world, I employed the rest of my youth in travel, in seeing courts and armies, in intercourse with men of diverse temperaments and conditions, in collecting varied experiences, in proving myself in the various predicaments in which I was placed by fortune, and under

all circumstances bringing my mind to bear on the things which came before it, so that I might derive some profit from my experience. For it seemed to me that I might meet with much more truth in the reasonings that each man makes on the matters that specially concern him, and the issue of which would very soon punish him if he made a wrong judgment, than in the case of those made by a man of letters in his study touching speculations which lead to no result, and which bring about no other consequences to himself excepting that he will be all the more vain the more they are removed from common sense, since in this case it proves him to have employed so much the more ingenuity and skill in trying to make them seem probable. And I always had an excessive desire to learn to distinguish the true from the false, in order to see clearly in my actions and to walk with confidence in this life.

It is true that while I only considered the manners of other men I found in them nothing to give me settled convictions; and I remarked in them almost as much diversity as I had formerly seen in the opinions of philosophers. So much was this the case that the greatest profit which I derived from their study was that, in seeing many things which, although they seem to us very extravagant and ridiculous, were yet commonly received and approved by other great nations, I learned to believe nothing too certainly of which I had only been convinced by example and custom. Thus little by little I was delivered from many errors which might have obscured our natural vision and rendered us less capable of listening to Reason. But after I had employed several years in thus studying the book of the world and trying to acquire some experience, I one day formed the resolution

of also making myself an object of study and of employing all the strength of my mind in choosing the road I should follow. This succeeded much better, it appeared to me, than if I had never de-parted either from my country' or my books.

Descartes, Disamrst on Melhodj I

23 As much experience is *prudence*, so is much science *sapience*. For though we usually have one name of *wisdom* for them both; yet the Latins did always distinguish between *prudencia* and *sapientia*; ascribing the former to experience, the latter to science. But to make their difference appear more clearly, let us suppose one man endued with an excellent natural use and dexterity in handling his arms; and another to have added to that dexterity' an acquired science of where he can offend, or be offended by his adversary, in every possible posture or guard: the ability of the former would be to the ability of the latter, as *prudence* to *sapience*; both useful, but the latter infallible. But they that, trusting only to the authority of books, follow the blind blindly, are like him that, trusting to the false rules of a master of fence, ventures presumptuously upon an adversary that either kills or disgraces him.

The signs of science are some certain and infallible; some, uncertain. Certain, when he that pretendeth the science of anything can teach the same; that is to say, demonstrate the truth thereof perspicuously to another: uncertain, when only some particular events answer to his pretence, and upon many occasions prove so as he says they must. Signs of *prudence* are all uncertain; because to observe by experience, and remember all circumstances that may alter the success, is impossible,

But in any business, whereof a man has not infallible science to proceed by, to forsake his own natural judgment, and be guided by general sentences read in authors, and subject to many exceptions, is a sign of folly, and generally scorned by the name of pedantry.

Hobbes, Leviathan, I, 5

- 24 Two things instruct man about his whole nature; instinct and experience.

Pascal, Pensées, VI, 396

- 25 Let us then suppose the mind to be, as we say, white paper, void of all characters, without any ideas:—How comes it to be furnished? Whence comes it by that vast store which the busy and boundless fancy of man has painted on it with an almost endless variety? Whence has it all the *materials* of reason and knowledge? To this I answer, in one word, from experience. In that all our knowledge is founded; and from that it ultimately derives itself. Our observation employed either, about external sensible objects, or about the internal operations of our minds perceived and reflected on by ourselves, is that which supplies our understandings with all the *materials* of thinking. These two are the fountains of knowledge, from whence all the ideas we have, or can naturally have, do spring.

Locke, Concerning Human Understanding, Bk. II, 1,2

- 26 When it is asked, *What is the nature of all our reasonings concerning matter of fact?* the proper answer seems to be, that they are founded on the relation of cause and effect. When again it is asked, *What is the foundation of*

all our reasonings and conclusions concerning that relation? it may be replied in one word. Experience. But if we still carry on our sifting humour, and ask, *What is the foundation of all conclusions from experience?* this implies a new question, which may be of more difficult solution and explication. ... I say then, that, even after we have experience of the operations of cause and effect, our conclusions from that experience are not founded on reasoning, or any process of the understanding. . . .

All reasonings may be divided into two kinds, namely, demonstrative reasoning, or that concerning relations of ideas, and moral reasoning, or that concerning matter of fact and existence. That there are no demonstrative arguments in the case seems evident; since it implies no contradiction that the course of nature may change, and that an object, seemingly like those which we have experienced, may be attended with different or contrary effects. May I not clearly and distinctly conceive that a body, falling from the clouds, and which, in all other respects, resembles snow, has yet the taste of salt or feeling of fire? Is there any more intelligible proposition than to affirm, that all the trees will flourish in December and January, and decay in May and June? Now whatever is intelligible, and can be distinctly conceived, implies no contradiction, and can never be proved false by any demonstrative argument or abstract reasoning *a priori*.

If we be, therefore, engaged by arguments to put trust in past experience, and make it the standard of our future judgement, these arguments must be probable only, or such as regard matter of fact and real existence, according to the division above mentioned. But that there is no argument of this kind, must appear, if our explication of that species of reasoning be admitted as

solid and satisfactory. We have said that all arguments concerning existence are founded on the relation of cause and effect; that our knowledge of that relation is derived entirely from experience; and that all our experimental conclusions proceed upon the supposition that the future will be conformable to the past. To endeavour, therefore, the proof of this last supposition by probable arguments, or arguments regarding existence, must be evidently going in a circle, and taking that for granted, which is the very point in question.

In reality, all arguments from experience are founded on the similarity which we discover among natural objects, and by which we are induced to expect effects similar to those which we have found to follow from such objects. And though none but a fool or madman will ever pretend to dispute the authority of experience, or to reject that great guide of human life, it may surely be allowed a philosopher to have so much curiosity at least as to examine the principle of human nature, which gives this mighty authority to experience, and makes us draw advantage from that similarity which nature has placed among different objects. From causes which appear similar we expect similar effects. This is the sum of all our experimental conclusions. Now it seems evident that, if this conclusion were formed by reason, it would be as perfect at first, and upon one instance, as after ever so long a course of experience. But the case is far otherwise....

And it is certain we here advance a very intelligible proposition at least, if not a true one, when we assert that, after the constant conjunction of two objects—heat and flame, for instance, weight and solidity—we are determined by custom alone to expect the one from the

appearance of the other. This hypothesis seems even the only one which explains the difficulty, why we draw, from a thousand instances, an inference which we are not able to draw from one instance, that is, in no respect, different from them. Reason is incapable of any such variation. The conclusions which it draws from considering one circle are the same which it would form upon surveying all the circles in the universe. But no man, having seen only one body move after being impelled by another, could infer that every other body will move after a like impulse. All inferences from experience, therefore, are effects of custom, not of reasoning.

Hume, Concerning Human Understanding, IV, 28-V, 36

- 27 The general observations treasured up by a course of experience, give us the clue of human nature, and teach us to unravel all its intricacies. Pretexts and appearances no longer deceive us. Public declarations pass for the specious colouring of a cause. And though virtue and honour be allowed their proper weight and authority, that perfect disinterestedness, so often pretended to, is never expected in multitudes and parties; seldom in their leaders; and scarcely even in individuals of any rank or station. But were there no uniformity in human actions, and were every experiment which we could form of this kind irregular and anomalous, it were impossible to collect any general observations concerning mankind; and no experience, however accurately digested by reflection, would ever serve to any purpose. Why is the aged husbandman more skilful in his calling than the young beginner but because there is a certain uniformity in the operation of the sun, rain, and earth towards the production of vegetables; and experience teaches the old

practitioner the rules by which this operation is governed and directed.

Hume, Concerning Human Understanding, VIII, 65

28 She [Mrs. Western] was, moreover, excellently well-skilled in the doctrine of amour, and knew better than anybody who and who were together; a knowledge which she the more easily attained, as her pursuit of it was never diverted by any affairs of her own; for either she had no inclinations, or they had never been solicited; which last is indeed very probable; for her masculine person, which was near six foot high, added to her manner and learning, possibly prevented the other sex from regarding her, notwithstanding her petticoats, in the light of a woman. However, as she had considered the matter scientifically, she perfectly well knew, though she had never practised them, all the arts which fine ladies use when they desire to give encouragement, or to conceal liking, with all the long appendage of smiles, ogles, glances, &c., as they are at present practised in the beau-monde. To sum the whole, no species of disguise or affectation had escaped her notice; but as to the plain simple workings of honest nature, as she had never seen any such, she could know but little of them.

Fielding, Tom Jones, VI, 2

29 Whose assistance shall I invoke to direct my pen?

First, Genius; thou gift of Heaven; without whose aid in vain we struggle against the stream of nature.... And thou, almost the constant attendant on true genius, Humanity, bring all thy tender sensations.... And thou, O Learning! (for without thy assistance nothing pure,

nothing correct, can genius produce) do thou guide my pen.... Lastly, come Experience, long conversant with the wise, the good, the learned, and the polite. Nor with them only, but with every kind of character, from the minister at his levee, to the bailiff in his spunging-house; from the dutchess at her drum, to the landlady behind her bar. From thee only can the manners of mankind be known; to which the recluse pedant, however great his parts or extensive his learning may be, hath ever been a stranger.

Fielding, Tom Jones, XIII, 1

30 I mentioned Dr. Adam Smith's book on *The Wealth of Nations*, which was just published, and that Sir John Pringle had observed to me, that Dr. Smith, who had never been in trade, could not be expected to write well on that subject any more than a lawyer upon physick. *Johnson*. "He is mistaken, Sir: a man who has never been engaged in trade himself may undoubtedly write well upon trade, and there is nothing which requires more to be illustrated by philosophy than trade does. As to mere wealth, that is to say, money, it is clear that one nation or one individual cannot increase its store but by making another poorer: but trade procures what is more valuable, the reciprocation of the peculiar advantages of different countries. A merchant seldom thinks but of his own particular trade. To write a good book upon it, a man must have extensive views. It is not necessary to have practised, to write well upon a subject." I mentioned law as a subject on which no man could write well without practice. *Johnson*. "Why, Sir, in England, where so much money is to be got by the practice of the law, most of our writers upon it have been in practice; though Blackstone had not been much in practice when he published his

Commentaries. But upon the Continent, the great writers on law have not all been in practice: Grotius, indeed, was; but Puffendorf was not, Burlamaqui was not."

Boswell, Life of Johnson (Mar. 16, 1776)

- 31 It was a very remarkable circumstance about Johnson, whom shallow observers have supposed to have been ignorant of the world, that very few men had seen greater variety of characters; and none could observe them better, as was evident from the strong, yet nice portraits which he often drew.

Boswell, Life of Johnson (Apr. 5, 1776)

- 32 Under these melancholy circumstances [the invasion of the Germans], an inexperienced youth was appointed to save and to govern the provinces of Gaul, or rather, as he expresses it himself, to exhibit the vain image of Imperial greatness. The retired scholastic education of Julian, in which he had been more conversant with books than with arms, with the dead than with the living, left him in profound ignorance of the practical arts of war and government; and when he awkwardly repeated some military exercise which it was necessary for him to learn, he exclaimed with a sigh, "O Plato, Plato, what a task for a philosopher!"

Gibbon, Decline and Fall of the Roman Empire, XIX

- 33 The experience of past faults, which may sometimes correct the mature age of an individual, is seldom profitable to the successive generations of mankind. The nations of antiquity, careless of each other's safety, were separately vanquished and enslaved by the Romans. This

awful lesson might have instructed the barbarians of the West to oppose, with timely counsels and confederate arms, the unbounded ambition of Justinian. Yet the same error was repeated, the same consequences were felt.

Gibbon, Decline and Fall of the Roman Empire, XLI

34 That all our knowledge begins with experience there can be no doubt. For how is it possible that the faculty of cognition should be awakened into exercise otherwise than by means of objects which affect our senses, and partly of themselves produce representations, partly rouse our powers of understanding into activity, to compare, to connect, or to separate these, and so to convert the raw material of our sensuous impressions into a knowledge of objects, which is called experience? In respect of time, therefore, no knowledge of ours is antecedent to experience, but begins with it.

But, though all our knowledge begins with experience, it by no means follows that all arises out of experience. For, on the contrary, it is quite possible that our empirical knowledge is a compound of that which we receive through impressions, and that which the faculty of cognition supplies from itself (sensuous impressions giving merely the *occasion*), an addition which we cannot distinguish from the original element given by sense, till long practice has made us attentive to, and skilful in separating it. It is, therefore, a question which requires close investigation, and not to be answered at first sight, whether there exists a knowledge altogether independent of experience, and even of all sensuous impressions? Knowledge of this kind is called *a priori*, in contradistinction to empirical knowledge, which has its sources *a posteriori*, that is, in experience.

But the expression, "*a priori*," is not as yet definite enough adequately to indicate the whole meaning of the question above started. For, in speaking of knowledge which has its sources in experience, we are wont to say, that this or that may be known *a priori*, because we do not derive this knowledge immediately from experience, but from a general rule, which, however, we have itself borrowed from experience. Thus, if a man undermined his house, we say, "he might know *a priori* that it would have fallen;" that is, he needed not to have waited for the experience that it did actually fall. But still, *a priori*, he could not know even this much. For, that bodies are heavy, and, consequently, that they fall when their supports are taken away, must have been known to him previously, by means of experience.

By the term "knowledge *a priori*," therefore, we shall in the sequel understand, not such as is independent of this or that kind of experience, but such as is absolutely so of *all* experience. Opposed to this is empirical knowledge, or that which is possible only *a posteriori*, that is, through experience. Knowledge *a priori* is that with which no empirical element is mixed up. For example, the proposition, "Every change has a cause," is a proposition *a priori*, but impure, because change is a conception which can only be derived from experience.

Kant, Critique of Pure Reason, Introduction, I

35 One impulse from a vernal wood
May teach you more of man,
Of moral evil and of good,
Than all the sages can.

Wordsworth, The Tables Turned

36 No facts are to me sacred; none are profane; I simply
experiment, an endless seeker with no Past at my back.

Emerson, Circles

37 The years teach much which the days never know.

Emerson, Experience

38 I cannot rest from travel; I will drink
Life to the lees. All times I have enjoy'd
Greatly, have suffer'd greatly, both with those
That love me, and alone; on shore, and when
Thro' scudding drifts the rainy Hyades
Vext the dim sea. I am become a name;
For always roaming with a hungry heart
Much have I seen and known,—cities of men
And manners, climates, councils, governments,
Myself not least, but honor'd of them all,—
And drunk delight of battle with my peers,
Far on the ringing plains of windy Troy.
I am a part of all that I have met;
Yet all experience is an arch wherethro'
Gleams that untravell'd world whose margin fades
For ever and for ever when I move.
How dull it is to pause, to make an end.
To rust unbumish'd, not to shine in use!
As tho' to breathe were life! Life piled on life
Were all too little, and of one to me
Little remains; but every hour is saved
From that eternal silence, something more,
A bringer of new things; and vile it were
For some three suns to store and hoard myself.
And this gray spirit yearning in desire

To follow knowledge like a sinking star,
Beyond the utmost bound of human thought.

Tennyson, Ulysses

39 All languages and literatures are full of general observations on life, both as to what it is, and how to conduct oneself in it; observations which everybody knows, which everybody repeats, or hears with acquiescence, which are received as truisms, yet of which most people first truly learn the meaning when experience, generally of a painful kind, has made it a reality to them. How often, when smarting under some unforeseen misfortune or disappointment, does a person call to mind some proverb or common saying, familiar to him all his life, the meaning of which, if he had ever before felt it as he does now, would have saved him from the calamity. There are indeed reasons for this, other than the absence of discussion; there are many truths of which the full meaning *cannot* be realised until personal experience has brought it home. But much more of the meaning even of these would have been understood, and what was understood would have been far more deeply impressed on the mind, if the man had been accustomed to hear it argued pro and con by people who did understand it.

Mill, On Liberty, II

40 Experience must be consulted in order to learn from it under what circumstances arguments from it will be valid. We have no ulterior test to which we subject experience in general; but we make experience its own test.

41 Kutuzov looked round. He was listening to the general's report—which consisted chiefly of a criticism of the position at Tsarevo-Zaymishche—as he had listened to Denisov, and seven years previously had listened to the discussion at the Austerlitz council of war. He evidently listened only because he had ears which, though there was a piece of tow in one of them, could not help hearing; but it was evident that nothing the general could say would surprise or even interest him, that he knew all that would be said beforehand, and heard it all only because he had to, as one has to listen to the chanting of a service of prayer. All that Denisov had said was clever and to the point. What the general was saying was even more clever and to the point, but it was evident that Kutuzov despised knowledge and cleverness, and knew of something else that would decide the matter—something independent of cleverness and knowledge. Prince Andrew watched the commander in chief's face attentively, and the only expression he could see there was one of boredom, curiosity as to the meaning of the feminine whispering behind the door, and a desire to observe propriety. It was evident that Kutuzov despised cleverness and learning and even the patriotic feeling shown by Denisov, but despised them not because of his own intellect, feelings, or knowledge—he did not try to display any of these—but because of something else. He despised them because of his old age and experience of life.

42 Kutuzov like all old people did not sleep much at night. He often fell asleep unexpectedly in the daytime, but at night, lying on his bed without undressing, he generally remained awake thinking.

So he lay now on his bed, supporting his large, heavy, scarred head on his plump hand, with his one eye open, meditating and peering into the darkness.

Since Bennigsen, who corresponded with the Emperor and had more influence than anyone else on the staff, had begun to avoid him, Kutuzov was more at ease as to the possibility of himself and his troops being obliged to take part in useless aggressive movements. The lesson of the Tarutino battle and of the day before it, which Kutuzov remembered with pain, must, he thought, have some effect on others too.

"They must understand that we can only lose by taking the offensive. Patience and time are my warriors, my champions," thought Kutuzov. He knew that an apple should not be plucked while it is green. It will fall of itself when ripe, but if picked unripe the apple is spoiled, the tree is harmed, and your teeth are set on edge. Like an experienced sportsman he knew that the beast was wounded, and wounded as only the whole strength of Russia could have wounded it, but whether it was mortally wounded or not was still an undecided question. Now by the fact of Lauriston and Barthelemy having been sent, and by the reports of the guerrillas, Kutuzov was almost sure that the wound was mortal- But he needed further proofs and it was necessary to wait.

"They want to run to see how they have wounded it. Wait and we shall see! Continual maneuvers, continual advances!" thought he. "What for? only to distinguish themselves! As if fighting were fun. They are like children

from whom one can't get any sensible account of what has happened because they all want to show how well they can fight. But that's not what is needed now.

"And what ingenious maneuvers they all propose to me! It seems to them that when they have thought of two or three contingencies" (he remembered the general plan sent him from Petersburg) "they have foreseen everything. But the contingencies are endless."

Tolstoy, War and Peace, XIII, 17

- 43 If the realm of human knowledge were confined to abstract reasoning, then having subjected to criticism the explanation of "power" that Juridical science gives us, humanity would conclude that power is merely a word and has no real existence. But to understand phenomena man has, besides abstract reasoning, experience by which he verifies his reflections. And experience tells us that power is not merely a word but an actually existing phenomenon.

Tolstoy, War and Peace, II Epilogue, V

- 44 We should be careful to get out of an experience only the wisdom that is in it—and stop there; lest we be like the cat that sits down on a hot stove-lid. She will never sit down on a hot stove-lid again— and that is well; but also she will never sit down on a cold one any more.

Mark Twain, Pudd'nhead Wilson's New Calendar, XI

- 45 *My experience is what I agree to attend to.* Only those items which I notice shape my mind—without selective interest, experience is an utter chaos. Interest alone gives accent and emphasis, light and shade, background and

foreground—intelligible perspective, in a word. It varies in every creature, but without it the consciousness of every creature would be a gray chaotic indiscriminateness, impossible for us even to conceive.

William James, Psychology, XI

46 In logic a concept is unalterable; but what are popularly called our "conceptions of things" alter by being used. The aim of "Science" is to attain conceptions so adequate and exact that we shall never need to change them. There is an everlasting struggle in every mind between the tendency' to keep unchanged, and the tendency to renovate, its ideas. Our education is a ceaseless compromise between the conservative and the progressive factors. Every new experience must be disposed of under some old head. The great point is to find the head which has to be least altered to take it in. Certain Polynesian natives, seeing horses for the first time, called them pigs, that being the nearest head. My child of two played for a week with the first orange that was given him, calling it a "ball." He called the first whole eggs he saw "potatoes," having been accustomed to see his "eggs" broken into a glass, and his potatoes without the skin. A folding pocket-corkscrew he unhesitatingly called "bad-scissors." Hardly any one of us can make new heads easily when fresh experiences come. Most of us grow more and more enslaved to the stock conceptions with which we have once become familiar, and less and less capable of assimilating impressions in any but the old ways. Old-fogyism, in short, is the inevitable terminus to which life sweeps us on. Objects which violate our established habits of "apperception" are simply not taken account of at all; or, if on some occasion we are forced by

dint of argument to admit their existence, twenty-four hours later the admission is as if it were not, and every trace of the unassimilable truth has vanished from our thought. Genius, in truth, means little more than the faculty of perceiving in an unhabitual way.

William James, Psychology, XIX

47 These are the most prominent of the tendencies which are worthy of being called instinctive in the human species. It will be observed that *no other mammal, not even the monkey, shows so large an array*. In a perfectly-rounded development, every one of these instincts would start a habit toward certain objects and inhibit a habit toward certain others. Usually this is the case; but, in the one-sided development of civilized life, it happens that the timely age goes by in a sort of starvation of objects, and the individual then grows up with gaps in his psychic constitution which future experiences can never fill. Compare the accomplished gentleman with the poor artisan or tradesman of a city: during the adolescence of the former, objects appropriate to his growing interests, bodily and mental, were offered as fast as the interests awoke, and, as a consequence, he is armed and equipped at every angle to meet the world. Sport came to the rescue and completed his education where real things were lacking. He has tasted of the essence of every side of human life, being sailor, hunter, athlete, scholar, fighter, talker, dandy, man of affairs, etc., all in one. Over the city poor boy's youth no such golden opportunities were hung, and in his manhood no desires for most of them exist. Fortunate it is for him if gaps are the only anomalies his instinctive life presents; perversions are too often the fruit of his unnatural bringing up.

William James, Psychology, XXIV

48 Consciousness flickers; and even at its brightest, there is a small focal region of clear illumination, and a large penumbral region of experience which tells of intense experience in dim apprehension. The simplicity of clear consciousness is no measure of the complexity of complete experience. Also this character of our experience suggests that consciousness is the crown of experience, only occasionally attained, not its necessary base.

Whitehead, Process and Reality, III, 5

49 I feel that the concept of 'experience' has been very much over-emphasized, especially in the Idealist philosophy, but also in many forms of empiricism. I found, when I began to think about theory of knowledge, that none of the philosophers who emphasize 'experience' tells us what they mean by the word. They seem willing to accept it as an indefinable of which the significance should be obvious. They tend to think that only what is experienced can be known to exist and that it is meaningless to assert that some things exist although we do not know them to exist. I think that this sort of view gives much too much importance to knowledge, or at any rate to something analogous to knowledge. I think also that those who profess such views have not realized all their implications. Few philosophers seem to understand that one may know a proposition of the form 'All A is B' or 'There are A's' without knowing any single A individually. If you are on a pebbly beach you may be quite sure that there are pebbles on the beach that you have not seen or touched. Everybody, in fact, accepts innumerable

propositions about things not experienced, but when people begin to philosophize they seem to think it necessary to make themselves artificially stupid. I will admit at once that there are difficulties in explaining how we acquire knowledge that transcends experience, but I think the view that we have no such knowledge is utterly untenable.

Russell, My Philosophical Development, XI

50 To place knowledge where it arises and operates in experience is to know that, as it arose because of the troubles of man, it is confirmed in reconstructing the conditions which occasioned those troubles. Genuine intellectual integrity is found in experimental knowing. Until this lesson is fully learned, it is not safe to dissociate knowledge from experiment nor experiment from experience.

Dewey, Essays in Experimental Logic, Introduction, 7

51 Scientific principles and laws do not lie on the surface of nature. They are hidden, and must be wrested from nature by an active and elaborate technique of inquiry. Neither logical reasoning nor the passive accumulation of any number of observations—which the ancients called experience—suffices to lay hold of them. Active experimentation must force the apparent facts of nature into forms different to those in which they familiarly present themselves; and thus make them tell the truth about themselves, as torture may compel an unwilling witness to reveal what he has been concealing. Pure reasoning as a means of arriving at truth is like the spider who spins a web out of himself. The web is orderly and

elaborate, but it is only a trap. The passive accumulation of experiences—the traditional empirical method—is like the ant who busily runs about and collects and piles up heaps of raw materials. True method, that which Bacon would usher in, is comparable to the operations of the bee who, like the ant, collects material from the external world, but unlike that industrious creature attacks and modifies the collected stuff in order to make it yield its hidden treasure.

Dewey, Reconstruction in Philosophy, II

- 52 We always live at the time we live and not at some other time, and only by extracting at each present time the full meaning of each present experience are we prepared for doing the same thing in the future. This is the only preparation which in the long run amounts to anything.

Dewey, Experience and Education, III

- 53 There is no discipline in the world so severe as the discipline of experience subjected to the tests of intelligent des'clopment and direction.

Dewey, Experience and Education, VIII

- 54 We should do well to remember that crude experience knows nothing of the distinction between subject and object. This distinction is a division in things, a contrast established between masses of images which show different characteristics in their modes of existence and relation. If this truth is overlooked, if subject and object are made conditions of experience instead of being, like body and mind, its contrasted parts, the revenge of fate is quick and ironical; either subject or object must

immediately collapse and evaporate altogether. All objects must become modifications of the subject or all subjects aspects or fragments of the object. . . . Reflection must . . . , separate them, if knowledge (that is, ideas with eventual application and practical transcendence) is to exist at all. In other words, action must be adjusted to certain elements of experience and not to others, and those chiefly regarded must have a certain interpretation put upon them by trained apperception. The rest must be treated as moonshine and taken no account of except perhaps in idle and poetic revery. In tills way crude experience grows reasonable and appearance becomes knowledge of reality.

Santayana, Life of Reason, I, 6

55 *April 26.* Mother is putting my new secondhand clothes in order. She prays now, she says, that I may learn in my own life and away from home and friends what the heart is and what it feels. Amen. So be it. Welcome, O life! I go to encounter for the millionth time the reality of experience and to forge in the smithy of my soul the uncreated conscience of my race.

Joyce, Portrait of the Artist as a Young Man, V

6.3 Truth

Though it is not included among the passages here quoted, a memorable statement by Josiah Royce provides an apt introduction to the subject under consideration. "A liar," Professor Royce once said, "is a man who willfully misplaces his ontological predicates"—a man who, believing that

something is the case, declares in speech that it is not the case; or believing that something is not the case, declares that it is. Accordingly, it is impossible to prevaricate in speech unless one thinks that one has the truth about the matter in question. When is anyone in that state of mind? Aristotle's answer to that question, in a famous passage quoted below, provides the basis for Royce's remark. We possess the truth mentally, he said, when we think that that which is, *is*, or that that which is not, is *not*. Falsity in the mind, like prevarication in speech, consists in thinking that which is, is *not*, or that which is *not*, *is*.

This classic definition of truth is acceptable only to those who affirm the existence of a reality independent of the knowing mind—a reality to which the mind can conform or fail to conform. In the absence of the possibility of a correspondence between the mind and an independent reality that it attempts to know, truth for the mind would have to consist in the internal coherence and consistency of its own thoughts. But even for those who hold that an independent reality provides the ultimate test of the mind's claim to possessing the truth, consistency—the avoidance of contradiction—is also of critical importance.

The question, *What is truth?*, to be answered by one or another definition of it, must never be confused with the question, *How can we tell whether a particular statement under consideration is true or false?* Answering the latter question, many of the philosophers quoted formulate different sets of criteria for discriminating between the true and the false; as, for example, William James and John Dewey in their promulgation of what came to be called "the pragmatic theory of truth," which, while it did not exclude the criterion of internal consistency, stressed the point that our best assurance of the truth of a statement comes from

our finding that it works successfully when put into practice. "The true," said James, "is the expedient in the way of our thinking."

In addition to offering definitions of truth itself and enumerating the criteria for determining whether a particular statement is true or false, the passages here collected discuss the unity of Truth with a capital T as contrasted with the multiplicity of truths; the immutability of whatever is true in and of itself as against the mutability of the human mind's claims to knowing what is true and false; the difference between the truth of true statements about what is the case and the truth of true statements about what ought to be done or sought; the moral obligation to pursue and love the truth, and to be unswerving in one's adherence to it, a higher loyalty even than the one we owe to our friends; the necessity of complete freedom of expression and discussion for the cooperative pursuit of truth; and the acknowledgment of human fallibility in that pursuit.

The extent of that fallibility and the proneness of the human mind to error are discussed in Section 6.4 and points there made are further developed in Sections 6.5 and 6.6, where the questioning of human opinions and beliefs leads to skeptical doubts about the human mind's ability ever to get at the truth.

■ ■ ■

1 Truth lies at the bottom of a well.

Democritus (qu. by Diogenes Laertius, Lives of the Philosophers)

2 *Socrates*. Protagoras... says that man is the measure of all things, and that things are to me as they appear to me, and that they are to you as they appear to you. Do you agree with him, or would you say that things have a permanent essence of their own?

Hermogenes. There have been times, Socrates, when I have been driven in my perplexity to take refuge with Protagoras; not that I agree with him at all....

Soc. But if Protagoras is right, and the truth is that things are as they appear to any one, how can some of us be wise and some of us foolish?

Her. Impossible.

Soc. And if, on the other hand, wisdom and folly are really distinguishable, you will allow, I think, that the assertion of Protagoras can hardly be correct. For if what appears to each man is true to him, one man cannot in reality be wiser than another.

Her. He cannot.

Soc. Nor will you be disposed to say with Euthydemus, that all things equally belong to all men at the same moment and always; for neither on his view can there be some good and other bad, if virtue and vice are always equally to be attributed to all.

Her. There cannot.

Soc. But if neither is right, and things are not relative to individuals, and all things do not equally belong to all at the same moment and always, they must be supposed to have their own proper and permanent essence: they are not in relation to us, or influenced by us, fluctuating according to our fancy, but they are independent, and

maintain to their own essence the relation prescribed by nature.

Her. I think, Socrates, that you have said the truth.

Plato, Cratylus, 386A

3 Of the nature of the soul, though her true form be ever a theme of large and more than mortal discourse, let me speak briefly, and in a figure. And let the figure be composite—a pair of winged horses and a charioteer. Now the winged horses and the charioteers of the gods are all of them noble and of noble descent, but those of other races are mixed; the human charioteer drives his in a pair; and one of them is noble and of noble breed, and the other is ignoble and of ignoble breed; and the driving of them of necessity gives a great deal of trouble to him. I will endeavour to explain to you in what way the mortal differs from the immortal creature. The soul in her totality has the care of inanimate being everywhere, and traverses the whole heaven in divers forms appearing:—when perfect and fully winged she soars upward, and orders the whole world; whereas the imperfect soul, losing her wings and drooping in her flight at last settles on the solid ground—there, finding a home, she receives an earthly frame which appears to be self-moved, but is really moved by her power; and this composition of soul and body is called a living and mortal creature. For immortal no such union can be reasonably believed to be; although fancy, not having seen nor surely known the nature of God, may imagine an immortal creature having both a body and also a soul which are united throughout all time. Let that, however, be as God wills, and be spoken of acceptably to him. And now let us ask the reason why the soul loses her wings!

The wing is the corporeal element which is most akin to the divine, and which by nature tends to soar aloft and carry that which gravitates downwards into the upper region, which is the habitation of the gods. The divine is beauty, wisdom, goodness, and the like; and by these the wing of the soul is nourished, and grows apace; but when fed upon evil and foulness and the opposite of good, wastes and falls away. Zeus, the mighty lord, holding the reins of a winged chariot, leads the way in heaven, ordering all and taking care of all; and there follows him the array of gods and demigods, marshalled in eleven bands; Hestia alone abides at home in the house of heaven; of the rest they who are reckoned among the princely twelve march in their appointed order. They see many blessed sights in the inner heaven, and there are many ways to and fro, along which the blessed gods are passing, every one doing his own work; he may follow who will and can, for jealousy has no place in the celestial choir. But when they go to banquet and festival, then they move up the steep to the top of the vault of heaven. The chariots of the gods in even poise, obeying the rein, glide rapidly; but the others labour, for the vicious steed goes heavily, weighing down the charioteer to the earth when his steed has not been thoroughly trained:—and this is the hour of agony and extremest conflict for the soul. For the immortals, when they are at the end of their course, go forth and stand upon the outside of heaven, and the revolution of the spheres carries them round, and they behold the things beyond. But of the heaven which is above the heavens, what earthly poet ever did or ever will sing worthily? It is such as I will describe; for I must dare to speak the truth, when truth is my theme. There abides the very being with which true knowledge is

concerned; the colourless, formless, intangible essence, visible only to mind, the pilot of the soul. The divine intelligence, being nurtured upon mind and pure knowledge, and the intelligence of every soul which is capable of receiving the food proper to it, rejoices at beholding reality, and once more gazing upon truth, is replenished and made glad, until the revolution of the worlds brings her round again to the same place. In the revolution she beholds justice, and temperance, and knowledge absolute, not in the form of generation or of relation, which men call existence, but knowledge absolute in existence absolute; and beholding the other true existences in like manner, and feasting upon them, she passes down into the interior of the heavens and returns home; and there the charioteer putting up his horses at the stall, gives them ambrosia to eat and nectar to drink.

Such is the life of the gods; but of other souls, that which follows God best and is likeliest to him lifts the head of the charioteer into the outer world, and is carried round in the revolution, troubled indeed by the steeds, and with difficulty beholding true being; while another only rises and falls, and sees, and again fails to see by reason of the unruliness of the steeds. The rest of the souls are also longing after the upper world and they all follow, but not being strong enough they are carried round below the surface, plunging, treading on one another, each striving to be first; and there is confusion and perspiration and the extremity of effort; and many of them are lamed or have their wings broken through the ill-driving of the charioteers; and all of them after a fruitless toil, not having attained to the mysteries of true being, go away, and feed upon opinion. the reason why

the souls exhibit this exceeding eagerness to behold the plain of truth is that pasturage is found there, which is suited to the highest part of the soul; and the wing on which the soul soars is nourished with this. And there is a law of Destiny, that the soul which attains any vision of truth in company with a god is preserved from harm until the next period, and if attaining always is always unharmed. But when she is unable to follow, and fails to behold the truth, and through some ill-hap sinks beneath the double load of forgetfulness and vice, and her wings fall from her and she drops to the ground, then the law ordains that this soul shall at her first birth pass, not into any other animal, but only into man; and the soul which has seen most of truth shall come to the birth as a philosopher, or artist, or some musical and loving nature; that which has seen truth in the second degree shall be some righteous king or warrior chief; the soul which is of the third class shall be a politician, or economist, or trader; the fourth shall be a lover of gymnastic toils, or a physician; the fifth shall lead the life of a prophet or hierophant; to the sixth the character of a poet or some other imitative artist will be assigned; to the seventh the life of an artisan or husbandman; to the eighth that of a sophist or demagogue; to the ninth that of a tyrant;—all these are states of probation, in which he who does righteously improves, and he who does unrighteously, deteriorates his lot.

Plato, Phaedrus, 246A

4 I cannot refute you, Socrates, said Agathon:—Let us assume that what you say is true.

Say rather, beloved Agathon, that you cannot refute the truth; for Socrates is easily refuted.

Plato, Symposium, 201B

- 5 *Socrates*. I would ask you to be thinking of the truth and not of Socrates: agree with me, if I seem to you to be speaking the truth; or if not, withstand me might and main, that I may not deceive you as well as myself in my enthusiasm, and like the bee, leave my sting in you before I die.

Plato, Phaedo, 91A

- 6 *Socrates*. I should not like to have my words repeated to the tragedians and the rest of the imitative tribe—but I do not mind saying to you, that all poetical imitations are ruinous to the understanding of the hearers, and that the knowledge of their true nature is the only antidote to them. . . . I have always from my earliest youth had an awe and love of Homer, which even now makes the words falter on my lips, for he is the great captain and teacher of the whole of that charming tragic company; but a man is not to be revered more than the truth.

Plato, Republic, X, 595A

- 7 *Athenian Stranger*. The greatest and highest truths have no outward image of themselves visible to man, which he who wishes to satisfy the soul of the enquirer can adapt to the eye of sense, and therefore we ought to train ourselves to give and accept a rational account of them; for immaterial things, which are the noblest and greatest, are shown only in thought and idea, and in no other way.

Plato, Statesman, 286A

- 8 As there are in the mind thoughts which do not involve truth or falsity, and also those which must be either true

or false, so it is in speech. For truth and falsity imply combination and separation. Nouns and verbs, provided nothing is added, are like thoughts without combination or separation; 'man' and 'white', as isolated terms, are not yet either true or false.

Aristotle, On Interpretation, 16a10

- 9 The least initial deviation from the truth is multiplied later a thousandfold.

Aristotle, On the Heavens, 271b9

- 10 To give a satisfactory decision as to the truth it is necessary to be rather an arbitrator than a party to the dispute.

Aristotle, On the Heavens, 279b11

- 11 The investigation of the truth is in one way hard, in another easy. An indication of this is found in the fact that no one is able to attain the truth adequately, while, on the other hand, we do not collectively fail, but every one says something true about the nature of things, and while individually we contribute little or nothing to the truth, by the union of all a considerable amount is amassed. Therefore, since the truth seems to be like the proverbial door, which no one can fail to hit, in this respect it must be easy, but the fact that we can have a whole truth and not the particular part we aim at shows the difficulty of it.

Perhaps, too, as difficulties are of two kinds, the cause of the present difficulty is not in the facts but in us. For as the eyes of bats are to the blaze of day, so is the reason

in our soul to the things which are by nature most evident of all.

Aristotle, Metaphysics, 993a30

- 12 It is right... that philosophy should be called knowledge of the truth. For the end of theoretical knowledge is truth, while that of practical knowledge is action (for even if they consider how things are, practical men do not study the eternal, but what is relative and in the present). Now we do not know a truth without its cause; and a thing has a quality in a higher degree than other things if in virtue of it the similar quality belongs to the other things as well (e.g. fire is the hottest of things; for it is the cause of the heat of all other things); so that that which causes derivative truths to be true is most true. Hence the principles of eternal things must be always most true (for they are not merely sometimes true, nor is there any cause of their being, but they themselves are the cause of the being of other things), so that as each thing is in respect of being, so is it in respect of truth.

Aristotle, Metaphysics, 993b19

- 13 Of one subject we must either affirm or deny any one predicate. This is clear, in the first place, if we define what the true and the false are. To say of what is that it is not, or of what is not that it is, is false, while to say of what is that it is, and of what is not that it is not, is true; so that he who says of anything that it is, or that it is not, will say either what is true or what is false; but neither what is nor what is not is said to be or not to be.

Aristotle, Metaphysics, 1011b24

- 14 It would perhaps be thought to be better, indeed to be our duty, for the sake of maintaining the truth even to destroy what touches us closely, especially as we are philosophers or lovers of wisdom; for, while both are dear, piety requires us to honour truth above our friends.

Aristotle, Ethics, 1096a13

- 15 The man who loves truth, and is truthful where nothing is at stake, will still more be truthful where something is at stake; he will avoid falsehood as something base, seeing that he avoided it even for its own sake; and such a man is worthy of praise. He inclines rather to understate the truth; for this seems in better taste because exaggerations are wearisome.

Aristotle, Ethics, 1127b3

- 16 The states by virtue of which the soul possesses truth by way of affirmation or denial are five in number, i.e. art, scientific knowledge, practical wisdom, philosophic wisdom, intuitive reason; we do not include judgement and opinion because in these we may be mistaken.

Aristotle, Ethics, 1139b16

- 17 Those who object that that at which all things aim is not necessarily good are, we may surmise, talking nonsense. For we say that that which every one thinks really is so; and the man who attacks this belief >will hardly have anything more credible to maintain instead.

Aristotle, Ethics, 1172b35

- 18 Nature has instilled in our minds an insatiable desire to see truth.

Cicero, Disputations, I, 19

19 We don't believe a liar even when he tells the truth.

Cicero, Divination, II, 71

20 Then said Jesus to those Jews which believed on him, If ye continue in my word, then are ye my disciples indeed;
And ye shall know the truth, and the truth shall make you free.

John 8:31-32

21 Pilate therefore said unto him. Art thou a king then? Jesus answered, Thou sayest that I am a king. To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth. Every one that is of the truth heareth my voice.

Pilate saith unto him. What is truth? And when he had said this, he went out again unto the Jew's, and saith unto them, I find in him no fault at all.

John 18:37-38

22 Am I therefore become your enemy, because I tell you the truth?

Galatians 4:16

23 A liar ought to have a good memory.

Quintilian, Institutio Oratoria, IV, 2

24 Veritable truth is not accordance with an external; it is self-accordance; it affirms and is nothing other than itself and is nothing other; it is at once existence and self-affirmation.

Plotinus, Fifth Ennead, V, 2

25 And I looked upon other things, and I saw that they owed their being to You, and that all finite things are in You: hut in a different manner, being in You not as in a place, but because You are and hold all things in the hand of Your truth, and all things are true inasmuch as they are: nor is falsehood anything, save that something b thought to be which is not.

Augustine, Confessions, 15

26 I have met many who wished to deceive, but not one who wished to be deceived.

Augustine, Confessions, X, 23

27 Why does truth call forth hatred? Why is Your servant treated as an enemy by those to whom he preaches the truth, if happiness is loved, which is simply joy in truth? Simply because truth is loved in such a way that those who love some other thing want it to be the truth, and, precisely because they do not wish to be deceived, are unwilling to be convinced that they are deceived. Thus they hate the truth for the sake of that other thing which they love because they take it for truth. They love truth when it enlightens them, they hate truth when it accuses them. Because they do not wish to be deceived and do wish to deceive, they love truth when it reveals itself, and hate it when it reveals them. Thus it shall reward them as they deserve: those who do not wish to be revealed by truth, truth will unmask against their will, but it will not reveal itself to them. Thus, thus, even thus, does the human mind, blind and inert, vile and ill-behaved, desire to keep itself concealed, yet desire that nothing should

be concealed from itself. But the contrary happens to it—it cannot be hidden from truth, but only truth from it. Even so, for all its worthlessness, the human mind would rather find its joy in truth than falsehood. So that it shall be happy if, with no other thing to distract, it shall one day come to rejoice in that sole Truth by which all things are true.

Augustine, Confessions, X, 23

28 Lying is wrong even to save chastity.

Augustine, On Lying, VII, 10

29 He who says that some lies are just, must be judged to say no other than that some sins are just, and therefore some things are just which are unjust: than which what can be more absurd?

Augustine, To Consentius, Against Lying, 18

30 "If any man makes search for truth with all his penetration, and would be led astray by no deceiving paths, let him turn upon himself the light of an inward gaze, let him bend by force the long-drawn wanderings of his thoughts into one circle; let him tell surely to his soul, that he has, thrust away within the treasures of his mind, all that he labours to acquire without. Then shall that truth, which now was hid in error's darkening cloud, shine forth more clear than Phaebus's self. For the body, though it brings material mass which breeds forgetfulness, has never driven forth all light from the mind. The seed of truth does surely cling within, and can be roused as a spark by the fanning of philosophy. For if it is not so, how do ye men make answers true of your own instinct when

teachers question you? Is it not that the quick spark of truth lies buried in the heart's low depths? And if the Muse of Plato sends through those depths the voice of truth, each man has not forgotten and is but reminding himself of what he learns."

When she [Philosophy] made an end, I said, "I agree very strongly with Plato; for this is the second time that you have reminded me of these thoughts. The first time I had lost them through the material influence of the body; the second, when overwhelmed by this weight of trouble."

Boethius, Consolation of Philosophy, III

31 As the good denotes that towards which the appetite tends, so the true denotes that towards which the intellect tends. Now there is this difference between the appetite and the intellect, or any knowledge whatsoever, that knowledge is according as the thing known is in the knower, whilst appetite is according as the desirer tends towards the thing desired. Thus the term of the appetite, namely good, is in the thing desirable, and the term of knowledge, namely true, is in the intellect itself.

Now as good exists in a thing so far as that thing is related to the appetite—and hence the aspect of goodness passes on from the desirable thing to the appetite, according as the appetite is called good if the thing desired is good, so, since the true is in the intellect in so far as it is conformed to the thing understood, the aspect of the true must pass from the intellect to the thing understood, so that also the thing understood is said to be true in so far as it has some relation to the intellect.

Now a thing understood may be in relation to an intellect either essentially or accidentally. It is related essentially to an intellect on which it depends as regards its being, but accidentally to an intellect by which it is knowable; even as we may say that a house is related essentially to the intellect of the architect, but accidentally to the intellect upon which it does not depend.

Now we do not judge of a thing by what is in it accidentally, but by what is in it essentially. Hence, everything is said to be true absolutely in so far as it is related to the intellect from which it depends; and thus it is that artificial things are said to be true as being related to our intellect. For a house is said to be true that expresses the likeness of the form in the architect's mind, and words are said to be true so far as they are the signs of truth in the intellect. In the same way natural things are said to be true in so far as they express the likeness of the species that are in the divine mind. For a stone is called true, because it expresses the nature proper to a stone, according to the preconception in the divine intellect. Thus, then, truth is principally in the intellect, and secondarily in things according as they are related to the intellect as their principle.

Aquinas, Summa Theologica, I, 16, 1

- 32 Truth is found in the intellect according as it apprehends a thing as it is, and in things according as they have being conformable to an intellect. This is to the greatest degree found in God. For His being is not only conformed to His intellect, but it is the very act of His intellect, and His act of understanding is the measure and cause of every other being and of every other intellect, and He

Himself is His own being and act of understanding. And so it follows not only that truth is in Him, but that He is truth itself, and the supreme and first truth.

Aquinas, Summa Theologica, I, 16, 5

- 33 Truth and good include one another; for truth is something good, otherwise it would not be desirable; and good is something true, otherwise it would not be intelligible. Therefore Just as the object of the appetite may be something true, as having the aspect of good, for example, when some one desires to know the truth, so the object of the practical intellect is good directed to operation, and under the aspect of truth. For the practical intellect knows truth, just as the speculative, but it directs the known truth to operation.

Aquinas, Summa Theologica, I, 79, 11

- 34 No one envies another the knowledge of truth, which can be known entirely by many except perhaps one may envy another his superiority in the knowledge of it.

Aquinas, Summa Theologica, I-II, 28, 4

- 35 Being and truth in the universal cannot be the object of hatred because disagreement is the cause of hatred, and agreement is the cause of love, while being and truth are common to all things. But nothing hinders some particular being or some particular truth being an object of hatred, in so far as it is considered as something contrary and repugnant....

Now it may happen in three ways that some particular truth is repugnant or contrary to the good we love. First, according as truth is in things as in its cause and origin.

And thus man sometimes hates a particular truth when he wishes that what is true were not true. Secondly, according as truth is in man's knowledge, which hinders him from gaining the object loved; such is the case of those who wish not to know the truth of faith, that they may sin freely.... Thirdly, a particular truth is hated as something repugnant according as it is in the intellect of another man; as, for instance, when a man wishes to remain indolent in his sin, he hates that anyone should know the truth about his sin.

Aquinas, Summa Theologica, I-II, 29, 5

- 36 The greatest of all pleasures consists in the contemplation of truth. Now every pleasure assuages pain as stated above. Hence the contemplation of truth assuages pain or sorrow, and the more so the more perfectly one is a lover of wisdom.

Aquinas, Summa Theologica, I-II, 38, 4

- 37 A small error in the beginning is a great one in the end.

Aquinas, Concerning Being and Essence, Intro.

- 38 True expresses the correspondence of being to the knowing power, for all knowing is produced by an assimilation of the knower to the thing known, so that assimilation is said to be the cause of knowledge. Similarly, the sense of sight knows a color by being informed with a species of the color.

The first reference of being to the intellect, therefore, consists in its agreement with the intellect. This agreement is called "the conformity of thing and intellect." In this conformity is fulfilled the formal

constituent of the true, and this is what the true adds to being, namely, the conformity or equation of thing and intellect. As we said, the knowledge of a thing is a consequence of this conformity; therefore, it is an effect of truth, even though the fact that the thing is a being is prior to its truth.

Aquinas, On Truth, I, 1

39 And the Friar: "I heard once at Bologna many of the Devil's vices told; amongst which, I heard that he is a liar and the father of lies."

Dante, Inferno, XXIII, 143

40 But first, I pray you, of your courtesy,
You'll not ascribe it to vulgarity
Though I speak plainly of this matter here,
Retailing you their words and means of cheer;
Nor though I use their very terms, nor lie.
For this thing do you know as well as I:
When one repeats a tale told by a man,
He must report, as nearly as he can,
Every least word, if he remember it,
However rude it be, or how unfit;
Or else he may be telling what's untrue.
Embellishing and fictionizing too.
He may not spare, although it were his brother;
He must as well say one word as another.
Christ spoke right broadly out, in holy writ,
And, you know well, there's nothing low in it.
And Plato says, to those able to read:
"The word should be the cousin to the deed."

Chaucer, Canterbury Tales: The Prologue

41 As thus: You know that each evangelist
Who tells the passion of Lord Jesus Christ
Says not in all things as his fellows do,
But nonetheless, each gospel is all true,
And all of them accord in their essence,
Howbeit there's in telling difference.
For some of them say more and some say less
When they His piteous passion would express;
I mean now Mark and Matthew, Luke and John;
Yet, without doubt, their meaning is all one.

Chaucer, Canterbury Tales: Prologue to Melibeus

42 Superstition, idolatry, and hypocrisy have ample wages,
but truth goes a begging.

Luther, Table Talk, H53

43 Anyone who does not feel sufficiently strong in memory
should not meddle with lying.... Now liars either invent
everything out of whole cloth, or else disguise and alter
something fundamentally true. When they disguise and
change a story, if you put them back onto it often enough
they find it hard not to get tangled up. For since the thing
as it is has become lodged first in the memory and has
imprinted itself there by way of consciousness and
knowledge, it is difficult for it not to present itself to the
imagination, dislodging the falsehood, which cannot have
so firm and secure a foothold. Likewise, the
circumstances that were learned first, slipping into the
mind every moment, tend to weaken the memory of the
false or corrupted parts that have been added. In what
liars invent completely, inasmuch as there is no contrary
impression which clashes with the falsehood, they seem

to have the less reason to fear making a mistake.
Nevertheless even this, since it is an empty thing without a grip, is prone to escape any but a very strong memory.

Montaigne, Essays, I, 9, Of Liars

- 44 If falsehood, like truth, had only one face, we would be in better shape. For we would take as certain the opposite of what the liar said. But the reverse of truth has a hundred thousand shapes and a limitless field.

Montaigne, Essays, I, 9, Of Liars

- 45 How many arts there are that profess to consist of conjecture more than of knowledge, that do not decide on the true and the false and merely follow what seems to be! There are, they say, both a true and a false, and there is in us the means to seek it, but not to test it by a touchstone. we are much better if we let ourselves be led without inquisitiveness in the way of the world. A soul guaranteed against prejudice is marvelously advanced toward tranquility. People who judge and check their judges never submit to them as they ought. How much more docile and easily led, both by the laws of religion and by political laws, are the simple and incurious minds, than those minds that survey divine and human causes like pedagogues!

Montaigne, Essays, 11, 12, Apology for Raymond Sebond

- 46 If the human grip was capable and firm enough to grasp (he truth by our own means; these means being common to all men, this truth would be bandied from hand to hand, from one man to another; and at least there would

be one thing in the world, out of all there are, that would be believed by all men with universal consent. But this fact, that no proposition can be seen which is not debated and controverted among us, or which may not be, well shows that our natural judgment does not grasp very clearly what it grasps. For my judgment cannot make my companion's judgment accept it; which is a sign that I have grasped it by some other means than by a natural power that is in me and in all men.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

- 47 Truth is the first and fundamental part of virtue. We must love it for itself. He who tells the truth because he has some external obligation to do so and because it serves him, and who does not fear to tell a lie when it is not important to anybody, is not sufficiently truthful.

Montaigne, Essays, II, 17, Of Presumption

- 48 The way of truth is one and simple; that of private profit and the advantage of one's personal business is double, uneven, and random.

Montaigne, Essays, III, 1, The Useful and the Honorable

- 49 Truth itself does not have the privilege to be employed at any time and in any way; its use, noble as it is, has its circumscriptions and limits. It often happens, as (he world goes, that people blurt it out into a prince's ear not only fruitlessly, but harmfully, and even unjustly. And no one will make me believe that a righteous remonstrance cannot be applied wrongfully, and that the interest of the substance must not often yield to the interest of the form.

Montaigne, Essays, III, 13, Of Experience

50 *Launcelot*. Truth will come to light; murder cannot be hid long.

Shakespeare, Merchant of Venice, II, ii, 82

51 *Hotspur*. I can teach thee, coz, to shame the devil By telling truth: tell truth and shame the devil.

Shakespeare, I Henry IV, III, i, 58

52 *Polonius*. See you now;
Your bail of falsehood takes this carp of truth:
And thus do we of wisdom and of reach,
With windlasses and with assays of bias,
By indirections find directions out.

Shakespeare, Hamlet, II, i, 62

53 *Fool*. Truth's dog must to kennel; he must be whipped out, when Lady the brach may stand by the fire and stink.

Shakespeare, Lear, I, iv, 124

54 I thank thee for thy Good-will, dear *Sancho*, repy'd Don Quixote: But I assure thee, that all these seeming Extravagancies that I must run through, are no Jests: Far from it, they must be all perform'd seriously and solemnly; for otherwise we should transgress the Laws of Chivalry, that forbid us to tell Lyes upon the Pain of Degradation; now to pretend to do one Thing, and effect another, is an Evasion, which I esteem to be as bad as Lying. Therefore the Blows which I must give my self on the Head, ought to be real, substantial, sound ones, without any Trick, or mental Reservation; for which Reason I would have thee leave me some Lint and Salve,

since Fortune has depriv'd us of the Sovereign Balsam which we lost.

Cervantes, Don Quixote, I, 25

55 With regard to authority, it is the greatest weakness to attribute infinite credit to particular authors, and to refuse his own prerogative to time, the author of all authors, and, therefore, of all authority. For truth is rightly named the daughter of time, not of authority.

Bacon, Novum Organum, I, 84

56 This same truth is a naked and open day-light, that doth not shew' the masques and mummeries and triumphs of the world, half so stately and daintily as candle-lights. Truth may perhaps come to the price of a pearl, that sheweth best by day; but it will not rise to the price of a diamond or carbuncle, that sheweth best in varied lights. A mixture of a lie doth ever add pleasure.

Bacon, Of Truth

57 How'soever these things are thus in men's depraved judgments and affections, yet truth, which only doth judge itself, teacheth that the inquiry of truth, which is the love-making or wooing of it, the knowledge of truth, which is the presence of it, and the belief of truth, which is the enjoying of it, is the sovereign good of human nature.

Bacon, Of Truth

58 It were far better never to think of investigating truth at all, than to do so without a method.... Moreover by a method I mean certain and simple rules, such that, if a

man observe them accurately, he shall never assume what is false as true, and will never spend his mental efforts to no purpose, but will always gradually increase his knowledge and so arrive at a true understanding of all that does not surpass his powers.

Descartes, Rules for Direction of the Mind, IV

- 59 Having but one truth to discover in respect to each matter, whoever succeeds in finding it knows in its regard as much as can be known.

Descartes, Discourse on Method, II

- 60 Having remarked that there was nothing at all in the statement "*I think, therefore I am*" which assures me of having thereby made a true assertion, excepting that I see very clearly that to think it is necessary to be, I came to the conclusion that I might assume, as a general rule, that the things which we conceive very clearly and distinctly are all true.

Descartes, Discourse on Method, IV

- 61 From the very fact that anyone girds himself up for an attack upon the truth, he makes himself less capable of perceiving the truth itself, since he withdraws his mind from the consideration of those reasons that tend to convince him of it, in order to discover others that have the opposite effect.

Descartes, Objections and Replies, II

- 62 When two names are joined together into a consequence, or affirmation, as thus, *A man is a living creature*; or thus. *If he be a man, he is a living creature*; if the latter name

living creature signify all that the former name *man* signifieth, then the affirmation, or consequence, is *true*; otherwise *false*. For true and false are attributes of speech, not of things. And where speech is not, there is neither truth nor falsehood. Error there may be, as when we expect that which shall not be, or suspect what has not been; but in neither case can a man be charged with untruth.

Seeing then that truth consisteth in the right ordering of names in our affirmations, a man that seeketh precise truth had need to remember what every name he uses stands for, and to place it accordingly; or else he will find himself entangled in words, as a bird in lime twigs; the more he struggles, the more belimed.

Hobbes, Leviathan, I, 4

63 Every man is not a proper Champion for Truth, nor fit to take up the Gauntlet in the cause of Verity: Many, from the ignorance of these Maximes, and an inconsiderate Zeal unto Truth, have too rashly charged the Troops of Error, and remain as Trophies unto the enemies of Truth: A man may be in as just possession of Truth as of a City, and yet be forced to surrender; his therefore far better to enjoy her with peace, than to hazard her on a battle.

Sir Thomas Browne, Religio Medici, I, 6

64 It is a strange and tedious war when violence attempts to vanquish truth. All the efforts of violence cannot weaken truth, and only serve to give it fresh vigour. All the lights of truth cannot arrest violence, and only serve to exasperate it. When force meets force, the weaker must succumb to the stronger; when argument is opposed to

argument, the solid and the convincing triumphs over the empty and the false; but violence and verity can make no impression on each other. Let none suppose, however, that the two are, therefore, equal to each other; for there is this vast difference between them, that violence has only a certain course to run, limited by the appointment of Heaven, which overrules its effects to the glory of the truth which it assails; whereas verity endures forever and eventually triumphs over its enemies, being eternal and almighty as God himself.

Pascal, Provincial Letters, XII

65 We make an idol of truth itself; for truth apart from charity is not God, but His image and idol, which we must neither love nor worship; and still less must we love or worship its opposite, namely, falsehood.

Pascal, Pensées, VIII, 582

66 Truth is so obscure in these times, and falsehood so established, that, unless we love the truth, we cannot know it.

Pascal, Pensées, XIV, 864

67 Whatever the weight of antiquity, truth should always have the advantage, even when newly discovered, since it is always older than every opinion men have held about it, and only ignorance of its nature could imagine it began to be at the time it began to be known.

Pascal, Preface to the Treatise on the Vacuum

68 It is a disease natural to man to believe that he possesses the truth directly, and this is the reason he is always

inclined to deny whatever he cannot understand.
Whereas in fact he naturally knows nothing but error and
should accept as true only those things whose
contradictory appears to him to be false. Consequently,
whenever a proposition is inconceivable, we must
suspend our judgment and not deny it for that reason,
but examine its contradictory; and if we find this
manifestly false, we may boldly affirm the original
statement, however incomprehensible it is.

Pascal, Geometrical Demonstration

69 I see indeed that truth is the same at Toulouse and at
Paris.

Pascal, Letter to Fermat (July 29, 1654)

70 Thus while he spake, each passion dimm'd his
[Satan's] face
Thrice chang'd with pale, ire, envie and despair,
Which marr'd his borrow'd visage, and betraid
Him counterfet, if any eye beheld.
For heav'nly mindes from such distempers foule
are ever cleer. Whereof hee soon aware,
Each perturbation smooth'd with outward calme,
Artificer of fraud; and was the first
That practis'd falshood under saintly shew,
Deep malice to conceale, couch't with revenge.

Milton, Paradise Lost, IV, 114

71 Hard are the ways of truth, and rough to walk.

Milton, Paradise Regained, I, 478

72 And though all the winds of doctrine were let loose to play upon the earth, so Truth be in the field, we do injuriously, by licensing and prohibiting, to misdoubt her strength. Let her and Falsehood grapple; who ever knew Truth put to the worse, in a free and open encounter?

Milton, Areopagitica

73 For who knows not that Truth is strong, next to the Almighty? She needs no policies, nor stratagems, nor licensings to make her victorious; those are the shifts and the defences that error uses against her power. Give her but room, and do not bind her when she sleeps, for then she speaks not true.

Milton, Areopagitica

74 He who has a true idea knows at the same time that he has a true idea, nor can he doubt the truth of the thing.... For no one who has a true idea is ignorant that a true idea involves the highest certitude; to have a true idea signifying just this, to know a thing perfectly or as well as possible. No one, in fact, can doubt this, unless he supposes an idea to be something dumb, like a picture on a tablet, instead of being a mode of thought, that is to say, intelligence itself. Moreover, I ask who can know that he understands a thing unless he first of all understands that thing? that is to say, who can know that he is certain of anything unless he is first of all certain of that thing? Then, again, what can be clearer or more certain than a true idea as the standard of truth? Just as light reveals both itself and the darkness, so truth is the standard of itself and of the false. I consider what has been said to be a sufficient answer to the objection that if a true idea is

distinguished from a false idea only in so far as it is said to agree with that of which it is the idea, the true idea therefore has no reality nor perfection above the false idea (since they are distinguished by an external sign alone), and consequently the man who has true ideas will have no greater reality or perfection than he who has false ideas only. I consider, too, that I have already replied to those who inquire why men have false ideas, and how a man can certainly know that he has ideas which agree with those things of which they are the ideas. For with regard to the difference between a true and a false idea, it is evident. . . that the former is related to the latter as being is to non-being. . . . With regard to . . . how a man can know that he has an idea which agrees with (that of which it is the idea—I have shown almost more times than enough that he knows it simply because he has an idea which agrees with that of which it is the idea, that is to say, because truth is its own standard. We must remember, besides, that our mind, in so far as it truly perceives things, is a part of the infinite intellect of God, and therefore it must be that the clear and distinct ideas of (our) mind are as true as those of God.

Spinoza, Ethics, II, Prop. 43; Schol.

75 For Truth has such a face and such a mien,
As to be lov'd needs only to be seen.

Dryden, The Hind and the Panther, I, 33

76 There are... two kinds of *truths*, those of *reasoning* and those of *fact*. Truths of reasoning are necessary and their opposite is impossible: truths of fact are contingent and their opposite is possible. When a truth is necessary, its

reason can be found by analysis, resolving it into more simple ideas and truths, until we come to those which are primary.

Leibniz, Monadology, 33

77 the truth certainly would do well enough if she were once left to shift for herself. She seldom has received anti, I fear, never will receive much assistance from the power of great men, to whom she is but rarely known and more rarely welcome. She is not taught by laws, nor has she any need of force to procure her entrance into the minds of men. Errors, indeed, prevail by the assistance of foreign and borrowed succours. But if Truth makes not her way into the understanding by her own light, she will be but the weaker for any borrowed force violence can add to her.

Locke, Letter Concerning Toleration

7B The imputation of Novelty is a terrible charge amongst those who judge of men's heads, as they do of their perukes, by the fashion, and can allow none to be right but the received doctrines. Truth scarce ever yet carried it by vote anywhere at its first appearance: new opinions are always suspected, and usually opposed, without any other reason but because they are not already common. But truth, like gold, is not the less so for being newly brought out of the mine. It is trial and examination must give it price, and not any antique fashion; and though it be not yet current by the public stamp, yet it may, for all that, be as old as nature, and is certainly not the less genuine.

Locke, Concerning Human Understanding, Dedication

79 Though, in compliance with the ordinary way of speaking, I have shown in what sense and upon what ground our ideas may be sometimes called true or false; yet if we will look a little nearer into the matter, in all cases where any idea is called true or false, it is from some judgment that the mind makes, or is supposed to make, that is true or false. For truth or falsehood, being never without some affirmation or negation, express or tacit, it is not to be found but where signs are joined or separated, according to the agreement or disagreement of the things they stand for. The signs we chiefly use are either ideas or words; wherewith we make either mental or verbal propositions. Truth lies in so joining or separating these representatives, as the things they stand for do in themselves agree or disagree; and falsehood in the contrary.

Locke, Concerning Human Understandings Bk. II, XXXII,
19

80 He that would seriously set upon the search of truth ought in the first place to prepare his mind with a love of it. For he that loves it not will not take much pains to get it; nor be much concerned when he misses it. There is nobody in the commonwealth of learning who does not profess himself a lover of truth: and there is not a rational creature that would not take it amiss to be thought otherwise of. And yet, for all this, one may truly say, that there are very few lovers of truth, for truth's sake, even amongst those who persuade themselves that they are so. How a man may know whether he be so in earnest, is worth inquiry: and I think there is one unerring mark of it, viz. The not entertaining any proposition with greater assurance than the proofs it is built upon will warrant.

Whoever goes beyond this measure of assent, it is plain, receives not the truth in the love of it; loves not truth for truth's sake, but for some other bye-end.

Locke, Concerning Human Understanding, Bk. IV, XIX, 1

- 81 He must surely be either very weak, or very little acquainted with the sciences, who shall reject a truth that is capable of demonstration, for no other reason but because it is newly known, and contrary to the prejudices of mankind.

Berkeley, Principles of Human Knowledge, Pref.

- 82 My master heard me with great appearances of uneasiness in his countenance; because *doubting* or *not believing*, are so little known in this country, that the inhabitants cannot tell how to behave themselves under such circumstances. And I remember in frequent discourses with my master concerning the nature of manhood, in other parts of the world, having occasion to talk of *lying* and *false representation*, it was with much difficulty that he comprehended what I meant; although he had otherwise a most acute judgment. For he argued thus; that the use of speech was to make us understand one another, and to receive information of facts; now if any one *said the thing which was not*, these ends were defeated; because I cannot properly be said to understand him; and I am so far from receiving information, that he leaves me worse than in ignorance; for I am led to believe a thing *black*, when it is *white*; and *short*, when it is *long*. And these were all the notions he had concerning that faculty of lying, so perfectly well

understood, and so universally practised among human creatures.

Swift, Gulliver's Travels, IV, 4

83 He who tells a lie is not sensible of how great a task he undertakes; for he must be forced to invent twenty more to maintain that one.

Pope, Thoughts on Various Subjects

84 There are certain times when most people are in a disposition of being informed, and 'tis incredible what a vast good a little truth might do, spoken in such seasons.

Pope, Letter to William Wycherley (June 23, 1705)

85 'Tis certain we cannot take pleasure in any discourse, where our judgment gives no assent to those images which are presented to our fancy. The conversation of those, who have acquir'd a habit of lying, tho' in affairs of no moment, never gives any satisfaction; and that because those ideas they present to us, not being attended with belief, make no impression upon the mind. Poets themselves, tho' liars by profession, always endeavour to give an air of truth to their fictions; and where that is totally neglected, their performances, however ingenious, will never be able to afford much pleasure. In short, we may observe, that even when ideas have no manner of influence on the will as passions, truth and reality are still requisite, in order to make them entertaining to the imagination.

Hume, Treatise of Human Nature, Bk. I, III, 10

86 Reason is the discovery of truth or falshood. Truth or falshood consists in an agreement or disagreement either to the *real* relations of ideas, or to *real* existence and matter of fact. Whatever, therefore, is not susceptible of this agreement or disagreement, is incapable of being true or false, and can never be an object of our reason.

Hume, Treatise of Human Nature, Bk. III, I, 1

87 Mr. Allworthy rightly observed, that there was a great difference between being guilty of a falsehood to excuse yourself, and to excuse another.

Fielding, Tom Jones, III, 5

88 The elegant Lord Shaftesbury somewhere objects to telling too much truth: by which it may be fairly inferred, that, in some cases, to lie is not only excusable, but commendable.

And surely there are no persons who may so properly challenge a right to this commendable deviation from truth, as young women in the affair of love; for which they may plead precept, education, and above all, the sanction, nay, I may say the necessity of custom, by which they are restrained, not from submitting to the honest impulses of nature (for that would be a foolish prohibition), but from owning them.

Fielding, Tom Jones, XIII, 12

89 Humanly speaking, let us define truth, while waiting for a better definition, as—"a statement of the facts as they are."

Voltaire, Philosophical Dictionary: Truth

90 There are truths which are not for all men, nor for all occasions.

Voltaire, Letter to Cardinal de Bernis (Apr, 23, mi)

91 Truth is a fruit which should not be plucked until it is quite ripe.

Voltaire, Letter to Countess de Barcewitz (Dec. 24, 1761)

92 Between falsehood and useless truth there is little difference. As gold which he cannot spend will make no man rich, so knowledge which he cannot apply will make no man wise.

Johnson, Idler No. 84

93 "Pilgrimage," said Imlac, "like many other acts of piety, may be reasonable or superstitious, according to the principles upon which it is performed. Long journeys in search of truth are not commanded. Truth, such as is necessary to the regulation of life, is always found where it is honestly sought."

Johnson, Rasselas, XI

94 *Goldsmith*. "There are people who tell a hundred political lies every day, and are not hurt by it. Surely, then, one may tell truth with safety'. *Johnson*. "Why, Sir, in the first place, he w'ho tells a hundred lies has disarmed the force of his Hes. But besides; a man had rather have a hundred lies told of him, than one truth which he does not wish should be told," *Goldsmith*. "For my part, I'd tell truth, and shame the devil," *Johnson*. "Yes, Sir; but the devil will be angry'. I wish to shame the devil as much as you do, but I should choose to be out of the reach of his claws."

Goldsmith. "His claws can do you no harm, when you have the shield of truth."

Boswell, Life of Johnson (Apr. 15, 1773)

95 *Johnson.* Nobody has a right to put another under such a difficulty, that he must either hurt the person by telling the truth, or hurt himself by telling what is not true.

Boswell, Life of Johnson (Apr. 25, 1778)

96 We talked of the casuistical question. Whether it was allowable at any time to depart from *Truth?* *Johnson.* "The general rule is, that Truth should never be violated, because it is of the utmost importance to the comfort of life, that we should have a full security by mutual faith; and occasional inconveniences should be willingly suffered that we may preserve it. There must, however, be some exceptions. If, for instance, a murderer should ask you which way a man is gone, you may tell him what is not true, because you are under a previous obligation not to betray a man to a murderer.... But I deny the lawfulness of telling a lie to a sick man for fear of alarming him. You have no business with consequences; you are to tell the truth. Besides, you are not sure what effect your telling him that he is in danger may have. It may bring his distemper to a crisis, and that may cure him. Of all lying, I have the greatest abhorrence of this, because I believe it has been frequently practised on myself."

I cannot help thinking that there is much weight in the opinion of those who have held, that Truth, as an eternal and immutable principle, ought, upon no account whatever, to be violated, from supposed previous or

superiour obligations, of which every man being to judge for himself, there is great danger that we too often, from partial motives, persuade ourselves that they exist; and probably whatever extraordinary instances may sometimes occur, where some evil may be prevented by violating this noble principle, it would be found that human happiness would, upon the whole, be more perfect were Truth universally preserved.

Boswell, Life of Johnson (June 13, 1784)

- 97 The protestant and philosophic readers of the present age will incline to believe that, in the account of his own conversion, Constantine attested a wilful falsehood by a solemn and deliberate perjury. They may not hesitate to pronounce that, in the choice of a religion, his mind was determined only by a sense of interest; and that ... he used the altars of the church as a convenient footstool to the throne of the empire. A conclusion so harsh and so absolute is not, however, warranted by our knowledge of human nature, of Constantine, or of Christianity. In an age of religious fervour the most artful statesmen are observed to feel some part of the enthusiasm which they inspire; and the most orthodox saints assume the dangerous privilege of defending the cause of truth by the arms of deceit and falsehood. Personal interest is often the standard of our belief, as well as of our practice; and the same motives of temporal advantage which might influence the public conduct and professions of Constantine would insensibly dispose his mind to embrace a religion so propitious to his fame and fortunes. His vanity was gratified by the flattering assurance that *he* had been chosen by Heaven to reign over the earth: success had justified his divine title to the throne, and

that title was founded on the truth of the Christian revelation. As real virtue is sometimes excited by undeserved applause, the specious piety of Constantine, if at first it was only specious, might gradually, by the influence of praise, of habit, and of example, be matured into serious faith and fervent devotion.

Gibbon, Decline and Fall of the Roman Empire, XX

98 It is a humiliating consideration for human reason that it is incompetent to discover truth by means of pure speculation, but, on the contrary, stands in need of discipline to check its deviations from the straight path and to expose the illusions which it originates. But, on the other hand, this consideration ought to elevate and to give it confidence, for this discipline is exercised by itself alone, and it is subject to the censure of no other power. The bounds, moreover, which it is forced to set to its speculative exercise, form likewise a check upon the fallacious pretensions of opponents; and thus what remains of its possessions, after these exaggerated claims have been disallowed, is secure from attack or usurpation. The greatest, and perhaps the only, use of all philosophy of pure reason is, accordingly, of a purely negative character. It is not an organon for the extension, but a discipline for the determination, of the limits of its exercise; and without laying claim to the discovery of new truth, it has the modest merit of guarding against error.

Kant, Critique of Pure Reason, Transcendental Method

99 Truth can never be told so as to be understood, and not be believ'd.

Blake, Marriage of Heaven and Hell, 10

100 Veracity does not consist in saying, but in the intention of communicating, truth.

Coleridge, Biographia Literaria, IX

101 And, after all, what is a lie? 'T is but
The truth in masquerade; and I defy
Historians, heroes, lawyers, priests, to put
A fact without some leaven of a lie.

Byron, Don Juan, XI, 37

102 'Tis strange,—but true; for truth is always strange;
Stranger than fiction; if it could be told,
How much would novels gain by the exchange!
How differently the world would men behold!

Byron, Don Juan, XIV, 101

103 Truth is most beautiful undraped; and the impression it makes is deep in proportion as its expression has been simple. This is so partly because it then takes unobstructed possession of the hearer's whole soul, and leaves him no by-thought to distract him; partly, also, because he feels that here he is not being corrupted or cheated by the arts of rhetoric, but that all the effect of what is said comes from the thing itself.

Schopenhauer, Some Forms of Literature

104 If you have reason to suspect that a person is telling you a lie, look as though you believed every word he said. This will give him courage to go on; he will become more vehement in his assertions and in the end betray himself.

Schopenhauer, Our Relation to Others

105 The true must essentially be regarded as in conflict with this world; the world has never been so good, and will never become so good, that the majority will desire the truth, or have the true conception of it in such a way that its proclamation must consequently immediately gain the support of everyone. No, he who will proclaim some truth in truth, must prepare himself in some other way than by the help of such a foolish expectation; he must be willing essentially to relinquish the immediate.

Kierkegaard, Works of Love, II, 10

106 Truth is such a fly-away, such a sly-boots, so untransportable and unbarrelable a commodity, that it is as bad to catch as light.

Emerson, Literary Ethics

107 The soul is the perceiver and revealer of truth. we know truth when we see it, let sceptic and scoffer say what they choose. Foolish people ask you, when you have spoken what they do not wish to hear, 'How do you know it is truth, and not an error of your own?' We know truth when we see it, from opinion, as we know when we are awake that we are awake.... We are wiser than we know.

Emerson, The Over-Soul

108 God offers to every mind its choice between truth and repose. Take which you please—you can never have both.

Emerson, Intellect

109 "Jonah did the Almighty's bidding. And what was that, shipmates? To preach the truth to the face of Falsehood! That was it!

"This, shipmates, this is that other lesson; and woe to that pilot of the living God who slights it. Woe to him whom this world charms from Gospel duty! Woe to him who seeks to pour oil upon the waters when God has brewed them into a gale! Woe to him who seeks to please rather than to appal! Woe to him whose good name is more to him than goodness! Woe to him who, in this world, courts not dishonour! Woe to him who would not be true, even though to be false were salvation! Yea, woe to him who, as the great Pilot Paul has it, while preaching to others is himself a castaway!"

He dropped and fell away from himself for a moment; then lifting his face to them again, showed a deep joy in his eyes, as he cried out with a heavenly enthusiasm,—"but oh! shipmates! on the starboard hand of every woe, there is a sure delight; and higher the top of that delight, than the botton of the woe is deep. Is not the maintruck higher than the kelson is low? Delight is to him—a far, far upward, and inward delight—who against the proud gods and commodores of this earth, ever stands forth his own inexorable self. Delight is to him whose strong arms yet support him, when the ship of this base treacherous world has gone down beneath him. Delight is to him, who gives no quarter in the truth, and kill, burns, and destroys all sin though he pluck it out from under the robes of Senators and Judges. Delight,—top-gallant delight is to him, who acknowledges no law or lord, but the Lord his God, and is only a patriot to heaven. Delight is to him, whom all the waves of the billows of the seas of the boisterous mob can never shake from this sure Keel of

the Ages. And eternal delight and deliciousness will be his, who coming to lay him down, can say with his final breath—O Father!— chiefly known to me by Thy rod— mortal or immortal, here I die. I have striven to be Thine, more than to be this world's, or mine own. Yet this is nothing; I leave eternity to Thee; for what is man that he should live out the lifetime of his God?"

Melville, Moby Dick, IX

110 The symmetry of form attainable in pure fiction cannot so readily be achieved in a narration essentially having less to do with fable than with fact. Truth uncompromisingly told will always have its ragged edges; hence the conclusion of such a narration is apt to be less finished than an architectural finial.

Melville, Billy Budd

111 The wildest dreams of wild men, even, are not the less true, though they may not recommend themselves to the sense which is most common among Englishmen and Americans to-day. It is not every truth that recommends itself to the common sense. Nature has a place for the wild clematis as well as for the cabbage. Some expressions of truth are reminiscent,—others merely sensible, as the phrase is,—others prophetic.

Thoreau, Walking

112 No face which we can give to a matter will stead us so well at last as the truth. This alone wears well. For the most part, we are not where we are, but in a false position. Through an infirmity of our natures, we suppose a case, and put ourselves into it, and hence are in two

cases at the same time, and it is doubly difficult to get out. In sane moments we regard only the facts, the case that is. Say what you have to say, not what you ought. Any truth is better than make-believe.

Thoreau, Walden: Conclusion

113 If some great Power would agree to make me always think what is true and do what is right, on condition of being turned into a sort of clock and wound up every morning before I got out of bed, I should instantly close with the offer.

T. H. Huxley, Descartes' "Discourse on Method"

114 History warns us... that it is the customary fate of new truths to begin as heresies and to end as superstitions.

T. H. Huxley, The Coming of Age of "The Origin of Species"

115 Time, whose tooth gnaws away everything else, is powerless against truth.

T. H. Huxley, Administrative Nihilism

116 It is a piece of idle sentimentality that truth, merely as truth, has any inherent power denied to error of prevailing against the dungeon and the stake. Men are not more zealous for truth than they often are for error, and a sufficient application of legal or even of social penalties will generally succeed in stopping the propagation of either. The real advantage which truth has consists in this, that when an opinion is true, it may be extinguished once, twice, or many times, but in the course of ages there will generally be found persons to

rediscover it, until some one of its reappearances falls on a time when from favourable circumstances it escapes persecution until it has made such head as to withstand all subsequent attempts to suppress it.

Mill, On Liberty, II

117 No one can be a great thinker who does not recognise, that as a thinker it is his first duty to follow his intellect to whatever conclusions it may lead. Truth gains more even by the errors of one who, with due study and preparation, thinks for himself, than by the true opinions of those who only hold them because they do not suffer themselves to think. Not that it is solely, or chiefly, to form great thinkers, that freedom of thinking is required. On the contrary, it is as much and even more indispensable to enable average human beings to attain the mental stature which they are capable of. There have been, and may again be, great individual thinkers in a general atmosphere of mental slavery. But there never has been, nor ever will be, in that atmosphere an intellectually active people. Where any people has made a temporary approach to such a character, it has been because the dread of heterodox speculation was for a time suspended. Where there is a tacit convention that principles are not to be disputed; where the discussion of the greatest questions which can occupy humanity is considered to be closed, we cannot hope to find that generally high scale of mental activity which has made some periods of history so remarkable.

Mill, On Liberty, II

118 On every subject on which difference of opinion is possible, the truth depends on a balance to be struck between two sets of conflicting reasons.

Mill, On Liberty, II

119 Truth, in the great practical concerns of life, is so much a question of the reconciling and combining of opposites, that very few have minds sufficiently capacious and impartial to make the adjustment with an approach to correctness, and it has to be made by the rough process of a struggle between combatants fighting under hostile banners.

Mill, On Liberty, II

120 The essence of lying is in deception, not in words; a lie may be told by silence, by equivocation, by the accent on a syllabic, by a glance of the eye attaching a peculiar significance to a sentence; and all these kinds of lies are worse and baser by many degrees than a lie plainly worded; so that no form of blinded conscience is so far sunk as that which comforts itself for having deceived, because the deception was by gesture or silence, instead of utterance; and, finally, according to Tennyson's deep and trenchant line, "A lie which is half a truth is ever the worst of lies."

Ruskin, Modern Painters, Pt. IX, 7

121 "I should never dare to say that I know the truth," said the Mason, whose words struck Pierre more and more by their precision and firmness. "No one can attain to truth by himself. Only by laying stone on stone with the cooperation of all, by the millions of generations from our

forefather Adam to our own times, is that temple reared which is to be a worthy dwelling place of the Great God," he added, and closed his eyes.

Tolstoy, War and Peace, V, 2

122 If we would only stop lying, if we would only testify to the truth as we see it, it would turn out at once that there are hundreds, thousands, even millions of men just as we are, who see the truth as we do, are afraid as we are of seeming to be singular by confessing it, and are only waiting, again as we are, for some one to proclaim it.

Tolstoy, The Kingdom of God Is Within You

123 The person who confesses that there is such a thing as truth, which is distinguished from falsehood simply by this, that if acted on it should, on full consideration, carry us to the point we aim at and not astray, and then, though convinced of this, dares not know the truth and seeks to avoid it, is in a sorry state of mind indeed.

C. S. Peirce, Fixation of Belief

124 Truths, on the average, have a greater tendency to get believed than falsities have. Were it otherwise, considering that there are myriads of false hypotheses to account for any given phenomenon, against one sole true one (or if you will have it so, against every true one), the first step toward genuine knowledge must have been next door to a miracle.

C. S. Peirce, What Pragmatism Means

125 You don't know about me without you have read a book by the name of *The Adventures of Tom Sawyer*; but that

ain't no matter. That book was made by Mr. Mark Twain, and he told the truth, mainly. There was things which he stretched, but mainly he told the truth. That is nothing. I never seen anybody but lied one time or another.

Mark Twain, Huckleberry Finn, 1

126 One of the most striking differences between a cat and a lie is that a cat has only nine lives.

Mark Twain, Pudd'nhead Wilson's Calendar, VII

127 When in doubt tell the truth.

Mark Twain, Pudd'nhead Wilson's New Calendar, II

128 The most common lie is the lie one tells to oneself; lying to others is relatively the exception.

Nietzsche, Antichrist, LV

129 Hands off: neither the whole of truth nor the whole of good is revealed to any single observer, although each observer gains a partial superiority of insight from the peculiar position in which he stands. Even prisons and sickrooms have their special revelations. It is enough to ask of each of us that he should be faithful to his own opportunities and make the most of his own blessings, without presuming to regulate the rest of the vast field.

William James, On a Certain Blindness in Human Beings

130 Our belief in truth itself, for instance, that there is a truth, and that our minds and it are made for each other—what is it but a passionate affirmation of desire, in which our social system backs us up? we want to have a truth; we want to believe that our experiments and

studies and discussions must put us in a continually better and better position towards it; and on this line we agree to fight out our thinking lives. But if a Pyrrhonic skeptic asks us how we know all this, can our logic find a reply? No! certainly it cannot. It is just one volition against another—we willing to go in for life upon a trust or assumption which he, for his part, does not care to make.

William James, The Will to Believe

131 *The true is the name of whatever proves itself to be good in the way of belief and good, too, for definite, assignable reasons.* Surely you must admit this, that if there were no good for life in true ideas, or if the knowledge of them were positively disadvantageous and false ideas the only useful ones, then the current notion that truth is divine and precious, and its pursuit a duty, could never have grown up or become a dogma. In a world like that, our duty would be to shun truth, rather. But in this world, just as certain foods are not only agreeable to our taste, but good for our teeth, our stomach, and our tissues; so certain ideas are not only agreeable to think about, or agreeable as supporting other ideas that we are fond of, but they are also helpful in life's practical struggles. If there be any life that it is really better we should lead, and if there be any idea which, if believed in, would help us to lead that life, then it would be really *better for us* to believe in that idea, *unless, indeed, belief in it incidentally clashed with other greater vital benefits.*

"What would be better for us to believe!" This sounds very like a definition of truth. It comes very near to saying "what we ought to believe"; and in that definition

none of you would find any oddity. Ought we ever not to believe what it is better for us to believe? And can we then keep the notion of what is better for us, and what is true for us, permanently apart?

Pragmatism says no, and I fully agree with her.

William James, Pragmatism, II

132 New truths thus are resultants of new experiences and of old truths combined and mutually modifying one another. And since this is the case in the changes of opinion of today, there is no reason to assume that it has not been so at all times. It follows that very ancient modes of thought may have survived through all the later changes in men's opinions. The most primitive ways of thinking may not yet be wholly expunged. Like our five fingers, our ear bones, our rudimentary caudal appendage, or our other 'vestigial' peculiarities, they may remain as indelible tokens of events in our race history. Our ancestors may at certain moments have struck into ways of thinking which they might conceivably not have found. But once they did so, and after the fact, the inheritance continues. When you begin a piece of music in a certain key, you must keep the key to the end. You may alter your house ad libitum, but the ground plan of the first architect persists—you can make great changes, but you cannot change a Gothic church into a Doric temple. You may rinse and rinse Ac bottle, but you can't get the taste of the medicine or whiskey that first filled it wholly out.

My thesis now is this, that *our fundamental ways of thinking about things are discoveries of exceedingly remote ancestors, which have been able to preserve themselves throughout the experience of all subsequent*

time. They form one great stage of equilibrium in the human mind's development, the stage of common sense. Other stages have grafted themselves upon this stage, but have never succeeded in displacing it.

William James, Pragmatism, V

133 Pragmatism... asks its usual question. "Grant an idea or belief to be true," it says, "what concrete difference will its being true make in anyone's actual life? How will the truth be realized? What experiences will be different from those which would obtain if the belief were false? What, in short, is the truth's cash value in experiential terms?"

The moment pragmatism asks this question, it sees the answer: *True ideas are those that we can assimilate, validate, corroborate, and verify. False ideas are those that we cannot.* That is the practical difference it makes to us to have true ideas; that, therefore, is the meaning of truth, for it is all that truth is known as.

William James, Pragmatism, VI

134 *'The true,' to put it very briefly, is only the expedient in the way of our thinking, just as 'the right' is only the expedient in the way of our behaving.* Expedient in almost any fashion; and expedient in the long run and on the whole of course; for what meets expediently all the experience in sight won't necessarily meet all farther experiences equally satisfactorily. Experience, as we know, has ways of boiling over, and making us correct our present formulas.

The 'absolutely' true, meaning what no farther experience will ever alter, is that ideal vanishing point toward which we imagine that all our temporary truths

will some day converge. It runs on all fours with the perfectly wise man, and with the absolutely complete experience; and, if these ideals are ever realized, they will all be realized together. Meanwhile we have to live today by what truth we can get today, and be ready tomorrow to call it falsehood. Ptolemaic astronomy. Euclidean space, Aristotelian logic, scholastic metaphysics, were expedient for centuries, but human experience has boiled over those limits, and we now call these things only relatively true, or true within those borders of experience. 'Absolutely' they are false; for we know that those limits were casual, and might have been transcended by past theorists just as they are by present thinkers.

William James, Pragmatism, VI

135 *The Truth*: what a perfect idol of the rationalistic mind! I read in an old letter—from a gifted friend who died too young—these words: "In everything, in science, art, morals, and religion, there must be one system that is right and every other wrong." How characteristic of the enthusiasm of a certain stage of youth! At twenty-one we rise to such a challenge and expect to find the system. It never occurs to most of us even later that the question "what is *the* truth?" is no real question (being irrelative to all conditions) and that the whole notion of *the* truth is an abstraction from the fact of truths in the plural, a mere useful summarizing phrase like the Latin Language or *the* Law.

William James, Pragmatism, VII

136 The search for truth should be the goal of our activities; it is the sole end worthy of them. Doubtless we should first bend our efforts to assuage human suffering, but why? Not to suffer is a negative ideal more surely attained by the annihilation of the world. If we wish more and more to free man from material cares, it is that he may be able to employ the liberty obtained in the study and contemplation of truth.

But sometimes truth frightens us. And in fact we know that it is sometimes deceptive, that it is a phantom never showing itself for a moment except to ceaselessly flee, that it must be pursued further and ever further without ever being attained. Yet to work one must stop, as some Greek, Aristotle or another, has said. We also know how cruel the truth often is, and we wonder whether illusion is not more consoling, yea, even more bracing, for illusion it is which gives confidence. When it shall have vanished, will hope remain and shall we have the courage to achieve? Thus would not the horse harnessed to his treadmill refuse to go, were his eyes not bandaged? And then to seek truth it is necessary to be independent, wholly independent. If, on the contrary, we wish to act, to be strong, we should be united. This is why many of us fear truth; we consider it a cause of weakness. Yet truth should not be feared, for it alone is beautiful.

When I speak here of truth, assuredly I refer first to scientific truth; but I also mean moral truth, of which what we call justice is only one aspect. It may seem that I am misusing words, that I combine thus under the same name two things having nothing in common; that scientific truth, which is demonstrated, can in no way be likened to moral truth, which is felt. And yet I can not separate them, and whosoever loves the one can not help

loving the other. To find the one, as well as to find the other, it is necessary to free the soul completely from prejudice and from passion; it is necessary to attain absolute sincerity. These two sorts of truth when discovered give the same joy; each when perceived beams with the same splendor, so that we must see it or close our eyes. Lastly, both attract us and flee from us; they are never fixed: when we think to have reached them, we find that we have still to advance, and he who pursues them is condemned never to know repose. It must be added that those who fear the one will also fear the other; for they are the ones who in everything are concerned above all with consequences. In a word, I liken the two truths, because the same reasons make us love them and because the same reasons make us fear them.

Poincare, Value of Science, Intro.

137 Truth telling is not compatible with the defence of the realm.

Shaw, Heartbreak House, Pref.

138 *Keegan*. My way of joking is to tell the truth. It's the funniest joke in the world.

Shaw, John Bull's Other Island, II

139 Truth is a qualification which applies to Appearance alone. Reality is just itself, and it is nonsense to ask whether it be true or false. Truth is the conformation of Appearance to Reality. This conformation may be more or less, also direct or indirect. Thus Truth is a generic quality with a variety of degrees and modes. In the Law-Courts, the wrong species of Truth may amount to perjury. For

example, a portrait may be so faithful as to deceive the eye. Its very truthfulness then amounts to deception. A reflexion in a mirror is at once a truthful appearance and a deceptive appearance. The smile of a hypocrite is deceptive, and that of a philanthropist may be truthful. But both of them were truly smiling.

Whitehead, Adventures of Ideas, XVI, 2

140 Every belief which is not merely an impulse to action is in the nature of a picture, combined with a yes-feeling or a no-feeling; in the case of a yes-feeling it is "true" if there is a fact having to the picture the kind of similarity that a prototype has to an image; in the case of a no-feeling it is "true" if there is no such fact, A belief which is not true is called "false."

This is a definition of "truth" and "falsehood."

Russell, Human Knowledge, II, 11

141 The most mordant verities are heard at last, after the interests they injure and the emotions they rouse have exhausted their frenzy.

Freud, Future of Psycho-Analytic Therapy

142 The simplest explanation is not always the right one, truth is very often not simple.

*Freud, New Introductory Lectures on Psycho-Analysis,
XXX*

143 The ordinary man knows only one *truth* —truth in the ordinary sense of the word. What may be meant by a higher, or a highest, truth, he cannot imagine. Truth seems to him as little capable of having degrees as

death, and the necessary leap from the beautiful to the true is one that he cannot make. Perhaps you will agree with me in thinking that he is right in this.

*Freud, New Introductory Lectures on Psycho-Analysis,
XXXV*

144 For ordinary purposes, that is for practical purposes, the truth and the realness of things are synonymous. We are all children who say "really and truly." A reality which is taken in organic response so as to lead to subsequent reactions that are off the track and aside from the mark, while it is, existentially speaking, perfectly real, is not good reality. It lacks the hallmark of value. Since it is a certain kind of object which we want, one which will be as favorable as possible to a consistent and liberal or growing functioning, it is this kind, the true kind, which for us monopolizes the title of reality. Pragmatically, teleologically, this identification of truth and "reality" is sound and reasonable: rationalistically, it leads to the notion of the duplicate versions of reality, one absolute and static because exhausted; the other phenomenal and kept continually on the jump because otherwise its own inherent nothingness would lead to its total annihilation. Since it is only genuine or sincere things, things which are good for what they lay claim to in the way of consequences, which we want or are after, *morally* they alone are "real."

Dewey, Practical Character of Reality

145 To generalize the recognition that the true means the verified and means nothing else places upon men the responsibility for surrendering political and moral

dogmas, and subjecting to the test of consequences their most cherished prejudices. Such a change involves a great change in the seat of authority and the methods of decision in society.

Dewey, Reconstruction in Philosophy, VI

146 An a priori true thought would be one whose possibility guaranteed its truth.

We could only know a priori that a thought is true if its truth was to be recognized from the thought itself (without an object of comparison).

Wittgenstein, Tractatus Logico-Philosophicus, 3.04-3.05

147 What is the function of philosophy? To disclose the absolute truth? But is it credible that the absolute truth should descend into the thoughts of a mortal creature, equipped with a few special senses and with a biased intellect, a man lost amidst millions of his fellows and a prey to the epidemic delusions of the race? Possession of the absolute truth is not merely by accident beyond the range of particular minds; it is incompatible with being alive, because it excludes any particular station, organ, interest, or date of survey: the absolute truth is undiscoverable just because it is not a perspective, Perspectives are essential to animal apprehension; an observer, himself a part of the world he observes, must have a particular station in it; he cannot be equally near to everything, nor internal to anything but himself; of the rest he can only take views, abstracted according to his sensibility and foreshortened according to his interests. Those animals which I was supposing endowed with an adequate philosophy surely do not possess the absolute

truth. They read nature in their private idioms. Their imagination, like the human, is doubtless incapable of coping with all things at once, or even with the whole of anything natural. Mind was not created for the sake of discovering the absolute truth. The absolute truth has its own intangible reality, and scorns to be known.

Santayana, Realms of Being, Pref.

148 Not the assertion as a psychological fact is true, but only that which it asserts: and the difference in quality and value between true ideas and false ideas, taken as states of mind, is a moral difference: the true ideas being safer and probably clearer and more humorous than the false, and marking a success on the mind's part in understanding the world, whereas false ideas would mark a failure.

Santayana, Realm of Truth, V

149 Truth is . . . , not discoverable at all without some vital moral impulse prompting to survey it, and some rhetorical or grammatical faculty, synthesizing that survey and holding it up to attention in the form of a recognizable essence. Dramatic myth, however poetical it may be or merely analogous to the facts, in that at least it responds to the facts reflectively, has entered the arena of truth; it is more cognitive, more intelligent, and more useful than a mechanical record of those facts without any moral synthesis. I think it very doubtful whether, if religion and poetry should dry up altogether, mankind would be nearer the truth; or whether science would gain anything by correcting its philosophical pretensions, for instance the pretension to truth, in order to become

merely the technology of the mechanical arts. Certainly nothing would be gained intellectually: and if we condemned intelligence, as well as imagination, to ticking like a clock, if not to total silence, we might outrage human nature too deeply, and provoke a violent reaction. It is more prudent for the critic of illusion to consider the truth that myth may possess rather than to attempt to escape from myth altogether.

Santayana, Realm of Truth, VII

150 The love of truth is often mentioned, the hatred of truth hardly ever, yet the latter is the commoner. People say they love the truth when they pursue it, and they pursue it when unknown: not therefore because of any felt affinity to it in their souls, but probably because they need information for practical purposes, or to solve some conventional riddle. Where known, on the contrary, truth is almost always dismissed or disguised, because the aspect of it is hateful. And this apart from any devilish perversity in the natural man, or accidental vices that may fear the light. On the contrary, the cause is rather the natural man's innocence and courage in thinking himself the measure of all things. Life imposes selfish interests and subjective views on every inhabitant of earth; and in hugging these interests and these views the man hugs what he initially assumes to be the truth and the right. So that aversion from the real truth, a sort of antecedent hatred of it as contrary to presumption, is interwoven into the very fabric of thought.

Santayana, Realm of Truth, XII

151 There is no difficulty in understanding what is meant by the notion of truth. What is a true or truthful word? A word which expresses, as it really is, the speaker's thought; a word in conformity with that thought. What, then, is a true thought? A thought which represents, as it really is, the thing to which it refers; a thought in conformity with that thing. We therefore conclude that *truth in the mind consists in its conformity with the thing.*

It is impossible to define truth otherwise without lying to ourselves, without falsifying the notion of truth of which in practice we make use in the living exercise of our intelligence, each time that we think.

We may further remark that a thought false in all its constituents is an impossibility for, being in conformity with nothing whatsoever, it would be the zero of thought. If, for instance, I affirm that stones have a soul, this is undoubtedly a complete error. But it is true that stones exist, true also that certain beings have a soul; that is to say, all the constituents which compose this false thought are not false. Therefore error itself presupposes truth.

Maritain, Introduction to Philosophy, II, 4

152 All views are only probable, and a doctrine of probability which is not bound to a truth dissolves into thin air. In order to describe the probable, you must have a firm hold on the true. Therefore, before there can be any truth whatsoever, there must be an absolute truth.

Sartre, Existentialism

6.4 Error, Ignorance, and the Limits of Human Knowledge

The mind that is in error about a certain matter and the mind that is ignorant of it are both in want of knowledge, but they do not stand in the same relation to the knowledge that they lack. To be in error is to claim to know what one does not know. It is, therefore, an unacknowledged ignorance of the matter in question, combined with a false presumption. In contrast, ignorance is simply a privation of knowledge unaccompanied by any pretension to know. Hence, from the point of view of the teacher, as Socrates suggests, ignorance is preferable to error, and especially an acknowledged ignorance—an explicit recognition that one does not know.

The passages collected here ring all the changes on these states of mind and point out their implications not only for teaching and learning, but also for the development of knowledge itself. On any point in question, there can be a multiplicity of errors all opposed to a single truth; and the sources or causes of error are also multitudinous. Writers such as Descartes and Bacon, who are concerned with rules for the proper conduct of the mind's efforts in seeking knowledge, therefore undertake to specify the pitfalls and stumbling blocks that must be avoided in order to steer clear of error.

Error, manifesting the fallibility of the human mind, and ignorance, betokening its failure to know, enter into the consideration of the question concerning the limits of human knowledge, discussed in a number of the quotations assembled here. What is the line that divides the unknown from the unknowable? Is the unknowable unknowable in

itself or only to us because of the weakness of our intellects? Can the mind establish for itself the boundaries of attainable knowledge, and safeguard itself against the illusory pursuit of the unknowable beyond those borders? To questions of this sort, the writers quoted offer an interesting diversity of answers.

■ ■ ■

- 1 *Agamemnon*. Delusion is the elder daughter of Zeus, the accursed
who deludes all; her feet are delicate and they step not
on the firm earth, but she walks the air above men's
heads
and leads them astray.

Homer, Iliad, XIX, 91

- 2 *Teiresias*. All men may err
but error once committed, he's no fool
nor yet unfortunate, who gives up his stiffness
and cures the trouble he has fallen in.
Stubbornness and stupidity are twins.

Sophocles, Antigone, 1023

- 3 *Ajax*. Not knowing anything's the sweetest life— Ignorance
is an evil free from pain.

Sophocles, Ajax, 554

- 4 *Diotima*. Herein is the evil of ignorance, that he who is
neither good nor wise is nevertheless satisfied with

himself: he has no desire for that of which he feels no want.

Plato, Symposium, 204A

5 *Socrates*. Do you see, Meno, what advances he [the slave boy] has made in his power of recollection? He did not know at first, and he does not know now, what is the side of a figure of eight feet: but then he thought that he knew, and answered confidently as if he knew, and had no difficulty; now he has a difficulty, and neither knows nor fancies that he knows.

Meno. True.

Soc. Is he not better off in knowing his ignorance?

Men. I think that he is.

Soc. If we have made him doubt, and given him the “torpedo’s shock,” have we done him any harm?

Men. I think not.

Soc. We have certainly, as would seem, assisted him in some degree to the discovery of the truth; and now he will wish to remedy his ignorance, but then he would have been ready to tell all the world again and again that the double space should have a double side.

Men. True.

Soc. But do you suppose that he would ever have enquired into or learned what he fancied that he knew, though he was really ignorant of it, until he had fallen into perplexity under the idea that he did not know, and had desired to know?

Men. I think not, Socrates.

Soc. Then he was the better for the torpedo’s touch?

Men. I think so.

Plato, Meno, 84A

6 *Socrates*. I am going to explain to you why I have such an evil name. When I heard the answer, I said to myself, What can the god mean? and what is the interpretation of his riddle? for I know that I have no wisdom, small or great. What then can he mean when he says that I am the wisest of men? And yet he is a god, and cannot lie; that would be against his nature. After long consideration, I thought of a method of trying the question. I reflected that if I could only find a man wiser than myself, then I might go to the god with a refutation in my hand. I should say to him, "Here is a man who is wiser than I am; but you said that I was the wisest." Accordingly I went to one who had the reputation of wisdom, and observed him—his name I need not mention; he was a politician whom I selected for examination— and the result was as follows: When I began to talk with him, I could not help thinking that he was not really wise, although he was thought wise by many, and still wiser by himself; and thereupon I tried to explain to him that he thought himself wise, but was not really wise; and the consequence was that he hated me, and his enmity was shared by several who were present and heard me. So I left him, saying to myself, as I went away: Well, although I do not suppose that either of us knows anything really beautiful and good, I am better off than he is,—for he knows nothing, and thinks that he knows; I neither know nor think that I know. In this latter particular, then, I seem to have slightly the advantage of him. Then I went to another who had still higher pretensions to wisdom, and my conclusion was exactly the same. Whereupon I made another enemy of him, and of many others besides him.

Then I went to one man after another, being not unconscious of the enmity which I provoked, and I

lamented and feared this: But necessity was laid upon me,—the word of God, I thought, ought to be considered first. And I said to myself, Go I must to all who appear to know, and find out the meaning of the oracle. And I swear to you, Athenians, by the dog I swear!—for I must tell you the truth—the result of my mission was just this: I found that the men most in repute were all but the most foolish; and that others less esteemed were really wiser and better. I will tell you the tale of my wanderings and of the "Herculean" labours, as I may call them, which I endured only to find at last the oracle irrefutable. After the politicians, I went to the poets; tragic, dithyrambic, and all sorts. And there, I said to myself, you will be instantly detected; now you will find out that you are more ignorant than they are. Accordingly, I took them some of the most elaborate passages in their own writings, and asked what was the meaning of them—thinking that they would teach me something. Will you believe me? I am almost ashamed to confess the truth, but I must say that there is hardly a person present who would not have talked better about their poetry than they did themselves. Then I knew that not by wisdom do poets write poetry, but by a sort of genius and inspiration; they are like diviners or soothsayers who also say many fine things, but do not understand the meaning of them. The poets appeared to me to be much in the same case; and I further observed that upon the strength of their poetry they believed themselves to be the wisest of men in other things in which they were not wise. So I departed, conceiving myself to be superior to them for the same reason that I was superior to the politicians.

At last I went to the artisans, for I was conscious that I knew nothing at all, as I may say, and I was sure that they

knew many fine things; and here I was not mistaken, for they did know many things of which I was ignorant, and in this they certainly were wiser than I was. But I observed that even the good artisans fell into the same error as the poets;—because they were good workmen they thought that they also knew all sorts of high matters, and this defect in them overshadowed their wisdom; and therefore I asked myself on behalf of the oracle, whether I would like to be as I was, neither having their knowledge nor their ignorance, or like them in both; and I made answer to myself and to the oracle that I was better off as I was.

Plato, Apology, 21A

- 7 Ignorance—defined not as the negation of knowledge but as a positive state of mind—is error produced by inference,

Aristotle, Posterior Analytics, 79b23

- 8 The very limit of human blindness is to glory in being blind.

Augustine, Confessions, III, 3

- 9 It is clear that as regards its proper object the intellect is always true; and hence it is never deceived of itself, but whatever deception occurs must be ascribed to some lower power, such as the imagination or the like. Hence we see that when the natural power of judgment is free we are not deceived by such images, but only when it is not free, as is the case in sleep.

Aquinas, Summa Theologica, I, 94, 4

- 10 O Juvenal, how truly thou didst say.
The people never know for what they seek,
For what they want seems right in every way,
And clouds of error ever render weak
Their judgments, in what'er they do or speak.

Chaucer, Troilus and Cressida, IV., 29

- 11 O January, what might it now avail
Could your eyes see as far as ships can sail?
For it's as pleasant, blind, deceived to be
As be deceived while yet a man may see.
Lo, Argus, who was called the hundred-eyed,
No matter how he peered and watched and pried,
He was deceived; and God knows others too
Who think, and firmly, that it is not so.
Oblivion is peace; I say no more.

Chaucer, Canterbury Tales: Merchant's Tale

- 12 It may be said with some plausibility that there is an
abecedarian ignorance that comes before knowledge,
and another, doctoral ignorance that comes after
knowledge: an ignorance that knowledge creates and
engenders, just as it undoes and destroys the first.

Montaigne, Essays, I, 54, Of Vain Subtleties

- 13 Do you want a man to be healthy, do you want him
disciplined and firmly and securely poised? Wrap him in
darkness, idleness, and dullness. We must become like
the animals in order to become wise, and be blinded in
order to be guided.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

- 14 As by simplicity life becomes pleasanter, so also does it become better and more innocent, as I was starting to say a while back. The simple and ignorant, says Saint Paul, raise themselves to heaven, and take possession of it; and we, with all our learning, plunge ourselves into the infernal abyss.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

- 15 Many abuses are engendered in the world, or, to put it more boldly, all the abuses in the world are engendered, by our being taught to be afraid of professing our ignorance and our being bound to accept everything that we cannot refute.

Montaigne, Essays, III, 11, Of Cripples

- 16 Anyone who wants to be cured of ignorance must confess it.... Wonder is the foundation of all philosophy, inquiry its progress, ignorance its end. I'll go further: There is a certain strong and generous ignorance that concedes nothing to knowledge in honor and courage, an ignorance that requires no less knowledge to conceive it than does knowledge.

Montaigne, Essays, III, 11, Of Cripples

- 17 The human soul uses reason, sees many things, investigates many more; but, however well equipped, it gets light and the beginnings of knowledge from the outer senses, as from beyond a barrier—hence the very many ignorances and foolishnesses whereby our judgments and our life-actions are confused, so that few or none do rightly and duly order their acts.

William Gilbert, On the Loadstone, V, 12

18 *Messala*. O hateful error, melancholy's child,
Why dost thou show to the apt thoughts of men
The things that are not? O error, soon conceived,
Thou never comest unto a happy birth,
But kill'st the mother that engender'd thee!

Shakespeare, Julius Caesar, V, iii, 67

19 Four species of idols beset the human mind, to which (for distinction's sake) we have assigned names, calling the first idols of the tribe, the second idols of the den, the third idols of the market, the fourth idols of the theatre.

The formation of notions and axioms on the foundation of true induction is the only fitting remedy by which we can ward off and expel these idok. It is, however, of great service to point them out; for the doctrine of idols bears the same relation to the interpretation of nature as that of the confutation of sophisms does to common logic.

The idols of the tribe are inherent in human nature and the very tribe or race of man; for man's sense is falsely asserted to be the standard of things; on the contrary, all the perceptions both of the senses and the mind bear reference to man and not to the universe, and the human mind resembles those uneven mirrors which impart their own properties to different objects, from which rays are emitted and distort and disfigure them.

The idols of the den are those of each individual; for everybody (in addition to the errors common to the race of man) has his own individual den or cavern, which intercepts and corrupts the light of nature, either from his own peculiar and singular disposition, or from his education and intercourse with others, or from his reading, and the authority acquired by those whom he reverences and admires, or from the different impressions

produced on the mind, as it happens to be preoccupied and predisposed, or equable and tranquil, and the like; so that the spirit of man (according to its several dispositions), is variable, confused, and, as it were, actuated by chance; and Heraclitus said well that men search for knowledge in lesser worlds, and not in the greater or common world.

There are also idols formed by the reciprocal intercourse and society of man with man, which we call idols of the market, from the commerce and association of men with each other; for men converse by means of language, but words are formed at the will of the generality, and there arises from a bad and unapt formation of words a wonderful obstruction to the mind. Nor can the definitions and explanations with which learned men are wont to guard and protect themselves in some instances afford a complete remedy; words still manifestly force the understanding, throw everything into confusion, and lead mankind into vain and innumerable controversies and fallacies.

Lastly, there are idols which have crept into men's minds from the various dogmas of peculiar systems of philosophy, and also from the perverted rules of demonstration, and these we denominate idols of the theatre; for we regard all the systems of philosophy hitherto received or imagined, as so many plays brought out and performed, creating fictitious and theatrical worlds.

Bacon, Novum Organum, I, 39-44

- 20 The power of will which I have received from God is not of itself the source of my errors—for it is very ample and very perfect of its kind—any more than is the power of

understanding; for since I understand nothing but by the power which God has given me for understanding, there is no doubt that all that I understand, I understand as I ought, and it is not possible that I err in this. Whence then come my errors? They come from the sole fact that since the will is much wider in its range and compass than the understanding, I do not restrain it within the same bounds, but extend it also to things which I do not understand: and as the will is of itself indifferent to these, it easily falls into error and sin, and chooses the evil for the good, or the fake for the true.

Descartes, Meditations on First Philosophy, IV

21 I. . . perceive that God could easily have created me so that I never should err, although I still remained free, and endowed with a limited knowledge, viz., by giving to my understanding a clear and distinct intelligence of all things as to which I should ever have to deliberate; or simply by His engraving deeply in my memory the resolution never to form a judgment on anything without having a clear and distinct understanding of it, so that I could never forget it. And it is easy for me to understand that, in so far as I consider myself alone, and as if there were only myself in the world, I should have been much more perfect than I am, if God had created me so that I could never err. Nevertheless I cannot deny that in some sense it is a greater perfection in the whole universe that certain parts should not be exempt from error as others are than that all parts should be exactly similar. And I have no right to complain if God, having placed me in the world, has not called upon me to play a part that excels all others in distinction and perfection,

Descartes, Meditations on First Philosophy, IV

22 When a man reckons without the use of words, which may be done in particular things, as when upon the sight of any one thing, we conjecture what was likely to have preceded, or is likely to follow upon it; if that which he thought likely to follow follows not, or that which he thought likely to have preceded it hath not preceded it, this is called *error*; to which even the most prudent men are subject. But when we reason in words of general signification, and fall upon a general inference which is false; though it be commonly called *error*, it is indeed an *absurdity*, or senseless speech. For error is but a deception, in presuming that somewhat is past, or to come; of which, though it were not past, or not to come, yet there was no impossibility discoverable. But when we make a general assertion, unless it be a true one, the possibility of it is inconceivable. And words whereby we conceive nothing but the sound are those we call *absurd*, *insignificant*, and *nonsense*. And therefore if a man should talk to me of a *round quadrangle*; or *accidents of bread in cheese*; or *immaterial substances*; or of a *free subject*; a *free will*; or any *free* but free from being hindered by opposition; I should not say he were in an error, but that his words were without meaning; that is to say, absurd.

I have said before... that a man did excel all other animals in this faculty, that when he conceived anything whatsoever, he was apt to enquire the consequences of it, and what effects he could do with it. And now I add this other degree of the same excellence, that he can by words reduce the consequences he finds to general rules, called *theorems*, or *aphorisms*; that is, he can reason, or

reckon, not only in number, but in all other things whereof one may be added unto or subtracted from another.

But this privilege is allayed by another; and that is by the privilege of absurdity, to which no living creature is subject, but men only. And of men, those are of ail most subject to it that profess philosophy. For it is most true that Cicero saith of them somewhere; that there can be nothing so absurd but may be found in the books of philosophers. And the reason is manifest. For there is not one of them that begins his ratiocination from the definitions or explications of the names they are to use; which is a method that hath been used only in geometry, which conclusions have thereby been made indisputable.

Hobbes, Leviathan, 1,5

23 The chief malady of man is restless curiosity' about things which he cannot understand; and it is not so bad for him to be in error as to be curious to no purpose.

Pascal, Pensées, 1, 18

24 Man is only a subject full of error, natural and ineffaceable, without grace. Nothing shows him the truth. Everything deceives him. These two sources of truth, reason and the senses, besides being both wanting in sincerity, deceive each other in turn. The senses mislead the Reason with false appearances, and receive from Reason in their turn the same trickery which they apply to her; Reason has her revenge. The passions of the soul trouble the senses, and make false impressions upon them. They rival each other in falsehood and deception.

Pascal, Pensées, II, 83

25 *Satan*. One fatal Tree there stands of Knowledge call'd,
Forbidden them to taste: Knowledge forbidd'n?
Suspicious, reasonless. Why should thir Lord
Envie them that? can it be sin to know,
Can it be death? and do they onely stand
By Ignorance, is that thir happie state.
The proof of thir obedience and thir faith?

Milton, Paradise Lost, IV, 514

26 Many errors, of a truth, consist merely in the application of the wrong names to things. For if a man says that the lines which are drawn from the centre of the circle to the circumference are not equal, he understands by the circle, at all events for the time, something else than mathematicians understand by it. So when men make errors in calculation, the numbers which are in their minds are not those which are upon the paper. As far as their mind is concerned there is no error, although it seems as if there were, because we think that the numbers in their minds are those which are upon the paper. If we did not think so, we should not believe them to be in error. . . . This is the source from which so many controversies arise—that men either do not properly explain their own thoughts, or do not properly interpret those of other people; for, in truth, when they' most contradict one another, they' either think the same things or something different, so that those things which they suppose to be errors and absurdities in another person are not so.

Spinoza, Ethics, II, Prop. 47, Schol.

27 There is not so contemptible a plant or animal, that does not confound the most enlarged understanding. Though the familiar use of things about us take off our wonder, yet it cures not our ignorance.

Locke, Concerning Human Understanding, Bk. III, VI, 9

28 Heav'n from all creatures hides the book of Fate,
All but the page prescribe, their present state;
From brutes what men, from men what spirits know:
Or who could suffer Being here below?
The lamb thy riot dooms to bleed to-day.
Had he thy Reason, would he skip and play?
Pleas'd to the last, he crops the flow'ry food.
And licks the hand just rais'd to shed his blood.
Oh blindness to the future! kindly giv'n.
That each may fill the circle mark'd by Heav'n;
Who secs with equal eye, as God of all,
A hero perish, or a sparrow fall,
Atoms or systems into ruin hurl'd,
And now a bubble burst, and now a world.

Pope, Essay on Man, Epistle I, 77

29 We may discover the reason why no philosopher, who is rational and modest, has ever pretended to assign the ultimate cause of any natural operation, or to show distinctly the action of that power, which produces any single effect in the universe. It is confessed, that the utmost effort of human reason is to reduce the principles, productive of natural phenomena, to a greater simplicity, and to resolve the many particular effects into a few general causes, by means of reasonings from analogy, experience, and observation. But as to the causes of

these general causes, we should in vain attempt their discovery; nor shall we ever be able to satisfy ourselves, by any particular explication of them. These ultimate springs and principles are totally shut up from human curiosity and enquiry. Elasticity, gravity, cohesion of parts, communication of motion by impulse; these are probably the ultimate causes and principles which we shall ever discover in nature; and we may esteem ourselves sufficiently happy, if, by accurate enquiry and reasoning, we can trace up the particular phenomena to, or near to, these general principles.

Hume, Concerning Human Understanding, IV, 26

30 To each his suff'rings: all are men,
Condemn'd alike to groan;
The tender for another's pain,
Th' unfeeling for his own.
Yet ah! why should they know their fate?
Since sorrow never comes too late.
And happiness too swiftly flies.
Thought would destroy their paradise.
No more; where ignorance is bliss,
'Tis folly to be wise.

Gray, Ode on a Distant Prospect of Eton College

31 Now if you will venture to go along with me, and look down into the bottom of this matter, it will be found that the cause of obscurity and confusion, in the mind of a man, is threefold.

Dull organs, dear Sir, in the first place. Secondly, slight and transient impressions made by the objects, when the

said organs are not dull. And thirdly, a memory like unto a sieve, not able to retain what it has received,...

Now you must understand that not one of these was the true cause of the confusion in my uncle Toby's discourse; and it is for that very reason I enlarge upon them so long, after the manner of great physiologists—to shew the world, what it did not arise from.

What it did arise from, I have hinted above, and a fertile source of obscurity it is,—and ever will be,—and that is the unsteady uses of words, which have perplexed the clearest and most exalted understandings.

Sterne, Tristram Shandy, II, 2

32 How is reason so precious a gift that we would not lose it for anything in the world? and how has this reason served only to make us the most unhappy of all beings?

Whence comes it that loving truth passionately, we are always betrayed to the most gross impostures?

Why is life still loved by this crowd of Indians deceived and enslaved by the bonzes, crushed by a Tartar's descendants, overburdened with work, groaning in want, assailed by disease, exposed to every scourge?

Whence comes evil, and why does evil exist?

O atoms of a day! O my companions in infinite littleness, born like me to suffer everything and to be ignorant of everything, are there enough madmen among you to believe that they know all these things? No, there are not; no, at the bottom of your hearts you feel your nonentity as I render justice to mine. But you are arrogant enough to want people to embrace your vain systems; unable to be tyrants over our bodies, you claim to be tyrants over our souls.

Voltaire, Philosophical Dictionary: Ignorance

- 33 Ignorance is mere privation, by which nothing can be produced: it is a vacuity in which the soul sits motionless and torpid for want of attraction; and, without knowing why, we always rejoice when we learn, and grieve when we forget.

Johnson, Rasselas, XI

- 34 A lady once asked him [Johnson] how he came to define *Pastern* the *knee* of a horse: instead of making an elaborate defence, as she expected, he at once answered, "Ignorance, Madam, pure ignorance."

Boswell, Life of Johnson (1755)

- 35 *Johnson*. Mankind have a great aversion to intellectual labour; but even supposing knowledge to be easily attainable, more people would be content to be ignorant than would take even a little trouble to acquire it,

Boswell, Life of Johnson (1763)

- 36 Thus, Sir, I have disposed of this falsehood. But falsehood has a perennial spring.

Burke, Speech on American Taxation (1774)

- 37 The consciousness of ignorance—unless this ignorance is recognized to be absolutely necessary'—ought, instead of forming the conclusion of my inquiries, to be the strongest motive to the pursuit of them. All ignorance is either ignorance of things or of the limits of knowledge. If my ignorance is accidental and not necessary, it must incite me, in the first case, to a *dogmatical* inquiry

regarding the objects of which I am ignorant; in the second, to a *critical* investigation into the bounds of all possible knowledge. But that my ignorance is absolutely necessary and unavoidable, and that it consequently absolves from the duty of all further investigation, is a fact which cannot be made out upon empirical grounds—from *observation*—but upon critical grounds alone, that is, by a thoroughgoing *investigation* into the primary sources of cognition. It follows that the determination of the bounds of reason can be made only on *a priori* grounds; while the empirical limitation of reason, which is merely an indeterminate cognition of an ignorance that can never be completely removed, can take place only *a posteriori*. In other words, our empirical knowledge is limited by that which yet remains for us to know.

Kant, Critique of Pure Reason, Transcendental Method

38 It is... quite certain that we can never get a sufficient knowledge of organized beings and their inner possibility, much less get an explanation of them, by looking merely to mechanical principles of nature. Indeed, so certain is it, that we may confidently assert that it is absurd for men even to entertain any thought of so doing or to hope that maybe another Newton may some day arise, to make intelligible to us even the genesis of but a blade of grass from natural laws that no design has ordered. Such insight we must absolutely deny to mankind.

Kant, Critique of Teleological Judgement, 75

39 So numerous indeed and so powerful are the causes which serve to give a false bias to the judgment, that we,

upon many occasions, see wise and good men on the wrong as well as on the right side of questions of the first magnitude to society. This circumstance, if duly attended to, would furnish a lesson of moderation to those who are ever so much persuaded of their being in the right in any controversy. And a further reason for caution, in this respect, might be drawn from the reflection that we are not always sure that those who advocate the truth are influenced by purer principles than their antagonists. Ambition, avarice, personal animosity, party opposition, and many other motives not more laudable than these, are apt to operate as well upon those who support as those who oppose the right side of a question.

Hamilton, Federalist 1

40 Though it cannot be pretended that the principles of moral and political knowledge have, in general, the same degree of certainty with those of the mathematics, yet they have much better claims in this respect than, to judge from the conduct of men in particular situations, we should be disposed to allow them. The obscurity is much oftener in the passions and prejudices of the reasoner than in the subject. Men, upon too many occasions, do not give their own understandings fair play; but, yielding to some untoward bias, they entangle themselves in words and confound themselves in subtleties.

Hamilton, Federalist 31

41 *Faust* Oh, happy he who still hopes that he can
Emerge from Error's boundless sea!

What man knows not, is needed most by man.
And what man knows, for that no use has he.

Goethe, Faust, I, 1064

42 That there should one Man die ignorant who had capacity
for Knowledge, this I call a tragedy.

Carlyle, Sartor Resartus, III, 4

43 There are many things of which a wise man might wish to
be ignorant.

Emerson, Demonology

44 So seemed it to me, as I stood at her helm, and for long
hours silently guided the way of this fire-ship on the sea.
Wrapped, for that interval, in darkness myself, I but the
better saw the redness, the madness, the ghastliness of
others. The continual sight of the fiend shapes before me,
capering half in smoke and half in fire, these at last begat
kindred visions in my soul, as soon as I began to yield to
that unaccountable drowsiness which ever would come
over me at a midnight helm.

But that night, in particular, a strange (and ever since
inexplicable) thing occurred to me. Starting from a brief
standing sleep, I was horribly conscious of something
fatally wrong. The jawbone tiller smote my side, which
leaned against it; in my ears was the low hum of sails,
just beginning to shake in the wind; I thought my eyes
were open; I was half conscious of putting my finger to
the lids and mechanically stretching them still further
apart. But, spite of all this, I could see no compass before
me to steer by; though it seemed but a minute since I
had been watching the card, by the steady binnacle lamp

illumining it. Nothing seemed before me but a jet gloom, now and then made ghastly by flashes of redness.

Uppermost was the impression, that whatever swift, rushing thing I stood on was not so much bound to any haven ahead as rushing from all havens astern. A stark, bewildered feeling, as of death, came over me.

Convulsively my hands grasped the tiller, but with the crazy conceit that the tiller was, somehow, in some enchanted way, inverted. My God! what is the matter with me? thought I. Lo! in my brief sleep I had turned myself about, and was fronting the ship's stern, with my back to her prow and the compass. In an instant I faced back, just in time to prevent the vessel from flying up into the wind, and very probably capsizing her. How glad and how grateful the relief from this unnatural hallucination of the night, and the fatal contingency of being brought by the lee!

Look not too long in the face of the fire, O man! Never dream with thy hand on the helm! Turn not thy back to the compass; accept the first hint of the hitching tiller; believe not the artificial fire, when its redness makes all things look ghastly. To-morrow, in the natural sun, the skies will be bright; those who glared like devils in the forking flames, the morn will show in far other, at least gentler, relief; the glorious, golden, glad sun, the only true lamp—all others but liars!

Melville, Moby Dick, XCVI

45 It has often and confidently been asserted, that man's origin can never be known: but ignorance more frequently begets confidence than does knowledge: it is those who know little, and not those who know much,

who so positively assert that this or that problem will never be solved by science.

Darwin, Descent of Man, Intro.

- 46 So that while it is the summit of human wisdom to learn the limit of our faculties, it may be wise to recollect that we have no more right to make denials, than to put forth affirmatives, about what lies beyond that limit.

T. H. Huxley, Hume, Bishop Berkeley on the Metaphysics of Sensation

- 47 The fatal tendency of mankind to leave off thinking about a thing when it is no longer doubtful, is the cause of half their errors. A contemporary author has well spoken of “the deep slumber of a decided opinion.”

But what! (it may be asked) Is the absence of unanimity an indispensable condition of true knowledge? Is it necessary that some part of mankind should persist in error to enable any to realise the truth? Does a belief cease to be real and vital as soon as it is generally receive proposition never thoroughly understood and felt unless some doubt of it remains? soon as kind have unanimously accepted a truth, do truth perish within them? The highest best result of improved intelligence, it has hitherto been thought, is to unite mankind more and more in the acknowledgment of all important truths, and does the intelligence only last as long as it has not achieved its object? Do the fruits of conquest perish by the very completeness of the victory.

I affirm no such thing. As mankind improve, the number of doctrines which are no longer disputed or doubted will be constantly on the increase: and the well-

being of mankind may almost be measured by the number and gravity of the truths which have reached the point of being uncontested. The cessation, on one question after another, of serious controversy, is one of the necessary incidents of the consolidation of opinion; a consolidation as salutary in the case of true opinions, as it is dangerous and noxious when the opinions are erroneous.

Mill, On Liberty, II

48 If you want to know whether you are thinking rightly, put your thoughts into words. In the very attempt to do this you will find yourselves, consciously or unconsciously, using logical forms. Logic compels us to throw our meaning into distinct propositions, and our reasonings into distinct steps. It makes us conscious of all the implied assumptions on which we are proceeding, and which, if not true, vitiate the entire process. It makes us aware what extent of doctrine we commit ourselves to by any course of reasoning, and obliges us to look the implied premises in the face, and make up our minds whether we can stand to them. It makes our opinions consistent with themselves and with one another, and forces us to think clearly, even when it cannot make us think correctly. It is true that error may be consistent and systematic as well as truth; but this is not the common case. It is no small advantage to see clearly the principles and consequences involved in our opinions, and which we must either accept, or else abandon those opinions. We are much nearer to finding truth when we search for it in broad daylight. Error, pursued rigorously to all that is implied in it, seldom fails to get detected by coming into collision with some known and admitted fact.

Mill, Inaugural Address at St. Andrews

49 Ignorance is not innocence but sin.

Browning, The Inn Album, V

50 Among all forms of mistake, prophecy is the most gratuitous.

George Eliot, Middlemarch, I, 10

51 Ignorance gives one a large range of probabilities.

George Eliot, Daniel Deronda, II, 13

52 *Father Zossima*. Of the pride of Satan what I think is this: it is hard for us on earth to comprehend it, and therefore it is so easy to fall into error and to share it, even imagining that we are doing something grand and fine. Indeed, many of the strongest feelings and movements of our nature we cannot comprehend on earth. Let not that be a stumbling-block, and think not that it may serve as a justification to you for anything. For the Eternal Judge asks of you what you can comprehend and not what you cannot. You will know that yourself hereafter, for you will behold all things truly then and will not dispute them. On earth, indeed, we are, as it were, astray, and if it were not for the precious image of Christ before us, we should be undone and altogether lost, as was the human race before the flood. Much on earth is hidden from us, but to make up for that we have been given a precious mystic sense of our living bond with the other world, with the higher heavenly world, and the roots of our thoughts and feelings are not here but in other worlds. That is why the philosophers say that we cannot apprehend the reality of things on earth.

Dostoevsky, Brothers Karamazov, Pt. II, VI, 3

53 I am thankful that the good God created us all ignorant. I am glad that when we change His plans in this regard we have to do it at our own risk.

*Mark Twain, Letter to the Alta California [San Francisco]
(May 28, 1867)*

54 Philosophers can never hope finally to formulate... metaphysical first principles. Weakness of insight and deficiencies of language stand in the way inexorably. Words and phrases must be stretched towards a generality foreign to their ordinary usage; and however such elements of language be stabilized as technicalities, they remain metaphors mutely appealing for an imaginative leap.

There is no first principle which is in itself unknowable, not to be captured by a flash of insight. But, putting aside the difficulties of language, deficiency in imaginative penetration forbids progress in any form other than that of an asymptotic approach to a scheme of principles, only definable in terms of the ideal which they should satisfy.

Whitehead, Process and Reality, I, 1

55 Error is not only the absolute error of believing what is false, but also the quantitative error of believing more or less strongly than is warranted by the degree of credibility properly attaching to the proposition believed in relation to the believer's knowledge. A man who is quite convinced that a certain horse will win the Derby is in error even if the horse does win.

Russell, Human Knowledge, V, 6

56 The proposition that symptoms vanish when their unconscious antecedents have been made conscious has been borne out by all subsequent research; although the most extraordinary and unexpected complications are met with in attempting to carry this proposition out in practice. Our therapy does its work by transforming something unconscious into something conscious and only succeeds in its work in so far as it is able to effect this transformation.

Now for a rapid digression, lest you should run the risk of imagining that this therapeutic effect is achieved too easily. According to the conclusions we have reached so far, neurosis would be the result of a kind of ignorance, a not-knowing of mental processes which should be known. This would approach very closely to the well-known Socratic doctrine according to which even vice is the result of ignorance. Now it happens in analysis that an experienced practitioner can usually surmise very easily what those feelings are which have reminded unconscious in each individual patient. It should not therefore be a matter of great difficulty to cure the patient by imparting his knowledge to him and so relieving his ignorance. At least, one side of the unconscious meaning of the symptom would be easily dealt with in this way, although it is true that the other side of it, the connection between the symptom and the previous experiences in the patient's life, can hardly be divined thus; for the analyst does not know what the experiences have been, he has to wait till the patient remembers them and tells him. But one might find a substitute even for this in many cases. One might ask for information about his past life from the friends and relations; they are often in a position to know what

events have been of a traumatic nature, perhaps they can even relate some of which the patient is ignorant because they took place at some very early period of childhood. By a combination of these two means it would seem that the pathogenic ignorance of the patients might be overcome in a short time without much trouble.

If only it were so! But we have made discoveries that we were quite unprepared for at first. There is knowing and knowing; they are not always the same thing. There are various kinds of knowing, which psychologically are not by any means of equal value. . . . Knowing on the part of the physician is not the same thing as knowing on the part of the patient and does not have the same effect. When the physician conveys his knowledge to the patient by telling him what he knows, it has effect. No, it would be incorrect to say that. It does not have the effect of dispersing the symptoms; but it has a different one, it sets the analysis in motion, and the first result of this is often an energetic denial. The patient has learned something that he did not know before—the meaning of his symptom—and yet he knows it as little as ever. Thus we discover that there is more than one kind of ignorance. It requires a considerable degree of insight and understanding of psychological matters in order to see in what the difference consists. But the proposition that symptoms vanish with the acquisition of knowledge of their meaning remains true, nevertheless. The necessary condition is that the knowledge must be founded upon an inner change in the patient which can only come about by a mental operation directed to that end.

Freud, General Introduction to Psycho-Analysis, XVIII

57 While the power of thought frees us from servile subjection to instinct, appetite, and routine, it also brings with it the occasion and possibility of error and mistake. In elevating us above the brute, it opens to us the possibility of failures to which the animal, limited to instinct, cannot sink.

Dewey, How We Think, Pt, I, II, 2

6.5 Opinion, Belief, and Faith

The three subjects considered here all tend to bring the meaning of knowledge into sharper focus. Does the man who says "I know" signify a different state of mind from the man who says, of the same matter, "I opine," or "I think," or "I believe"? What is the difference? Are there some things of which we can only say "I think," "I opine," or "I believe," but not "I know"? Is faith a belief about things that we cannot know? These and similar questions are dealt with in the passages quoted below.

Employing the phrase "right opinion" to designate an opinion that happens to be true, Plato attempts to point out why it is better to have knowledge than right opinion even though both put the mind in possession of the truth. In a similar vein, Aristotle comments on the difference between knowing the truth of a theorem in geometry because one is able to demonstrate it and believing or opining that it is true on the authority of one's teacher. In subsequent elaborations of the same insight, knowledge and opinion or belief are differentiated by the distinction between that which the mind necessarily affirms and that to which it voluntarily gives its assent. If I cannot withhold my assent from the proposition that two plus two makes four, then I know it to be true; I do not opine or believe it. But if what is proposed is something that I can voluntarily accept or reject, then my affirmation or denial of the matter is an act of opinion or belief, not of knowledge. In geometry, for example, an axiom

commands my assent, but I am free to accept or reject a postulate which asks me to take something for granted.

As the difference between knowledge, on the one hand, and opinion or belief, on the other, becomes clearer, the door to skepticism is opened by doubts concerning the extent of the area in which men can properly say that they know. This is countered by giving greater weight or credence to opinions and beliefs in proportion as they are well grounded in observed facts or supported by cogent reasons even though the facts and the reasons do not produce the certainty of self-evident or of demonstrated truths. Accordingly, the discussion of opinion and belief becomes involved with considerations of probability, and with efforts to ascertain the degree of probability that, for all practical purposes, is as good as certainty.

In common speech, the words "belief" and "faith" are often used interchangeably, but the word "faith" has a special and distinct significance when it is employed by writers in the Judaeo-Christian tradition of Western thought. The passages quoted here reflecting that tradition set religious faith apart from the ordinary run of secular beliefs by confining it to the things that God has explicitly revealed to men in Sacred Scripture. Having such faith is thought to be a mark of divine grace. Men may exercise their own will to believe about other matters, but belief in the articles of religious faith is a gift that God himself bestows upon them. Because theology, or at least dogmatic theology, finds its first principles in the articles of religious faith and then attempts to explicate what is thus believed, some quotations dealing with theology are included here.

■ ■ ■

1 Thy word is a lamp unto my feet, and a light unto my path.

Psalm 119:105

2 And he said. Go, and tell this people, Hear ye indeed, but understand not; and see ye indeed, but perceive not.

Make the heart of this people fat, and make their ears heavy, and shut their eyes; lest they see with their eyes, and hear with their ears, and understand with their heart, and convert, and be healed.

Then said I, Lord, how long? And he answered, Until the cities be wasted without inhabitant, and the houses without man, and the land be utterly desolate.

And the Lord have removed men far away, and there be a great forsaking in the midst of the land.

Isaiah 6:9-12

3 *Socrates.* If a man knew the way to Larisa, or anywhere else, and went to the place and led others thither, would he not be a right and good guide?

Meno. Certainly.

Soc. And a person who had a right opinion about the way, but had never been and did not know, might be a good guide also, might he not?

Men. Certainly.

Soc. And while he has true opinion about that which the other knows, he will be just as good a guide if he thinks the truth, as he who knows the truth?

Men. Exactly.

Soc. Then true opinion is as good a guide to correct action as knowledge; and that was the point which we omitted in our speculation about the nature of virtue, when we said that knowledge only is the guide of right action; whereas there is also right opinion.

Men. True.

Soc. Then right opinion is not less useful than knowledge?

Men. The difference, Socrates, is only that he who has knowledge will always be right; but he who has right opinion will sometimes be right, and sometimes not.

Soc. What do you mean? Can he be wrong who has right opinion, so long as he has right opinion?

Men. I admit the cogency of your argument, and therefore, Socrates, I wonder that knowledge should be preferred to right opinion—or why they should ever differ.

Soc. And shall I explain this wonder to you?

Men. Do tell me.

Soc. You would not wonder if you had ever observed the images of Daedalus; but perhaps you have not got them in your country?

Men. What have they to do with the question?

Soc. Because they require to be fastened in order to keep them, and if they are not fastened they will play truant and run away.

Men. Well, what of that?

Soc. I mean to say that they are not very valuable possessions if they are at liberty, for they will walk off like runaway slaves; but when fastened, they are of great value, for they are really beautiful works of art. Now this is an illustration of the nature of true opinions: while they abide with us they are beautiful and fruitful, but they run away out of the human soul, and do not remain long, and

therefore they are not of much value until they are fastened by the tie of the cause; and this fastening of them, friend Meno, is recollection, as you and I have agreed to call it. But when they are bound, in the first place, they have the nature of knowledge; and, in the second place, they are abiding. And this is why knowledge is more honourable and excellent than true opinion, because fastened by a chain.

Plato, Meno, 97A

- 4 *Socrates*. Seeing... that not only rhetoric works by persuasion, but that other arts do the same, as in the case of the painter, a question has arisen which is a very fair one: Of what persuasion is rhetoric the artificer, and about what?—is not that a fair way of putting the question?

Gorgias. I think so.

Soc. Then, if you approve the question, Gorgias, what is the answer?

Gor. I answer, Socrates, that rhetoric is the art of persuasion in courts of law and other assemblies, as I was just now saying, and about the just and unjust.

Soc. And that, Gorgias, was what I was suspecting to be your notion; yet I would not have you wonder if by-and-by I am found repeating a seemingly plain question; for I ask not in order to confute you, but as I was saying that the argument may proceed consecutively, and that we may not get the habit of anticipating and suspecting the meaning of one another's words; I would have you develop your own views in your own way, whatever may be your hypothesis.

Gor. I think that you are quite right, Socrates.

Soc. Then let me raise another question; there is such a thing as "having learned"?

Gor. Yes.

Soc. And there is also "having believed"?

Gor. Yes.

Soc. And is the "having learned" the same as "having believed," and are learning and belief the same things?

Gor. In my judgment, Socrates, they are not the same.

Soc. And your judgment is right, as you may ascertain in this way:—If a person were to say to you, "Is there, Gorgias, a false belief as well as a true?"—you would reply, if I am not mistaken, that there is.

Gor. Yes.

Soc. Well, but is there a false knowledge as well as a true?

Gor. No.

Soc. No, indeed; and this again proves that knowledge and belief differ.

Gor. Very true.

Soc. And yet those who have learned as well as those who have believed are persuaded?

Gor. Just so.

Soc. Shall we then assume two sorts of persuasion,—one which is the source of belief without knowledge, as the other is of knowledge?

Gor. By all means.

Soc. And which sort of persuasion does rhetoric create in courts of law and other assemblies about the just and unjust, the sort of persuasion which gives belief without knowledge, or that which gives knowledge?

Gor. Clearly, Socrates, that which only gives belief.

Soc. Then rhetoric, as would appear, is the artificer of a persuasion which creates belief about the just and

unjust, but gives no instruction about them?

Gor. True.

Plato, Gorgias, 454A

5 Things that are true and things that are better are, by their nature, practically always easier to prove and easier to believe in.

Aristotle, Rhetoric, 1355a38

6 Jesus answered and said, I thank thee, O Father, Lord of heaven and earth, because thou hast hid these things from the wise and prudent, and hast revealed them unto babes.

Even so, Father: for so it seemed good in thy sight.

All things are delivered unto me of my Father: and no man knoweth the Son, but the Father; neither knoweth any man the Father, save the Son, and he to whomsoever the Son will reveal him.

Matthew 11:25-27

7 The disciples came, and said unto him, why speakest thou unto them in parables?

He answered and said unto them, Because it is given unto you to know the mysteries of the kingdom of heaven, but to them it is not given.

For whosoever hath, to him shall be given, and he shall have more abundance; but whosoever hath not, from him shall be taken away even that he hath.

Therefore speak I to them in parables: because they seeing see not; and hearing they hear not, neither do they understand.

And in them is fulfilled the prophecy of E-sai-as, which saith. By hearing ye shall hear, and shall not understand; and seeing ye shall see, and shall not perceive:

For this people's heart is waxed gross, and their ears are dull of hearing, and their eyes they have closed; lest at any time they should see with their eyes, and hear with their ears, and should understand with their heart, and should be converted, and I should heal them.

But blessed are your eyes, for they see: and your ears, for they hear.

For verily I say unto you, That many prophets and righteous men have desired to see those things which ye see, and have not seen them; and to hear those things which ye hear, and have not heard them.

Matthew 13:10-17

8 Verily I say unto you, If ye have faith as a grain of mustard seed, ye shall say unto this mountain. Remove hence to yonder place; and it shall remove; and nothing shall be impossible unto you.

Matthew 17:20

9 And straightway the father of the child cried out, and said with tears, Lord, I believe; help thou mine unbelief.

Mark 9:24

10 For verily I say unto you, That whosoever shall say unto this mountain, Be thou removed, and be thou cast into the sea; and shall not doubt in his heart, but shall believe that those things which he saith shall come to pass; he shall have whatsoever he saith.

Therefore I say unto you, What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them.

Mark 11:23-24

- 11 Jesus saith unto him, Thomas, because thou hast seen me, thou hast believed: blessed are they that have not seen, and yet have believed.

John 20:29

- 12 Whosoever shall call upon the name of the Lord shall be saved.

How then shall they call on him in whom they have not believed? and how shall they believe in him of whom they have not heard? and how shall they hear without a preacher?

And how shall they preach, except they be sent? as it is written, How beautiful are the feet of them that preach the gospel of peace, and bring glad tidings of good things!

But they have not all obeyed the gospel. For E-sai-as saith, Lord, who hath believed our report?

So then faith cometh by hearing, and hearing by the word of God.

Romans 10:13-17

- 13 O foolish Galatians, who hath bewitched you, that ye should not obey the truth, before whose eyes Jesus Christ hath been evidently set forth, crucified among you?

This only would I learn of you. Received ye the Spirit by the works of the law, or by the hearing of faith?

Are ye so foolish? having begun in the Spirit, are ye now made perfect by the flesh?

Have ye suffered so many things in vain? if it be yet in vain.

He therefore that ministereth to you the Spirit, and worketh miracles among you, doeth he it by the works of the law, or by the hearing of faith?

Even as Abraham believed God, and it was accounted to him for righteousness.

Know ye therefore that they which are of faith, the same are the children of Abraham.

And the scripture, foreseeing that God would justify the heathen through faith, preached before the gospel unto Abraham, saying, In thee shall all nations be blessed.

So then they which be of faith are blessed %vith faithful Abraham.

For as many as are of the works of the law are under the curse: for it is written, Cursed is every one that continueth not in all things which are written in the book of the law to do them.

But that no man is justified by the law in the sight of God, it is evident; for, The just shall IK-c by faith.

Galatians 3:1-11

14 I have fought a good fight, I have finished my course, I have kept the faith.

II Timothy 4:7

15 Therefore we ought to give the more earnest heed to the things which we have heard, lest at any time we should let them slip.

For if the word spoken by angels was stedfast, and every transgression and disobedience received a just recompence of reward;

How shall we escape, if we neglect so great salvation; which at the first began to be spoken by the Lord, and was confirmed unto us by them that heard him;

God also bearing them witness, both with signs and wonders, and with divers miracles, and gifts of the Holy Ghost, according to his own will?

Hebrews 2:1-4

16 Now faith is the substance of things hoped for, the evidence of things not seen.

Hebrews 11:1

17 We have not followed cunningly devised fables, when we made known unto you the power and coining of our Lord Jesus Christ, but were eyewitnesses of his majesty.

For he received from God the Father honour and glory, when there came such a voice to him from the excellent glory. This is my beloved Son, in whom I am well pleased.

And this voice which came from heaven we heard, when we were with him in the holy mount.

We have also a more sure word of prophecy; whereunto ye do well that ye take heed, as unto a light that shineth in a dark place, until the day dawn, and the day star arise in your hearts.

// Peter 1:16-19

18 The Revelation of Jesus Christ, which God gave unto him, to shew unto his servants things which must shortly come

to pass; and he sent and signified it by his angel unto his servant John:

Who bare record of the word of God, and of the testimony of Jesus Christ, and of all things that he saw.

Blessed is he that readeth, and they that hear the words of this prophecy, and keep those things which are written therein: for the time is at hand.

Revelation 1:1-3

19 I was glad also that the old scriptures of the Law and the Prophets were set before me now, no longer in that light in which they had formerly seemed absurd, when I criticised Your holy ones for thinking this or that which in plain fact they did not think. And it was a joy to hear Ambrose who often repeated to his congregation, as if it were a rule he was most strongly urging upon them, the text: *the letter killeth, but the spirit giveth life*. And he would go on to draw aside the veil of mystery and lay open the spiritual meaning of things which taken literally would have seemed to teach falsehood.

Augustine, Confessions, VI, 4

20 I wanted to be as certain of things unseen as that seven and three make ten. For I had not reached the point of madness which denies that even this can be known; but I wanted to know other things as clearly as this, either such material things as were not present to my senses, or spiritual things which I did not know how to conceive save corporeally. By believing I might have been cured; for then the eye of my mind would have been clearer and so might in some way have been directed towards Your truth which abides for ever and knows no defect. But as

usually happens, the man who has tried a bad doctor is afraid to trust even a good one, so it was with the health of my soul, which could not be healed save by believing, and refused to be healed that way for fear of believing falsehood. Thus I was resisting Your hands, for You first prepared for us the medicine of faith and then applied it to the diseases of the world and gave it such great power.

Augustine, Confessions, VI, 4

21 I continued my miserable complaining: "How long, how long shall I go on saying tomorrow and again tomorrow? Why not now, why not have an end to my uncleanness this very hour?"

Such things I said, weeping in the most bitter sorrow of my heart. And suddenly I heard a voice from some nearby house, a boy's voice or a girl's voice, I do not know: but it was a sort of sing-song, repeated again and again, "Take and read, take and read." I ceased weeping and immediately began to search my mind most carefully as to whether children were accustomed to chant these words in any kind of game, and I could not remember that I had ever heard any such thing. Dammings back the flood of my tears I arose, interpreting the incident as quite certainly a divine command to open my book of Scripture and read the passage at which I should open. ... So I was moved to return to the place where Alypius was sitting, for I had put down the Apostle's book there when I arose. I snatched it up, opened it and in silence read the passage upon which my eyes first fell: *Not in rioting and drunkenness, not in chambering and impurities, not in contention and envy, but put ye on the Lord Jesus Christ and make not provision for the flesh in its concupiscences.* {Romans xiii, 13.} I had no wish to read

further, and no need. For in that instant, with the very ending of the sentence, it was as though a light of utter confidence shone in all my heart, and all the darkness of uncertainty vanished away....

Then we went in to my mother and told her, to her great joy. We related how it had come about: she was filled with triumphant exultation, and praised You who are mighty beyond what we ask or conceive: for she saw that You had given her more than with all her pitiful weeping she had ever asked. For You converted me to Yourself so that I no longer sought a wife nor any of this world's promises, but stood upon that same rule of faith in which You had shown me to her so many years before. Thus You changed her mourning into joy, a joy far richer than she had thought to wish, a joy much dearer and purer than she had thought to find in grandchildren of my flesh.

Augustine, Confessions, VIII, 12

- 22 This Mediator, having spoken what He judged sufficient first by the prophets, then by His own lips, and afterwards by the apostles, has besides produced the Scripture which is called canonical, which has paramount authority, and to which we yield assent in all matters of which we ought not to be ignorant, and yet cannot know of ourselves. For if we attain the knowledge of present objects by the testimony of our own senses, whether internal or external, then, regarding objects remote from our own senses, we need others to bring their testimony, since we cannot know them by our own, and we credit the persons to whom the objects have been or are sensibly present. Accordingly, as in the case of visible objects which we have not seen, we trust those who have (and likewise with all sensible objects), so in the case of

things which are perceived by the mind and spirit, i.e., which are remote from our interior sense, it behoves us to trust those who have seen them set in that incorporeal light, or abidingly contemplate them.

Augustine, City of God, XI, 3

23 Men see Him just so far as they die to this world; and so far as they live to it they see Him not. But yet, although that light may begin to appear clearer, and not only more tolerable, but even more delightful, still it is only through a glass darkly that we are said to see, because we walk by faith, not by sight, while we continue to wander as strangers in this world, even though our conversation be in heaven.

Augustine, Christian Doctrine, II, 7

24 Just as poor as the store of gold and silver and garments which the people of Israel brought with them out of Egypt was in comparison with the riches which they afterwards attained at Jerusalem, and which reached their height in the reign of King Solomon, so poor is all the useful knowledge which is gathered from the books of the heathen when compared with the knowledge of Holy Scripture. For whatever man may have learnt from other sources, if it is hurtful, it is there condemned; if it is useful, it is therein contained. And while every man may find there all that he has learnt of useful elsewhere, he will find there in much greater abundance things that are to be found nowhere else, but can be learnt only in the wonderful sublimity and wonderful simplicity of the Scriptures.

Augustine, Christian Doctrine, II, 42

25 What I understand I also believe, but I do not understand everything that I believe; for all which I understand I know, but I do not know all that I believe. But still I am not unmindful of the utility of believing many things which are not known.... And though the majority of things must remain unknown to me, yet I do know what is the utility of believing.

Augustine, On the Teacher, XI, 37

26 Although by the revelation of grace in this life we cannot know of God "what He is," and thus are united to Him as to one unknown, still we know Him more fully according as many and more excellent of His effects are demonstrated to us, and according as we attribute to Him some things known by divine revelation, to which natural reason cannot reach, as, for instance, that God is Three and One.

Aquinas, Summa Theologica, I, 12, 13

27 The light of faith makes us see what we believe. For just as, by the habits of the other virtues, man sees what is fitting to him in respect of that habit, so, by the habit of faith, the human mind is directed to assent to such things as are fitting to a right faith, and not to assent to others.

Aquinas, Summa Theologica, II-II, 1, 4

28 Unbelievers are in ignorance of things that are of faith, for neither do they see or know them in themselves, nor do they know them to be credible. The faithful, on the other hand, know them, not as by demonstration, but by the light of faith which makes them see that they ought to believe them.

Aquinas, Summa Theologica, II-II, 1, 5

29 Science and opinion about the same object can certainly be in different men, as we have stated above about science and faith. Yet it is possible for one and the same man to have science and faith about the same thing relatively, that is, in relation to the subject, but not in the same respect. For it is possible for the same person, about one and the same thing, to know one thing and to think another. And, in like manner, one may know by demonstration the unity of God, and believe that He is a Trinity. On the other hand, in one and the same man, about the same thing, and in the same respect, science is incompatible with either opinion or faith, yet for different reasons. Because science is incompatible with opinion about the same thing absolutely, for the notion of science demands that what is known should be thought impossible to be otherwise, but the notion of opinion demands that the thing of which there is opinion may be thought possible to be otherwise. Yet that which is held by faith, on account of the certainty of faith is also thought impossible to be otherwise; and the reason why science and faith cannot be about the same object and in the same respect is because the object of science is something seen, while the object of faith is the unseen, as stated above.

Aquinas, Summa Theologica, II-II, 1, 5

30 Whatever is in opposition to faith, whether it consist in a man's thoughts, or in outward persecution, increases the merit of faith, insofar as the will is shown to be more prompt and firm in believing. Hence the martyrs had more merit of faith, through not renouncing faith on

account of persecution; and even the wise have greater merit of faith, through not renouncing their faith on account of the reasons brought forward by philosophers or heretics in opposition to faith.

Aquinas, Summa Theologica, II-II, 2, 10

- 31 Other things being equal sight is more certain than hearing. But if (the authority of) the person from whom we hear greatly surpasses that of the seer's sight, hearing is more certain than sight. Thus a man of little science is more certain about what he hears on the authority of an expert in science, than about what is apparent to him according to his own reason. And much more is a man certain about what he hears from God, Who cannot be deceived, than about what he sees with his own reason, which can be mistaken.

Aquinas, Summa Theologica, II-II, 4,8

- 32 Faith is the substance of things hoped for, and argument of things which are not seen; and this I take to be its quiddity.

Dante, Paradiso, XXIV, 64

- 33 I believe in one God, sole and eternal, who moveth all the heaven, himself unmoved, with love and with desire.

And for such belief I have not only proofs physic and metaphysic, but it is given me likewise by the truth which hence doth rain

through Moses, through the Prophets and through the Psalms, through the Gospel and through you who wrote when the glowing Spirit had made you fosterers.

And I believe in three eternal Persons, and I believe them one Essence, so One and so Trine as to comport at once with *are* and *is*.

With the profound divine state whereof I speak, my mind is stamped more limes than once by evangelic teaching.

This the beginning is; this is the spark which then dilates into a living flame, and like a star in heaven shineth in me.

Dante, Paradiso, XXIV, 130

34 The principal lesson of theology is that Christ can be known.

Luther, Table Talk, 1333

35 Prior to faith and a knowledge of God, reason is darkness, but in believers it's an excellent instrument, just as all gifts and instruments of nature are evil in godless men, so they are good in believers. Faith is now furthered by reason, speech, and eloquence, whereas these were only impediments prior to faith. Enlightened reason, taken captive by faith, receives life from faith, for it is slain and given life again.

Luther, Table Talk, 2938b

36 Faith justifies not as a work, or as a quality, or as knowledge, but as assent of the will and firm confidence in the mercy of God. For if faith were only knowledge, then the devil would certainly be saved because he possesses the greatest knowledge of God and of all the works and wonders of from the creation of the world.

Accordingly faith must be understood otherwise than as knowledge. In part, however, it is assent.

Luther, Table Talk, 4655

37 Little children are saved only by faith without any good works; therefore faith alone justifies. If God's power be able to effect that in one, then he is also able to accomplish it in all; for the power of the child effects it not, but the power of faith; neither is it done through the child's weakness or disability; for then that weakness would be merit of itself, or equivalent to merit. It is a mischievous thing that we miserable, sinful wretches will upbraid God, and hit him in the teeth with our works, and think thereby to be justified before him; but God will not allow it.

Luther, Table Talk, H304

38 Faith consists in a knowledge of God and of Christ, not in reverence for the Church.

Calvin, Institutes of the Christian Religion, III, 2

39 Faith is a knowledge of the benevolence of God towards us, and a certain persuasion of his veracity.

Calvin, Institutes of the Christian Religion, III, 2

40 The principal hinge on which faith turns is this— that we must not consider the promises of mercy, which the Lord offers, as true only to others, and not to ourselves; but rather make them our own, by embracing them in our hearts.

Calvin. Institutes of the Christian Religion, III, 2

- 41 Perhaps it is not without reason that we attribute facility in belief and conviction to simplicity and ignorance; for it seems to me I once learned that belief was a sort of impression made on our mind, and that the softer and less resistant the mind, the easier it was to imprint something on it.... The more a mind is empty and without counterpoise, the more easily it gives beneath the weight of the first persuasive argument.

Montaigne, Essays, I, 27, It Is Folly

- 42 Some make the world believe that they believe what they do not believe. Others, in greater number, make themselves believe it, being unable to penetrate what it means to believe.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

- 43 We must not give God chaff for wheat, as they say. If we believed in him, I do not say by faith, but with a simple belief; in fact (and I say it to our great confusion), if we believed in him just as in any other history, if we knew him like one of our comrades, we would love him above all other things, for the infinite goodness and beauty that shines in him. At least he would march in the same rank in our affection as riches, pleasures, glory, and our friends.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

- 44 the participation that we have in the knowledge of truth, whatever it may be, has not been acquired by our own powers. God has taught us that clearly enough by the witnesses that he has chosen from the common people, simple and ignorant, to instruct us in his admirable

secrets. Our faith is not of our own acquiring, it is a pure present of another's liberality. It is not by reasoning or by our understanding that we have received our religion; it is by external authority and command. The weakness of our judgment helps us more in this than its strength, and our blindness more than our clear-sightedness. It is by the mediation of our ignorance more than of our knowledge that we are learned with that divine learning.

Montaigne, Essays, 11, 12, Apology for Raymond Sebond

45 Reason does nothing but go astray in everything, and especially when it meddles with divine things. Who feels this more evidently than we? For even though we have given it certain and infallible principles, even though we light its steps with the holy lamp of the truth which it has pleased God to communicate to us, nevertheless we see daily how, when it strays however little from the beaten path and deviates or wanders from the way traced and trodden by the Church, immediately it is lost, it grows embarrassed and entangled, whirling round and floating in that vast, troubled, and undulating sea of human opinions, unbridled and aimless. As soon as it loses that great common highroad it breaks up and disperses onto a thousand different roads.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

46 I do not at all hate opinions contrary to mine. I am so far from being vexed to see discord between my judgments and others', and from making myself incompatible with the society of men because they are of a different sentiment and party from mine, that on the contrary,

since variety is the most general fashion that nature has followed, and more in minds than bodies, inasmuch -as minds are of a substance suppler and susceptible of more forms, I find it much rarer to see our humors and plans agree. And there were never in the world two opinions alike, any more than two hairs or two grains. Their most universal quality is diversity.

Montaigne, Essays, 11, 37, Children and Fath».rs

47 I enter into discussion and argument with great freedom and ease, inasmuch as opinion finds in me a bad soil to penetrate and take deep roots in. No propositions astonish me, no belief offends me, whatever contrast it offers with my own. There is no fancy so frivolous and so extravagant that it does not seem to me quite suitable to the production of the human mind. We who deprive our judgment of the right to make decisions look mildly on opinions different from ours; and if we do not lend them our judgment, we easily lend them our ears. Where one scale of the balance is totally empty, I let the other vacillate under an old woman's dreams. And it seems to me excusable if I take rather the odd number than the even, Thursday rather than Friday; if I am happier to be twelfth or fourteenth than thirteenth at table; if I would rather see a hare skirting my path when I travel than crossing it, and rather give my left foot than my right to be booted first. All such idle fancies, which are in credit around us, deserve at least to be listened to. For me they out%veigh only emptiness, but they do outweigh that. Popular and chance opinions count in weight for something, and not nothing, in nature. And he who does not let himself go that far may perhaps fall into the vice of obstinacy to avoid that of superstition.

Montaigne, Essays, III, 8, Of the Art of Discussion

48 I honoured our theology and aspired as much as anyone to reach to heaven, but having learned to regard it as a most highly assured fact that the road is not less open to the most ignorant than to the most learned, and that the revealed truths which conduct thither are quite above our intelligence, I should not have dared to submit them to the feebleness of my reasonings; and I thought that, in order to undertake to examine them and succeed in so doing, it was necessary to have some extraordinary assistance from above and to be more than a mere man.

Descartes, Discourse on Method, I

49 Though the matters be obscure with which our faith is said to deal, nevertheless this is understood to hold only of the fact or matter of which it treats, and it is not meant that the formal reason on account of which we assent to matters of faith is obscure: for, on the other hand, this formal reason consists in a certain internal light, and it is when God supernaturally fills us with this illumination that we are confident that what is proposed for our belief has been revealed by Him, Himself, and that it is clearly impossible that He should lie: a fact more certain than any natural light and often indeed more evident than it on account of the light of grace.

Descartes, Objections and Replies, II

50 The Scripture was written to show unto men the kingdom of God, and to prepare their minds to become His obedient subjects, leaving the world, and the philosophy thereof, to the disputation of men for the exercising of their natural reason.

Hobbes, Leviathan, I, 8

- 51 Faith of supernatural law is not a fulfilling, but only an assenting to the same; and not a duty that we exhibit to God, but a gift which God freely giveth to whom He pleaseth; as also unbelief is not a breach of any of His laws, but a rejection of them all, except the laws natural.

Hobbes, Leviathan, II, 26

- 52 Disputing of God's nature is contrary to His honour, for it is supposed that in this natural kingdom of God, there is no other way to know anything but by natural reason; that is, from the principles of natural science; which are so far from teaching us anything of God's nature, as they cannot teach us our own nature, nor the nature of the smallest creature living. And therefore, when men out of the principles of natural reason dispute of the attributes of God, they but dishonour Him: for in the attributes which we give to God, we are not to consider the signification of philosophical truth, but the signification of pious intention to do Him the greatest honour we are able.

Hobbes, Leviathan, 11, 31

- 53 Belief and unbelief never follow men's commands. Faith is a gift of God which man can neither give nor take away by promise of rewards or menaces of torture.

Hobbes, Leviathan, III, 42

- 54 As for those wingy Mysteries in Divinity, and airy subtleties in Religion, which have unhing'd the brains of better heads, they never stretched the *Pia Mater* of mine. Methinks there be not impossibilities enough in Religion

for an active faith; the deepest Mysteries ours contains have not only been illustrated, but maintained, by Syllogism and the rule of Reason. I love to lose my self in a mystery, to pursue my Reason to an *O altitudo!* 'Tis my solitary recreation to pose my apprehension with those involved AEnigma's and riddles of the Trinity, with Incarnation, and Resurrection. I can answer all the Objections of Satan and my rebellious reason with that odd resolution I learned of *Tertullian*, *Certum est quia impossibile est*. I desire to exercise my faith in the difficultest point; for to credit ordinary and visible objects is not faith, but perswasion. Some believe the better for seeing Christ's Sepulchre; and when they have seen the Red Sea, doubt not of the Miracle. Now contrarily, I bless my self and am thankful that I lived not in the days of Miracles, that I never saw Christ nor His Disciples; I would not have been one of those *Israelites* that pass'd the Red Sea, nor one of Christ's patients on w'hom he wrought his wonders; then had my faith been thrust upon me, nor should I enjoy that greater blessing pronounced to all that believe and saw not. 'Tis an easie and necessary belief, to credit what our eye and sense hath examined: I believe he was dead, and buried, and rose again; and desire to see him in his glory, rather than to contemplate him in his Cenotaphe or Sepulchre. Nor is this much to believe; as we have reason, we owe this faith unto History: they only had the advantage of a bold and noble Faith, who lived before his coming, who upon obscure propheties and mystical Types could raise a belief, and expect apparent impossibilities.

Sir Thomas Browne, Religio Medici, I, 9

55 How shall the dead arise, is no question of my Faith; to believe only possibilities, is not Faith, but meer Philosophy.

Sir Thomas Browne, Religio Medici, I, 48

56 Faith indeed tells what the senses do not tell, but not the contrary of what they see. It is above them and not contrary to them.

Pascal, Pensées, IV, 265

57 If we submit everything to reason, our religion will have no mysterious and supernatural element. If we offend the principles of reason, our religion will be absurd and ridiculous.

Pascal, Pensées, IV, 273

58 Instead of complaining that God had hidden Himself, you will give Him thanks for not having revealed so much of Himself; and you will also give Him thanks for not having revealed Himself to haughty sages, unworthy to know so holy a God.

Two kinds of persons know Him: those who have a humble heart, and who love lowliness, whatever kind of intellect they may have, high or low; and those who have sufficient understanding to see the truth, whatever opposition they may have to it.

Pascal, Pensées, IV, 288

59 the knowledge of God without that of man's misery causes pride. The knowledge of man's misery without that of God causes despair. The knowledge of Jesus Christ

constitutes the middle course, because in Him we find both God and our misery.

Pascal, Pensées, VII, 527

60 We understand nothing of the works of God, if we do not take as a principle that He has willed to blind some and enlighten others.

Pascal, Pensées, VIII, 566

61 It is a wonderful thing, and worthy of particular attention, to see this Jewish people existing so many years in perpetual misery, it being necessary as a proof of Jesus Christ both that they should exist to prove Him and that they should be miserable because they crucified Him; and though to be miserable and to exist are contradictory, they nevertheless still exist in spite of their misery. They are visibly a people expressly created to serve as a witness to the Messiah (Isaiah 43.9; 44.8). They keep the books, and love them, and do not understand them. And all this was foretold; that God's judgments are entrusted to them, but as a sealed book.

Pascal, Pensées, IX, 640-641

62 What in me is dark
Illumine, what is low raise and support;
That to the highth of this great Argument
I may assert Eternal Providence,
And justifie the wayes of God to men.

Milton, Paradise Lost, I, 22

63 Thou Celestial light
Shine inward, and the mind through all her powers

Irradiate, there plant eyes, all mist from thence
Purge and disperse, that I may see and tell
Of things invisible to mortal sight.

Milton, Paradise Lost, III, 51

64 So spake the Seraph *Abdiel* faithful found,
Among the faithless, faithful only hee;
Among innumerable false, unmov'd,
Unshak'n, uneduc'd, unterrifi'd
His Loyal tie he kept, his Love, his Zealc;
Nor number, nor example with him wrought
To swerve from truth, or change his constant mind
Though single. From amidst them forth he passd.
Long way through hostile scorn, which he susteind
Superior, nor of violence fear'd aught;
And with retorted scorn his back he turn'd
On those proud Towrs to swift destruction doom'd.

Milton, Paradise Lost, V, 893

65 Where there is much desire to learn, there of necessity
will be much arguing, much writing, many opinions; for
opinion in good men is but knowledge in the making.

Milton, Areopagitica

66 As in the whole course of my investigation I found
nothing taught expressly by Scripture, which does not
agree with our understanding, or which is repugnant
thereto, and as I saw that the prophets taught nothing,
which is not very simple and easily to be grasped by all,
and further, that they clothed their teaching in the style,
and confirmed it with the reasons, which would most
deeply move the mind of the masses to devotion towards

God, I became thoroughly convinced, that the Bible leaves reason absolutely free, that it has nothing in common with philosophy, in fact, that Revelation and Philosophy stand on totally different footings.

Spinoza, Theologico-Political Treatise, Pref.

67 Scripture does not teach philosophy, but merely obedience, and ... all it contains has been adapted to the understanding and established opinions of the multitude. Those, therefore, who wish to adapt it to philosophy, must needs ascribe to the prophets many ideas which they never even dreamed of, and give an extremely forced interpretation to their words: those on the other hand, who would make reason and philosophy subservient to theology, will be forced to accept as Divine utterances the prejudices of the ancient Jews, and to fill and confuse their mind therewith. In short, one party will run wild with the aid of reason, and the other will run wild without the aid of reason.

Spinoza, Theologico-Political Treatise, XV

68 Faith is not built on disquisitions vain;
The things we must believe are few and plain.

Dryden, Religio Laici, 431

69 Divine faith itself, when it is kindled in the soul, is something more than an opinion, and depends not upon the occasions or the motives that have given it birth; it advances beyond the intellect, and takes possession of the will and of the heart, to make us act with zeal and joyfully as the law of God commands. Then we have no

further need to think of reasons or to pause over the difficulties of argument which the mind may anticipate.

Leibniz, Theodicy, 29

70 Though everything said in the text be infallibly true, yet the reader may be, nay, cannot choose but be, very fallible in the understanding of it. Nor is it to be wondered, that the \rill of God, when clothed in words, should be liable to that doubt and uncertainty which unavoidably attends that sort of conveyance, when even his Son, whilst clothed in flesh, was subject to all the frailties and inconveniences of human nature, sin excepted.

Locke, Concerning Human Understanding, Bk. III, IX, 23

71 Though the common experience and the ordinary course of things have justly a mighty influence on the minds of men, to make them give or refuse credit to anything proposed to their belief; yet there is one case, wherein the strangeness of the fact lessens not the assent to a fair testimony given of it. For where such supernatural events are suitable to ends aimed at by Him who has the power to change the course of nature, there, under such circumstances, that may be the fitter to procure belief, by how much the more they are beyond or contrary to ordinary observation. This is the proper case of miracles, which, well attested, do not only find credit themselves, but give it also to other truths, which need such confirmation.

Locke, Concerning Human Understanding, Bk. IV, XVI, 13

72 Reason is natural revelation, whereby the eternal Father of light and fountain of all knowledge, communicates to mankind that portion of truth which he has laid within the reach of their natural faculties: revelation is natural reason enlarged by a new set of discoveries communicated by God immediately; which reason vouches the truth of, by the testimony and proofs it gives that they come from God. So that he that takes away reason to make away for revelation, puts out the light of both, and does much what the same as if he would persuade a man to put out his eyes, the better to receive the remote light of an invisible star by a telescope.

Locke, Concerning Human Understanding, Bk. IV, XIX, 4

73 I believe that thousands of men would be orthodox enough in certain points, if divines had not been too curious, or too narrow, in reducing orthodoxy within the compass of subtleties, niceties, and distinctions, with little warrant from Scripture and less from reason or good policy.

Swift, Thoughts on Religion

74 Lo! the poor Indian, whose untutor'd mind
Sees God in clouds, or hears him in the wind;
His soul proud Science never taught to stray
Far as the solar walk, or milky way;
Yet simple Nature to his hope has giv'n,
Behind the cloud-topt hill, an humbler heav'n;
Some safer world in depth of woods embrac'd,
Some happier island in the watry waste,
Where slaves once more their native land behold,
No fiends torment, no Christians thirst for gold!

To Be, contents his natural desire,
He asks no Angel's wing, no Seraph's fire;
But thinks, admitted to that equal sky,
His faithful dog shall bear him company.

Pope, Essay on Man, Epistle I, 99

75 For Modes of Faith, let graceless zealots fight;
His can't be wrong whose life is in the right.

Pope, Essay on Man, Epistle III, 305

76 When any opinion leads to absurdities, it is certainly
false; but it is not certain that an opinion is false, because
it is of dangerous consequence.

Hume, Concerning Human Understanding, VIII, 75

77 Upon the whole, we may conclude, that the Christian
religion not only was at first attended with miracles, but
even at this day cannot be believed by any reasonable
person without one. Mere reason is insufficient to
convince us of its veracity: And whoever is moved by
faith to assent to it, is conscious of a continued miracle in
his own person, which subverts all the principles of his
understanding, and gives him a determination to believe
what is most contrary to custom and experience.

Hume, Concerning Human Understanding, X, 101

78 The universal propensity to believe in an invisible,
intelligent power, if not an original instinct, being at least
a general attendant of human nature, may be considered
as a kind of mark or stamp, which the Divine workman
has set upon his work; and nothing surely can more
dignify mankind, than to be thus selected from all other

parts of the creation, and to bear the image or impression of the universal Creator.

Hume, Natural History of Religion, XV

79 Mr. Murray praised the ancient philosophers for the candour and good humour with which those of different sects disputed with each other. *Johnson*. "Sir, they disputed with good humour, because they were not in earnest as to religion. Had the ancients been serious in their belief, we should not have had their Gods exhibited in the manner we find them represented in the Poets. The people would not have suffered it. They disputed with good humour upon their fanciful theories, because they were not interested in the truth of them: when a man has nothing to lose, he may be in good humour with his opponent. Accordingly you see in Lucian, the Epicurean, who argues only negatively, keeps his temper; the Stoick, who has something positive to preserve, grows angry. Being angry with one who controverts an opinion which you value, is a necessary consequence of the uneasiness which you feel. Every man who attacks my belief, diminishes in some degree my confidence in it, and therefore makes me uneasy; and I am angry with him who makes me uneasy. Those only who believed in revelation have been angry at having their faith called in question; because they only had something upon which they could rest as matter of fact."

Boswell, Life of Johnson (Apr. 3, 1776)

80 The opinion of a learned Bishop of our acquaintance, as to there being merit in religious faith, being mentioned;—*Johnson*. "Why, yes, Sir, the most licentious man, were

hell open before him, would not take the most beautiful strumpet to his arms. We must, as the Apostle says, live by faith, not by sight."

Boswell, Life of Johnson (June 3, 1781)

- 81 Since ... the most sublime efforts of philosophy can extend no farther than feebly to point out the desire, the hope, or, at most, the probability of a future state, there is nothing, except a divine revelation that can ascertain the existence and describe the condition of the invisible country which is destined to receive the souls of men after their separation from the body.

Gibbon, Decline and Fall of the Roman Empire, XV

- 82 Personal interest is often the standard of our belief, as well as of our practice.

Gibbon, Decline and Fall of the Roman Empire, XX

- 83 The most sagacious of the Christian theologians, the great Athanasius himself, has candidly confessed that, whenever he forced his understanding to meditate on the divinity of the Logos, his toilsome and unavailing efforts recoiled on themselves; that the more he thought, the less he comprehended; and the more he wrote, the less capable was he of expressing his thoughts. In every step of the inquiry we are compelled to feel and acknowledge the immeasurable disproportion between the size of the object and the capacity of the human mind. We may strive to abstract the notions of time, of space, and of matter, which so closely adhere to all the perceptions of our experimental knowledge. But as soon as we presume to reason of infinite substance, of spiritual generation, as

often as we deduce any positive conclusions from a negative idea, we are involved in darkness, perplexity, and inevitable contradiction.

Gibbon, Decline and Fall of the Roman Empire, XXI

84 I maintain that all attempts of reason to establish a theology by the aid of speculation alone are fruitless, that the principles of reason as applied to nature do not conduct us to any theological truths, and, consequently, that a rational theology can have no existence, unless it is founded upon the laws of morality. For all synthetical principles of the understanding are valid only as immanent in experience; while the cognition of a Supreme Being necessitates their being employed transcendently, and of this the understanding is quite incapable. If the empirical law of causality is to conduct us to a Supreme Being, this being must belong to the chain of empirical objects—in which case it would be, like all phenomena, itself conditioned. If the possibility of passing the limits of experience be admitted, by means of the dynamical law of the relation of an effect to its cause, what kind of conception shall we obtain by this procedure? Certainly not the conception of a Supreme Being, because experience never presents us with the greatest of all possible effects, and it is only an effect of this character that could witness to the existence of a corresponding cause. If, for the purpose of fully satisfying the requirements of Reason, we recognize her right to assert the existence of a perfect and absolutely necessary being, this can be admitted only from favour, and cannot be regarded as the result of irresistible demonstration. The physico-theological proof may add weight to others—if other proofs there are—by connecting speculation with

experience; but in itself it rather prepares the mind for theological cognition, and gives it a right and natural direction, than establishes a sure foundation for theology.

Kant, Critique of Pure Reason, Transcendental Dialectic

85 Holding for true, or the subjective validity of a judgement in relation to conviction (which is, at the same time, objectively valid), has the three following degrees: opinion, belief, and knowledge. Opinion is a consciously insufficient judgement, subjectively as well as objectively. Belief is subjectively sufficient, but is recognized as being objectively insufficient. Knowledge is both subjectively and objectively sufficient. Subjective sufficiency is termed conviction (for myself); objective sufficiency is termed certainty (for all). I need not dwell longer on the explanation of such simple conceptions.

Kant, Critique of Pure Reason, Transcendental Method

86 When men exercise their reason coolly and freely on a variety of distinct questions, they inevitably fall into different opinions on some of them. When they are governed by a common passion, their opinions, if they are so to be called, will be the same.

Hamilton or Madison, Federalist 50

87 Public opinion... deserves to be as much respected as despised—despised for its concrete expression and for the concrete consciousness it expresses, respected for its essential basis, a basis which only glimmers more or less dimly in that concrete expression. But in itself it has no criterion of discrimination, nor has it the ability to extract the substantive element it contains and raise it to precise

knowledge. Thus to be independent of public opinion is the first formal condition of achieving anything great or rational whether in life or in science. Great achievement is assured, however, of subsequent recognition and grateful acceptance by public opinion, which in due course will make it one of its own prejudices.

Hegel, Philosophy of Right, 318

88 Opinion is like a pendulum and obeys the same law. If it goes past the centre of gravity on one side, it must go a like distance on the other; and it is only after a certain time that it finds the true point which it can remain at rest.

Schopenhauer, Further Pathological Observations

89 There is no other revelation than the thoughts of the wise, even though these thoughts, liable to error as is the lot of everything human, are often clothed in strange allegories and myths under the name of religion. So far, then, it is a matter of indifference whether a man lives and dies in reliance on his own or another's thoughts; for it is never more than human thought, human opinion, which he trusts. Still, instead of trusting what their own minds tell them, men have as a rule a weakness for trusting others who pretend to supernatural sources of knowledge. And in view of the enormous intellectual inequality between man and man, it is easy to see that the thoughts of one mind might appear as in some sense a revelation to another.

Schopenhauer, Christian System

90 Faith is the highest passion in a man. There are perhaps many in every generation who do not even reach it, but no one gets further.

Kierkegaard, Fear and Trembling, Epilogue

91 Mysticism has not the patience to wait for God's revelation.

Kierkegaard, Journals (July II, 1840)

92 We are born believing. A man bears beliefs as a tree bears apples.

Emerson, Warship

93 The test of the true faith, certainly, should be its power to charm and command the soul, as the laws of nature control the activity of the hands— so commanding that we find pleasure and honor in obeying.

Emerson, Address to Harvard Divinity School

94 Strong Son of God, immortal Love,
Whom we, that have not seen thy face,
By faith, and faith alone, embrace,
Believing where we cannot prove.

Tennyson, In Memoriam, Pref.

95 Ahab. If the gods think to speak outright to man, they will honourably speak outright; not shake their heads, and give an old wife's darkling hint.

Melville, Moby Dick, CXXXIII

96 It is remarkable that the highest intellectual mood which the world tolerates is the perception of the truth of the

most ancient revelations, now in some respects out of date; but any direct revelation, any original thoughts, it hates like virtue. The fathers and the mothers of the town would rather hear the young man or young woman at their tables express reverence for some old statement of the truth than utter a direct revelation themselves. They don't want to have any prophets born into their families—damn them! So far as thinking is concerned, surely original thinking is the divinest thing. Rather we should reverently watch for the least motions, the least scintillations, of thought in this sluggish world, and men should run to and fro on the occasion more than at an earthquake. We check and repress the divinity That stirs within us, to fall down and worship the divinity that is dead without us. I go to see many a good man or good woman, so called, and utter freely that thought which alone it was given to me to utter; but there was a man who lived a long, long time ago, and his name was Moses, and another whose name was Christ, and if your thought does not, or does not appear to, coincide with what they said, the good man or the good woman has no ears to hear you. They think they love God! It is only his old clothes, of which they make scarecrow's for the children. Where will they come nearer to God than in those very children?

Thorau, Journal (Nov. 16, 1851)

97 What we call rational grounds for our beliefs are often extremely irrational attempts to justify our instincts.

T. H. Huxley, On the Natural Inequality of Men, fn. 1

98 There is the greatest difference between presuming an opinion to be true, because, with every opportunity for contesting it, it has not been refuted, and assuming its truth for the purpose of not permitting its refutation. Complete liberty of contradicting and disproving our opinion is the very condition which justifies us in assuming its truth for purposes of action; and on no other terms can a being with human faculties have any rational assurance of being right.

Mill, On Liberty, II

99 The usefulness of an opinion is itself matter of opinion: as disputable, as open to discussion, and requiring discussion as much as the opinion itself. There is the same need of an infallible judge of opinions to decide an opinion to be noxious, as to decide it to be false, unless the opinion condemned has full opportunity of defending itself. And it will not do to say that the heretic may be allowed to maintain the utility or harmlessness of his opinion, though forbidden to maintain its truth. The truth of an opinion is part of its utility. If we would know whether or not it is desirable that a proposition should be believed, is it possible to exclude the consideration of whether or not it is true? In the opinion, not of bad men, but of the best men, no belief which is contrary to truth can be really useful: and can you prevent such men from urging that plea, when they are charged with culpability for denying some doctrine which they are told is useful, but which they believe to be false?

Mill, On Liberty, II

100 Reason ... is subservient to faith, as handling, examining, explaining, recording, cataloguing, defending the truths which faith, not reason, has gained for us, as providing an intellectual expression of supernatural facts, eliciting what is implicit, comparing, measuring, connecting each with each, and forming one and all into a theological system.

Newman, Essay on the Development of Christian Doctrine, Pt. 11, VII, 3

101 From the age of fifteen, dogma has been the fundamental principle of my religion: I know no other religion; I cannot enter into the idea of any other sort of religion; religion, as a mere sentiment, is to me a dream and a mockery.

Newman, Apologia Pro Vita Sua, II

102 Ten thousand difficulties do not make one doubt.

Newman, Apologia Pro Vita Sua, V

103 The Sea of Faith

Was once, too, at the full, and round earth's shore
Lay like the folds of a bright girdle furled.
But now I only hear
Its melancholy, long, withdrawing roar,
Retreating, to the breath
Of the night-wind, down the vast edges drear
And naked shingles of the world.

Arnold, Dover Beach

104 That ancient deception which demands faith in what has no reasonable explanation, is already worn out and

we can no longer return to it.... Man always understands everything through his reason and not through faith. It was once possible to deceive him by asserting that he knows only through faith and not through reason, but as soon as he knows two faiths and sees men who profess another faith in the same way that he professes his own, he is inevitably obliged to decide the matter by reason. ... In our time the attempts made to infuse spirituality into man through faith apart from reason, are like attempts to feed a man otherwise than through his mouth.

Tolstoy, On Life, Appendix III

105 People today live without faith. On the one hand, the minority of wealthy, educated people, having freed themselves from the hypnotism of the Church, believe in nothing. They look upon all faiths as absurdities or as useful means of keeping the masses in bondage—no more. On the other hand, the vast majority, poor, uneducated, but for the most part truly sincere, remain under the hypnotism of the Church and therefore think they believe and have faith. But this is not really faith, for instead of throwing light on man's position in the world it only darkens it.

Tolstoy, What Is Religion?, VIII

106 Thought in action has for its only possible motive the attainment of thought at rest; and whatever does not refer to belief is no part of the thought itself.

And what, then, is belief? It is the demi-cadence which closes a musical phrase in the symphony of our intellectual life. We have seen that it has just three properties: First, it is something that we are aware of;

second, it appeases the irritation of doubt; and, third, it involves the establishment in our nature of a rule of action, or, say for short, a *habit*. As it appeases the irritation of doubt, which is the motive for thinking, thought relaxes, and comes to rest for a moment when belief is reached. But, since belief is a rule for action, the application of which involves further doubt and further thought, at the same time that it is a stopping-place, it is also a new starting-place for thought. That is why I have permitted myself to call it thought at rest, although thought is essentially an action. The final upshot of thinking is the exercise of volition, and of this thought no longer forms a part; but belief is only a stadium of mental action, an effect upon our nature due to thought, which will influence future thinking.

G. S. Peirce, How to Make Our Ideas Clear

107 Whoever has theologian blood in his veins has a wrong and dishonest attitude towards all things from the very first. The pathos that develops out of this is called faith.

Nietzsche, Antichrist, IX

108 The 'will of God' (that is to say the conditions for preserving the power of the priest) has to be known—to this end a 'revelation' is required. In plain words: a great literary forgery becomes necessary, a 'sacred book' is discovered—it is made public with all hieratic pomp, with days of repentance and with lamentation over the long years of 'sinfulness'.

Nietzsche, Antichrist, XXVI

109 The logical reason of man operates in this held of divinity exactly as it has always operated in Jove or in patriotism, or in politics, or in any other of the wider affairs of life, in which our passions or our mystical intuitions fix our beliefs beforehand. It finds arguments for our conviction, for indeed it has to find them. It amplifies and defines our faith, and dignifies it and lends it words and plausibility. It hardly ever engenders it; it cannot now secure it.

William James, Varieties of Religious Experience, XVIII

110 Our faith is faith in someone else's faith, and in the greatest matters this is most the case.

William James, The Will to Believe

111 So far as man stands for anything, and is productive or originaive at all, his entire vital function may be said to have to deal with maybes. Not a victory is gained, not a deed of faithfulness or courage is done, except upon a maybe; not a service, not a sally of generosity, not a scientific exploration or experiment or textbook, that may not be a mistake. It is only by risking our persons from one hour to another that we live at all. And often enough our faith beforehand in an uncertified result *is the only thing that makes the result come true*. Suppose, for instance, that you are climbing a mountain, and have worked yourself into a position from which the only escape is by a terrible leap. Have faith that you can successfully make it, and your feet are nerved to its accomplishment But mistrust yourself, and think of all the sweet things you have heard the scientists say of maybes, and you will hesitate so long that, at last, all

unstrung and trembling, and launching yourself in a moment of despair, you roll in the abyss. In such a case (and it belongs to an enormous class), the part of wisdom as well as of courage is to *believe what is in the line of your needs*, for only by such belief is the need fulfilled. Refuse to believe, and you shall indeed be right, for you shall irretrievably perish. But believe, and again you shall be right, for you shall save yourself. You make one or the other of two possible universes true by your trust or mistrust,—both universes having been only maybes, in this particular, before you contributed your act.

William James, Is Life Worth Living?

112 These, then, are my last words to you: Be not afraid of life. Believe that life is worth living, and your belief will help create the fact. The 'scientific proof that you are right may not be clear before the day of judgment (or some stage of being which that expression may serve to symbolize) is reached. But the faithful fighters of this hour, or the beings that then and there will represent them, may then turn to the faint-hearted, who here decline to go on, with words like those with which Henry IV greeted the tardy Crillon after a great victory had been gained: "Hang yourself, brave Crillon! we fought at Arques, and you were not there."

William James, Is Life Worth Living?

113 It is not disbelief that is dangerous in our society: it is belief.

Shaw, Androcles and the Lion, Pref.

114 William James accomplished a new advance in Pragmatism by his theory of the will to believe, or as he himself later called it, the right to believe. The discovery of the fundamental consequences of one or another belief has without fail a certain influence on that belief itself. If a man cherishes novelty, risk, opportunity and a variegated esthetic reality, he will certainly reject any belief in Monism, when he clearly perceives the import of this system. But if, from the very start, he is attracted by esthetic harmony, classic proportions, fixity even to the extent of absolute security, and logical coherence, it is quite natural that he should put faith in Monism. Thus William James took into account those motives of instinctive sympathy which play a greater role in our choice of a philosophic system than do formal reasonings; and he thought that we should be rendering a service to the cause of philosophical sincerity if we would openly recognize the motives which inspire us. He also maintained the thesis that the greater part of philosophic problems and especially those which touch on religious fields are of such a nature that they are not susceptible of decisive evidence one way or the other. Consequently he claimed the right of a man to choose his beliefs not only in the presence of proofs or conclusive facts, but also in the absence of all such proof. Above all when he is forced to choose between one meaning or another, or when by refusing to choose he has a right to assume the risks of faith, his refusal is itself equivalent to a choice. The theory of the will to believe gives rise to misunderstandings and even to ridicule; and therefore it is necessary to understand clearly in what way James used it. We are always obliged to act in any case; our actions and with them their consequences actually

change according to the beliefs which we have chosen. Moreover it may be that, in order to discover the proofs which will ultimately be the intellectual justification of certain beliefs—the belief in freedom, for example, or the belief in God—it is necessary to begin to act in accordance with this belief.

Dewey, Development of American Pragmatism

115 Dogmas are at their best when nobody denies them, for then their falsehood sleeps, like that of an unconscious metaphor, and their moral function is discharged instinctively.

Santayana, Life of Reason, III, 5

6.6 Doubt and Skepticism

It is not in the sphere of opinion or belief, but rather with respect to matters about which men claim to have knowledge, that doubt operates critically. Whatever is a matter of opinion or belief, even if appraised as highly probable, is subject to doubt. But when men claim to have certitude in their knowledge or possession of the truth, they hold what they affirm or deny to be beyond all reasonable doubt. It is such certitude that the skeptic challenges by his doubts.

As the passages collected here plainly show, skepticism is both an attitude of mind and a systematic method of dealing with the whole range of human opinions, beliefs, and claims to knowledge. In its ancient as well as in its modern forms, it sometimes goes to the extreme of universal doubt. We can have certainty about nothing, nor can we even validly assert

that one proposition is more probable than another. One opinion is as good as another; all are equally true or false. The reader will find among the passages quoted, arguments against such extreme skepticism that take the form of reduction to absurdity: the skeptic cannot say that no statement is true without contradicting himself, for if his own statement is false, then at least some statements are true; and if his own statement is true, then it is false that no statements are true. Should the skeptic refuse to acknowledge the force of this argument, because he is willing to embrace self-contradiction, nothing remains to be said. Conversation between the extreme skeptic and his opponent must cease.

In other quotations the reader will find a more moderate skepticism recommended as a therapeutic method, seeking to sift the claims to knowledge and to winnow those that are valid from those that are without foundation. This is the method of beginning by doubting everything in order to come at last to the few things that one cannot doubt, and to discover from an examination of these the criteria of certitude. Moderate skepticism also takes the form of attenuating universal doubt by conceding moral or practical certitude to the beliefs one must embrace in order to carry on the conduct of one's life from day to day. The attempt to maintain a middle position between extreme skepticism, on the one hand, and extreme dogmatism, on the other, is sometimes described as being properly critical rather than skeptical. The reader will discern these nuances of method in quotations from Descartes, Hume, and Kant; but it is by reading the passages taken from Montaigne that he will become acquainted with skepticism as an attitude of mind that is both tolerant and uncompromising.

In still other passages, the reader will discover the range of reasons that are offered for the doubt or uncertainty that generates one or another form of skepticism: mistrust of the senses based on the illusions and hallucinations to which they are subject; mistrust of intellectual judgments based on the fallibility of the intellect and the errors to which it is prone; mistrust of even widely held opinions or firmly established beliefs based on the fact that contrary opinions and beliefs have also been regarded as acceptable or settled. It will be seen that the opponents of skepticism, certainly in its extreme form, do not dismiss such doubts as groundless, but rather try to confine them to the areas in which they are justified.

■ ■ ■

- 1 *Socrates*. What, according to you and your friend Gorgias, is the definition of virtue?

Meno. O Socrates, I used to be told, before I knew you, that you were always doubting yourself and making others doubt; and now you are casting your spells over me, and I am simply getting bewitched and enchanted, and am at my wits' end. And if I may venture to make a jest upon you, you seem to me both in your appearance and in your power over others to be very like the flat torpedo fish, who torpifies those who come near him and touch him, as you have now torpified me, I think. For my soul and my tongue are really torpid, and I do not know how to answer you; and though I have been delivered of an infinite variety of speeches about virtue before now, and to many persons—and very good ones they were, as

thought—at this moment I cannot even say what virtue is. And I think that you are very wise in not voyaging and going away from home, for if you did in other places as you do in Athens, you would be cast into prison as a magician.

Soc. You are a rogue, Meno, and had all caught me.

Men. What do you mean, Socrates?

Soc. I can tell why you made a simile about me.

Men. Why?

Soc. In order that I might make another simile about you. For I know that all pretty young gentlemen like to have pretty similes made about them—as well they may—but I shall not return the compliment. As to my being a torpedo, if the torpedo is torpid as well as the cause of torpidity in others, then indeed I am a torpedo, but not otherwise; for I perplex others, not because I am clear, but because I am utterly perplexed myself. And now I know not what virtue is, and you seem to be in the same case, although you did once perhaps know before you touched me.

Plato, Meno, 79B

- 2 *Socrates.* Tell me, Theodorus, do you suppose that you yourself, or any other follower of Protagoras, would contend that no one deems another ignorant or mistaken in his opinion?

Theodorus. The thing is incredible, Socrates.

Soc. And yet that absurdity is necessarily involved in the thesis which declares man to be the measure of all things.

Theod. How so?

Soc. Why, suppose that you determine in your own mind something to be true, and declare your opinion to

me; let us assume, as he argues, that this is true to you. Now, if so, you must either say that the rest of us are not the judges of this opinion or judgment of yours, or that we judge you always to have a true opinion? But are there not thousands upon thousands who, whenever you form a judgment, take up arms against you and are of an opposite judgment and opinion, deeming that you judge falsely?

Theod. Yes, indeed, Socrates, thousands and tens of thousands, as Homer says, who give me a world of trouble.

Soc. Well, but are we to assert that what you think is true to you and false to the ten thousand others?

Theod. No other inference seems to be possible.

Soc. And how about Protagoras himself? If neither he nor the multitude thought, as indeed they do not think, that man is the measure of all things, must it not follow that the truth of which Protagoras wrote would be true to no one? But if you suppose that he himself thought this, and that the multitude does not agree with him, you must begin by allowing that in whatever proportion the many are more than one, in that proportion his truth is more untrue than true.

Theod. That would follow if the truth is supposed to vary with individual opinion.

Soc. And the best of the joke is, that he acknowledges the truth of their opinion who believe his own opinion to be false; for he admits that the opinions of all men are true.

Theod. Certainly.

Soc. And does he not allow that his own opinion is false, if he admits that the opinion of those who think him false is true?

Theod. Of course.

Soc. Whereas the other side do not admit that they speak falsely?

Theod. They do not.

Soc. And he, as may be inferred from his writings, agrees that this opinion is also true.

Theod. Clearly.

Soc. Then all mankind, beginning with Protagoras, will contend, or rather, I should say that he will allow, when he concedes that his adversary has a true opinion—Protagoras, I say, will himself allow that neither a dog nor any ordinary man is the measure of anything which he has not learned—am I not right?

Theod. Yes.

Soc. And the truth of Protagoras being doubted by all, will be true neither to himself nor to any one else?

Theod. I think, Socrates, that we are running my old friend too hard.

Plato, Theaetetus, 170B

- 3 All statements cannot be false nor all true, both because of many other difficulties which might be adduced as arising from this position, and because if all are false it will not be true to say even this, and if all are true it will not be false to say all are false.

Aristotle, Metaphysics, 1063b30

- 4 If a man believe that nothing is known, he knows not whether this even can be known, since he admits he knows nothing. I will therefore decline to argue the case against him who places himself with head where his feet should be. And yet granting that he knows this, I would

still put this question, since he has never yet seen any truth in things, whence he knows what knowing and not knowing severally are, and what it is that has produced the knowledge of the true and the false and what has proved the doubtful to differ from the certain.

Lucretius, Nature of Things, IV

5 But straightway Jesus spake unto them, saying, Be of good cheer; it is I; be not afraid.

And Peter answered him and said. Lord, if it be thou, bid me come unto thee on the water.

And he said. Come. And when Peter was come down out of the ship, he walked on the water, to go to Jesus.

But when he saw the wind boisterous, he was afraid; and beginning to sink, he cried, saying, Lord, save me.

And immediately Jesus stretched forth his hand, and caught him, and said unto him, O thou of little faith, wherefore didst thou doubt?

Matthew 14:27-31

6 But Thomas, one of the twelve, called Did-y-mus, was not with them when Jesus came.

The other disciples therefore said unto him. We have seen the Lord. But he said unto them, Except I shall see in his hands the print of the nails, and put my finger into the print of the nails, and thrust my hand into his side, I will not believe.

John 20:24-25

7 Zeus. What have we left?

Hermes. There is Scepticism. Come along, Pyrrhias, and be put up. Quick's the word. The attendance is

dwindling; there will be small competition. Well, who buys Lot 9?

Ninth Dealer. I. Tell me first, though, what do you know?

Scepticism. Nothing.

Ninth D. But how's that?

Sc. There does not appear to me to be anything.

Ninth D. Are not *we* something?

Sc. How do I know that?

Ninth D. And you yourself?

Sc. Of that I am still more doubtful.

Ninth D. Well, you *are* in a fix! And what have you got those scales for?

Sc. I use them to weigh arguments in, and get them evenly balanced. They must be absolutely equal—not a feather-weight to choose between them; then, and not till then, can I make uncertain which is right.

Ninth D. What else can you turn your hand to?

Sc. Anything; except catching a runaway.

Ninth D. And why not that?

Sc. Because, friend, everything eludes my grasp.

Ninth D. I believe you. A slow, lumpish fellow you seem to be. And what is the end of your knowledge?

Sc. Ignorance. Deafness. Blindness.

Ninth D. What! sight and hearing both gone?

Sc. And with them judgement and perception, and all, in short, that distinguishes man from a worm.

Ninth D. You are worth money!—What shall we say for him?

Her. Four pounds.

Ninth D. Here it is. Well, fellow; so you are mine?

Sc. I doubt it.

Ninth D. Nay, doubt it not! You are bought and paid for.

Sc. It is a difficult case. ... I reserve my decision.

Ninth D. Now, come along with me, like a good slave.

Sc. But how am I to know whether what you say is true?

Ninth D. Ask the auctioneer. Ask my money. Ask the spectators.

Sc. Spectators? But can we be sure there are any?

Ninth D. Oh, I'll send you to the treadmill. That will convince you with a vengeance that I am your master.

Sc. Reserve your decision.

Ninth D. Too late. It is given.

Her. Stop that Nvrangling and go with your purchaser. Gentlemen, we hope to see you here again to-morrow, when we shall be offering some lots suitable for plain men, artisans, and shopkeepers.

Lucian, Sale of Creeds

- 8 For we are, and know that we are, and delight in our being, and our knowledge of it. Moreover, in these three things no true-seeming illusion disturbs us; for we do not come into contact with these by some bodily sense, as we perceive the things outside of us—colours, e.g., by seeing, sounds by hearing, smells by smelling, tastes by tasting, hard and soft objects by touching—of all which sensible objects it is the images resembling them but not themselves which we perceive in the mind and hold in the memory, and which excite us to desire the objects. But, without any delusive representation of images or phantasms, I am most certain that I am and that I know and delight in this. In respect of these truths, I am not at all afraid of the arguments of the Academicians, who say,

"What if you are deceived?" For if I am deceived, I am. For he who is not, cannot be deceived; and if I am deceived, by this same token I am. And since I am if I am deceived, how am I deceived in believing that I am? for it is certain that I am if I am deceived. Since, therefore, I, the person deceived, should be, even if I were deceived, certainly I am not deceived in this knowledge that I am. And, consequently, neither am I deceived in knowing that I know. For, as I know that I am, so I know this also, that I know. And when I love these two things, I add to them a certain third thing, namely, my love, which is of equal moment. For neither am I deceived in this, that I love, since in those things which I love I am not deceived; though even if these were false, it would still be true that I loved false things. For how could I justly be blamed and prohibited from loving false things, if it were false that I loved them? But, since they are true and real, who doubts that when they are loved, the love of them is itself true and real?

Augustine, City of God, XI, 26

9 *Panurge*. By the flesh, blood, and body, I swear, reswear, forswear, abjure, and renounce: he evades and avoids, shifts and escapes me, and quite slips and winds himself out of my gripes and clutches.

At these words Gargantua arose, and said, Praised be the good God in all things, but especially for bringing the world into the height of refinedness beyond what it was when I first became acquainted therewith, that now the most learned and most prudent philosophers are not ashamed to be seen entering in at the porches and frontispieces of the schools of the Pyrrhonian, Aporrhetic, Sceptic, and Ephetic sects. Blessed be the holy name of

God! Veritably, it is like henceforth to be found an enterprise of much more easy undertaking, to catch lions by the neck, horses by the mane, oxen by the horns, bulls by the muzzle, wolves by the tail, goats by the beard, and flying birds by the feet, than to entrap such philosophers in their words.

Rabelais, Gargantua and Pantagruel, III, 36

- 10 Ignorance that knows itself, that judges itself and condemns itself, is not complete ignorance: to be that, it must be ignorant of itself. So that the profession of the Pyrrhonians is to waver, doubt, and inquire, to be sure of nothing, to answer for nothing. Of the three functions of the soul, the imaginative, the appetitive, and the consenting, they accept the first two; the last they suspend and keep it ambiguous, without inclination or approbation, however slight, in one direction or the other.

Zeno pictured in a gesture his conception of this division of the faculties of the soul: the hand spread and open was appearance; the hand half shut and the fingers a little hooked, consent; the closed fist, comprehension; when with his left hand he closed his fist still tighter, knowledge.

Now this attitude of their Judgment, straight and inflexible, taking all things in without adherence or consent, leads them to their Ataraxy, which is a peaceful and sedate condition of life, exempt from the agitations we receive through the impression of the opinion and knowledge we think we have of things. Whence are born fear, avarice, envy, immoderate desires, ambition, pride, superstition, love of novelty, rebellion, disobedience, obstinacy, and most bodily ills. Indeed, they free themselves thereby from jealousy on behalf of their

doctrine. For they dispute in a very mild manner. They do not fear contradiction in their discussion. When they say that heavy things go down, they would be very sorry to have anyone take their word for it; and they seek to be contradicted, so as to create doubt and suspension of judgment, which is their goal. They advance their propositions only to combat those they think we believe in....

Is it not an advantage to be freed from the necessity that curbs others? Is it not better to remain in suspense than to entangle yourself in the many errors that the human fancy has produced? Is it not better to suspend your conviction than to get mixed up in these seditious and quarrelsome divisions? ...

The Pyrrhonians have kept themselves a wonderful advantage in combat, having rid themselves of the need to cover up. It does not matter to them that they are struck, provided they strike; and they do their work with everything. If they your proposition is lame; if you win, theirs is. If they lwe, they confirm ignorance; if you lose, you confirm it. If they prove that nothing is known, well and good; if they do not know how to prove it, just as good.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

11 *Que scais-je?* (What do I know?)

Montaigne (his motto)

12 *Hamlet*. Doubt thou the stars are fire;
Doubt that the sun doth move;
Doubt truth to be a liar;
But never doubt I love.

Shakespeare, Hamlet, II, ii, 116

- 13 *Othello*. Make me to see't; or, at the least, so prove it
That the probation bear no hinge nor loop
To hang a doubt on; or woe upon thy life!

Iago. My noble lord—

Oth. If thou dost slander her and torture me,
Never pray more; abandon all remorse;
On horror's head horrors accumulate;
Do deeds to make heaven weep, all earth amazed;
For nothing canst thou to damnation add
Greater than that.

Shakespeare, Othello, III, iii, 364

- 14 If a man will begin with certainties, he shall end in doubts; but if he will be content to begin with doubts, he shall end in certainties.

Bacon, Advancement of Learning, Bk. I, V, 8

- 15 The registering of doubts hath two excellent uses: the one, that it saveth philosophy from errors and falsehoods; when that which is not fully appearing is not collected into assertion, whereby error might draw error, but reserved in doubt: the other, that the entry of doubts are as so many suckers or sponges to draw use of knowledge; insomuch as that which, if doubts had not preceded, a man should never have advised, but passed it over without note, by the suggestion and solicitation of doubts is made to be attended and applied. But both these commodities do scarcely countervail an inconvenience, which will intrude itself if it be not debarred; which is, that when a doubt is once received, men labour rather how to keep it a doubt still, than how to solve it; and

accordingly bend their wits. Of this we see the familiar example in lawyers and scholars, both which, if they have once admitted a doubt, it goeth ever after authorized for a doubt. But that use of wit and knowledge is to be allowed, which laboureth to make doubtful things certain, and not those which labour to make certain things doubtful. Therefore these kalendars of doubts I commend as excellent things; so that there be this caution used, that when they be thoroughly sifted and brought to resolution, they be from thenceforth omitted, decarded, and not continued to cherish and encourage men in doubting.

Bacon, Advancement of Learning, Bk. 11, VIII, 5

- 16 Our method and that of the sceptics agree in some respects at first setting out, but differ most widely, and are completely opposed to each other in their conclusion; for they roundly assert that nothing can be known; we, that but a small part of nature can be known, by the present method; their next step, however, is to destroy the authority of the senses and understanding, whilst we invent and supply them with assistance.

Bacon, Novum Organum, I, 37

- 17 I consider that I possess no senses; I imagine that body, figure, extension, movement and place are but the fictions of my mind. What, then, can be esteemed as true? Perhaps nothing at all, unless that there is nothing in the world that is certain.

But how can I know there is not something different from those things that I have just considered, of which one cannot have the slightest doubt? Is there not some

God, or some other being by whatever name we call it, who puts these reflections into my mind? That is not necessary, for is it not possible that I am capable of producing them myself? I myself, am I not at least something? But I have already denied that I had senses and body. Yet I hesitate, for what follows from that? Am I so dependent on body and senses that I cannot exist without these? But I was persuaded that there was nothing in all the world, that there was no heaven, no earth, that there were no minds, nor any bodies: was I not then likewise persuaded that I did not exist? Not at all; of a surety I my-self did exist since I persuaded myself of something [or merely because I thought of something]. But there is some deceiver or other, very powerful and very cunning, who ever employs his ingenuity in deceiving me. Then without doubt I exist also if he deceives me, and let him deceive me as much as he will, he can never cause me to be nothing so long as I think that I am something. So that after having reflected well and carefully examined all things, we must come to the definite conclusion that this proposition: I am, I exist, is necessarily true each time that I pronounce it, or that I mentally conceive it.

Descartes, Meditations on First Philosophy, II

- 18 After I have recognised that there is a God—because at the same time I have also recognised that all things depend upon Him, and that He is not a deceiver, and from that have inferred that what I perceive clearly and distinctly cannot fail to be true—although I no longer pay attention to the reasons for which I have judged this to be true, provided that I recollect having clearly and distinctly perceived it no contrary reason can be brought

forward which could ever cause me to doubt of its truth; and thus I have a true and certain knowledge of it. And this same knowledge extends likewise to all other things which I recollect having formerly demonstrated, such as the truths of geometry and the like; for what can be alleged against them to cause me to place them in doubt?

Descartes, Meditations on First Philosophy, V

- 19 My statement that the entire testimony of the senses must be considered to be uncertain, nay, even false, is quite serious and so necessary for the comprehension of my meditations, that he who will not or cannot admit that, is unfit to urge any objection to them that merits a reply.

Descartes, Objections and Replies, V

- 20 What astonishes me most is to see that all the world is not astonished at its own weakness. Men act seriously, and each follows his own mode of life, not because it is in fact good to follow' since it is the custom, but as if each man knew certainly where reason and justice are. They find themselves continually deceived, and, by a comical humility, think it is their own fault and not that of the art which they claim always to possess. But it is well there are so many such people in the world, who are not sceptics for the glory of scepticism, in order to show that man is quite capable of the most extravagant opinions, since he is capable of believing that he is not in a state of natural and inevitable weakness, but, on the contrary, of natural wisdom.

Nothing fortifies scepticism more than that there are some who are not sceptics; if all were so, they would be wrong.

Pascal, Pansees, VI, 374

- 21 As to what is said by Descartes, that we must doubt all things in which there is the least uncertainty, it would be preferable to express it by this better and more expressive precept: We ought to think what degree of acceptance or dissent everything merits; or more simply, we ought to inquire after the reasons of any dogma. Thus the Cartesian wranglings concerning doubt would cease.

Leibniz, Animadversions on Descartes' Principles of Philosophy

- 22 If we will disbelieve everything, because we cannot certainly know all things, we shall do much-wisely as he who would not use his legs, but sit still and perish, because he had no wings to fly.

Locke, Concerning Human Understanding, Intro.

- 23 As for our own existence, we perceive it so plainly and so certainly, that it neither needs nor is capable of any proof. For nothing can be more evident to us than our own existence. I think, I reason, I feel pleasure and pain: can any of these be more evident to me than my own existence? If I doubt of all other things, that very doubt makes me perceive my own existence, and will not suffer me to doubt of that. For if I know I feel pain, it is evident I have as certain perception of my own existence, as of the existence of the pain I feel: or if I know I doubt, I have as certain perception of the existence of the thing doubting,

as of that thought which I call doubt. Experience then convinces us, that we have an intuitive knowledge of our own existence, and an internal infallible perception that we are. In every act of sensation, reasoning, or thinking, we are conscious to ourselves of our own being; and, in this matter, come not short of the highest degree of certainty.

Locke, Concerning Human Understandings Bk. IV, IX, 3

24 As these noble Houyhnhnms are endowed by nature with a general disposition to all virtues, and have no conceptions or ideas of what is evil in a rational creature, so their grand maxim is, to cultivate *reason*, and to be wholly governed by it. Neither is *reason* among them a point problematical as with us, where men can argue with plausibility on both sides of the question; but strikes you with immediate conviction; as it must needs do where it is not mingled, obscured, or discoloured by passion and interest. I remember it was with extreme difficulty that I could bring my master to understand the meaning of the word *opinion*, or how a point could be disputable; because reason taught us to affirm or deny, only where we are certain; and beyond our knowledge, we cannot do either. So that controversies, wranglings, disputes, and positiveness in false or dubious propositions, are evils unknown among the Houyhnhnms. In the like manner, when I used to explain to him our several systems of *natural philosophy*, he would laugh that a creature pretending to *reasons* should value it self upon the knowledge of other peoples conjectures, and in things, where that knowledge, if it were certain, could be of no use. Wherein he agreed entirely with the sentiments of

Socrates, as Plato delivers them; which I mention as the highest honour I can do that prince of philosophers.

Swift, Gulliver's Travels, IV, 8

- 25 The Cartesian doubt. . . were it ever possible to be attained by any human creature (as it plainly is not) would be entirely incurable; and no reasoning could ever bring us to a state of assurance and conviction upon any subject.

Hume, Concerning Human Understandings XII, 116

- 26 The great subverter of Pyrrhonism or the excessive principles of scepticism is action, and employment, and the occupations of common life. These principles may flourish and triumph in the schools; where it is, indeed, difficult, if not impossible, to refute them. But as soon as they leave the shade, and by the presence of the real objects, which actuate our passions and sentiments, are put in opposition to the more powerful principles of our nature, they vanish like smoke, and leave the most determined sceptic in the same condition as other mortals.

The sceptic, therefore, had better keep within his proper sphere, and display those philosophical objections, which arise from more profound researches. Here he seems to have ample matter of triumph; while he justly insists, that all our evidence for any matter of fact, which lies beyond the testimony of sense or memory, is derived entirely from the relation of cause and effect; that we have no other idea of this relation than that of two objects, which have been frequently conjoined together; that we have no argument to convince us, that

objects, which have, in our experience, been frequently conjoined, will likewise, in other instances, be conjoined in the same manner; and that nothing leads us to this inference but custom or a certain instinct of our nature; which it is indeed difficult to resist, but which, like other instincts, may be fallacious and deceitful. While the sceptic insists upon these topics, he shows his force, or rather, indeed, his own and our weakness; and seems, for the time at least, to destroy all assurance and conviction. These arguments might be displayed at greater length, if any durable good or benefit to society could ever be expected to result from them.

For here is the chief and most confounding objection to excessive scepticism, that no durable good can ever result from it; while it remains in its full force and vigour. we need only ask such a sceptic, What his meaning is? And what he proposes by all these curious researches? He is immediately at a loss, and knows not what to answer. A Copernican or Ptolemaic, who supports each his different system of astronomy, may hope to produce a conviction, which will remain constant and durable, with his audience. A Stoic or Epicurean display's principles, which may not be durable, but which have an effect on conduct and behaviour. But a Pyrrhonian cannot expect, that his philosophy will have any constant influence on the mind: or if it had, that its influence would be beneficial to society. On the contrary, he must acknowledge, if he will acknowledge anything, that all human life must perish, were his principles universally and steadily to prevail. All discourse, all action would immediately cease; and men remain in a total lethargy, till the necessities of nature, unsatisfied, put an end to their miserable existence. It is true; so fatal an event is very little to be dreaded. Nature

is always too strong for principle. And though a Pyrrhonian may throw himself or others into a momentary amazement and confusion by his profound reasonings; the first and most trivial event in life will put to flight all his doubts and scruples, and leave him the same, in every point of action and speculation, with the philosophers of every other sect, or with those who never concerned themselves in any philosophical researches. When he awakes from his dream, he will be the first to join in the laugh against himself, and to confess, that all his objections are mere amusement, and can have no other tendency' than to show the whimsical condition of mankind, who must act and reason and believe; though they are not able, by their most diligent enquiry, to satisfy themselves concerning the foundation of these operations, or to remove the objections, which may be raised against them.

Hume, Concerning Human Understanding, XII, 126-128

- 27 There is, indeed, a more mitigated scepticism or academical philosophy, which may be both durable and useful, and which may, in part, be the result of this Pyrrhonism, or excessive scepticism, when its undistinguished doubts are, in some measure, corrected by common sense and reflection. The greater part of mankind are naturally apt to be affirmative and dogmatical in their opinions; and while they see objects only on one side, and have no idea of any counterpoising argument, they throw themselves precipitately into the principles, to which they are inclined; nor have they any indulgence for those who entertain opposite sentiments. To hesitate or balance perplexes their understanding, checks their passion, and suspends their action. They are,

therefore, impatient till they escape from a state, which to them is so uneasy: and they think, that they could never remove themselves far enough from it, by the violence of their affirmations and obstinacy of their belief. But could such dogmatical reasoners become sensible of the strange infirmities of human understanding, even in its most perfect state, and when most accurate and cautious in its determinations; such a reflection would naturally inspire them with more modesty and reserve, and diminish their fond opinion of themselves, and their prejudice against antagonists. The illiterate may reflect on the disposition of the learned, who, amidst all the advantages of study and reflection, are commonly still diffident in their determinations: and if any of the learned be inclined, from their natural temper, to haughtiness and obstinacy, a small tincture of Pyrrhonism might abate their pride, by showing them, that the few advantages, which they may have attained over their fellows, are but inconsiderable, if compared with the universal perplexity and confusion, which is inherent in human nature. In general, there is a degree of doubt, and caution, and modesty, which, in all kinds of scrutiny and decision, ought for ever to accompany a just reasoner.

Hume, Concerning Human Understanding, XII, 129

28 What danger can ever come from ingenious reasoning and inquiry? The worst speculative skeptic ever I knew a much better man than the best superstitious devotee and bigot.

Hume, Letter to Gilbert Elliot (Mar. 10, 1751)

29 Doubt is not a pleasant condition, but certainty is an absurd one.

Voltaire, Letter to Frederick the Great (Apr. 6, 1767)

30 Talking of those who denied the truth of Christianity, he [Johnson] said, "It is always easy' to be on the negative side. If a man were now to deny that there is salt upon the table, you could not reduce him to an absurdity. Come, let us try this a little further. I deny that Canada is taken, and I can support my denial by pretty good arguments. The French are a much more numerous people than we; and it is not likely that they would allow us to take it. 'But the ministry have assured us, in all the formality of *The Gazette*, that it is taken.'— Very true. But the ministry have put us to an enormous expence by the war in America, and it is their interest to persuade us that we have got something for our money.—'But the fact is confirmed by thousands of men who were at the taking of it.'—Ay, but these men have still more interest in deceiving us. They' don't want that you should think the French have beat them, but that they' have beat the French. Now suppose you should go over and find that it is really taken, that would only satisfy yourself; for when you come home we will not believe you. We will say, you have been bribed.—Yet, Sir, notwithstanding all these plausible objections, we have no doubt that Canada is really ours. Such is the weight of common testimony. How much stronger are the evidences of the Christian religion!"

Boswell, Life of Johnson (July 14, 1763)

31 *Johnson*. "Hume, and other sceptical innovators, are vain men, and will gratify themselves at any expence. Truth will not afford sufficient food to their vanity; so they have betaken themselves to error. Truth, Sir, is a cow which will yield such people no more milk, and so they' are gone to milk the bull. If I could have allowed myself to gratify my vanity at the expence of truth, what fame might I have acquired. Every thing which Hume has advanced against Christianity had passed through my mind long before he wrote. Always remember this, that after a system is well settled upon positive evidence, a few partial objections ought not to shake it. The human mind is so limited, that it cannot take in all the parts of a subject, so that there may be objections raised against any thing. There are objections against a plenum, and objections against a vacuum; yet one of them must certainly be true,"

Boswell, Life of Johnson (July 21, 1763)

32 After we came out of the church, we stood talking | or some time together of Bishop Berkeley's ingenious sophistry to prove the non-existence of matter, and that every thing in the universe is merely ideal. I observed, that though we are satisfied his doctrine is not true, it is impossible to refute it. I never shall forget the alacrity with which Johnson answered, striking his foot with mighty force against a large stone, till he rebounded from it, "I refute it *thus*"

Boswell, Life of Johnson (Aug. 6, 1763)

33 When we apply reason to the objective synthesis of phenomena . . . reason establishes, with much

plausibility, its principle of unconditioned unity; but it very soon falls into such contradictions that it is compelled, in relation to cosmology, to renounce its pretensions.

For here a new phenomenon of human reason meets us—a perfectly natural antithetic, which does not require to be sought for by subtle sophistry, but into which reason of itself unavoidably falls. It is thereby preserved, to be sure, from the slumber of a fancied conviction—which a merely one-sided illusion produces; but it is at the same time compelled, either, on the one hand, to abandon itself to a despairing scepticism, or, on the other, to assume a dogmatical confidence and obstinate persistence in certain assertions, without granting a fair hearing to the other side of the question. Either is the death of a sound philosophy, although the former might perhaps deserve the title of the euthanasia of pure reason.

Kant, Critique of Pure Reason, Transcendental Dialectic

- 34 The sceptical errors of this remarkably acute thinker [i.e., Hume] arose principally from a defect, which was common to him with the dogmatists, namely, that he had never made a systematic review of all the different kinds of *a priori* synthesis performed by the understanding. Had he done so, he would have found, to take one example among many, that the principle of permanence was of this character, and that it, as well as the principle of causality, anticipates experience. In this way he might have been able to describe the determinate limits of the *a priori* operations of understanding and reason. But he merely declared the understanding to be limited, instead of showing what its limits were; he created a general

mistrust in the power of our faculties, without giving us any determinate knowledge of the bounds of our necessary and unavoidable ignorance; he examined and condemned some of the principles of the understanding, without investigating all its powers with the completeness necessary to criticism. He denies, with truth, certain powers to the understanding, but he goes further, and declares it to be utterly inadequate to the *a priori* extension of knowledge, although he has not fully examined all the powers which reside in the faculty; and thus the fate which always overtakes scepticism meets him too. That is to say, his own declarations are doubted, for his objections were based upon *facta*, which are contingent, and not upon principles, which can alone demonstrate the necessary invalidity of all dogmatical assertions.

Kant, Critique of Pure Reason, Transcendental Method

35 He who shall teach the Child to Doubt
The rotting Grave shall ne'er get out.
He who respects the Infant's faith
Triumphs over Hell & Death.

Blake, Auguries of Innocence, 87

36 *Mephistopheles*. I am the Spirit that denies!
And rightly too; for all that doth begin
Should rightly to destruction run;
'Twere better then that nothing were begun.

Goethe, Faust, I, 1338

37 *Dogmatist*. I'll not let screams lead me to war
With doubts and critic-cavils.

The Devil must be something, or
Else how could there be devils?

Idealist. For once, as I see phantasy,
It is far too despotic.
In truth, if I be all I see,
Today I'm idiotic.

Realist. This riot makes my torture sheer
And greatly irks me surely;
For the first time I'm standing here
On my feet insecurely.

Supernaturalist. With much delight I join this crew
And share with them their revels;
For that there are good spirits too
I argue from these devils.

Skeptic. They go to track the flamelets out
And think they're near the treasure.
Devil alliterates with Doubt,
So I am here with pleasure.

Goethe, Faust, I, 4343

38 The arrogant declamations current in our time against philosophy present the singular spectacle, on the one hand of deriving their justification from the superficiality to which that study has been degraded, and, on the other, of being themselves rooted in this element against which they turn so ungratefully. For by pronouncing the knowledge of truth a wild-goose chase, this self-styled philosophizing has reduced all thoughts and all topics to the same level, just as the despotism of the Roman Empire abolished the distinction between free men and slaves, virtue and vice, honour and dishonour, learning and ignorance. The result of this levelling process is that the concepts of what is true, the laws of ethics, likewise

become nothing more than opinions and subjective convictions. The maxims of the worst of criminals, since they too are convictions, are put on the same level of value as those laws; and at the same time any object, however sorry, however accidental, any material however insipid, is put on the same level of value as what constitutes the interest of all thinking men and the bonds of the ethical world.

Hegel, Philosophy of Right, Pref.

- 39 The most dangerous form of scepticism is always that which least looks like it. The notion that pure thought is the positive truth for an existing individual, is sheer scepticism, for this positiveness is chimerical. It is a glorious thing to be able to explain the past, the whole of human history; but if the ability to understand the past is to be the summit of attainment for a living individual, this positiveness is scepticism, and a dangerous form of it, because of the deceptive quantity of things understood.

Kierkegaard, Concluding Unscientific Postscript, II, 3

- 40 I do not press the skepticism of the materialist. I know the quadruped opinion will not prevail. 'Tis of no importance what bats and oxen think. The first dangerous symptom I report is, the levity of intellect; as if it were fatal to earnestness to know much. Knowledge is the knowing that we can not know. The dull pray; the geniuses are light mockers. How respectable is earnestness on every platform! but intellect kills it.

Emerson, Montaigne; or, The Skeptic

41 I am the doubter and the doubt,
And I the hymn the Brahmin sings.

Emerson, Brahma

42 You say, but with no touch of scorn,
Sweet-hearted, you, whose light-blue eyes
Are tender over drowning flies.
You tell me, doubt is Devil-born.

I know not: one indeed I knew
In many a subtle question versed,
Who touch'd a jarring lyre at first.
But ever strove to make it true;

Perplexed in faith, but pure in deeds.
At last he beat his music out.
There lives more faith in honest doubt,
Believe me, than in half the creeds.

He fought his doubts and gather'd strength,
He would not make his judgment blind.
He faced the spectres of the mind
And laid them; thus he came at length

To find a stronger faith his own,
And Power was with him in the night,
Which makes the darkness and the light.
And dwells not in the light alone.

But in the darkness and the cloud.
As over Sinai's peaks of old,
While Israel made their gods of gold,
Altho' the trumpet blew so loud.

Tennyson, In Memoriam, XCVI

43 Know ye, now, Bulkington? Glimpses do ye seem to see
of that mortally intolerable truth; that all deep, earnest
thinking is but the intrepid effort of the soul to keep the
open independence of her sea; while the wildest winds of
heaven and earth conspire to cast her on the treacherous,
slavish shore?

But as in landlessness alone resides the highest truth,
shoreless, indefinite as God—so, better is it to perish in
that howling infinite, than be ingloriously dashed upon
the lee, even if that were safety! For worm-like, then, oh!
who would craven crawl to land! Terrors of the terrible! is
all this agony so vain? Take heart, take heart, O
Bulkington! Bear thee grimly, demigod! Up from the
spray of thy ocean-perishing—straight up, leaps thy
apotheosis!

Melville, Moby Dick, XXIII

44 Through all the thick mists of the dim doubts in my mind,
divine intuitions now and then shoot, enkindling my fog
with a heavenly ray. And for this I thank God; for all have
doubts; many deny; but doubts or denials, few along with
them, have intuitions. Doubts of all things earthly, and
intuitions of some things heavenly; this combination
makes neither believer nor infidel, but makes a man who
regards them both with equal eye.

Melville, Moby Dick, LXXXV

45 Those who were more directly responsible for providing
me with the knowledge essential to the right guidance of
life (and who sincerely desired to do so), imagined they
were discharging that most sacred duty by impressing

upon my childish mind the necessity, on pain of reprobation in this world and damnation in the next, of accepting, in the strict and literal sense, every statement contained in the Protestant Bible. I was told to believe, and I did believe, that doubt about any of them was a sin, not less reprehensible than a moral delict. I suppose that, out of a thousand of my contemporaries, nine hundred, at least, had their minds systematically warped and poisoned, in the name of the God of truth, by like discipline.

T. H. Huxley, Science and Christian Tradition, Prologue

46 Why not, "The Way, the Truth, the Life?"

That way

Over the mountain, which who stands upon
Is apt to doubt if it be meant for a road;
While, if he views it from the waste itself,
Up goes the line there, plain from base to brow.
Not vague, mistakable! what's a break or two
Seen from the unbroken desert either side?
And then (to bring in fresh philosophy)
What if the breaks themselves should prove at last
The most consummate of contrivances
To train a man's eye, teach him what is faith?
And so we stumble at truth's very test!
All we have gained then by our unbelief
Is a life of doubt diversified by faith,
For one of faith diversified by doubt:
We called the chess-board white,—we call it black.

Browning, Bishop Blougram's Apology

47 Philosophers of very diverse stripes propose that philosophy shall take its start from one or another state of mind in which no man, least of all a beginner in philosophy, actually is. One proposes that you shall begin by doubting everything, and says that there is only one thing that you cannot doubt, as if doubting were "as easy as lying." Another proposes that we should begin by observing "the first impressions of sense," forgetting that our very percepts are the results of cognitive elaboration. But in truth, there is but one state of mind from which you can "set out," namely, the very state of mind in which you actually find yourself at the time you do "set out"—a state in which you are laden with an immense mass of cognition already formed, of which you cannot divest yourself if you would; and who knows whether, if you could, you would not have made all knowledge impossible to yourself? Do you call it *doubting* to write down on a piece of paper that you doubt? If so, doubt has nothing to do with any serious business. But do not make believe; if pedantry has not eaten all the reality' out of you, recognize, as you must, that there is much that you do not doubt, in the least. Now that which you do not at all doubt, you must and do regard as infallible, absolute truth.. . .

Two things here are all-important to assure oneself of and to remember. The first is that a person is not absolutely an individual. His thoughts are what he is "saying to himself," that is, is saying to that other self that is just coming into life in the flow of time. When one reasons, it is that critical self that one is trying to persuade; and all thought whatsoever is a sign, and is mostly of the nature of language. The second thing to remember is that the man's circle of society (however

widely or narrowly this phrase may be understood), is a sort of loosely compacted person, in some respects of higher rank than the person of an individual organism. It is these two things alone that render it possible for you—but only in the abstract, and in a Pickwickian sense—to distinguish between absolute truth and what you do not doubt.

C. S. Peirce, What Pragmatism Means

48 Our belief in truth itself. . . that there is a truth, and that our minds and it are made for each other,—what is it but a passionate affirmation of desire, in which our social system backs us up? We want to have a truth; we want to believe that our experiments and studies and discussions must put us in a continually better and better position towards it; and on this line we agree to fight out our thinking lives. But if a pyrrhonistic sceptic asks us how we know all this, can our logic find a reply? No! certainly it cannot. It is just one volition against another,—we willing to go in for life upon a trust or assumption which he, for his part, does not care to make.

William James, Will to Believe

49 Neither acquiescence in skepticism nor acquiescence in dogma is what education should produce. What it should produce is a belief that knowledge is attainable in a measure, though with difficulty; that much of what passes for knowledge at any given time is likely to be more or less mistaken, but that the mistakes can be rectified by care and industry.... Knowledge, like other good things, is difficult, but not impossible; the dogmatist forgets the difficulty, the skeptic denies the possibility.

Both are mistaken, and their errors, when widespread, produce social disaster.

Russell, Aims of Education

50 I wish to propose for the reader's favourable consideration a doctrine which may, I fear, appear wildly paradoxical and subversive, the doctrine in question is this: that it is undesirable to believe a proposition when there is no ground whatever for supposing it true. I must, of course, admit that if such an opinion became common it would completely transform our social life and our political system; since both are at present faultless, this must weigh against it. I am also aware (what is more serious) that it would tend to diminish the incomes of clairvoyants, bookmakers, bishops and others who live on the irrational hopes of those who have done nothing to deserve good fortune here or hereafter. In spite of these grave arguments, I maintain that a case can be made out for my paradox.

Russell, Sceptical Essays, I

51 If one regards oneself as a sceptic, it is well from time to time to be sceptical about one's scepticism.

*Freud, New Introductory Lectures on Psycho-Analysis,
XXX*

52 The *Weltanschauung* to which I shall first refer is, as it were, a counterpart of political anarchism, and may perhaps have emanated from it. No doubt there have been intellectual nihilists of this kind before, but at the present day the theory' of relativity of modern physics seems to have gone to their heads. It is true that they

start out from science, but they succeed in forcing it to cut the ground from under its own feet, to commit suicide, as it were; they make it dispose of itself by getting it to refute its own premises. One often has an impression that this nihilism is only a temporary attitude, which will only be kept up until this task has been completed. When once science has been got rid of, some kind of mysticism, or, indeed, the old religious *Weltanschauung*, can spring up in the space that has been left vacant. According to this anarchistic doctrine, there is no such thing as truth, no assured knowledge of the external world. What we give out as scientific truth is only the product of our own needs and desires, as they are formulated under varying external conditions; that is to say, it is illusion once more. Ultimately we find only what we need to find, and see only what we desire to see. We can do nothing else. And since the criterion of truth, correspondence with an external world, disappears, it is absolutely immaterial what views we accept. All of them are equally true and false. And no one has a right to accuse any one else of error.

For a mind which is interested in epistemology, it would be tempting to enquire into the contrivances and sophistries by means of which the anarchists manage to elicit a final product of this kind from science. One would no doubt be brought up against situations like the one involved in the familiar example of the Cretan who says that all Cretans are liars. But I am not desirous, nor am I capable, of going deeper into this. I will merely remark that the anarchistic theory only retains its remarkable air of superiority so long as it is concerned with opinions about abstract things; it breaks down the moment it comes in contact with practical life. Now the behaviour of

men is guided by their opinions and knowledge, and the same scientific spirit which speculates about the structure of the atom or the origin of man is concerned in the building of a bridge that will bear its load. If it were really a matter of indifference what we believed, if there were no knowledge which was distinguished from among our opinions by the fact that it corresponds with reality, then we might just as well build our bridges of cardboard as of stone, or inject a tenth of a gramme of morphia into a patient instead of a hundredth, or take tear-gas as a narcotic instead of ether. But the intellectual anarchists themselves would strongly repudiate such practical applications of their theory.

*Freud, New Introductory Lectures on Psycho-Analysis,
XXXV*

53 For an answer which cannot be expressed the question too cannot be expressed.

The *riddle* does not exist.

If a question can be put at all, then it can also be answered.

Scepticism is *not* irrefutable, but palpably senseless, if it would doubt where a question cannot be asked.

For doubt can only exist where there is a question; a question only where there is an answer and this only where something can be said.

We feel that even if *all possible* scientific questions be answered, the problems of life have still not been touched at all. Of course there is then no question left, and just this is the answer.

The solution of the problem of life is seen in the vanishing of this problem.

(Is not this the reason why men to whom after long doubting the sense of life became clear, could not then say wherein this sense consisted?)

Wittgenstein, Tractatus Logico-Philosophicus, 6.5-6.521

54 Scepticism is the chastity of the intellect, and it is shameful to surrender it too soon or to the first comer: there is nobility in preserving it coolly and proudly through a long youth, until at last, in the ripeness of instinct and discretion, it can be safely exchanged for fidelity and happiness.

Santayana, Scepticism and Animal Faith, IX

55 Was the being of truth, . . . denied by the Sophists, or could they deny it? Yes, if we think only of the truth as proclaimed by particular opinions. All things said to be true might be false. Whatsoever depended on argument might be challenged by an opposed cleverer argument; whatsoever depended on usage, faith, or preference might be reversed by a contrary pose; so that ever>' man remained free to think and do what he liked, and to deny all authority. This, though with a different moral tone and intention, was also the position of the Sceptics. They despised opinion, and collected contradictory arguments in order to liberate the mind from every pledge and the heart from every earthly bond. These indomitable doubters stood firm as rocks in their philosophy; and even the Sophists were sure of their wisdom and knowingness in playing their chosen parts in the world. For both schools, then, there was an unspoken truth: namely, that life was a treacherous predicament in which they found themselves without a reason, and that they

were determined, whether nobly or nimbly, to make the best of it. Their moral philosophy left the cosmos problematical, while taking for granted abundant knowledge of human affairs and human character. If that age had had a turn for introspection and autobiography, it might have erected a doctrine of the march of experience. Trust in memory, in expectation, in the mutual communication of many minds might have issued in a system like modern psychologism: the view that all we see, say, and think is false, but that the only truth is that we see, say and think it. If nothing be real except experience, nothing can be true except biography. Society must then be conceived as carried on in a literary medium, with no regard to the natural basis of society. If the ancients never hit upon such a system of biographical metaphysics, the reason doubtless was that they were too intelligent.

Santayana, Realm of Truth, XIII

56 As for the sceptics, who doubt, as least theoretically and in words, the reliability of our organs of knowledge, especially of the intellect or reason, it would obviously be waste of breath to attempt to demonstrate its reliability to them. For every demonstration rests on some previously admitted certainty, and it is their very profession to admit of none. To defend human knowledge against their attack it is sufficient (i) to show in what that knowledge consists and how it is attained; (ii) to refute the arguments they adduce; (iii) to make a *reductio ad absurdum*. When they say that they do not know whether any proposition is true, either they know that this proposition at any rate is true, in which case they obviously contradict themselves, or they do not know

whether it is true, in which case they are either saying nothing whatever, or do not know what they say. The sole philosophy open to those who doubt the possibility of truth is absolute silence—even mental. That is to say, as Aristotle points out, such men must make themselves vegetables. No doubt reason often errs, especially in the highest matters, and, as Cicero said long ago, there is no nonsense in the world which has not found some philosopher to maintain it, so difficult is it to attain truth. But it is the error of cowards to mistake a difficulty for an impossibility.

Maritain, Introduction to Philosophy, II, 4

6.7 Reasoning, Demonstration, and Disputation

The subjects treated in this section relate to subjects treated in earlier ones: reasoning is involved in the acquisition of knowledge, in the development of hypotheses or theories, and in the criticism of opinions or beliefs; demonstration or proof is regarded, in certain fields of learning (mathematics, for example), as a condition pre-requisite to the acceptance of a conclusion as valid knowledge; disputation or controversy arises when men attempt to resolve issues generated by conflicting theories, or conflicting opinions and beliefs. The reader will also find that the subjects treated here are relevant to the discussion of philosophy, science, and mathematics in Chapter 17; and to certain aspects of the consideration of mind in Chapter 5.

Some of the passages quoted undertake to formulate the logic of reasoning in rules that determine whether the

reasoning is valid or invalid, such as Aristotle's rules of the syllogism; others describe reasoning in psychological rather than in logical terms, as a process by which the mind passes from one judgment to another. Different types of reasoning are distinguished, and fallacies in reasoning are noted. The difference between deduction and induction is considered in two ways: on the one hand, as a distinction between two kinds of reasoning; on the other hand, as a distinction between a ratiocinative process (deduction) and an intuitive leap (induction).

The contrast between that which the mind grasps discursively, through steps of reasoning or ratiocination, and that which it grasps intuitively, by immediate apprehension, is involved in a basic thesis concerning demonstration, advanced in certain of the passages quoted. Reasoning may be formally valid, in the sense that it does not violate any logical rules, while at the same time being materially false; i.e., reaching, from premises that are partly or wholly false, a conclusion that is false. When the term "demonstration" is applied, as it is by certain writers, to reasoning that is not only formally valid but also materially true (the establishment of a true conclusion from true premises), a question arises. Does this always require that the truth of the premises be demonstrated in turn? Or does demonstration presuppose the existence of indemonstrable propositions—axioms that cannot be demonstrated, yet the truth of which can still be known, intuitively and not by reasoning? Those who take a strict view of demonstration argue that it presupposes the indemonstrable.

At the opposite extreme from demonstration is the use of reasoning in what certain authors call the process of dialectic or disputation. On many issues reasonable men can take opposite sides, and when they do, they can marshal

arguments for opposite conclusions. Those who draw a sharp line between the spheres of knowledge and opinion, or truth and probability, place demonstrative reasoning on one side of this line, and dialectical or disputatious reasoning on the other.

■ ■ ■

1 Come now, and let us reason together, saith the Lord.

Isaiah 1:18

2 *Wrong Logic.* Aye, say you so? why I have been half-burst; I do so long

To overthrow his arguments with arguments more strong.
I am the Lesser Logic? True: these Schoolmen call me so,
Simply because I was the first of all mankind to show
How old established rules and laws might contradicted
be:

And this, as you may guess, is worth a thousand pounds
to me,

To take the feeble cause, and yet to win the disputation.

Aristophanes, Clouds, 1031

3 *Socrates.* When a simple man who has no skill in dialectics believes an argument to be true which he afterwards imagines to be false, whether really false or not, and then another and another, he has no longer any faith left, and great disputers, as you know, come to think at last that they have grown to be the wisest of mankind; for they alone perceive the utter unsoundness and instability of all arguments, or indeed, of all things,... How melancholy,

if there be such a thing as truth or certainty or possibility of knowledge—that a man should have lighted upon some argument or other which at first seemed true and then turned out to be false, and instead of blaming himself and his own want of wit, because he is annoyed, should at last be too glad to transfer the blame from himself to arguments in general: and for ever afterwards should hate and revile them, and lose truth and the knowledge of realities.

Plato, Phaedo, 90A

- 4 *Socrates*. First principles, even if they appear certain, should be carefully considered; and when they are satisfactorily ascertained, then, with a sort of hesitating confidence in human reason, you may, I think, follow the course of the argument.

Plato, Phaedo, 107A

- 5 Verily, Glaucon, I [Socrates] said, glorious is the power of the art of contradiction!

Why do you say so?

Because I think that many a man falls into the practice against his will. When he thinks that he is reasoning he is really disputing, just because he cannot define and divide, and so know that of which he is speaking; and he will pursue a merely verbal opposition in the spirit of contention and not of fair discussion.

Plato, Republic, V, 454A

- 6 *Socrates*. That your feelings may not be moved to pity about our citizens who are now thirty years of age, every care must be taken in introducing them to dialectic.

Glaucon. Certainly.

There is a danger lest they should taste the dear delight too early; for youngsters, as you may have observed, when they first get the taste in their mouths, argue for amusement, and are always contradicting and refuting others in imitation of those who refute them; like puppydogs, they rejoice in pulling and tearing at all who come near them-

Yes, he said, there is nothing which they like better.

And when they have made many conquests and received defeats at the hands of many, they violently and speedily get into a way of not believing anything which they believed before, and hence, not only they, but philosophy and all that relates to it is apt to have a bad name with the rest of the world.

Too true, he said.

But when a man begins to get older, he will no longer be guilty of such insanity; he will imitate the dialectician who is seeking for truth, and not the eristic, who is contradicting for the sake of amusement; and the greater moderation of his character will increase instead of diminishing the honour of the pursuit.

Plato, Republic, VII, 539A

- 7 What I now assert is that at all events we do know by demonstration. By demonstration I mean a syllogism productive of scientific knowledge, a syllogism, that is, the grasp of which is *eo ipso* such knowledge. Assuming then that my thesis as to the nature of scientific knowing is correct, the premisses of demonstrated knowledge must be true, primary, immediate, better known than and prior to the conclusion, which is further related to them as effect to cause. Unless these conditions are satisfied,

the basic truths will not be 'appropriate' to the conclusion. Syllogism there may indeed be without these conditions, but such syllogism, not being productive of scientific knowledge, will not be demonstration. The premisses must be true: for that which is non-existent cannot be known—we cannot know, c.g. that the diagonal of a square is commensurate with its side. The premisses must be primary' and indemonstrable; otherwise they will require demonstration in order to be known, since to have knowledge, if it be not accidental knowledge, of things which are demonstrable, means precisely to have a demonstration of them. The premisses must be the causes of the conclusion, better known than it, and prior to it; its causes, since we possess scientific knowledge of a thing only when we know its cause; prior, in order to be causes; antecedently known, this antecedent knowledge being not our mere understanding of the meaning, but knowledge of the fact as well. ... In saying that the premisses of demonstrated knowledge must be primary', I mean that they must be the 'appropriate' basic truths, for I identify primary premiss and basic truth. A 'basic truth' in a demonstration is an immediate proposition. An immediate proposition is one which has no other proposition prior to it.... I call an immediate basic truth of syllogism a 'thesis' when, though it is not susceptible of proof by the teacher, yet ignorance of it does not constitute a total bar to progress on the part of the pupil: one which the pupil must know if he is to learn anything whatever is an axiom. I call it an axiom because there are such truths and we give them the name of axioms *par excellence*. If a thesis assumes one part or the other of an enunciation, i.e. asserts either the existence or the non-existence of a subject, it is a

hypothesis; if it does not so assert, it is a definition. Definition *is* a 'thesis' or a 'laying something down', since the arithmetician lays it down that to be a unit is to be quantitatively indivisible; but it is not a hypothesis, for to define what a unit is is not the same as to affirm its existence.

Now since the required ground of our knowledge—i.e. of our conviction—of a fact is the possession of such a syllogism as we call demonstration, and the ground of the syllogism is the facts constituting its premisses, we must not only know the primary premisses—some if not all of them—beforehand, but know them better than the conclusion.

Aristotle, Posterior Analytics, 71b16

- 8 Reasoning is an argument in which, certain things being laid down, something other than these necessarily comes about through them, (a) It is a 'demonstration', when the premisses from which the reasoning starts are true and primary, or are such that our knowledge of them has originally come through premisses which are primary and true: (b) reasoning, on the other hand, is 'dialectical', if it reasons from opinions that are generally accepted. Things are 'true' and 'primary' which are believed on the strength not of anything else but of themselves: for in regard to the first principles of science it is improper to ask any further for the why and wherefore of them; each of the first principles should command belief in and by itself. On the other hand, those opinions are 'generally accepted' which are accepted by every one or by the majority or by the philosophers—i.e. by all, or by the majority, or by the most notable and illustrious of them. Again (r), reasoning is 'contentious' if it starts from

opinions that seem to be generally accepted, but are not really such, or again if it merely seems to reason from opinions that are or seem to be generally accepted. For not every opinion that seems to be generally accepted actually is generally accepted. For in none of the opinions which we call generally accepted is the illusion entirely on the surface, as happens in the case of the principles of contentious arguments; for the nature of the fallacy in these is obvious immediately, and as a rule even to persons with little power of comprehension. So then, of the contentious reasonings mentioned, the former really deserves to be called 'reasoning' as well, but the other should be called 'contentious reasoning', but not 'reasoning', since it appears to reason, but does not really do so. Further (rf), besides all the reasoning we have mentioned there are the mis-reasonings that start from the premisses peculiar to the special sciences, as happens (for example) in the case of geometry and her sister sciences. For this form of reasoning appears to differ from the reasonings mentioned above; the man who draws a false figure reasons from things that are neither true and primary, nor yet generally accepted. For he does not fall within the definition; he does not assume opinions that are received either by every one or by the majority or by philosophers—that is to say, by all, or by most, or by the most illustrious of them—but he conducts his reasoning upon assumptions which, though appropriate to the science in question, are not true; for he effects his mis-reasoning either by describing the semicircles wrongly or by drawing certain lines in a way in which they could not be drawn.

The foregoing must stand for an outline survey of the species of reasoning.

Aristotle, Topics, 100a25

9 You should display your training in inductive reasoning against a young man, in deductive against an expert. You should try, moreover, to secure from those skilled in deduction their premisses, from inductive reasoners their parallel cases; for this is the thing in which they are respectively trained. In general, too, from your exercises in argumentation you should try to carry away either a syllogism on some subject or a refutation or a proposition or an objection, or whether some one put his question properly or improperly (whether it was yourself or some one else) and the point which made it the one or the other. For this is what gives one ability, and the whole object of training is to acquire ability, especially in regard to propositions and objections. For it is the skilled propounder and objector who is, speaking generally, a dialectician....

Do not argue with every one, nor practise upon the man in the street; for there are some people with whom any argument is bound to degenerate. For against any one who is ready to try all means in order to seem not to be beaten, it is indeed fair to try all means of bringing about one's conclusion: but it is not good form. Wherefore the best rule is, not lightly to engage with casual acquaintances, or bad argument is sure to result. For you see how in practising together people cannot refrain from contentious argument.

It is best also to have ready-made arguments relating to those questions in which a very small stock will furnish us with arguments serviceable on a very large number of occasions. These are those that are universal, and those

in regard to which it is rather difficult to produce points for ourselves from matters of everyday experience.

Aristotle, Topics, 164a12

- 10 We must grasp the number of aims entertained by those who argue as competitors and rivals to the death. These are five in number, refutation, fallacy, paradox, solecism, and fifthly to reduce the opponent in the discussion to babbling—i.e. to constrain him to repeat himself a number of times; or it is to produce the appearance of each of these things without the reality. For they choose if possible plainly to refute the other party, or as the second best to show that he is committing some fallacy, or as a third best to lead him into paradox, or fourthly to reduce him to solecism, i.e. to make the answerer, in consequence of the argument, to use an ungrammatical expression; or, as a last resort, to make him repeat himself.

Aristotle, On Sophistical Refutations, 165b12

- 11 Precision is not to be sought for alike in all discussions, any more than in all the products of the crafts. Now fine and just actions, which political science investigates, admit of much variety and fluctuation of opinion, so that they may be thought to exist only by convention, and not by nature. And goods also give rise to a similar fluctuation because they bring harm to many people; for before now men have been undone by reason of their wealth, and others by reason of their courage. We must be content, then, in speaking of such subjects and with such premisses to indicate the truth roughly and in outline, and in speaking about things which are only for

the most part true and with premisses of the same kind to reach conclusions that are no better. In the same spirit, therefore, should each type of statement be received; for it is the mark of an educated man to look for precision in each class of things just so far as the nature of the subject admits; it is evidently equally foolish to accept probable reasoning from a mathematician and to demand from a rhetorician scientific proofs.

Aristotle, Ethics, 1094b13

- 12 Scientific knowledge is judgement about things that are universal and necessary, and the conclusions of demonstration, and all scientific knowledge, follow from first principles (for scientific knowledge involves apprehension of a rational ground). This being so, the first principle from which what is scientifically known follows cannot be an object of scientific knowledge, of art, or of practical wisdom; for that which can be scientifically known can be demonstrated, and art and practical wisdom deal with things that are variable. Nor are these first principles the objects of philosophic wisdom, for it is a mark of the philosopher to have demonstration about some things. If, then, the states of mind by which we have truth and are never deceived about things invariable or even variable are scientific knowledge, practical wisdom, philosophic wisdom, and intuitive reason, and it cannot be any of the three (i.e. practical wisdom, scientific knowledge, or philosophic wisdom), the remaining alternative is that it is intuitive reason that grasps the first principles.

Aristotle, Ethics, 1140b31

13 What things a man must learn in order to be able to apply the art of disputation, has been accurately shown by our philosophers; but with respect to the proper use of the things, we are entirely without practice. Only give to any of us, whom you please, an illiterate man to discuss with, and he cannot discover how to deal with the man. But when he has moved the man a little, if he answers beside the purpose, he does not know how to treat him, but he then either abuses or ridicules him, and says, "He is an illiterate man; it is not possible to do anything with him." Now a guide, when he has found a man out of the road leads him into the right way: he does not ridicule or abuse him and then leave him. Do you also show this illiterate man the truth, and you will see that he follows. But so long as you do not show him the truth, do not ridicule him, but rather feel your own incapacity.

How then did Socrates act? He used to compel his adversary in disputation to bear testimony to him, and he wanted no other witness. Therefore he could say, "I care not for other witnesses, but I am always satisfied with the evidence of my adversary, and I do not ask the opinion of others, but only the opinion of him who is disputing with me." For he used to make the conclusions drawn from natural notions so plain that every man saw the contradiction and withdrew from it.

Epictetus, Discourses, II, 12

14 When one of those who were present said, "Persuade me that logic is necessary," he replied: Do you wish me to prove this to you? The answer was, "Yes." Then I must use a demonstrative form of speech. This was granted. How then will you know if I am cheating you by argument? The man was silent. Do you see, said Epictetus, that you

yourself are admitting that logic is necessary, if without it you cannot know so much as this, whether logic is necessary or not necessary?

Epictetus, Discourses, II, 25

15 There remain those branches of knowledge which pertain not to the bodily senses, but to the intellect, among which The science of reasoning and that of number are the chief. The science of reasoning is of very great service in searching into and unravelling all sorts of questions that come up in Scripture, only in the use of it we must guard against the love of wrangling and the childish vanity of entrapping an adversary. For there are many of what are called sophisms, inferences in reasoning that are false, and yet so close an imitation of the true, as to deceive not only dull people, but clever men too, when they are not on their guard. For example, one man lays before another with whom he is talking, the proposition, "What I am, you are not." The other assents, for the proposition is in part true, the one man being cunning and the other simple. Then the first speaker adds: "I am a man"; and when the other has given his assent to this also, the first draw's his conclusion: "Then you are not a man." Now of this sort of ensnaring arguments. Scripture, as I judge, expresses detestation in that place where it is said, "There is one that sheweth wisdom in words, and is hated"; although, indeed, a style of speech which is not intended to entrap, but only aims at verbal ornamentation more than is consistent with seriousness of purpose, is also called sophistical.

There are also valid processes of reasoning which lead to false conclusions, by following out to its logical consequences the error of the man with whom one is

arguing; and these conclusions are sometimes drawn by a good and learned man, with the object of making the person from whose error these consequences result, feel ashamed of them, and of thus leading him to give up his error, when he finds that if he wishes to retain his old opinion, he must of necessity also hold other opinions which he condemns. For example, the apostle did not draw true conclusions when he said, "Then is Christ not risen," and again, "Then is our preaching vain, and your faith is also vain"; and further on drew other inferences which are all utterly false; for Christ has risen, the preaching of those who declared this fact was not in vain, nor was their faith in vain who had believed it. But all these false inferences followed legitimately from the opinion of those who said that there is no resurrection of the dead. These inferences, then, being repudiated as false, it follows that since they would be true if the dead rise not, there will be a resurrection of the dead. As, then, valid conclusions may be drawn not only from true but from false propositions, the laws of valid reasoning may easily be learnt in the schools, outside the pale of the Church. But the truth of propositions must be inquired into in the sacred books of the Church.

Augustine, Christian Doctrine, II, 31

- 16 Human intellects obtain their perfection in the knowledge of truth by a kind of movement and discursive intellectual operation; that is to say, as they advance from one known thing to another. But, if from the knowledge of a known principle they were straightway to perceive as known all its consequent conclusions, then discourse would have no place in them. Such is the condition of the angels, because in those things which

they first know naturally, they at once behold all things whatsoever that can be known in them.

Aquinas, Summa Theologica, I, 58, 3

- 17 As in the intellect, when reasoning, the conclusion is compared with the principle, so in the intellect composing and dividing, the predicate is compared with the subject. For if our intellect were to see at once the force of the conclusion in the principle, it would never understand by discursion and reasoning. In like manner, if the intellect in apprehending the quiddity of the subject were at once to have knowledge of all that can be attributed to, or removed from, the subject, it would never understand by composing and dividing, but only by understanding the essence. Thus it is evident that for the self-same reason our intellect understands by discursion, and by composing and dividing, namely, that in the first apprehension of anything newly apprehended it does not at once grasp all that is virtually contained in it. And this comes from the weakness of the intellectual light within us.

Aquinas, Summa Theologica, I, 58, 4

- 18 The discourse of reason always begins from an understanding and ends at an understanding, because we reason by proceeding from certain understood principles, and the discourse of reason is perfected when we come to understand what we did not know before. Hence the act of reasoning proceeds from something previously understood.

Aquinas, Summa Theologica, II-II, 8, 1

- 19 Axioms determined upon in argument can never assist in the discovery of new effects; for the subtilty of nature is vastly superior to that of argument.

Bacon, Novum Organum, I, 24

- 20 There are two ways by which we arrive at the knowledge of facts, viz, by experience and by deduction. We must further observe that while our inferences from experience are frequently fallacious, deduction, or the pure illation of one thing from another, though it may be passed over, if it is not seen through, cannot be erroneous when performed by an understanding that is in the least degree rational.

Descartes, Rules for Direction of the Mind, II

- 21 In reasoning we unite not names but the things signified by the names; and I marvel that the opposite can occur to anyone. For who doubts whether a Frenchman and a German are able to reason in exactly the same way about the same things, though they yet conceive the words in an entirely diverse way?

Descartes, Objections and Replies, III

- 22 All men by nature reason alike, and well, when they have good principles. For who is so stupid as both to mistake in geometry, and also to persist in it, when another detects his error to him?

By this it appears that reason is not, as sense and memory, born with us; nor gotten by experience only, as prudence is; but attained by industry: first in apt imposing of names; and secondly by getting a good and orderly method in proceeding from the elements, which

are names, to assertions made by connexion of one of them to another; and so to syllogisms, which are the connexions of one assertion to another, till we come to a knowledge of all the consequences of names appertaining to the subject in hand.

Hobbes, Leviathan, I, 5

- 23 Those who are accustomed to judge by feeling do not understand the process of reasoning, for they would understand at first sight and are not used to seek for principles. And others, on the contrary, who are accustomed to reason from principles, do not at all understand matters of feeling, seeking principles and being unable to see at a glance.

Pascal, Pensées, I, 3

- 24 When we wish to demonstrate a general theorem, we must give the rule as applied to a particular case; but if we wish to demonstrate a particular case, we must begin with the general rule. For we always find the thing obscure which we wish to prove and that clear which we use for the proof; for, when a thing is put forward to be proved, we first fill ourselves with the imagination that it is, therefore, obscure and, on the contrary, that what is to prove it is clear, and so we understand it easily.

Pascal, Pensées, I, 40

- 25 We must know where to doubt, where to feel certain, where to submit. He who does not do so understands not the force of reason. There are some who offend against these three rules, either by affirming everything as demonstrative, from want of knowing what demonstration

is; or by doubting everything, from want of knowing where to submit; or by submitting in everything, from want of knowing where they must judge.

Pascal, Pensées, IV, 268

26 Permit me to remind you of a universal rule which is applicable to all the particular subjects in which our concern is with establishing truth. I do not doubt your acceptance of it since it is generally admitted by all who consider things with an open mind and since it constitutes the chief part of the method of the schools in dealing with the sciences and that used by seekers after what is really solid, filling and fully satisfying the mind. The rule is never to make a decisive judgment, affirming or denying a proposition, unless what one affirms or denies satisfies one of the two following conditions: either that of itself it appear so clearly and distinctly to sense or to reason, according as it is subject to one or the other, that the mind cannot doubt its certainty, and that is what we call a principle or axiom, as, for example, if equals are added to equals, the results are equal; or that it be deduced as an infallible and necessary consequence from such principles or axioms, upon whose certainty entirely depends that of the consequences correctly drawn from them, as this proposition, the three angles of a triangle are equal to two right angles, "which not being self-evident," is evidently demonstrated as an infallible consequence of such axioms. Everything satisfying one of these two conditions is certain and true, and everything satisfying neither is considered doubtful and uncertain. We pass decisive judgment on things of the first kind and leave the rest undecided, calling them, according to their deserts, now a vision, now a caprice, occasionally a fancy,

sometimes an idea, and at the most a happy thought; and since it is rash to affirm them, we incline rather to the negative, ready however to return to the affirmative if a convincing demonstration brings their truth to light.

Pascal, Concerning the Vacuum

- 21 The art which I call the art of persuading, and which is simply the management of perfect scientific proofs, consists of three essential parts: defining by clear definitions the terms to be used; laying down evident principles or axioms to prove the matter in question; always mentally substituting in the demonstration, in place of the things defined, their definitions.

The reason for this method is apparent, since it would be useless to put forward something capable of proof and to undertake its demonstration if we had not first clearly defined all unintelligible terms; and since likewise the demonstration must be preceded by the granting of the evident principles required for the demonstration, for if we do not make sure of the foundation, we can have no assurance of the building; and since finally while demonstrating we must mentally substitute the definition in place of the things defined, for otherwise we could be led astray by the different meanings encountered in the terms. It is easy to see that if we observe this method we are sure to convince, since, with all the terms so defined that they are understood and entirely free from ambiguity and with the principles granted, if in the demonstration we always substitute in thought the definitions in place of the things defined, the invincible force of the conclusions cannot fail of its full effect.

Pascal, Geometrical Demonstration

28 How vain . . . , it is to expect demonstration and certainty in things not capable of it; and refuse assent to very rational propositions, and act contrary to very plain and clear truths, because they cannot be made out so evident, as to surmount every the least (I will not say reason, but) pretence of doubting. He that, in the ordinary affairs of life, would admit of nothing but direct plain demonstration, would be sure of nothing in this world, but of perishing quickly.

Locke, Concerning Human Understanding, Bk. IV, XI, 10

29 As demonstration is the showing the agreement or disagreement of two ideas by the intervention of one or more proofs, which have a constant, immutable, and visible connexion one with another; so probability is nothing but the appearance of such an agreement or disagreement by the intervention of proofs, whose connexion is not constant and immutable, or at least is not perceived to be so, but is, or appears for the most part to be so, and is enough to induce the mind to judge the proposition to be true or false, rather than the contrary.

Locke, Concerning Human Understanding, Bk. IV, XV, 1

30 If the use and end of right reasoning be to have right notions and a right judgment of things, to distinguish betwixt truth and falsehood, right and wrong, and to act accordingly, be sure not to let your sou be bred up iu the art and formality of disputing, either practicing it himself, or admiring it in others; unless instead of an able man, you desire to have him an insignificant wrangler, opiniator in discourse, and priding himself in

contradicting others; or, which is worse, questioning everything, and thinking there is no such thing as truth to be sought, but only victory, in disputing. There cannot be anything so disingenuous, so mis-becoming a gentleman or anyone who pretends to be a rational creature, as not to yield to plain reason and the conviction of clear arguments. Is there anything more consistent with civil conversation, and the end of all debate, than not to take an answer, though never so full and satisfactory, but still to go on with the dispute as long as equivocal sounds can furnish ... a term to wrangle with on the one side, or a distinction on the other; whether pertinent or impertinent, sense or nonsense, agreeing with or contrary to what he had said before, it matters not. For this, in short, is the way and perfection of logical disputes, that the opponent never takes any answer, nor the respondent ever yields to any argument. This neither of them must do, whatever becomes of truth or knowledge, unless he will pass for a poor baffled wretch, and lie under the disgrace of not being able to maintain whatever he has once affirmed, which is the great aim and glory in disputing. Truth is to be found and supported by a mature and due consideration of things themselves, and not by artificial terms and ways of arguing: these lead not men so much into the discovery of truth as into a captious and fallacious use of doubtful words, which is the most useless and most offensive way of talking, and such as least suits a gentleman or a lover of truth of anything in the world.

Locke, Some Thoughts Concerning Education, 189

- 31 Who reasons wisely is not therefore wise.
His pride in Reasoning not in Acting lies.

Pope, Moral Essays, Epistle I, 117

32 The gift of ratiocination and making syllogisms— I mean in man—for in superior classes of beings, such as angels and spirits—’tis all done, may it please your worships, as they tell me, by Intuition;—and beings inferior, as your worships all know—syllogize by their noses: though there is an island swimming in the sea (though not altogether at its ease) whose inhabitants, if my intelligence deceives me not, are so wonderfully gifted, as to syllogize after the same fashion, and oft-times to make very well out too: but that’s neither here nor there--

The gift of doing it as it should be, amongst us, or—the great and principal act of ratiocination in man, as logicians tell us, is the finding out the agreement or disagreement of two ideas one with another, by the intervention of a third (called the *medius terminus*); just as a man, as Locke well observes, by a yard, finds two men’s ninepin-alleys to be of the same length, which could not be brought together, to measure their equality, by juxtaposition.

Had the same great reasoner looked on, as my father illustrated his systems of noses, and observed my uncle Toby’s deportment—what great attention he gave to every word—and as oft as he took his pipe from his mouth, with what wonderful seriousness he contemplated the length of it— surveying it transversely as he held it betwixt his finger and his thumb—then foreright—then this way, and then that, in all its possible directions and foreshortenings—he would have concluded my uncle Toby had got hold of the *medius terminus*, and was syllogizing and measuring with it the truth of each hypothesis of long noses, in order, as my father laid them

before him. This, by the bye, was more than my father wanted—his aim in all the pains he was at in these philosophic lectures— was to enable my uncle Toby not to discuss—but comprehend—to hold the grains and scruples of learning—not to weigh them. My uncle Toby, as you will read in the next chapter, did neither the one nor the other.

Sterne, Tristram Shandy, III, 40

- 33 When one has had a good argument about spirit and matter, one always finishes by not understanding each other. No philosopher has been able with his own strength to lift this veil stretched by nature over all the first principles of things. Men argue, nature acts.

Voltaire, Philosophical Dictionary: Soul

- 34 One of the company took the other side. . . . This appeared to me very satisfactory. Johnson did not answer it; but talking for victory, and determined to be master of the field, he had recourse to the device which Goldsmith imputed to him in the witty words of one of Cibber's comedies: "There is no arguing with Johnson; for when his pistol misses fire, he knocks you down with the butt end of it."

Boswell, Life of Johnson (Oct. 26, 1769)

- 35 Johnson having argued for some time with a pertinacious gentleman; his opponent, who had talked in a very puzzling manner, happened to say, "I don't understand you. Sir": upon which Johnson observed, "Sir, I have found you an argument; but I am not obliged to find you an understanding."

Boswell, Life of Johnson (June 1764)

36 When reason employs conceptions alone, only one proof of its thesis is possible, if any. When, therefore, the dogmatist advances with ten arguments in favour of a proposition, we may be sure that not one of them is conclusive. For if he possessed one which proved the proposition he brings forward to demonstration—as must always be the case with the propositions of pure reason—what need is there for any more?

Kant, Critique of Pure Reason, Transcendental Method

37 Myself when young did eagerly frequent
Doctor and Saint, and heard great argument
About it and about; but evermore
Came out by the same door where in I went.

With them the seed of Wisdom did I sow.
And with mine own hand wrought to make it grow;
And this was all the Harvest that I reaped—
"I came like Water, and like Wind I go."

FitzGerald, Rubáiyát, XXVII-XXVIII

38 When you cannot prove that people are wrong, but only that they are absurd, the best course is to let them alone.

T. H. Huxley, On the Method of Zadig

39 There is no greater mistake than the hasty conclusion that opinions are worthless because they are badly argued.

T. H. Huxley, Natural Rights and Political Rights

- 40 There are two forms of reasoning: first, the investigating or interrogative form used by men who do not know and who wish to learn; secondly, the demonstrating or affirmative form employed by men who know or think they know, and who wish to teach others.

Claude Bernard, Experimental Medicine, I, 2

- 41 Few persons care to study logic, because everybody conceives himself to be proficient enough in the art of reasoning already. But I observe that this satisfaction is limited to one's own ratiocination, and does not extend to that of other men.

We come to the full possession of our power of drawing inferences, the last of all our faculties; for it is not so much a natural gift as a long and difficult art.

C. S. Peirce, Fixation of Belief

- 42 The object of reasoning is to find out, from the consideration of what we already know, something else which we do not know. Consequently, reasoning is good if it be such as to give a true conclusion from true premisses, and not otherwise. Thus, the question of validity is purely one of fact and not of thinking. A being the facts stated in the premisses and B being that concluded, the question is, whether these facts are really so related that if A were B would generally be. If so, the inference is valid; if not, not. It is not in the least the question whether, when the premisses are accepted by the mind, we feel an impulse to accept the conclusion also. It is true that we do generally reason correctly by nature. But that is an accident; the true conclusion would remain true if we had no impulse to accept it; and the

false one would remain false, though we could not resist the tendency to believe in it.

C. S. Peirce, Fixation of Belief

43 A friend of the writer gave as proof of the almost human intelligence of his dog that he took him one day down to his boat on the shore, but found the boat full of dirt and water. He remembered that the sponge was up at the house, a third of a mile distant; but, disliking to go back himself, he made various gestures of wiping out the boat and so forth, saying to his terrier, "Sponge, sponge; go fetch the sponge." But he had little expectation of a result, since the dog had never received the slightest training with the boat or the sponge. Nevertheless, off he trotted to the house, and, to his owner's great surprise and admiration, brought the sponge in his jaws. Sagacious as this was, it required nothing but ordinary contiguous association of ideas. The terrier was only exceptional in the minuteness of his spontaneous observation. Most terriers would have taken no interest in the boat-cleaning operation, nor noticed what the sponge was for. This terrier, in having picked those details out of the crude mass of his boat-experience distinctly enough to be reminded of them, was truly enough ahead of his peers on the line which leads to human reason. But his act was not yet an act of reasoning proper. It might fairly have been called so if, unable to find the sponge at Ac house, he had brought back a dipper or a mop instead. Such a substitution would have shown that, embedded in the very different appearances of these articles, he had been able to discriminate the identical partial attribute of capacity to take up water, and had reflected, "For the present purpose Aey are identical." This, which the dog

did not do, any man but the very stupidest could not fail to do.

William James, Psychology, XXII

44 It is very desirable, in instruction, not merely to persuade the student of the accuracy of important theorems, but to persuade him in the way which itself has, of all possible ways, the most beauty. The true interest of a demonstration is not, as traditional modes of exposition suggest, concentrated wholly in the result; where this does occur, it must be viewed as a defect, to be remedied, if possible, by so generalizing the steps of the proof that each becomes important in and for itself. An argument which serves only to prove a conclusion is like a story subordinated to some moral which it is meant to teach: for aesthetic perfection no part of a whole should be merely a means.

Russell, Study of Mathematics

45 The proof of self-evident propositions may seem, to an uninitiated, a somewhat frivolous occupation. To this we might reply that it is often by no means self-evident that one obvious proposition follows from another obvious proposition; so that we are really discovering new truths when we prove what is evident by a method which is not evident. But a more interesting retort is, that since people have tried to prove obvious propositions, they have found that many of them are false. Self-evidence is often a mere will-o'-the-wisp, which is sure to lead us astray if we take it as our guide. For instance, nothing is plainer than that a whole always has more terms than a part, or that a number is increased by adding one to it. But these

propositions are now known to be usually false. Most numbers are infinite, and if a number is infinite you may add ones to it as long as you like without disturbing it in the least. One of the merits of a proof is that it instils a certain doubt as to a result proved; and when what is obvious can be proved in some cases, but not in others, it becomes possible to suppose that in these other cases it is false.

Russell, Mathematics and the Metaphysicians

- 46 I have never been able to convince myself of the truth of the saying that "strife is the father of all things." I think the source of it was the philosophy of ancient Greek sophists and that it errs, as does the latter, through the overestimation of dialectics. It seems to me, on the contrary, that scientific controversy, so-called, is on a whole quite unfruitful, apart from the fact that it is almost always conducted in a highly personal manner.

Freud, General Introduction to Psycho-Analysis, XVI

- 47 Bacon's conviction of the quarrelsome, self-displaying character of the scholarship which had come down from antiquity was of course not so much due to Greek science itself as to the degenerate heritage of scholasticism in the fourteenth century, when philosophy had fallen into the hands of disputatious theologians, full of hairsplitting argumentativeness and quirks and tricks by which to win victory over somebody else.

But Bacon also brought his charge against the Aristotelian method itself. In its rigorous forms it aimed at demonstration, and in its milder forms at persuasion. But both demonstration and persuasion aim at conquest of

mind rather than of nature. Moreover they both assume that some one is already in possession of a truth or a belief, and that the only problem is to convince some one else, or to teach. In contrast, his new method had an exceedingly slight opinion of the amount of truth already existent, and a lively sense of the extent and importance of truths still to be attained. It would be a logic of discovery, not a logic of argumentation, proof and persuasion. To Bacon, the old logic even at its best was a logic for teaching the already known, and teaching meant indoctrination, disciplining. It was an axiom of Aristotle that only that which was already known could be learned, that growth in knowledge consisted simply of bringing together a universal truth of reason and a particular truth of sense which had previously been noted separately. In any case, learning meant growth of knowledge, and growth belongs in the region of becoming, change, and hence is inferior to possession of knowledge in the syllogistic self-revolving manipulation of what was already known—demonstration.

In contrast with this point of view, Bacon eloquently proclaimed the superiority of discovery of new facts and truths to demonstration of the old. Now there is only one road to discovery, and that is penetrating inquiry into the secrets of nature.

Dewey, Reconstruction in Philosophy, II

- 48 Dialectic is the conscience of discourse and has the same function as morality elsewhere, namely, to endow the soul with integrity and to perfect it into a monument to its own radical impulse. But as virtue is a wider thing than morality, because it includes natural gifts and genial sympathies, or even heroic sacrifices, so wisdom is a

wider thing than logic. To coherence in thought it adds docility to facts, and humility even of intellect, so that the integrity of its system becomes a human virtue, like the perfect use of a single language, without being an insult to the nature of things or a learned madness.

Santayana, Realm of Essence, VII

Chapter 7

LANGUAGE

Chapter 7 is divided into two sections: 7.1 The Nature OF Language and 7.2 The Arts of Language.

The passages included in these two sections tend to overlap in certain respects, but the primary emphasis in the quotations assembled in Section 7.1 is on the characteristics of human speech, its elements and structure, whereas the primary emphasis in Section 7.2 is on how to put the power of speech to good use in a variety of ways.

Of all the subjects treated in this book, language, perhaps more than any other, is thought by many to have been a major field of speculation, analysis, and research only in the last hundred years or so. It is in that period that a variety of sciences bearing the name "linguistics" have been developed and that related disciplines such as philology, semantics, and semiotics have come into being or matured. Beginning less than a half century ago, a dominant school of Anglo-American thought emerged, calling itself "linguistic and analytic philosophy." Nevertheless, the reader will find that an interest in the nature and structure of language and in the arts of using it effectively begins with the Greeks and runs throughout the tradition of Western thought.

The matters covered in this chapter are related to questions touched on in other chapters, especially Chapter 1 on Man, Chapter 5 on Mind, Chapter 6 on Knowledge,

Chapter 8 on Education, Chapter 16 on Art and Aesthetics, and Chapter 17 on Philosophy. Science, and Mathematics.

...

7.1 The Nature of Language

The passages assembled here deal with questions about the origin of language, the conventions of language, the diversity of languages, the power of words to perform the function of signs, and the relation of verbal signs to thought and knowledge, as well as to the objects of thought and knowledge.

Points are made about the manifold senses in which words can be used and their modes of ambiguity, about the distinction between words that name objects of thought or knowledge and words that play a role in sentences without naming anything, about the relation of spoken to written language, about the distinction between proper and common or general names, about the various uses to which language can be put, and about the conditions underlying its effective use for the purpose of communication.

That other animals communicate by sounds or gestures is acknowledged even by those writers who assert that man alone possesses a language in which questions can be asked and statements made in the service of inquiry and thought quite apart from the purposes of communication between individuals. Whether it is thought that the difference between man and other animals is one of kind or degree, it is universally agreed that the way in which the human

species has developed and employed language is one of its most distinctive characteristics.

■ ■ ■

1 And out of the ground the Lord God formed every beast of the field, and every fowl of the air; and brought them unto Adam to see what he would call them: and whatsoever Adam called every living creature, that was the name thereof.

And Adam gave names to all cattle, and to the fowl of the air, and to every beast of the field.

Genesis 2:19-20

2 And the whole earth was of one language, and of one speech.

And it came to pass, as they journeyed from the east, that they found a plain in the land of Shi-nar; and they dwelt there.

And they said one to another, Go to, let us make brick, and burn them thoroughly. And they had brick for stone, and slime had they for mortar.

And they said, Go to, let us build us a city and a tower, whose top may reach unto heaven; and let us make us a name, lest we be scattered abroad upon the face of the whole earth.

And the Lord came down to see the city and the tower, which the children of men builded.

And the Lord said, Behold, the people is one, and they have all one language; and this they begin to do; and

now nothing will be restrained from them, which they have imagined to do.

Go to, let us go down, and there confound their language, that they may not understand one another's speech.

So the Lord scattered them abroad from thence upon the face of all the earth: and they left off to build the city.

Therefore is the name of it called Babel; because the Lord did there confound the language of all the earth: and from thence did the Lord scatter them abroad upon the face of all the earth.

Genesis 11:1-9

- 3 *Socrates*. A name is an instrument of teaching and of distinguishing natures, as the shuttle is of distinguishing the threads of the web.

Plato, Cratylus, 388A

- 4 *Socrates*. I would recommend you , , . not to encourage yourself in this polemical and controversial temper, but to find out, in a friendly and congenial spirit, what we really mean when we say that all things are in motion, and that to every individual and state what appears, is. In this manner you will consider whether knowledge and sensation are the same or different, but you will not argue, as you were just now doing, from the customary use of names and words, which the vulgar pervert in all sorts of ways, causing infinite perplexity to one another.

Plato, Theaetetus, 168A

- 5 *Eleatic Stranger*. At present we are only agreed about the name, but of the thing to which we both apply the name

possibly you have one notion and I another; whereas we ought always to come to an understanding about the thing itself in terms of a definition, and not merely about the name minus the definition

Plato, Sophist, 218A

- 6 No man of intelligence will venture to express his philosophical views in language, especially not in language that is unchangeable, which is true of that which is set down in written characters.

Plato, Seventh Letter

- 7 Things are said to be named 'equivocally' when, though they have a common name, the definition corresponding with the name differs for each. Thus, a real man and a figure in a picture can both lay claim to the name 'animal'; yet these are equivocally so named, for, though they have a common name, the definition corresponding with the name differs for each. For should any one define in what sense each is an animal, his definition in the one case will be appropriate to that case only.

On the other hand, things are said to be named 'univocally' which have both the name and the definition answering to the name in common. A man and an ox are both 'animal', and these are univocally so named, inasmuch as not only the name, but also the definition, is the same in both cases: for if a man should state in what sense each is an animal, the statement in the one case would be identical with that in the other.

Things are said to be named 'derivatively'. which derive their name from some other name, but differ from it in termination. Thus the grammarian derives his name

from the word 'grammar', and the courageous man from the word 'courage'.

Aristotle, Categories, 1a1

- 8 Spoken words are the symbols of mental experience and written words are the symbols of spoken words. Just as all men have not the same writing, so all men have not the same speech sounds, but the mental experiences, which these directly symbolize, are the same for all, as also are those things of which our experiences are the images.

Aristotle, On Interpretation, 16a4

- 9 Nature... makes nothing in vain, and man is the only animal whom she has endowed with the gift of speech. And whereas mere voice is but an indication of pleasure or pain, and is therefore found in other animals (for their nature attains to the perception of pleasure and pain and the intimation of them to one another, and no further), the power of speech is intended to set forth the expedient and inexpedient, and therefore likewise the just and the unjust. And it is a characteristic of man that he alone has any sense of good and evil, of just and unjust, and the like, and the association of living beings who have this sense makes a family and a state.

Aristotle, Politics, 1253a8

- 10 Why then should words challenge Eternity,
When greatest men, and greatest actions die?
Use may revive the obsoletest words.
And banish those that now are most in vogue;
Use is the judge, the law, and rule of speech.

Horace, Ars Poetica

11 I have . . . discovered by observation how I learned to speak. I did not learn by elders teaching me words in any systematic way, as I was soon after taught to read and write. But of my own motion ... I strove with cries and various sounds and much moving of my limbs to utter the feelings of my heart—all this in order to get my own way. Now I did not always manage to express the right meanings to the right people. So I began to reflect. (I observed that) my ciders would make some particular sound, and as they made it would point at or move towards some particular thing: and from this I came to realize that the tiling w,as called by the sound they made when they wished to draw my attention to it. That they intended this was clear from the motions of their body, by a kind of natural language common to all races which consists in facial expressions, glances of the eye, gestures, and the tones by which the voice expresses the mind's state—for example whether things are to be sought, kept, thrown away, or avoided. So, as I heard the same words again and again properly used in different phrases, I came gradually to grasp what things they signified; and forcing my mouth to the same sounds, I began to use them to express my own wishes. Thus I learnt to convey what I meant to those about me.

Augustine, Confessions, I, 8

12 All instruction is either about things or about sigas; but things are learnt by means of signs. I now use the word "thing" in a strict sense to signify that which is never employed as a sign of anything else: for example, wood, stone, cattle, and other things of that kind. Not, however, the wood which we read Moses cast into the bitter waters to make them sweet, nor the stone which Jacob used as a

pillow, nor the ram which Abraham offered up instead of his son; for these, though they are things, are also signs of other things. There are signs of another kind, those which are never employed except as signs: for example, words. No one uses words except as signs of something else; and hence may be understood what I call signs: those things, to wit, which are used to indicate something else. Accordingly, every sign is also a thing; for what is not a thing is nothing at all. Every thing, however, is not also a sign.

Augustine, Christian Doctrine, I, 2

- 13 When we speak, in order that what we have in our minds may enter through the ear into the mind of the hearer, the word which we have in our hearts becomes an outward sound and is called speech; and yet our thought does not lose itself in the sound, but remains complete in itself, and takes the form of speech without being modified in its own nature by the change.

Augustine, Christian Doctrine, I, 13

- 14 As when I was writing about things, I introduced the subject with a warning against attending to anything but what they are in themselves, even though they are signs of something else, so now, when I come in its turn to discuss the subject of signs, I lay down this direction, not to attend to what they are in themselves, but to the fact that they are signs, that is, to what they signify. For a sign is a thing which, over and above the impression it makes on the senses, causes something else to come into the mind as a consequence of itself: as when we see a footprint, we conclude that an animal whose footprint

this is has passed by; and when we see smoke, we know that there is fire beneath; and when we hear the voice of a living man, we think of the feeling in his mind; and when the trumpet sounds, soldiers know that they are to advance or retreat, or do whatever else the state of the battle requires.

Now some signs are natural, others conventional. Natural signs are those which, apart from any intention or desire of using them as signs, do yet lead to the knowledge of something else, as, for example, smoke when it indicates fire. For it is not from any intention of making it a sign that it is so, but through attention to experience we come to know that fire is beneath, even when nothing but smoke can be seen. And the footprint of an animal passing by belongs to this class of signs. And the countenance of an angry or sorrowful man indicates the feeling in his mind, independently of his will: and in the same way every other emotion of the mind is betrayed by the tell-tale countenance, even though we do nothing with the intention of making it known. This class of signs, however, it is no part of my design to discuss at present. But as it comes under this division of the subject, I could not altogether pass it over. It will be enough to have noticed it thus far.

Conventional signs, on the other hand, are those which living beings mutually exchange for the purpose of showing, as well as they can, the feelings of their minds, or their perceptions, or their thoughts. Nor is there any reason for giving a sign except the desire of drawing forth and conveying into another's mind what the giver of the sign has in his own mind. We wish, then, to consider and discuss this class of signs so far as men are concerned with it, because even the signs which have been given us

of God, and which are contained in the Holy Scriptures, were made known to us through men— those, namely, who wrote the Scriptures. The beasts, too, have certain signs among themselves by which they make known the desires in their mind. For when the poultry-cock has discovered food, he signals with his voice for the hen to run to him, and the dove by cooing calls his mate, or is called by her in turn; and many signs of the same kind are matters of common observation. Now whether these signs, like the expression or the cry of a man in grief follow the movement of the mind instinctively and apart from any purpose, or whether they are really used with the purpose of signification, is another question, and does not pertain to the matter in hand. And this part of the subject I exclude from the scope of this work as not necessary to my present object.

Of the signs, then, by which men communicate their thoughts to one another, some relate to the sense of sight, some to that of hearing, a very few to the other senses. For, when we nod, we give no sign except to the eyes of the man to whom we wish by this sign to impart our desire. And some convey a great deal by the motion of the hands: and actors by movements of all their limbs give certain signs to the initiated, and, so to speak, address their conversation to the eyes: and the military standards and flags convey through the eyes the will of the commanders. And all these signs are as it were a kind of visible words. The signs that address themselves to the ear are, as I have said, more numerous, and for the most part consist of words. For though the bugle and the flute and the lyre frequently give not only a sweet but a significant sound, yet all these signs are very few in number compared with words. For among men words

have obtained far and away the chief place as a means of indicating the thoughts of the mind. Our Lord, it is true, gave a sign through the odour of the ointment which was poured out upon His feet; and in the sacrament of His body and blood He signified His will through the sense of taste; and when by touching the hem of His garment the woman was made whole, the act was not wanting in significance. But the countless multitude of the signs through which men express their thoughts consist of words. For I have been able to put into words all those signs, the various classes of which I have briefly touched upon, but I could by no effort express words in terms of those signs.

Augustine, Christian Doctrine, II, 1-3

- 15 Because words pass away as soon as they strike upon the air, and last no longer than their sound, men have by means of letters formed signs of words. Thus the sounds of the voice are made visible to the eye, not of course as sounds, but by means of certain signs.

Augustine, Christian Doctrine, II, 4

- 16 Since according to the Philosopher [Aristotle], words are signs of ideas, and ideas the similitude of things, it is evident that words relate to the meaning of things signified through the medium of the intellectual conception. It follows therefore that we can give a name to anything in as far as we can understand it.... Thus. . . the idea expressed by the name is the definition.

Aquinas, Summa Theologica, I, 13, 1

17 A name is communicable in two ways, properly, and by likeness. It is properly communicable in the sense that its whole signification can be given to many; by likeness it is communicable according to some part of the signification of the name. For instance this name "lion" is properly communicated to all things of the same nature as lion; by likeness it is communicable to those who participate in something lion-like, as for instance by courage, or strength, and those who thus participate are called lions metaphorically.

Aquinas, Summa Theologica, I, 13, 9

18 If man were by nature a solitary animal the passions of the soul by which he was conformed to things so as to have knowledge of them would be sufficient for him; but since he is by nature a political and social animal it was necessary that his conceptions be made known to others. This he does through vocal sound. Therefore there had to be significant vocal sounds in order that men might live together. Whence those who speak different languages find it difficult to live together in social unity.

*Aquinas, Commentary on Aristotle's "On Interpretation,"
I, 2*

19 If man had only sensitive cognition, which is of the here and now, such significant vocal sounds as the other animals use to manifest their conceptions to each other would be sufficient for him to live with others. But man also has the advantage of intellectual cognition, which abstracts from the here and now, and as a consequence, is concerned with things distant in place and future in time as well as things present according to time and

place. Hence the use of writing was necessary so that he might manifest his conceptions to those who are distant according to place and to those who will come in future time.

*Aquinas, Commentary on Aristotle's "On Interpretation,"
I, 2*

20 Man alone amongst the animals speaks and has gestures and expression which we call rational, because he alone has reason in him. And if anyone should say in contradiction that certain birds talk, as seems to be the case with some, especially the magpie and the parrot, and that certain beasts have expression or gestures, as the ape and some others seem to have, I answer that it is not true that they speak, nor that they have gestures, because they have no reason, from which these things must needs proceed; nor have they the principle of these things within them, nor do they understand what it is; nor do they purpose to signify anything by them, but they merely reproduce what they see and hear. Wherefore, even as the image of bodies is reproduced by certain shining things (for instance, a mirror), and the corporeal image that the mirror displays is not real, so the semblance of reason, namely the expression and the speech which the brute beast reproduces or displays, is not real.

Dante, Convivio, III, 7

21 What we call the vernacular speech is that to which children are accustomed by those who are about them when they first begin to distinguish words; or to put it more shortly, we say that the vernacular speech is that

which we acquire without any rule, by imitating our nurses. There further springs from this another secondary speech, which the Romans called grammar. And this secondary speech the Greeks also have, as well as others, but not all. Few, however, acquire the use of this speech, because we can only be guided and instructed in it by the expenditure of much time, and by assiduous study. Of these two kinds of speech also, the vernacular is the nobler, as well because it was the first employed by the human race, as because the whole world makes use of it, though it has been divided into forms differing in pronunciation and vocabulary. It is also the nobler as being natural to us, whereas the other is rather of an artificial kind.

Dante, De Vulgari Eloquentia, I, 1

22 In a certain bark of the dog the horse knows there is anger; at a certain other sound of his he is not frightened. Even in the beasts that have no voice, from the mutual services we see between them we easily infer some other means of communication; their motions converse and discuss. . . . Why not; just as well as our mutes dispute, argue, and tell stories by signs? I have seen some so supple and versed in this, that in truth they lacked nothing of perfection in being able to make themselves understood. Lovers grow angry, are reconciled, entreat, thank, make assignations, and in fine say everything, with their eyes. . . . What of the hands? We beg, we promise, call, dismiss, threaten, pray, entreat, deny, refuse, question, admire, count, confess, repent, fear, blush, doubt, instruct, command, incite, encourage, swear, testify, accuse, condemn, absolve, insult, despise, defy, vex, flatter, applaud, bless, humiliate, mock,

reconcile, commend, exalt, entertain, rejoice, complain, grieve, mope, despair, wonder, exclaim, are silent, and what not, with a variation and multiplication that vie with the tongue. With the head: we invite, send away, avow, disavow, give the lie, welcome, honor, venerate, disdain, demand, show out, cheer, lament, caress, scold, submit, brave, exhort, menace, assure, inquire. What of the eyebrows? What of the shoulders? There is no movement that does not speak both a language intelligible without instruction, and a public language; which means, seeing the variety and particular use of other languages, that this one must rather be judged the one proper to human nature.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

23 As for speech, it is certain that if it is not natural, it is not necessary. Nevertheless, I believe that a child who had been brought up in complete solitude, remote from all association (which would be a hard experiment to make), would have some sort of speech to express his ideas. And it is not credible that Nature has denied us this resource that she has given to many other animals: for what is it but speech, this faculty we see in them of complaining, rejoicing, calling to each other for help, inviting each other to love, as they do by the use of their voice? How could they not speak to one another? They certainly speak to us, and we to them. In how many ways do we not speak to our dogs? And they answer us. We talk to them in another language, with other names, than to birds, hogs, oxen, horses; and we change the idiom according to the species.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

24 *Juliet*. What's in a name? that which we call a rose
By any other name would smell as sweet.

Shakespeare, Romeo and Juliet, II, ii, 43

25 *Prospero*. Abhorred slave.

Which any print of goodness wilt not take,
Being capable of all ill! I pitied thee,
Took pains to make thee speak, taught thee each hour
One thing or other. When thou didst not, savage,
Know thine own meaning, but wouldst gabble like
A thing most brutish, I endow'd thy purposes
With words that made them known. But thy vile race,
Though thou didst learn, had that in't which good natures
Could not abide to be with; therefore wast thou
Deservedly confined into this rock,
Who hadst deserved more than a prison.

Caliban. You taught me language; and my profit on't
Is, I know how to curse. The red plague rid you
For learning me your language!

Shakespeare, Tempest, I, ii, 352

26 Custom is the most certain mistress of language as the public stamp makes the current money. But we must not be too frequent with the mint, every day coining, nor fetch words from the extreme and utmost ages; since the chief virtue of a style is perspicuity, and nothing so vicious in it as to need an interpreter. Words borrowed of antiquity do lend a kind of majesty to style, and are not without their delight sometimes; for they have the authority of years, and out of their intermission do win themselves a kind of gracelike newness. But the eldest of the present, and newest of the past language, is the best.

For what was the ancient language, which some men so dote upon, but the ancient custom? Yet when I name custom, I understand not the vulgar custom; for that were a precept no less dangerous to language than life, if we should speak or live after the manners of the vulgar: but that I call custom of speech, which is the consent of the learned; as custom of life, which is the consent of the good.

Jonson, Discoveries: Consuetudo

- 27 Men converse by means of language, but words are formed at the will of the generality, and there arises from a bad and unapt formation of words a wonderful obstruction to the mind.

Bacon, Novum Organum, 1,43

- 28 We may also recognise the difference that exists between men and brutes. For it is a very remarkable fact that there are none so depraved and stupid, without even excepting idiots, that they cannot arrange different words together, forming of them a statement by which they make known their thoughts; while, on the other hand, there is no other animal, however perfect and fortunately circumstanced it may be, which can do the same. It is not the want of organs that brings this to pass, for it is evident that magpies and parrots are able to utter words just like ourselves, and yet they cannot speak as we do, that is, so as to give evidence that they think of what they say. On the other hand, men who, being born, deaf and dumb, are in the same degree, or even more than the brutes, destitute of the organs which serve the others for talking, are in the habit of themselves inventing certain signs by

which they make themselves understood by those who, being usually in their company, have leisure to learn their language. And this does not merely show that the brutes have less reason than men, but that they have none at all, since it is clear that very little is required in order to be able to talk. And when we notice the inequality that exists between animals of the same species, as well as between men, and observe that some are more capable of receiving instruction than others, it is not credible that a monkey or a parrot, selected as the most perfect of its species, should not in these matters equal the stupidest child to be found, or at least a child whose mind is clouded, unless in the case of the brute the soul were of an entirely different nature from ours. And we ought not to confound speech with natural movements which betray passions and may be imitated by machines as well as be Manifested by animals; nor must we think, as did some of the ancients, that brutes talk, although we do not understand their language. For if this were true, since they have many organs which are allied to our own, they could communicate their thoughts to us just as easily as to those of their own race.

Descartes, Discourse on Method, V

- 29 The most noble and profitable invention of all other was that of *speech*, consisting of names or appellations, and their connexion; whereby men register their thoughts, recall them when they are past, and also declare them one to another for mutual utility and conversation; without which there had been amongst men neither Commonwealth, nor society, nor contract, nor peace, no more than amongst lions, bears, and wolves. The first author of speech was God himself, that instructed Adam

how to name such creatures as He presented to his sight; for the Scripture goeth no further in this matter. But this was sufficient to direct him to add more names, as the experience and use of the creatures should give him occasion; and to join them in such manner by degrees as to make himself understood; and so by succession of time, so much language might be gotten as he had found use for.

Hobbes, Leviathan, I, 4

- 30 The manner how speech serveth to the remembrance of the consequence of causes and effects consisteth in the imposing of names, and the connexion of them.

Of names, some are *proper*, and singular to one only thing; as Peter, John, this man, this tree: and some are *common* to many things; as man, horse, tree; every of which, though but one name, is nevertheless the name of diverse particular things; in respect of all which together, it is called a universal, there being nothing in the world universal but names; for the things named are every one of them individual and singular.

Hobbes, Leviathan, I, 4 though

- 31 When a man, upon the hearing of any speech, hath those thoughts which the words of that speech, and their connexion, were ordained and constituted to signify, then he is said to understand it: *understanding* being nothing else but conception caused by speech. And therefore if speech be peculiar to man, as for ought I know it is, then is understanding peculiar to him also. And therefore of absurd and false affirmations, in case they be universal, there can be no understanding; though many think they

understand then, when they do but repeat the words softly, or con them in their mind.

Hobbes, Leviathan, I, 4

32 There are . . . those who go to the absurdity of explaining a word by the word itself. I know 0 some who have defined light in this way: "Light is a luminary motion of luminous bodies, as if we could understand the words *luminary* and *luminous* without understanding the word *light*."

We cannot undertake to define being without falling into this absurdity, for we cannot define any word without beginning with these words it is, and thus use the word defined in the definition.

It is sufficiently clear from this that there are words incapable of definition. And if nature had not made up for this defect by giving a like idea to all men, all our expressions would be confused; whereas we make use of them with the same assurance and the same certainty we should have if they had been explained in a perfectly unambiguous way, because nature itself has given us, without words, a clearer understanding of them than we gain through art with all our explanations.

Pascal, Geometrical Demonstration

33 The senses at first let in particular ideas, and furnish the yet empty cabinet, and the mind by degrees growing familiar with some of them, they are lodged in the memory, and names got to them. Afterwards, the mind proceeding further, abstracts them, and by degrees learns the use of general names. In this manner the mind comes to be furnished with ideas and language, the

materials about which to exercise its discursive faculty. And the use of reason becomes daily more visible, as these materials that give it employment increase.

Locke, Concerning Human Understanding, Bk. I, I, 15

34 Man . . . had by nature his organs so fashioned, as to be fit to frame articulate sounds, which we call words. But this was not enough to produce language; for parrots, and several other birds, will be taught to make articulate sounds distinct enough, which yet by no means are capable of language.

Besides articulate sounds, therefore, it was further necessary that he should be able to use these sounds as signs of internal conceptions; and to make them stand as marks for the ideas within his own mind, whereby they might be made known to others, and the thoughts of men's minds be conveyed from one to another.

But neither was this sufficient to make words so useful as they ought to be. It is not enough for the perfection of language, that sounds can be made signs of ideas, unless those signs can be so made use of as to comprehend several particular things: for the multiplication of words would have perplexed their use, had every particular thing need of a distinct name to be signified by. To remedy this inconvenience, language had yet a further improvement in the use of *general terms*, whereby one word was made to mark a multitude of particular existences: which advantageous use of sounds was obtained only by the difference of the ideas they were made signs of: those names becoming general, which are made to stand for *general ideas*, and those remaining particular, where the *ideas* they are used for are *particular*.

Besides these names which stand for ideas, there be other words which men make use of, not to signify any idea, but the want or absence of some ideas, simple or complex, or all ideas together; such as are *nihil* in Latin, and in English, *ignorance* and *barrenness*. All which negative or privative words cannot be said properly to belong to, or signify no ideas: for then they would be perfectly insignificant sounds; but they relate to positive ideas, and signify their absence.

Locke, Concerning Human Understanding, Bk. III, I,

35 Because by familiar use from our cradles, we come to learn certain articulate sounds very perfectly, and have them readily on our tongues, and always at hand in our memories, but yet are not always careful to examine or settle their significations perfectly; it often happens that men, even when they would apply themselves to an attentive consideration, do set their thoughts more on words than things. Nay, because words are many of them learned before the ideas are known for which they stand: therefore some, not only children but men, speak several words no otherwise than parrots do, only because they have learned them, and have been accustomed to those sounds. But so far as words are of use and signification, so far is there a constant connexion between the sound and the idea, and a designation that the one stands for the other; without which application of them, they are nothing but so much insignificant noise.

Locke, Concerning Human Understanding, Bk. III, II, 7

36 It is plain, by what has been said, that *general* and *universal* belong not to the real existence of things; but

are the inventions and creatures of the understanding, made by it for its own use, and concern only signs, whether words or ideas. Words are general, as has been said, when used for signs of general ideas, and so are applicable indifferently to many particular things; and ideas are general when they are set up as the representatives of many particular things: but universality belongs not to things themselves, which are all of them particular in their existence, even those words and ideas which in their signification are general. When therefore we quit particulars, the generals that rest are only creatures of our own making; their general nature being nothing but the capacity they are put into, by the understanding, of signifying or representing many particulars. For the signification they have is nothing but a relation that, by the mind of man, is added to them.

Locke, Concerning Human Understanding, Bk. III, III, 11

37 Besides words which are names of ideas in the mind, there are a great many others that are made use of to signify the connexion that the mind gives to ideas, or to propositions, one with another. The mind, in communicating its thoughts to others, does not only need signs of the ideas it has then before it, but others also, to show or intimate some particular action of its own, at that time, relating to those ideas. This it does several ways; as Is, and Is not, are the general marks, of the mind, affirming or denying. But besides affirmation or negation, without which there is in words no truth or falsehood, the mind does, in declaring its sentiments to others, connect not only the parts of propositions, but whole sentences one to another, with their several relations and dependencies, to make a coherent discourse.

Locke, Concerning Human Understanding, Bk. III, VII, I

38 I leave it to be considered, whether it would not be well for mankind, whose concernment it is to know things as they are, and to do what they ought, and not to spend their lives in talking about them, or tossing words to and fro;— whether it would not be well, I say, that the use of words were made plain and direct; and that language, which was given us for the improvement of knowledge and bond of society, should not be employed to darken truth and unsettle people's rights; to raise mists, and render unintelligible both morality and religion? Or that at least, if this will happen, it should not be thought learning or knowledge to do so?

Locke, Concerning Human Understanding, Bk. III, X, 13

39 There has been a late deservedly esteemed philosopher [Locke] who, no doubt, has given [the doctrine of abstraction] very much countenance, by seeming to think the having abstract general ideas is what puts the widest difference in point of understanding betwixt man and beast.... I readily agree with this learned author, that the faculties of brutes can by no means attain to abstraction. But then if this be made the distinguishing property of that sort of animals, I fear a great many of those that pass for men must be reckoned into their number. The reason that is here assigned why we have no grounds to think brutes have abstract general ideas is, that we observe in them no use of words or any other general signs; which is built on this supposition—that the making use of words implies the having general ideas. From which it follows that men who use language are able to abstract or generalize their ideas. That this is the

sense and arguing of the author will further appear by his answering the question he in another place puts: "Since all things that exist are only particulars, how come we by general terms?" His answer is: "Words become general by being made the signs of general ideas."— *Essay on Human Understanding*, III. iii. 6. But it seems that a word becomes general by being made the sign, not of an abstract general idea, but of several particular ideas, any one of which it indifferently suggests to the mind. For example, when it is said "the change of motion is proportional to the impressed force," or that "whatever has extension is divisible," these propositions are to be understood of motion and extension in general; and nevertheless it will not follow that they suggest to my thoughts an idea of motion without a body moved, or any determinate direction and velocity, or that I must conceive an abstract general idea of extension, which is neither line, surface, nor solid, neither great nor small, black, white, nor red, nor of any other determinate colour. It is only implied that whatever particular motion I consider, whether it be swift or slow, perpendicular, horizontal, or oblique, or in whatever object, the axiom concerning it holds equally true. As does the other of every particular extension, it matters not whether line, surface, or solid, whether of this or that magnitude or figure.

Berkeley, Principles of Human Knowledge, Introduction,

11

- 40 Of late many have been very sensible of the absurd opinions and insignificant disputes which grow out of the abuse of words. And, in order to remedy these evils, they advise well, that we attend to the ideas signified, and

draw off our attention from the words which signify them. But, how good soever this advice may be they have given others, it is plain they could not have a due regard to it themselves, so long as they thought the only immediate use of words was to signify ideas, and that the immediate signification of every general name was a determinate abstract idea.

But, these being known to be mistakes, a man may with greater ease prevent his being imposed on by words. He that knows he has no other than *particular* ideas, will not puzzle himself in vain to find out and conceive the *abstract* idea annexed to any name. And he that knows names do not always stand for ideas will spare himself the labour of looking for ideas where there are none to be had.

*Berkeley, Principles of Human Knowledge, Introduction,
23-24*

41 We next went to the school of languages, where three professors sat in consultation upon improving that of their own country.

The first project was to shorten discourse by cutting polysyllables into one, and leaving out verbs and participles, because in reality all things imaginable are but nouns.

The other, was a scheme for entirely abolishing all words whatsoever: and this was urged as a great advantage in point of health as well as brevity. For, it is plain, that every word we speak is in some degree a diminution of our lungs by corrosion; and consequently contributes to the shortning of our lives. An expedient was therefore offered, that since words are only names for *things*, it would be more convenient for all men to carry

about them, such *things* as were necessary to express the particular business they are to discourse on. And this invention would certainly have taken place, to the great ease as well as health of the subject, if the women in conjunction with the vulgar and illiterate had not threatned to raise a rebellion, unless they might be allowed the liberty to speak with their tongues, after the manner of their forefathers: such constant irreconcilable enemies to science are the common people. However, many of the most learned and wise adhere to the new scheme of expressing themselves by things; which hath only this inconvenience attending it; that if a man's business be very great, and of various kinds, he must be obliged in proportion to carry a greater bundle of things upon his back, unless he can afford one or two strong servants to attend him. I have often beheld two of those sages almost sinking under the weight of their packs, like pedlars among us; who, when they met in the streets would lay down their loads, open their sacks, and hold conversation for an hour together; then put up their implements, help each other to resume their burthens, and take their leave.

But, for short conversations, a man may carry implements in his pockets and under his arms, enough to supply him, and in his house he cannot be at a loss; therefore the room where company meet who practise this art, is full of all things ready at hand, requisite to furnish matter for this kind of artificial converse.

Another great advantage proposed by this invention, was, that it would serve as an universal language to be understood in all civilized nations, whose goods and utensils are generally of the same kind, or nearly resembling, so that their uses might easily be

comprehended. And thus, ambassadors would be qualified to treat with foreign princes or ministers of State, to whose tongues they were utter strangers.

Swift, Gulliver's Travels, III, 5

42 This society hath a peculiar cant and jargon of their own, that no other mortal can understand, and wherein all their laws are written, which they take special care to multiply; whereby they have wholly confounded the very essence of truth and falshood, of right and wrong; so that it will take thirty years to decide whether the field, left me by my ancestors for six generations, belong to me, or to a stranger three hundred miles off.

Swift, Gulliver's Travels, IV, 5

43 Jones now declared that they must certainly have lost their way; but this the guide insisted upon was impossible; a word which, in common conversation, is often used to signify not only improbable, but often what is really very likely, and, sometimes, what hath certainly happened; and hyperbolical violence like that which is so frequently offered to the words infinite and eternal; by the former of which it is usual to express a distance of half a yard, and by the latter, a duration of five minutes. And thus it is as usual to assert the impossibility of losing what is already actually lost. This was, in fact, the case at present.

Fielding, Tom Jones, XII, 11

44 Words do not constitute an overt act; they remain only in idea. When considered by themselves, they have generally no determinate signification; for this depends

on the tone in which they are uttered. It often happens that in repeating the same words they have not the same meaning; this depends on their connection with other things, and sometimes more is signified by silence than by any expression whatever.

Montesquieu, Spirit of Laws, XII, 12

- 45 There is no such thing as abstract or general ideas, properly speaking; but ... all general ideas are, in reality, particular ones, attached to a general term, which recalls, upon occasion, other particular ones, that resemble, in certain circumstances, the idea, present to the mind. Thus when the term Horse is pronounced, we immediately figure to ourselves the idea of a black or a white animal, of a particular size or figure: But as that term is also usually applied to animals of other colours, figures and sizes, these ideas, though not actually present to the imagination, are easily recalled; and our reasoning and conclusion proceed in the same way, as if they were actually present.

Hume, Concerning Human Understanding, XII, 125, fn.

- 46 There is no complete language, no language which can express all our ideas and all our sensations; their shades are too numerous, too imperceptible. Nobody can make known the precise degree of sensation he experiences. One is obliged, for example, to designate by the general names of "love" and "hate" a thousand loves and a thousand hates all different from each other; it is the same with our pleasures and our pains. Thus all languages are, like us, imperfect.

Voltaire, Philosophical Dictionary: Languages

47 The first [difficulty] which presents itself is to conceive how language can have become necessary; for as there was no communication among men and no need for any, we can neither conceive the necessity of this invention, nor the possibility of it if it was not somehow indispensable. I might affirm, with many others, that languages arose in the domestic intercourse between parents and their children. But this expedient would not obviate the difficulty, and would besides involve the blunder made by those who, in reasoning on the state of nature, always import into it ideas gathered in a state of society.... For to say that the mother dictated to her child the words he was to use in asking her for one thing or another, is an explanation of how languages already formed are taught, but by no means explains how languages were originally formed.

We will suppose, however, that this first difficulty is obviated. Let us for a moment then take ourselves as being on this side of the vast space which must lie between a pure state of nature and that in which languages had become necessary, and, admitting their necessity, let us inquire how they could first be established. Here we have a new and worse difficulty to grapple with: for if men need speech to learn to think, they must have stood in much greater need of the art of thinking, to be able to invent that of speaking. And though we might conceive how the articulate sound of the voice came to be taken as the conventional interpreters of our ideas, it would still remain for us to inquire what could have been the interpreters of this convention for those ideas, which, answering to no sensible objects, could not be indicated either by gesture or voice; so that we can hardly form any tolerable

conjectures about the origin of this art of communicating our thoughts and establishing a correspondence between minds.

Rousseau, Origin of Inequality, I

48 The first language of mankind, the most universal and vivid, in a word the only language man needed, before he had occasion to exert his eloquence to persuade assembled multitudes, was the simple cry of nature. But as this was excited only by a sort of instinct on urgent occasions, to implore assistance in case of danger, or relief in case of suffering, it could be of little use in the ordinary course of life, in which more moderate feelings prevail. When the ideas of men began to expand and multiply, and closer communication took place among them, they strove to invent more numerous signs and a more copious language. They multiplied the inflections of the voice, and added gestures, which are in their own nature more expressive, and depend less for their meaning on a prior determination. Visible and movable objects were therefore expressed by gestures, and audible ones by imitative sounds: but, as hardly anything can be indicated by gestures, except objects actually present or easily described, and visible actions; as they are not universally useful—for darkness or the interposition of a material object destroys their efficacy—and as besides they rather request than secure our attention; men at length bethought themselves of substituting for them the articulate sounds of the voice, which, without bearing the same relation to any particular ideas, are better calculated to express them all, as conventional signs. Such an institution could only be made by common consent, and must have been effected

in a manner not very easy for men whose gross organs had not been accustomed to any such exercise. It is also in itself still more difficult to conceive, since such a common agreement must have had motives, and speech seems to have been highly necessary to establish the use of it.

Rousseau, Origin of Inequality, I

49 General ideas cannot be introduced into the mind without the assistance of words, nor can the understanding seize them except by means of propositions. This is one of the reasons why animals cannot form such ideas, or ever acquire that capacity for self-improvement which depends on them. When a monkey goes from one nut to another, are we to conceive that he entertains any general idea of that kind of fruit, and compares its archetype with the two individual nuts? Assuredly he does not; but the sight of one of these nuts recalls to his memory the sensations which he received from the other, and his eyes, being modified after a certain manner, give information to the palate of the modification it is about to receive. Every general idea is purely intellectual; if the imagination meddles with it ever so little, the idea immediately becomes particular. If you endeavour to trace in your mind the image of a tree in general, you never attain to your end. In spite of all you can do, you will have to see it as great or little, bare or leafy, light or dark, and were you capable of seeing nothing in it but what is common to all trees, it would no longer be like a tree at all. Purely abstract beings are perceivable in the same manner, or are only conceivable by the help of language. The definition of a triangle alone gives you a true idea of it: the moment you imagine a

triangle in your mind, it is some particular triangle and not another, and you cannot avoid giving it sensible lines and a coloured area. We must then make use of propositions and of language in order to form general ideas. For no sooner does the imagination cease to operate than the understanding proceeds only by the help of words. If then the first inventors of speech could give names only to ideas they already had, it follows that the first substantives could be nothing more than proper names.

Rousseau, Origin of Inequality, I

50 For myself, I am so aghast at the increasing difficulties which present themselves, and so well convinced of the almost demonstrable impossibility that languages should owe their original institution to merely human means, that I leave, to any one who will undertake it, the discussion of the difficult problem, which was most necessary, the existence of society to the invention of language, or the invention of language to the establishment of society.

Rousseau, Origin of Inequality, I

51 Talking of the origin of language; *Johnson*. "It must have come by inspiration. A thousand, nay, a million of children could not invent a language. While the organs are pliable, there is not understanding enough to form a language; by the time that there is understanding enough, the organs become stiff. We know that after a certain age we cannot learn to pronounce a new language. No foreigner, who comes to England when advanced in life, ever pronounces English tolerably well;

at least such instances are very rare. When I maintain that language must have come by inspiration, I do not mean that inspiration is required for rhetorick, and all the beauties of language; for when once man has language, we can conceive that he may gradually form modifications of it. I mean only that inspiration seems to me to be necessary to give man the faculty of speech; to inform him that he may have speech; which I think he could no more find out without inspiration, than cows or hogs would think of such a faculty."

Boswell, Life of Johnson (Apr. 18, 1783)

52 So sensible were the Romans of the influence of language over national manners, that it was their most serious care to extend, with the progress of their arms, the use of the Latin tongue. The ancient dialects of Italy, the Sabine, the Etruscan, and the Venetian, sunk into oblivion; but in the provinces, the east was less docile than the west, to the voice of its victorious preceptors. This obvious difference marked the two portions of the empire with a distinction of colours, which, though it was in some degree concealed during the meridian splendour of prosperity, became gradually more visible as the shades of night descended upon the Roman world. The western countries were civilised by the same hands which subdued them. As soon as the barbarians were reconciled to obedience, their minds were opened to any new impressions of knowledge and politeness. The language of Virgil and Cicero, though with some inevitable mixture of corruption, was so universally adopted in Africa, Spain, Gaul, Britain, and Pannonia, that the faint traces of the Punic or Celtic idioms were preserved only in the mountains, or among the peasants. Education and study

insensibly inspired the natives of those countries with the sentiments of Romans; and Italy gave fashions as well as laws to her Latin provincials. They solicited with more ardour, and obtained with more facility, the freedom and honours of the state; supported the national dignity in letters and in arms; and, at length, in the person of Trajan, produced an emperor whom the Scipios would not have disowned for their countryman. The situation of the Greeks was very different from that of the Barbarians. The former had been long since civilised and corrupted. They had too much taste to relinquish their language, and too much vanity to adopt any foreign institutions. Still preserving the prejudices after they had lost the virtues of their ancestors, they affected to despise the unpolished manners of the Roman conquerors, whilst they were compelled to respect their superior wisdom and power. Nor was the influence of the Grecian language and sentiments confined to the narrow limits of that once celebrated country. Their empire, by the progress of colonies and conquest, had been diffused from the Hadriatic to the Euphrates and the Nile. Asia was covered with Greek cities, and the long reign of the Macedonian kings had introduced a silent revolution into Syria and Egypt. In their pompous courts those princes united the elegance of Athens with the luxury of the East, and the example of the court was imitated, at an humble distance, by the higher ranks of their subjects. Such was the general division of the Roman empire into the Latin and Greek languages. To these we may add a third distinction for the body of the natives in Syria, and especially in Egypt. The use of their ancient dialects, by secluding them from the commerce of mankind, checked the improvements of those barbarians. The slothful

effeminacy of the former, exposed them to the contempt; the sullen ferociousness of the latter, excited the aversion of the conquerors.

Gibbon, Decline and Fall of the Roman Empire, 11

53 The use of letters is the principal circumstance that distinguishes a civilized people from a herd of savages incapable of knowledge or reflection. Without that artificial help, the human memory soon dissipates or corrupts the ideas intrusted to her charge; and the nobler faculties of the mind, no longer supplied with models or with materials, gradually forget their powers; the judgment becomes feeble and lethargic, the imagination languid or irregular. Fully to apprehend this important truth, let us attempt, in an improved society, to calculate the immense distance between the man of learning and the *illiterate* peasant. The former, by reading and reflection, multiplies his own experience, and lives in distant ages and remote countries; whilst the latter, rooted to a single spot, and confined to a few years of existence, surpasses, but very little, his fellow-labourer the ox in the exercise of his mental faculties. The same, and even a greater, difference will be found between nations than between individuals; and we may safely pronounce that, without some species of writing, no people has ever preserved the faithful annals of their history, ever made any considerable progress in the abstract sciences, or ever possessed, in any tolerable degree of perfection, the useful and agreeable arts of life.

Gibbon, Decline and Fall of the Roman Empire, IX

54 Though the origin of most of our words is forgotten, each word was at first a stroke of genius, and obtained currency because for the moment it symbolized the world to the first speaker and to the hearer. The etymologist finds the deadest word to have been once a brilliant picture. Language is fossil poetry.

Emerson, The Poet

55 If we possessed a perfect pedigree of mankind, a genealogical arrangement of the races of man would afford the best classification of the various languages now spoken throughout the world; and if all extinct languages, and all intermediate and slowly changing dialects, were to be included, such an arrangement would be the only possible one. Yet it might be that some ancient languages had altered very little and had given rise to few new languages, whilst others had altered much owing to the spreading, isolation, and state of civilisation of the several co-descended races, and had thus given rise to many new dialects and languages. The various degrees of difference between the languages of the same stock, would have to be expressed by groups subordinate to groups; but the proper or even the only possible arrangement would still be genealogical; and this would be strictly natural, as it would connect together all languages, extinct and recent, by the closest affinities, and would give the filiation and origin of each tongue.

Darwin, Origin of Species, XIV

56 The habitual use of articulate language is... peculiar to man; but he uses, in common with lower animals,

inarticulate cries to express his meaning, aided by gestures and the movements of the muscles of the face. This especially holds good with the more simple and vivid feelings, which are but little connected with our higher intelligence. Our cries of pain, fear, surprise, anger, together with their appropriate actions, and the murmur of a mother to her beloved child are more expressive than any words. That which distinguishes man from the lower animals is not the understanding of articulate sounds, for, as every one knows, dogs understand many words and sentences. In this respect they are at the same stage of development as infants, between the ages of ten and twelve months, who understand many words and short sentences, but cannot yet utter a single word. It is not the mere articulation which is our distinguishing character, for parrots and other birds possess this power. Nor is it the mere capacity of connecting definite sounds with definite ideas; for it is certain that some parrots, which have been taught to speak, connect unerringly words with things, and persons with events. The lower animals differ from man solely in his almost infinitely larger power of associating together the most diversified sounds and ideas; and this obviously depends on the high development of his mental powers.

Darwin, Descent of Man, I, 3

57 Language is an art, like brewing or baking.. . It certainly is not a true instinct, for every language has to be learnt.

Darwin, Descent of Man, I, 3

58 With respect to the origin of articulate language ... I cannot doubt that language owes its origin to the

imitation and modification of various natural sounds, the voices of other animals, and man's own instinctive cries, aided by signs and gestures.

Darwin, Descent of Man, I, 3

59 A great stride in the development of the intellect will have followed, as soon as the half-art and half-instinct of language came into use; for the continued use of language will have reacted on the brain and produced an inherited effect; and this again will have reacted on the improvement of language. As Mr. Chauncey Wright has well remarked, the largeness of the brain in man relatively to his body, compared with the lower animals, may be attributed in chief part to the early use of some simple form of language.—that wonderful engine which affixes signs to all sorts of objects and qualities, and excites trains of thought which would never arise from the mere impression of the senses, or if they did arise could not be followed out. The higher intellectual powers of man, such as those of ratiocination, abstraction, self-consciousness, etc., probably follow from the continued improvement and exercise of the other mental faculties.

Darwin, Descent of Man, III, 21

60 "Why, Huck, doan' de Trench people talk de same way we does?"

"No, Jim; you couldn't understand a word they said—not a single word."

"Well, now, I be ding-busted! How do dat come?"

"I don't know; but it's so. I got some of their jabber out of a book. S'pose a man was to come to you and say Polly-voo-franzy—what would you think?"

"I wouldn't think nuffn; I'd take cn bust him over dc head—dat is, ef he warn't white. I wouldn't 'low no nigger to call me dat."

"Shucks, It ain't calling you anything. It's only saying, do you know how to talk French?"

"Well, den, why couldn't he say it?"

"Why, he *is* a-saying it. That's a Frenchman's *way* of saying it."

"Well, it's a blame' ridicklous way, en I doan' want to hear no mo' 'bout it. Dey ain' no sense in it."

"Looky here, Jim; does a cat talk like we do?"

"No, a cat don't."

"Well, does a cow?"

"No, a cow don't, nuther."

"Does a cat talk like a cow, or a cow talk like a cat?"

"No, dey don't."

"It's natural and right for 'em to talk different from each other, ain't it?"

"Course."

"And ain't it natural and right for a cat and a cow to talk different from us?"

"Why, mos' sholy it is."

"Well, then, why ain't it natural and right for a *Frenchman* to talk different from us? You answer me that."

"Is a cat a man, Huck?"

"No."

"Well, den, dey ain't no sense in a cat talkin' like a man. Is a cow a man?—er is a cow a cat?"

"No, she ain't either of them."

"Well, den, she ain' got no business to talk like either one er the yuther of 'em. Is a Frenchman a man?"

"Yes."

"Well, den! Dad blame it, why doan' he talk like a man? You answer me dat!"

I see it warn't no use wasting words—you can't learn a nigger to argue- So I quit.

Mark Twain, Huckleberry Finn, XIV

61 Language was originally made by men who were not psychologist, and most men to-day employ almost exclusively the vocabulary of outward things. The cardinal passions of our life, anger, love, fear, hate, hope, and the most comprehensive divisions of our intellectual activity, to remember, expect, think, know, dream, with the broadest genera of aesthetic feeling, joy, sorrow, pleasure, pain, are the only facts of a subjective order which this vocabulary deigns to note by special words. The elementary qualities of sensation, bright, loud, red, blue, hot, cold, are, it is true, susceptible of being used in both an objective and a subjective sense. They stand for outer qualities and for the feelings which these arouse. But the objective sense is the original sense; and still today we have to describe a large number of sensations by the name of the object from which they have most frequently been got. An orange color, an odor of violets, a cheesy taste, a thunderous sound, a fiery smart, etc., will recall what I mean. This absence of a special vocabulary for subjective facts hinders the study of all but the very coarsest of them. Empiricist writers are very fond of emphasizing one great set of delusions which language inflicts on the mind. Whenever we have made a word, they say, to denote a certain group of phenomena, we are prone to suppose a substantive entity existing beyond the phenomena, of which the word shall be the name. But the lack of a word quite as often leads to the directly

opposite error. We are then prone to suppose that no entity can be there; and so we come to overlook phenomena whose existence would be patent to us all, had we only grown up to hear it familiarly recognized in speech. It is hard to focus our attention on the nameless, and so there results a certain vacuousness in the descriptive parts of most psychologies.

But a worse defect than vacuousness comes from the dependence of psychology on common speech. Naming our thought by its own objects, we almost all of us assume that as the objects are, so the thought must be. The thought of several distinct things can only consist of several distinct bits of thought, or "ideas"; that of an abstract or universal object can only be an abstract or universal idea. As each object may come and go, be forgotten and then thought of again, it is held that the thought of it has a precisely similar independence, self-identity, and mobility. The thought of the object's recurrent identity is regarded as the identity of its recurrent thought; and the perceptions of multiplicity, of coexistence, of succession, are severally conceived to be brought about only through a multiplicity, a coexistence, a succession, of perceptions. The continuous flow of the mental stream is sacrificed, and in its place an atomism, a brickbat plan of construction, is preached for the existence of which no good introspective grounds can be brought forward, and out of which presently grow all sorts of paradoxes and contradictions, the heritage of woe of students of the mind.

These words are meant to impeach the entire English psychology derived from Locke and Hume, and the entire German psychology derived from Herbart, so far as they

both treat "ideas" as separate subjective entities that come and go.

William James, Psychology, VII

62 The opinion so stoutly professed by many, that language is essential to thought, seems to have this much of truth in it, that all our inward images tend invincibly to attach themselves to something sensible, so as to gain in corporeity and life. Words serve this purpose, gestures serve it, stones, straws, chalk-marks, anything will do. As soon as any one of these things stands for the idea, the latter seems to be more real.

William James, Psychology, XXI

63 Language is a system of *signs*, different from the things signified, but able to suggest them,...

No doubt brutes have a number of such signs. When a dog yelps in front of a door, and his master, understanding his desire, opens it, the dog may, after a certain number of repetitions, get to repeat in cold blood a yelp which was at first the involuntary interjectional expression of strong emotion. The same dog may be taught to "beg" for food, and afterwards come to do so deliberately when hungry. The dog also learns to understand the signs of men, and the word "rat" uttered to a terrier suggests exciting thoughts of the rat-hunt. If the dog had the varied impulse to vocal utterance which some other animals have, he would probably repeat the word "rat" whenever he spontaneously happened to think of a rat-hunt—he no doubt does have it as an auditory image, just as a parrot calls out different words spontaneously from its repertory, and having learned the

name of a given dog will utter it on the sight of a different dog. In each of these separate cases the particular sign may be consciously noticed by the animal, as distinct from the particular thing signified, and will thus, so far as it goes, be a true manifestation of language. But when we come to man we find a great difference. *He has a deliberate intention to apply a sign to everything.* The linguistic impulse is with him generalized and systematic. For things hitherto unnoticed or unfelt, he *desires* a sign before he has one. Even though the dog should possess his "yelp" for this thing, his "beg" for that, and his auditory image "rat" for a third thing, the matter with him rests there. If a fourth thing interests him for which no sign happens already to have been learned, he remains tranquilly without it and goes no further. But the man postulates it, its absence irritates him, and he ends by inventing it. *This general purpose constitutes, I take it, the peculiarity of human speech, and explains its prodigious development.*

How, then, does the general purpose arise? It arises as soon as the notion of a *sign as such*, apart from any particular import, is born; and this notion is born by dissociation from the outstanding portions of a number of concrete cases of signification, The "yelp," the "beg," the "rat," differ as to their several imports and natures. They agree only in so far as they have the same *use* —to *be signs*, to stand for something more important than themselves. The dog whom this similarity could strike would have grasped the sign *per se* as such, and would probably thereupon become a general sign-maker, or speaker in the human sense. But how can the similarity strike him? Not without the juxtaposition of the similars (in virtue of the law we have laid down, that in order to

be segregated an experience must be repeated with varying concomitants)—not unless the "yelp" of the dog at the moment it occurs *recalls* to him his "beg," by the delicate bond of their subtle similarity of use—not till then can this thought flash through his mind: "Why, yelp and beg, in spite of all their unlikeness, are yet alike in this: that they are actions, signs, which lead to important boons. Other boons, *any* boons, may then be got by other signs!" This reflection made, the gulf is passed. Animals probably never make it, because the bond of similarity is not delicate enough. Each sign is drowned in *its* import, and never awakens other signs and other imports in juxtaposition. The rat-hunt idea is too absorbingly interesting in itself to be interrupted by anything so unctiguous to it as the idea of the "beg for food," or of "the door-open yelp," nor in their turn do these awaken the rat-hunt idea.

In the human child, however, these ruptures of contiguous association are very soon made; far off cases of sign-using arise when we make a sign now; and soon language is launched. The child in each case makes the discovery for himself. No one can help him except by furnishing him with the conditions. But as he is constituted, the conditions will sooner or later shoot together into the result.

William James, Psychology, XXII

- 64 A language is not a universal mode of expressing all ideas whatsoever. It is a limited mode of expressing such ideas as have been frequently entertained, and urgently needed, by the group of human beings who developed that mode of speech. It is only during a comparatively short period of human history that there has existed any

language with an adequate stock of general terms. Such general terms require a permanent literature to define them by their mode of employment.

The result is that the free handling of general ideas is a late acquirement. I am not maintaining that the brains of men were inadequate for the task. The point is that it took ages for them to develop first the appliances and then the habits which made generality of thought possible and prevalent. For ages, existing languages must have been ready for development. If men had been in contact with a superior race, either personally or by a survival of their literature, a process which requires scores or even hundreds of generations might have been antedated, so as to have been effected almost at once. Such, in fact, was the later history of the development of the races of Northern Europe. Again, a social system which encourages developments of thought can procure the advent. This is the way in which the result was first obtained. Society and language grew together.

Whitehead, Religion in the Making, I, 5

- 65 It is natural to think of the meaning of a word as something conventional. This, however, is only true %vith great limitations. A new word can be added to an existing language by a mere convention, as is done, for instance, with new scientific terms. But the basis of a language is not conventional, either from the point of view of the individual or from that of the community. A child learning to speak is learning habits and associations which are just as much determined by the environment as the habit of expecting dogs to bark and cocks to crow. The community that speaks a language has learnt it, and modified it by processes almost all of which are not

deliberate, but the results of causes operating according to more or less ascertainable laws. If we trace any Indo-European language back far enough, we arrive hypothetically (at any rate according to some authorities) at the stage when language consisted only of the roots out of which subsequent words have grown. How these roots acquired their meanings is not known, but a conventional origin is clearly just as mythical as the social contract by which Hobbes and Rousseau supposed civil government to have been established. We can hardly suppose a parliament of hitherto speechless elders meeting together and agreeing to call a cow a cow and a wolf a wolf. The association of words with their meanings must have grown up by some natural process, though at present the nature of the process is unknown.

Russell, Analysis of Mind, X

- 66 The essence of language lies, not in the use of this or that special means of communication, but in the employment of fixed associations (however these may have originated) in order that something now sensible—a spoken word, a picture, a gesture, or what not—may call up the "idea" of something else. Whenever this is done, what is now sensible may be called a "sign" or "symbol," and that of which it is intended to call up the "idea" may be called its "meaning." This is a rough outline of what constitutes "meaning."

Russell, Analysis of Mind, X

- 67 Language has two interconnected merits: first, that it is social, and second, that it supplies public expression for "thoughts" which would otherwise remain private.

Without language, or some pre-linguistic analogue, our knowledge of the environment is confined to what our own senses have shown us, together with such inferences as our congenital constitution may prompt; but by the help of speech we are able to know what others can relate, and to relate what is no longer sensibly present but only remembered. When we see or hear something which a companion is not seeing or hearing, we can often make him aware of it by the one word "look" or "listen," or even by gestures. But if half an hour ago we saw a fox, it is not possible to make another person aware of this fact without language. This depends upon the fact that the word "fox" applies equally to a fox seen or a fox remembered, so that our memories, which in themselves are private, are represented to others by uttered sounds, which are public. Without language, only that part of our life which consists of public sensations would be communicable, and that only to those so situated as to be able to share the sensations in question.

Russell, Human Knowledge, II, 1

68 Language serves not only to express thoughts, but to make possible thoughts which could not exist without it. It is sometimes maintained that there can be no thought without language, but to this view I cannot assent: I hold that there can be thought, and even true and false belief, without language. But however that may, it cannot be denied that all fairly elaborate thoughts require words. I can know, in a sense, that I have five fingers without knowing the word "five," but I cannot know that the population of London is about eight millions unless I have acquired the language of arithmetic, nor can I have any thought at all closely corresponding to what is asserted in

the sentence; "The ratio of the circumference of a circle to the diameter is approximately 3.14159." Language, once evolved, acquires a kind of autonomy: we can know, especially in mathematics, that a sentence asserts something true, although what it asserts is too complex to be apprehended even by the best minds.

Russell, Human Knowledge, II, 1

69 I think the elementary uses of a word may be distinguished as indicative, imperative, and interrogative. When a child sees his mother coming, he may say, "Mother"; this is the indicative use. When he wants her, he calls, "Mother!"; this is the imperative use. When she dresses up as a witch and he begins to pierce the disguise, he may say, "Mother?" This is the interrogative use. The indicative use must come first in the acquisition of language, since the association of word and object signified can only be created by the simultaneous presence of both. But the imperative use very quickly follows. This is relevant in considering what we mean by "thinking of" an object. It is obvious that the child who has just learned to call his mother has found verbal expression for a state in which he had often been previously, that this state was associated with his mother, and that it has now become associated with the word "Mother." Before language, his state was only partially communicable; an adult, hearing him cry, could know that he wanted something, but had to guess what it was. But the fact that the word "Mother!" expresses his state shows that even before the acquisition of language his state had a relation to his mother, namely, the relation called "thinking of." This relation is not created by

language, but antedates it. What language does is to make it communicable.

Russell, Human Knowledge, II, 2

70 When one has familiarized oneself with the extensive employment of symbolism for the representation of sexual material in dreams, one naturally asks oneself whether many of these symbols have not a permanently established meaning, like the signs in shorthand; and one even thinks of attempting to compile a new dream-book on the lines of the cipher method. In this connection it should be noted that symbolism does not appertain especially to dreams, but rather to the unconscious imagination, and particularly to that of the people, and it is to be found in a more developed condition in folklore, myths, legends, idiomatic phrases, proverbs, and the current witticisms of a people than in dreams. We should have, therefore, to go far beyond the province of dream-interpretation in order fully to investigate the meaning of symbolism, and to discuss the numerous problems—for the most part still unsolved—which are associated with the concept of the symbol. We shall here confine ourselves to saying that representation by a symbol comes under the heading of the indirect representations, but that we are warned by all sorts of signs against indiscriminately closing symbolic representation with the other modes of indirect representation before we have clearly conceived its distinguishing characteristics. In a number of cases, the common quality shared by the symbol and the thing which it represents is obvious; in others, it is concealed; in these latter cases the choice of the symbol appears to be enigmatic. And these are the very cases that must be able to elucidate the ultimate

meaning of the symbolic relation; they point to the fact that it is of a genetic nature. What is today symbolically connected was probably united, in primitive times, by conceptual and linguistic identity. The symbolic relationship seems to be a residue and reminder of a former identity. It may also be noted that in many cases the symbolic identity c-x-tends beyond the linguistic identity.

Freud, Interpretation of Dreams, VI, E

- 71 There is a specially close relation between true symbols and sexuality.

An important clue in this connection has recently been given to us in the view expressed by a philologist (H. Sperber, of Upsala, who works independently of psycho-analysis), that sexual needs have had the largest share in the origin and development of language. He says that the first sounds uttered were a means of communication, and of summoning the sexual partner, and that, in the later development, the elements of speech were used as an accompaniment to the different kinds of work carried on by primitive man. This work was performed by associated efforts, to the sound of rhythmically repeated utterances, the effect of which was to transfer a sexual interest to the work. Primitive man thus made his work agreeable, so to speak, by treating it as the equivalent of and substitute for sexual activities. The word uttered during the communal work had therefore two meanings, the one referring to the sexual act, the other to the labour which had come to be equivalent to it. In time the word was dissociated from its sexual significance and its application confined to the work. Generations later the same thing happened to a new word with a sexual

signification, which was then applied to a new form of work. In this way a number of root-words arose which were all of sexual origin but had all lost their sexual meaning. If the statement here outlined be correct, a possibility at least of understanding dream-symbolism opens out before us. We should comprehend why it is that in dreams, which retain something of these primitive conditions, there is such an extraordinarily large number of sexual symbols; and why weapons and tools in general stand for the male, and materials and things worked on for the female. The symbolic relations would then be the survival of the old identity in words; things which once had the same name as the genitalia could now appear in dreams as symbolizing them.

Freud, General Introduction to Psycho-Analysis, X

72 Things come and go; or we come and go, and either way things escape our notice. Our direct sensible relation to things is very limited. The suggestion of meanings by natural signs is limited to occasions of direct contact or vision. But a meaning fixed by a linguistic sign is conserved for future use. Even if the thing is not there to represent the meaning, the word may be produced so as to evoke the meaning. Since intellectual life depends on possession of a store of meanings, the importance of language as a tool of preserving meanings cannot be overstated. To be sure, the method of storage is not wholly aseptic; words often corrupt and modify the meanings they are supposed to keep intact, but liability to infection is a price paid by every living thing for the privilege of living.

Dewey, How We Think, Pt. III, XIII, 1

73 As is often said, grammar expresses the unconscious logic of the popular mind. *The chief intellectual classifications that constitute the working capital of thought have been built up for us by our mother tongue.* Our very lack of explicit consciousness in using language that we are employing the intellectual systematizations of the race shows how thoroughly accustomed we have become to its logical distinctions and groupings.

Dewey, How We Think, Pt. III, XIII, 1

74 Instruction always runs the risk of swamping the pupil's own vital, though narrow, experience under masses of communicated material. The instructor ceases and the teacher begins at the point where communicated matter stimulates into fuller and more significant life that which has entered by the strait and narrow gate of sense-perception and motor activity. Genuine communication involves contagion; its name should not be taken in vain by terming communication that which produces no community of thought and purpose between the child and the race of which he is the heir.

Dewey, How We Think, Pt. III, XVI, 3

7.2 The Arts of Language

Among the categories of art to which attention is called in the first section of Chapter 16 on Art and Aesthetics is the group of arts traditionally called "the seven liberal arts," divided into the trivium, or the three arts of grammar, logic, and rhetoric, and the quadrivium, or the four arts of arithmetic, geometry, music, and astronomy. The

contemporary reader will immediately recognize the first three as arts of language; the reader would probably understand the second four better if they were referred to as the mathematical arts of calculation and measurement.

Many of the passages quoted in this section recommend steps to be taken to make speech serve more effectively as an instrument of communication or of thought. They call attention to the fallacies or faults to be avoided by a careless or uncritical use of words. They propose remedies for the misuse and abuse of language.

Still other passages consider ways of making speech more effective as a means of persuasion, and touch on questions of style, both rhetorical and poetical. The fact that there are more passages that deal with rhetorical considerations than with the rules of grammar or logic is to be explained by the much more technical character of the latter, the treatment of which would be inappropriate in a book of this kind.

The liberal arts, especially the arts of language, are sometimes referred to as the arts of learning—the arts of teaching and being taught. It is not surprising, therefore, that certain matters covered in this section should be related to matters covered in Chapter 8 on Education, especially its third section, on teaching and learning. Since the liberal arts, especially logic, are involved in the process of inquiry and the formulation of knowledge, it is also the case that things touched on in this section are related to matters covered in Chapter 6 on Knowledge, Chapter 16 on Art and Aesthetics, and Chapter 17 on Philosophy, Science, and Mathematics.

1 *Hecuba*. Why

do we make so much of knowledge, struggle so hard
to get some little skill not worth the effort?
But persuasion, the only art whose power
is absolute, worth any price we pay,
we totally neglect. And so we fail;
we lose our hopes.

Euripides, Hecuba, 815

2 *Socrates*. I wish Protagoras either to ask or answer as he is inclined; but I would rather have done with poems and odes, if he does not object, and come back to the question about which I was asking you at first, Protagoras, and by your help make an end of that. The talk about the poets seems to me like a commonplace entertainment to which a vulgar company have recourse; who, because they are not able to converse or amuse one another, while they are drinking, with the sound of their own voices and conversation, by reason of their stupidity, raise the price of flute-girls in the market, hiring for a great sum the voice of a flute instead of their own breath, to be the medium of intercourse among them: but where the company are real gentlemen and men of education, you will see no flute-girls, nor dancing-girls, nor harp-girls; and they have no nonsense or games, but are contented with one another's conversation, of which their own voices are the medium, and which they carry on by turns and in an orderly manner, even though they are very liberal in their potations. And a company like this of

ours, and men such as we profess to be, do not require the help of another's voice, or of the poets whom you cannot interrogate about the meaning of what they are saying; people who cite them declaring, some that the poet has one meaning, and others that he has another, and the point which is in dispute can never be decided. This sort of entertainment they decline, and prefer to talk with one another, and put one another to the proof in conversation. And these are the models which I desire that you and I should imitate. Leaving the poets, and keeping to ourselves, let us try the mettle of one another and make proof of the truth in conversation. If you have a mind to ask, I am ready to answer; or if you would rather, do you answer, and give me the opportunity of resuming and completing our unfinished argument.

Plato, Protagoras, 347A

- 3 *Socrates*. The composers of speeches... always appear to me to be very extraordinary men... and their art is lofty and divine, and no wonder. For their art is a part of the great art of enchantment, and hardly, if at all, inferior to it: and whereas the art of the enchanter is a mode of charming snakes and spiders and scorpions, and other monsters and pests, this art of theirs acts upon dicasts and ecclesiasts and bodies of men, for the charming and pacifying of them.

Plato, Euthydemus, 289B

- 4 *Socrates*. Every discourse ought to be a living creature, having a body of its own and a head and feet; there should be a middle, beginning, and end, adapted to one another and to the whole.

Plato, Phaedrus, 264B

- 5 It is useful to have examined the number of meanings of a term both for clearness' sake (for a man is more likely to know what it is he asserts, if it has been made dear to him how many meanings it may have), and also with a view to ensuring that our reasonings shall be in accordance with the actual facts and not addressed merely to the term used. For as long as it is not clear in how many senses a term is used, it is possible that the answerer and the questioner are not directing their minds upon the same thing: whereas when once it has been made clear how many meanings there are, and also upon which of them the former directs his mind when he makes his assertion, the questioner would then look ridiculous if he failed to address his argument to this. It helps us also both to avoid being misled and to mislead by false reasoning: for if we know the number of meanings of a term, we shall certainly never be misled by false reasoning, but shall know if the questioner fails to address his argument to the same point; and when we ourselves put the questions we shall be able to mislead him, if our answerer happens not to know the number of meanings of our terms.

Aristotle, Topics, 108a18

- 6 We ought to use our terms to mean the same things as most people mean by them, but when we ask what kind of things are or are not of such and such a kind, we should not here go with the multitude: e.g. it is right to call 'healthy' whatever tends to produce health, as do most men: but in saying whether the object before us

tends to produce health or not, we should adopt the language no longer of the multitude but of the doctor.

Aristotle, Topics, 110a17

- 7 It is impossible in a discussion to bring in the actual things discussed: we use their names as symbols instead of them; and therefore we suppose that what follows in the names, follows in the things as well, just as people who calculate suppose in regard to their counters. But the two cases (names and things) are not alike. For names are finite and so is the sum-total of formulae, while things are infinite in number. Inevitably, then, the same formulae, and a single name, have a number of meanings. Accordingly just as, in counting, those who are not clever in manipulating their counters are taken in by the experts, in the same way in arguments too those who are not well acquainted with the force of names misreason both in their own discussions and when they listen to others. For this reason, then, and for others to be mentioned later, there exists both reasoning and refutation that is apparent but not real.

Aristotle, On Sophistical Refutations, 165a5

- 8 An incisive argument is one which produces the greatest perplexity: for this is the one with the sharpest fang.

Aristotle, On Sophistical Refutations, 182b32

- 9 Rhetorical study, in its strict sense, is concerned with the modes of persuasion. Persuasion is clearly a sort of demonstration, since we are most fully persuaded when we consider a thing to have been demonstrated.

Aristotle, Rhetoric, 1355a3

10 It is absurd to hold that a man ought to be ashamed of being unable to defend himself with his limbs, but not of being unable to defend himself with speech and reason, when the use of rational speech is more distinctive of a human being than the use of his limbs. And if it be objected that one who uses such power of speech unjustly might do great harm, *that* is a charge which may be made in common against all good things except virtue, and above all against the things that are most useful, as strength, health, wealth, generalship. A man can confer the greatest of benefits by a right use of these, and inflict the greatest of injuries by using them wrongly.

It is clear, then, that rhetoric is not bound up with a single definite class of subjects, but is as universal as dialectic; it is clear, also, that it is useful. It is clear, further, that its function is not simply to succeed in persuading, but rather to discover the means of coming as near such success as the circumstances of each particular case allow. In this it resembles all other arts. For example, it is not the function of medicine simply to make a man quite healthy, but to put him as far as may be on the road to health; it is possible to give excellent treatment even to those who can never enjoy sound health. Furthermore, it is plain that it is the function of one and the same art to discern the real and the apparent means of persuasion, just as it is the function of dialectic to discern the real and the apparent syllogism. What makes a man a 'sophist' is not his faculty, but his moral purpose. In rhetoric, however, the term 'rhetorician' may describe either the speaker's knowledge of the art, or his moral purpose. In dialectic it is different; a man is a 'sophist' because he has a certain kind of moral purpose,

a 'dialectician' in respect, not of his moral purpose, but of his faculty

Aristotle, Rhetoric, 1355a39

- 11 Rhetoric may be defined as the faculty of observing in any given case the available means of persuasion. This is not a function of any other art. Every other art can instruct or persuade about its own particular subject-matter; for instance, medicine about what is healthy and unhealthy, geometry about the properties of magnitudes, arithmetic about numbers, and the same is true of the other arts and sciences. But rhetoric we look upon as the power of observing the means of persuasion on almost any subject presented to us; and that is why we say that, in its technical character, it is not concerned with any special or definite class of subjects,

Aristotle, Rhetoric, 1355b26

- 12 Of the modes of persuasion furnished by the spoken word there are three kinds. The first kind depends on the personal character of the speaker; the second on putting the audience into a certain frame of mind; the third on the proof, or apparent proof, provided by the words of the speech itself. Persuasion is achieved by the speaker's personal character when the speech is so spoken as to make us think him credible. We believe good men more fully and more readily than others. . . . This kind of persuasion, like the others, should be achieved by what the speaker says, not by what people think of his character before he begins to speak.... His character may almost be called the most effective means of persuasion he possesses. Secondly, persuasion may come through

the hearers, when the speech stirs their emotions. Our judgements when we are pleased and friendly are not the same as when we are pained and hostile. . . . Thirdly, persuasion is effected through the speech itself when we have proved a truth or an apparent truth by means of the persuasive arguments suitable to the case in question.

Aristotle, Rhetoric, 1356a1

- 13 The duty of rhetoric is to deal with such matters as we deliberate upon without arts or systems to guide us, in the hearing of persons who cannot take in at a glance a complicated argument, or follow a long chain of reasoning. The subjects of our deliberation are such as seem to present us with alternative possibilities: about things that could not have been, and cannot now or in the future be, other than they are, nobody who takes them to be of this nature wastes his time in deliberation.

Aristotle, Rhetoric, 1356b40

- 14 There are three divisions of oratory—(1) political, (2) forensic, and (3) the ceremonial oratory of display.

Political speaking urges us either to do or not to do something: one of these two courses is always taken by private counsellors, as well as by men who address public assemblies. Forensic speaking either attacks or defends somebody: one or other of these two things must always be done by the parties in a case. The ceremonial oratory of display either praises or censures somebody. These three kinds of rhetoric refer to three different kinds of time. The political orator is concerned with the future: it is about things to be done hereafter that he advises, for or against. The party in a case at law is concerned with

the past; one man accuses the other, and the other defends himself, with reference to things already done. The ceremonial orator is, properly speaking, concerned with the present, since all men praise or blame in view of the state of things existing at the time, though they often find it useful also to recall the past and to make guesses at the future.

Aristotle, Rhetoric, 1358b6

- 15 Since rhetoric exists to affect the giving of decisions—the hearers decide between one political speaker and another, and a legal verdict is a decision—the orator must not only try to make the argument of his speech demonstrative and worthy of belief; he must also make his own character look right and put his hearers, who are to decide into the right frame of mind. Particularly in political oratory, but also in lawsuits, it adds much to an orator's influence that his own character should look right and that he should be thought to entertain the right feelings towards his hearers; and also that his hearers themselves should be in just the right frame of mind. That the orator's own character should look right is particularly important in political speaking: that the audience should be in the right frame of mind, in lawsuits. When people are feeling friendly and placable, they think one sort of thing; when they are feeling angry or hostile, they think either something totally different or the same thing with a different intensity: when they feel friendly to the man who comes before them for judgement, they regard him as having done little wrong, if any; when they feel hostile, they take the opposite view. Again, if they are eager for, and have good hopes of, a thing that will be pleasant if it happens, they think that it

certainly will happen and be good for them: whereas if they are indifferent or annoyed, they do not think so.

There are three things which inspire confidence in the orator's own character—The three, namely, that induce us to believe a thing apart from any proof of it: good sense, good moral character, and goodwill. False statements and bad advice are due to one or more of the following three causes. Men either form a false opinion through want of good sense; or they form a true opinion, but because of their moral badness do not say what they really think; or finally, they are both sensible and upright, but not well disposed to their hearers, and may fail in consequence to recommend what they know to be the best course. These are The only possible cases. It follows that anyone who is thought to have all three of these good qualities will inspire trust in his audience. The way to make ourselves thought to be sensible and morally good must be gathered from the analysis of goodness already given: the way to establish your own goodness is the same as The way to establish that of others.

Aristotle, Rhetoric, 1377b21

16 The use of persuasive speech is to lead to decisions.

(When we know a thing, and have decided about it, there is no further use in speaking about it.) This is so even if one is addressing a single person and urging him to do or not to do something, as when we scold a man for his conduct or try to change his views: the single person is as much your 'judge' as if he were one of many; we may say, without qualification, that any one is your judge whom you have to persuade. Nor does it matter whether we are arguing against an actual opponent or against a mere proposition; in the latter case we still have to use speech

and overthrow the opposing arguments, and we attack these as we should attack an actual opponent,

Aristotle, Rhetoric, 1391b8

- 17 Simplicity... makes the uneducated more effective than the educated when addressing popular audiences.... Educated men lay down broad general principles; uneducated men argue from common knowledge and draw obvious conclusions.

Aristotle, Rhetoric, 1395b27

- 18 The right thing in speaking really is that we should be satisfied not to annoy our hearers, without trying to delight them: we ought in fairness to fight our case with no help beyond the bare facts: nothing, therefore, should matter except the proof of those facts. Still, as has been already said, other things affect the result considerably, owing to the defects of our hearers. The arts of language cannot help having a small but real importance, whatever it is we have to expound to others: the way in which a thing is said does affect its intelligibility. Not, however, so much importance as people think. All such arts are fanciful and meant to charm the hearer. Nobody uses fine language when teaching geometry.

Aristotle, Rhetoric, 1404a3

- 19 Style to be good must be clear, as is proved by the fact that speech which fails to convey a plain meaning will fail to do just what speech has to do. It must also be appropriate, avoiding both meanness and undue elevation; poetical language is certainly free from meanness, but it is not appropriate to prose. Clearness is

secured by using the words (nouns and verbs alike) that are current and ordinary. Freedom from meanness, and positive adornment too, are secured by using the other words mentioned in the *Art of Poetry*. Such variation from what is usual makes the language appear more stately. People do not feel towards strangers as they do towards their own countrymen, and the same thing is true of their feeling for language. It is therefore well to give to everyday speech an unfamiliar air: people like what strikes them, and are struck by what is out of the way. In verse such effects are common, and there they are fitting: the persons and things there spoken of are comparatively remote from ordinary life. In prose passages they are far less often fitting because the subject-matter is less exalted. Even in poetry, it is not quite appropriate that fine language should be used by a slave or a very young man, or about very trivial subjects: even in poetry the style, to be appropriate, must sometimes be toned down, though at other times heightened. We can now see that a writer must disguise his art and give the impression of speaking naturally and not artificially, Naturalness is persuasive, artificiality is the contrary for our hearers are prejudiced and think we have some design against them, as if we were mixing their wines for them.

Aristotle, Rhetoric, 1404b2

- 20 Prose-writers must... pay specially careful attention to metaphor, because their other resources are scantier than those of poets. Metaphor, moreover, gives style clearness, charm, and distinction as nothing else can: and it is not a thing whose use can be taught by one man to another.

Aristotle, Rhetoric, 1405a5

21 The foundation of good style is correctness of language, which falls under five heads. (1) First, the proper use of connecting words, and the arrangement of them in the natural sequence which some of them require.. , . (2) The second lies in calling things by their own special names and not by vague general ones, (3) The third is to avoid ambiguities; unless, indeed, you definitely desire to be ambiguous, as those do who have nothing to say but are pretending to mean something. Such people are apt to put that sort of thing into verse. ... (4) A fourth rule is to observe Protagoras' classification of nouns into male, female, and inanimate; for these distinctions also must be correctly given.. . . (5) A fifth rule is to express plurality, fewness, and unity by the correct wording....

It is a general rule that a written composition should be easy to read and therefore easy to deliver. This cannot be so where there are many connecting words or clauses, or where punctuation is hard.

Aristotle, Rhetoric, 1407a19

22 An author can hold correct opinions and yet not be able to express them in polished style. To put one's thoughts on paper without being able to organize them or to express them clearly, or without being able to hold the reader with some kind of charm, means one is making an inexcusable misuse of both his leisure and his pen.

Cicero, Disputations, I, 3

23 Speech has a great deal to do with gaining propriety, and it has a double function. The first is oratory and the second is conversation. Oratory is the type of speech used in pleading court cases, addressing public

assemblies, and in the Senate. Conversation finds its place in social gatherings, informal discussions, and in speaking with friend. It should also play a role in dinners. Rhetoricians lay down the rules for oratory, but there are no rules for conversation. I don't really know why there shouldn't be. Where there are students to learn, teachers will be found. But there is no one who makes conversation a subject of study, while pupils surround rhetoricians everywhere. Yet the same rules that we apply to words and sentences in rhetoric would work equally well in conversation.

Cicero, De Officiis, I, 37

- 24 Conversation, in which the Socratics are the best models, ought to have the following qualities. It should be casual and not in the least dogmatic. It should be flavored with wit. The conversationalist should not hinder others from talking by monopolizing the conversation. In a general conversation he should be willing to let each person have his turn. He should pay attention, in the first place, to what the subject of the conversation is. If it is solemn, he should treat it seriously; if it is light, with humor. And above all, he should be careful lest his remarks give away some defect in his character. This is most likely to happen, when people, in jest or in earnest, delight in malicious and slanderous gossip behind someone's back, or set out to damage their reputations.

Cicero, De Officiis, I, 37

- 25 Neither can embellishments of language be found without arrangement and expression of thoughts, nor can thoughts be made to shine without the light of language.

Cicero, De Oratore, III, 6

26 Nobody ever admired an orator for merely speaking good Latin; if he speaks otherwise, they ridicule him; and not only do not think him an orator, but not even a man. Nor has any one ever extolled a speaker for merely speaking in such a manner that those who were present understood what he said; though every one has despised him who was not able to do so. Whom then do men regard with awe? What speaker do they behold with astonishment? At whom do they utter exclamations? Whom do they consider as a deity, if I may use the expression, amongst mortals? Him who speaks distinctly, explicitly, copiously, and luminously, both as to matter and words; who produces in his language a sort of rhythm and harmony; who speaks, as I call it, *gracefully*. Those also who treat their subject as the importance of things and persons requires, are to be commended for that peculiar kind of merit, which I term *aptitude and congruity*.... On my authority, therefore, deride and despise all those who imagine that from the precepts of such as are now called rhetoricians they have gained all the powers of oratory, and have not yet been able to understand what character they hold, or what they profess; for indeed, by an orator everything that relates to human life, since that is the field on which his abilities are displayed, and is the subject for his eloquence, should be examined, heard, read, discussed, handled, and considered; since eloquence is one of the most eminent virtues; and though all the virtues are in their nature equal and alike, yet one species is more beautiful and noble than another; as is this power, which, comprehending a knowledge of things, expresses the

thoughts and purposes of the mind in such a manner, that it can impel the audience whithersoever it inclines its force; and, the greater is its influence, the more necessary it is that it should be united with probity and eminent judgment; for if we bestow the faculty of eloquence upon persons destitute of these virtues, we shall not make them orators, but give arms to madmen.

Cicero, De Oratore, III, 14

27 A speech, then, is to be made becoming in its kind, with a sort of complexion and substance of its own; for that it be weighty, agreeable, savoring of erudition and liberal knowledge, worthy of admiration, polished, having feeling and passion in it, as far as is required, are qualities not confined to particular members, but are apparent in the whole body; but that it be, as it were, strewed with flowers of language and thought, is a property which ought not to be equally diffused throughout the whole speech, but at such intervals, that, as in the arrangement of ornaments, there may be certain remarkable and luminous objects disposed here and there. Such a kind of eloquence, therefore, is to be chosen, as is most adapted to interest the audience, such as may not only delight, but delight without satiety.

Cicero, De Oratore, III, 25

28 As in most things, so in language, Nature herself has wonderfully contrived, that what carries in it the greatest utility, should have at the same time either the most dignity, or, as if often happens, the most beauty.

Cicero, De Oratore, III, 45

29 This orator of ours is so to be finished as to his style and thoughts in general, that, as those who study fencing and polite exercises, not only think it necessary to acquire a skill in parrying and striking, but also grace and elegance of motion, so he may use such words as are suited to elegant and graceful composition, and such thoughts as contribute to the impressiveness of language.

Cicero, De Oratore, III, 52

30 The best orator is the one whose address instructs, delights, and moves the minds of the hearers. The orator is obliged to instruct, while pleasure is a gratuity granted to the audience. But to stir the emotions is indispensable.

Cicero, De Optimo Genere Oratorum, I

31 The difference between the orator and the dialectician is as great as that between two rivers of an opposite character. Streams that flow between high banks and at full flood have greater force than shallow brooks with water struggling against the opposition of pebbles.

Quintilian, Institutio Oratoria, XII, 2

32 As loose and incontinent livers are seldom fathers of many children, so loose and incontinent talkers seldom originate many sensible words.

Plutarch, Lycurgus

33 Rhetoric... is... the government of the souls of men, and... her chief business is to address the affections and passions, which are as it were the strings and keys to the soul, and require a skilful and careful touch to be played on as they should be.

Plutarch, Pericles

34 The most eloquent of public speakers [Demosthenes], in his oration against Midias, allows that Alcibiades, among other perfections, was a most accomplished orator. If, however, we give credit to Theophrastus, who of all philosophers was the most curious inquirer, and the greatest lover of history, we are to understand that Alcibiades had the highest capacity for inventing, for discerning what was the right thing to be said for any purpose, and on any occasion; but aiming not only at saying what was required, but also at saying it well, in respect, that is, of words and phrases, when these did not readily occur, he would often pause in the middle of his discourse for want of the apt word, and would be silent and stop till he could recollect himself, and had considered what to say.

Plutarch, Alcibiades

35 Extemporaneous speeches are deft and facile to abundance, but those who make them know neither w'here to begin nor where to stop.

Plutarch, Education of Children

36 This faculty of speaking and of ornamenting words, if there is indeed any such peculiar faculty, what else does it do, when there happens to be discourse about a thing, than to ornament the words and arrange them as hairdressers do the hair? But whether it is better to speak or to be silent, and better to speak in this way or that way, and whether this is becoming or not becoming, and the season for each and the use, what else tells us than the faculty of the will?

Epictetus, Discourses, II, 23

37 From Alexander the grammarian [I learned] to refrain from fault-finding, and not in a reproachful way to chide those who uttered any barbarous or solecistic or strange-sounding expression; but dexterously to introduce the very expression which ought to have been used, and in the way of answer or giving confirmation, or joining in an inquiry about the thing itself, not about the word, or by some other fit suggestion.

Marcus Aurelius, Meditations, I, 10

38 The chief merit of language is clearness, and we know that nothing detracts so much from this as do unfamiliar terms; accordingly we employ those terms which the bulk of people are accustomed to use.

Galen, Natural Faculties, I, 1

39 We... are not to suppose that when certain rhetoricians pour ridicule upon that which they are quite incapable of refuting, without any attempt at argument, their words are really thereby constituted rhetoric. For rhetoric proceeds by persuasive reasoning; words without reasoning are buffoonery rather than rhetoric.

Galen, Natural Faculties, I, 16

40 A thing [is] not bound to be true because uttered eloquently, nor false because the utterance of the lips is ill-arranged; but ... on the other hand a thing is not necessarily true because badly uttered, nor false because spoken magnificently. For it is with wisdom and folly as with wholesome and unwholesome food: just as either kind of food can be served equally well in rich dishes or

simple, so plain or beautiful language may clothe either wisdom or folly indifferently.

Augustine, Confessions, V, 6

41 The art of rhetoric being available for the enforcing either of truth or falsehood, who will dare to say that truth in the person of its defenders is to take its stand unarmed against falsehood? For example, that those who are trying to persuade men of what is false are to know how to introduce their subject, so as to put the hearer into a friendly, or attentive, or teachable frame of mind, while the defenders of the truth shall be ignorant of that art? That the former are to tell their falsehoods briefly, clearly, and plausibly, while the latter shall tell the truth in such a way that it is tedious to listen to, hard to understand, and, in fine, not easy to believe it? That the former are to oppose the truth and defend falsehood with sophistical arguments, while the latter shall be unable either to defend what is true, or to refute what is false? That the former, while imbuing the minds of their hearers with erroneous opinions, are by their power of speech to awe, to melt, to enliven, and to rouse them, while the latter shall in defence of the truth be sluggish, and frigid, and somnolent? Who is such a fool as to think this wisdom? Since, then, the faculty of eloquence is available for both sides, and is of very great service in the enforcing either of wrong or right, why do not good men study to engage it on the side of truth, when bad men use it to obtain the triumph of wicked and worthless causes, and to further injustice and error?

Augustine, Christian Doctrine, IV, 2

42 We must beware of the man who abounds in eloquent nonsense, and so much the more if the hearer is pleased with what is not worth listening to, and thinks that because the speaker is eloquent what he says must be true. And this opinion is held even by those who think that the art of rhetoric should be taught: for they confess that "though wisdom without eloquence is of little service to states, yet eloquence without wisdom is frequently a positive injury, and is of service never."

Augustine, Christian Doctrine, IV, 5

43 *Let the language devoted to truth be plain and simple. Who speaks carefully unless he wants to speak affectedly?* [Seneca]. The elegance that diverts us to itself harms its content.

As in dress it is pettiness to seek attention by some peculiar and unusual fashion, so in language the search for novel phrases and little-known words comes from a childish and pedantic ambition. Would that I might use only those that are used in the markets of Paris! Aristophanes the grammarian did not know what he was talking about when he criticized Epicurus for the simplicity of his words and the aim of his oratorical art, which was simply lucidity of speech. The imitation of speech, because of its facility, may be quickly picked up by a whole people; the imitation of judgment and invention does not come so fast.

Montaigne, Essays, I, 26, Education of Children

44 My language has no case or polish; it is harsh and disdainful, with a free and unruly disposition. And I like it that way, if not by judgment, then by inclination. But I

am quite conscious that sometimes I let myself go too far, and that in the effort to avoid art and affectation, I fall back into them in another direction:

I strive to be concise.

And grow' obscure.

Horace

Plato says that length and brevity are properties which neither decrease nor increase the worth of style.

Montaigne, Essays, II, 17, Of Presumption

45 Handling and use by able minds give value to a language, not so much by innovating as by filling it out with more vigorous and varied services, by stretching and bending it. They do not bring to it new words, but they enrich their own, give more weight and depth to their meaning and use; they teach the language unaccustomed movements, but prudently and shrewdly. And how little this gift is given to all is seen in so many French writers of our time. They are bold and disdainful enough not to follow the common road, but want of invention and of discretion ruins them. There is nothing to be seen in them but a wretched affectation of originality, cold and absurd disguises which instead of elevating the substance bring it down. Provided they can strut gorgeously in their novelty, they care nothing about effectiveness. To seize a new word they abandon the ordinary one, which is often stronger and more sinewy.

Montaigne, Essays, III, 5, On Some Verses of Virgil

46 I do not avoid any [figures of speech] that are used in the streets of France; those who would combat usage with grammar make fools of themselves.

Montaigne, Essays, III, 5, On Some Verses of Virgil

47 The most fruitful and natural exercise of our mind, in my opinion, is discussion. I find it sweeter than any other action of our life; and that is the reason why, if I were right now forced to choose, I believe I would rather consent to lose my sight than my hearing or speech....

The study of books is a languishing and feeble activity that gives no heat, whereas discussion teaches and exercises us at the same time. If I discuss with a strong mind and a stiff jouster, he presses on my flanks, prods me right and left; his ideas launch mine. Rivalry, glory, competition, push me and lift me above myself. And unison is an altogether boring quality in discussion.

As our mind is strengthened by communication with vigorous and orderly minds, so it is impossible to say how much it loses and degenerates by our continual association and frequentation with mean and sickly minds. There is no contagion that spreads like that one. I know by enough experience how much it is worth per yard. I love to argue and discuss, but in a small group and for my own sake. For to serve as a spectacle to the great and make a competitive parade of one's wit and chatter is an occupation that I find very unbecoming to a man of honor.

Montaigne, Essays, III, 8, Of the Art of Discussion

48 Truly, *Sancho*, said *Don Quixote*, thy Simplicity lessens, and thy Sense improves every Day. And good Reason why, quoth *Sancho*; some of your Worship's Wit must needs stick to me; for your dry unkindly Land, with good dunging and tilling, will in time yield a good Crop. I mean, Sir, that the Dung and Muck of your Conversation

being thrown on the barren Ground of my Wit, together with the Time I ha' served your Worship, and kept you Company; which is, as a body may say, the Tillage; I must needs bring forth blessed Fruit at last, so as not to shame my Master, but keep in the Paths of good Manners, which you have beaten into my sodden Understanding,

Cervantes, Don Quixote, II, 12

49 In the next place, *Sancho*, said the Knight, do not overlard your common Discourse with that glut of Proverbs, which you mix in it continually; for though Proverbs are properly concise and pithy Sentences, yet as thou bring'st 'em in, in such a huddle, by the Head and Shoulders, thou makest 'em look like so many Absurdities. Alas! Sir, quoth Sancho, this is a Disease that Heaven alone can cure; for I've more Proverbs than will fill a Book; and when I talk, they crowd so thick and fast to my Mouth, that they quarrel which shall get out first; so that my Tongue is forc'd to let 'em out as fast, first come first serv'd, though nothing to my Purpose. But henceforwards I'll set a Watch on my Mouth, and let none fly out, but such as shall befit the Gravity of my Place. For in a rich Man's House the Cloth is soon laid; where there's Plenty the Guests can't be empty. A Blot's no Blot till 'tis hit. He's safe who stands under the Bells; you can't cat your Cake and have your Cake; and Store's no Sore.

Go on, go on. Friend, said Don Quixote, thread, tack, stitch on, heap Proverb on Proverb, out with 'em Man, spew them out! There's no body coming. My Mother whips me, and I whip the Gigg. I warn thee to forbear foisting in a Rope of Proverbs every where, and thou blunder'st out a whole Litany of old Saws, as much to the Purpose as the last Yearn's Snow. Observe me, *Sancho*, I

condemn not the Use of Proverbs; but 'tis most certain, that such a Confusion and Hodge-podge of 'em, as thou throw'st out and dragg'st in by the Hair together, make Conversation fulsom and poor.

Cervantes, Don Quixote, II, 43

50 In all speech, words and sense are as the body and the soul. The sense is as the life and soul of language, without which all words are dead. Sense is wrought out of experience, the knowledge of human life and actions, or of the liberal arts.... Words are the people's, yet there is a choice of them to be made.... They are to be chose according to the persons we make speak, or the things we speak of. Some are of the camp, some of the council-board, some of the shop, some of the sheepecot, some of the pulpit, some of the bar, etc. And herein is seen their elegance and propriety, when we use them fitly and draw them forth to their just strength and nature by way of translation or metaphor.

Jonson, Discoveries: De Oratoris Dignitate

51 Language most shows a man: Speak, that I may see thee.

Jonson, Discoveries: De Stilo

52 Speech that is uttered with labour and difficulty, or speech that savoureth of the affectation of art and precepts, or speech that is framed after the imitation of some pattern of eloquence, though never so excellent; all this hath somewhat servile, and holding of the subject.

Bacon, Advancement of Learning, Bk. 1, To the King, 2

53 Let us consider the false appearances that are imposed upon us by words, which are framed and applied according to the conceit and capacities of the vulgar sort: and although we think we govern our words, and prescribe it well. . . yet certain it is that words, as a Tartar's bow, do shoot back upon the understanding of the wisest, and mightily entangle and pervert the judgement. So as it is almost necessary, in all controversies and disputations, to imitate the wisdom of the mathematicians, in setting down in the very beginning the definitions of our words and terms, that others may know how we accept and understand them, and whether they concur with us or no. For it cometh to pass, for want of this, that we are sure to end there where we ought to have begun, which is, in questions and differences about words.

Bacon, Advancement of Learning, Bk. II, XIV, 11

54 Concerning speech and words, the consideration of them hath produced the science of grammar. For man still striveth to reintegrate himself in those benedictions, from which by his fault he hath been deprived. ... So hath he sought to come forth of the... general curse which was the confusion of tongues by the art of grammar; whereof the use in a mother tongue is small, in a foreign tongue more; but most in such foreign tongues as have ceased to be vulgar tongues, and are turned only to learned tongues. The duty of it is of two natures: the one popular, which is for the speedy and perfect attaining languages, as well for intercourse of speech as for understanding of authors; the other philosophical, examining the power and nature of words, as they are the footsteps and prints of reason: which kind of analogy between words and

reason is handled *sparism*, brokenly though not entirely; and therefore I cannot report it deficient, though I think it very worthy to be reduced into a science by itself.

Unto grammar also belongeth, as an appendix, the consideration of the accidents of words; which are measure, sound, and elevation or accent, and the sweetness and harshness of them; whence hath issued some curious observations in rhetoric, but chiefly poesy, as we consider it, in respect of the verse and not of the argument. Wherein though men in learned tongues do tie themselves to the ancient measures, yet in modern languages it seemeth to me as free to make new measures of verses as of dances: for a dance is a measured pace, as a verse is a measured speech. In these things the sense is better judge than the art.

Bacon, Advancement of Learning, Bk. II, XVI, 4-5

55 The proofs and demonstrators of logic are toward all men indifferent and the same; but the proofs and persuasions of rhetoric ought to differ according to the auditors,... Which application, in perfection of idea, ought to extend so far, that if a man should speak of the same thing to several persons, he should speak to them all respectively and several ways.

Bacon, Advancement of Learning, Bk. II, XVIII, 5

56 Men imagine that their reason governs words, whilst, in fact, words react upon the understanding; and this has rendered philosophy and the sciences sophistical and inactive. Words are generally formed in a popular sense, and define things by those broad lines which are most obvious to the vulgar mind; but when a more acute

understanding, or more diligent observation is anxious to vary those lines, and to adapt them more accurately to nature, words oppose it. Hence the great and solemn disputes of learned men often terminate in controversies about words and names, in regard to which it would be better (imitating the caution of mathematicians) to proceed more advisedly in the first instance, and to bring such disputes to a regular issue by definitions. Such definitions, however, cannot remedy the evil in natural and material objects, because they consist themselves of words, and these words produce others; so that we must necessarily have recourse to particular instances, and their regular series and arrangement, as we shall mention when we come to the mode and scheme of determining notions and axioms.

The idols imposed upon the understanding by words are of two kinds. They are either the names of things which have no existence (for as some objects are from inattention left without a name, so names are formed by fanciful imaginations which are without an object), or they are the names of actual objects, but confused, badly defined, and hastily and irregularly abstracted from things. Fortune, the primum mobile, the planetary orbits, the clement of fire, and the like fictions, which owe their birth to futile and false theories, are instances of the first kind. And this species of idols is removed with greater facility, because it can be exterminated by the constant refutation or the desuetude of the theories themselves. The others, which are created by vicious and unskilful abstraction, are intricate and deeply rooted. Take some word for instance, as moist, and let us examine how far the different significations of this word are consistent. It will be found that the word moist is nothing but a

confused sign of different actions admitted of no settled and defined uniformity. For it means that which easily diffuses itself over another body; that which is indeterminable and cannot be brought to a consistency; that which yields easily in every direction; that which is easily divided and dispersed; that which is easily united and collected; that which easily flows and is put in motion; that which easily adheres to, and wets another body; that which is easily reduced to a liquid state though previously solid. When, therefore, you come to predicate or impose this name, in one sense flame is moist, in another air is not moist, in another fine powder is moist, in another glass is moist; so that it is quite clear that this notion is hastily abstracted from water only, and common ordinary liquors, without any due verification of it.

There are, however, different degrees of distortion and mistake in words. One of the least faulty classes is that of the names of substances, particularly of the less abstract and more defined species (those then of chalk and mud are good, of earth bad); words signifying actions are more faulty, as to generate, to corrupt, to change; but the most faulty are those denoting qualities (except the immediate objects of sense), as heavy, light, rare, dense. Yet in all of these there must be some notions a little better than others, in proportion as a greater or less number of things come before the senses.

Bacon, Novum Organum, I, 59-60

- 57 It is good, in discourse and speech of conversation, to vary and intermingle speech of the present occasion with arguments, tales with reasons, asking of questions with telling of opinions, and jest with earnest; for it is a dull

thing to tire, and, as we say now, to jade, any thing too far.

Bacon, Of Discourse

58 Names have been conferred on things for the most part by the inexpert, and ... for this reason they do not always fit the things with sufficient accuracy. ... It is not our part to change them after custom has accepted them, but only to permit the emendation of their meanings, when we perceive that others do not understand them aright.

Descartes, Objections and Replies, V

59 Eloquence is power; because it is seeming prudence.

Hobbes, Leviathan, I, 10

60 Eloquence is an art of saying things in such a way (1) that those to whom we speak may listen to them without pain and with pleasure; (2) that they feel themselves interested, so that self-love leads them more willingly to reflection upon it.

It consists, then, in a correspondence which we seek to establish between the head and the heart of those to whom we speak, on the one hand, and, on the other, between the thoughts and the expressions which we employ. This assumes that we have studied well the heart of man so as to know all its powers and, then, to find the just proportions of the discourse which we wish to adapt to them. We must put ourselves in the place of those who are to hear us, and make trial on our own heart of the turn which we give to our discourse in order to see whether one is made for the other, and whether we can assure ourselves that the hearer will be, as it were, forced

to surrender. We ought to restrict ourselves, so far as possible, to the simple and natural, and not to magnify that which is little, or belittle that which is great. It is not enough that a thing be beautiful; it must be suitable to the subject, and there must be in it nothing of excess or defect.

Pascal, Pensées, I, 16

61 *Eloquence*. —It requires the pleasant and the real; but the pleasant must itself be drawn from the true.

Pascal, Pensées, I, 25

62 There are some who speak well and write badly. For the place and the audience warm them, and draw from their minds more than they think of without that warmth.

Pascal, Pensées, I, 47

63 When we find words repeated in a discourse and, in trying to correct them, discover that they are so appropriate that we would spoil the discourse, we must leave them alone. This is the test; and our attempt is the work of envy, which is blind, and does not see that repetition is not in this place a fault; for there is no general rule.

Pascal, Pensées, I, 48

64 The same meaning changes with the words which express it. Meanings receive their dignity from words instead of giving it to them.

Pascal, Pensées, I, 50

65 No matter what we wish to persuade of, we must consider the person concerned, whose mind and heart we must know, what principles he admits, what things he loves, and then observe in the thing in question what relations it has to these admitted principles or to these objects of delight. So that the art of persuasion consists as much in knowing how to please as in knowing how to convince, so much more do men follow caprice than reason.

Pascal, Geometrical Demonstration

66 It often happens that we imagine that we have in our minds ideas of things, from supposing, wrongly, that we have already explained to ourselves the terms of which we make use. And it is not true, as some say, or at least it is very ambiguous, that we cannot speak of anything, understanding fully what we say, without having an idea of it. For often we vaguely understand each of the terms, or we remember that we have formerly understood them; but as we content ourselves with this blind thought and as we do not push far enough the analysis of notions, it happens that unwittingly we fall into the contradiction which the composite idea may imply.

Leibniz, Thoughts on Knowledge, Truth and Ideas

67 If we had some exact language (like the one called *Adamitic* by some) or at least a kind of truly philosophic writing, in which the ideas were reduced to a kind of *alphabet of human thought*, then all that follows rationally from what is given could be found by a *kind of calculus*, just as arithmetical or geometrical problems are solved.

Such a language would amount to a Cabala of mystical vocables or to the *arithmetic* of Pythagorean numbers or to the *Characteristic* language of magi, that is, of the wise,

Leibniz, On the Universal Science: Characteristic, XIV

68 To come back to the representations of ideas by characters: I think that controversies will never end nor silence be imposed upon the *sects*, unless complicated reasonings can be reduced to simple *calculations*, and words of vague and uncertain meaning to determinate *characters*.

What must be achieved is in fact this: that every paralogism be recognized as an *error of calculation*, and that every *sophism*, when expressed in this new kind of notation, appear as a *solecism* or *barbarism*, to be corrected easily by the law's of this philosophical grammar.

Once this is done, then when a controversy arises, disputation will no more be needed between two philosophers than between two computers. It will suffice that, pen in hand, they sit down to their abacus and (calling in a friend, if they so wish) say to each other: *let us calculate*. ... Once this true art of general analysis is established and taken up by custom, men who understand it and are experienced in it will under otherwise equal conditions be as far superior to all others as the literate is to the illiterate, the learned to the vulgar, the eminent geometrician to the apprentice, and the outstanding algebraist to the common calculator. Provided the required intelligence be applied, anyone could with this reliable method find out everything that can be obtained from the available data, with the use of

reason, even by the greatest and most experienced mind. The only difference remaining would be one of promptness, which is more important in action than in meditation and invention. ... If the invention of the telescope and the microscope has brought so much light into the sciences of nature, it will certainly be understood how much can be achieved by this *new instrument* (*novum organon*) by which the eye of the mind will be sharpened as much as is in the power of man.

Leibniz, On the Universal Science: Characteristic, XIV

69 The natural languages are of very great value in reasoning, but full of innumerable equivocations and unable to function in a calculus: for if they were able to do this, errors in reasoning could be uncovered from the very form and construction of the words, namely, as solecisms and barbarisms. Hitherto only the arithmetical and the algebraic notations have offered this admirable advantage. For in these fields all reasoning consists in the use of characters, and a mental error and an error of calculation are identical.

Having pondered this matter more deeply, it became clear to me long ago that all human ideas can be resolved into a few as their primitives. If characters were assigned to these primitives, characters for derivative notions could be formed therefrom, and from these it would always be possible to discover the primitive notions which are necessary ingredients; in short, it would be possible to find correct definitions and values and, hence, also the properties which are demonstrably implied in the definitions. Once this is achieved, anyone who in his reasoning and writing is using characters of this kind, will either never fall into error or, if he does, he will always

discover his errors himself by the simplest examinations, as anybody else will; and, moreover, he will find the truth which is implied in the available data. If these data should not be sufficient to find what he is searching for, he would see which experiments and notions would still be required, to approach truth as closely as the data permit, either through approximation or through determining the degree of greater probability. Sophisms and paralogisms would here be nothing other than what errors of calculation are in arithmetic and solecisms or barbarisms in speech.

This characteristic art, of which I conceived the idea, would contain the true organon of a general science of everything that is subject matter for human reasoning, but would be endowed throughout with the demonstrations of an evident calculus. It will therefore be necessary to present our characteristic art itself, that is, the art of using signs in a kind of rigorous calculus, as generally as possible.

Leibniz, On the Universal Science: Characteristic, XV

70 The words whereby [the mind]. . . signifies what connexion it gives to the several affirmations and negations, that it unites in one continued reasoning or narration, are generally called *particles*: and it is in the right use of these that more particularly consists the clearness and beauty of a good style. To think well, it is not enough that a man ideas clear and distinct in his thoughts, nor that he observes the agreement or disagreement of some of them; but he must think in train, and observe the dependence of his thoughts and reasonings upon one another. And to express well such methodical and rational thoughts, he must have words to

show that connexion, restriction, distinction, opposition, emphasis etc., he gives to each respective *part* of his discourse. To mistake in any of these, is to puzzle instead of informing his hearer: and therefore it is, that those words which are not truly by themselves the names of any ideas are of such constant and indispensable use in language, and do much contribute to men's well expressing themselves.

They show what relation the mind gives to its own thoughts. This part of grammar has been perhaps as much neglected as some others over-diligently cultivated. It is easy for men to write, one after another, of cases and genders, moods and tenses gerunds and supines: in these and the like there has been great diligence used; and particles themselves, in some languages, have been, with great show of exactness, ranked into their several orders. But though *prepositions* and *conjunctions*, etc., are names well known in grammar, and the particles contained under them carefully ranked into their distinct subdivisions; yet he who would show the right use of particles, and what significancy and force they have, must take a little more pains, enter into his own thoughts, and observe nicely the several postures of his mind in discoursing.

They are all marks of some action or intimation of the mind. Neither is it enough, for the explaining of these words, to render them, as is usual in dictionaries, by words of another tongue which come nearest to their signification: for what is meant by them is commonly as hard to be understood in one as another language. They are all marks of some action or intimation of the mind; and therefore to understand them rightly, the several views, postures, stands, turns, limitations, and

exceptions, and several other thoughts of the mind, for which we have either none or very deficient names, are diligently to be studied. Of these there is a great variety, much exceeding the number of particles that most languages have to express them by: and therefore it is not to be wondered that most of these particles have divers and sometimes almost opposite significations.

Locke, Concerning Human Understanding, Bk. III, VII, 2-4

71 Since wit and fancy find easier entertainment; in the world than dry truth and real knowledge, figurative speeches and allusion in language hardly be admitted as an imperfection or abuse of it. I confess, in discourses where we seek rather pleasure and delight than information and improvement, such ornaments as are borrowed from them can scarce pass for faults. But yet if we would speak of things as they are, we must allow that all the art of rhetoric, besides order and clearness; all the artificial and figurative application of words eloquence hath invented, are for nothing else but to insinuate wrong ideas, move the passions, and thereby mislead the judgment; and so indeed are perfect cheats: and therefore, however laudable or allowable oratory may render them in harangues and popular addresses, they are certainly, in all discourses that pretend to inform or instruct, wholly to be avoided; and where truth and knowledge are concerned, cannot but be thought a great fault, either of the language or person that makes use of them. What and how various they are, will be superfluous here to take notice; the books of rhetoric which abound in the world, will instruct those who want to be informed: only I cannot but observe how little the preservation and improvement of truth and knowledge is the care and

concern of mankind; since the arts of fallacy are endowed and preferred. It is evident how much men love to deceive and be deceived, since rhetoric, that powerful instrument of error and deceit, has its established professors, is publicly taught, and has always been had in great reputation: and I doubt not but it will be thought great boldness, if not brutality, in me to have said thus much against it. Eloquence, like the fair sex, has too prevailing beauties in it to suffer itself ever to be spoken against. And it is in vain to find fault with those arts of deceiving, wherein men find pleasure to be deceived.

Locke, Concerning Human Understanding, Bk. III, X, 34

72 It is not enough that men have ideas, determined ideas, for which they make these signs stand; but they must also take care to apply their words as near as may be to such ideas as common use has annexed them to. For words, especially of languages already framed, being no man's private possession, but the common measure of commerce and communication, it is not for any one at pleasure to change the stamp they are current in, nor alter the ideas they are affixed to; or at least, when there is a necessity to do so, he is bound to give notice of it. Men's intentions in speaking are, or at least should be, to be understood; which cannot be without frequent explanations, demands, and other the like incommodious interruptions, where men do not follow common use. Propriety of speech is that which gives our thoughts entrance into other men's minds with the greatest ease and advantage: and therefore deserves some part of our care and study, especially in the names of moral words. The proper signification and use of terms is best to be learned from those who in their writings and discourses

appear to have had the clearest notions, and applied to them their terms with the exactest choice and fitness. This way of using a man's words, according to the propriety of the language, though it have not always the good fortune to be understood; yet most commonly leaves the blame of it on him who is so unskilful in the language he speaks, as not to understand it when made use of as it ought to be.

Locke, Concerning Human Understanding, Bk. III, XI, 11

73 In the ordinary affairs of life, any phrases may be retained, so long as they excite in us proper sentiments, or dispositions to act in such a manner as is necessary for our well-being, how false soever they may be if taken in a strict and speculative sense. Nay, this is unavoidable, since, propriety being regulated by custom, language is suited to the received opinions, which are not always the truest. Hence it is impossible, even in the most rigid, philosophic reasonings, so far to alter the bent and genius of the tongue we speak, as never to give a handle for cavillers to pretend difficulties and inconsistencies. But, a fair and ingenuous reader will collect the sense from the scope and tenor and connexion of a discourse, making allowances for those inaccurate modes of speech which use has made inevitable.

Berkeley, Principles of Human Knowledge, 52

74 --And how did Garrick speak the soliloquy last night?-- Oh, against all rule, my Lord,—most ungrammatically! betwixt the substantive and the adjective, which should agree together in number, case, and gender, he made a breach thus,—stopping, as if the point wanted settling;—

and betwixt the nominative case, which your lordship knows should govern the verb, he suspended his voice in the epilogue a dozen times three seconds and three fifths by a stop-watch, my Lord, each time. --Admirable grammarian!-- But in suspending his voice—was the sense suspended likewise? Did no expression of attitude or countenance fill up the chasm?—Was the eye silent? Did you narrowly look? --I looked only at the stopwatch, my Lord. --Excellent observer!

And what of this new book the whole world makes such a rout about? --Oh! 'tis out of all plumb, my Lord, --quite an irregular thing!— not one of the angles at the four corners was a right angle. I had my rule and compasses, etc., my Lord, in my pocket.-- Excellent critic!

--And for the epic poem your lordship bid me look at— upon taking the length, breadth, height, and depth of it, and trying them at home upon an exact scale of Bossu's —'tis out, my Lord, in every one of its dimensions.-- Admirable connoisseur!

Sterne, Tristram Shandy, III, 12

75 Now before I venture to make use of the word Nose a second time—to avoid all confusion in what will be said upon it, in this interesting part of my story, it may not be amiss to explain my own meaning, and define, with all possible exactness and precision, what I would willingly be understood to mean by the term: being of opinion, that 'tis owing to the negligence and perverseness of writers in despising this precaution, and to nothing else—that all the polemical writings in divinity are not as clear and demonstrative as those upon a Will o' the Wisp, or any other sound part of philosophy, and natural pursuit; in order to which, what have you to do, before you set

out, unless you intend to go puzzling on to the day of judgment—but to give the world a good definition, and stand to it, of the main word you have most occasion for—changing it. Sir, as you would a guinea, into small coin?—which done—let the father of confusion puzzle you, if he can; or put a different idea either into your head, or your reader's head, if he knows how.

In books of strict morality and close reasoning, such as this I am engaged in—the neglect is inexcusable; and Heaven is witness, how the world has revenged itself upon me for leaving so many openings to equivocal strictures—and for depending so much as I have done, all along, upon the cleanliness of my readers' imaginations... therefore

I define a nose as follows—intreating only beforehand, and beseeching my readers, both male and female, of what age, complexion, and condition soever, for the love of God and their own souls, to guard against the temptations and suggestions of the devil, and suffer him by no art or wile to put any other ideas into their minds, than what I put into my definition—For by the word Nose, throughout all this long chapter of noses, and in every other part of my work, where the word Nose occurs—I declare, by that word I mean a nose, and nothing more, or less.

Sterne, Tristram Shandy, III, 31

76 Let it be considered how many ideas we owe to the use of speech; how far grammar exercises the understanding and facilitates its operations. Let us reflect on the inconceivable pains and the infinite space of time that the first invention of languages must have cost. To these reflections add what preceded, and then judge how many

thousand ages must have elapsed in the successive development in the human mind of those operations of which it is capable.

Rousseau, Origin of Inequality, I

77 Wise men, if they try to speak their language to the common herd instead of its own, cannot possibly make themselves understood. There are a thousand kinds of ideas which it is impossible to translate into popular language. Conceptions that are too general and objects that are too remote are equally out of its range.

Rousseau, Social Contract, II, 7

78 At Mr. Thrale's, in the evening, he [Johnson] repeated his usual paradoxical declamation against action in public speaking. "Action can have no effect upon reasonable minds. It may augment noise, but it never can enforce argument If you speak to a dog, you use action; you hold up your hand thus, because he is a brute; and in proportion as men are removed from brutes, action will have the less influence upon them," *Mrs. Thrale*. "What then, Sir, becomes of Demosthenes's saying? 'Action, action, action!' " *Johnson*. "Demosthenes, Madam, spoke to an assembly of brutes- to a barbarous people."

I thought it extraordinary, that he should deny the power of rhetorical action upon human nature, when it is proved by innumerable facts in all stages of society. Reasonable beings are not solely reasonable. They have fancies which may be pleased, passions which may be roused.

Boswell, Life of Johnson (Apr. 3, 1773)

79 Johnson was at all times jealous of infractions upon the genuine English language, and prompt to repress colloquial barbarisms; such as, *pledging myself*, for *undertaking*; *line*, for *department*, or *branch*, as, the *civil line*, the *banking line*. He was particularly indignant against the almost universal use of the word *idea* in the sense of *notion* or *opinion*, when it is clear that *idea* can only signify something of which an image can be formed in the mind. We may have an *idea* or *image* of a mountain, a tree, a building; but we cannot surely have an idea or image of an *argument* or *proposition*. Yet we hear the sages of the law "delivering their ideas upon the question under consideration"; and the first speakers in parliament "entirely coinciding in the *idea* which has been ably stated by an honourable member";—or "reprobating an *idea* unconstitutional, and fraught with the most dangerous consequences to a great and free country." Johnson called this "modern cant."

Boswell, Life of Johnson (Sept. 23, 1777)

80 Talking of conversation, he [Johnson] said, "There must, in the first place, be knowledge, there must be materials; in the second place, there must be a command of words; in the third place, there must be imagination, to place things in such views as they are not commonly seen in; and in the fourth place, there must be presence of mind, and a resolution that is not to be overcome by failures: this last is an essential requisite; for want of it many people do not excel in conversation."

Boswell, Life of Johnson (Mar. 21, 1783)

81 The arts of persuasion, so diligently cultivated by the first Caesars, were neglected by the military ignorance and Asiatic pride of their successors, and, if they condescended to harangue the soldiers, whom they feared, they treated with silent disdain the senators, whom they despised.

Gibbon, Decline and Fall of the Roman Empire, XXII

82 General logic... resolves the whole formal business of understanding and reason into its elements, and exhibits them as principles of all logical judging of our cognitions. This part of logic may, therefore, be called *analytic*, and is at least the negative test of truth, because all cognitions must first of all be estimated and tried according to these laws before we proceed to investigate them in respect of their content, in order to discover whether they contain positive truth in regard to their object. Because, however, the mere form of a cognition, accurately as it may accord with logical laws, is insufficient to supply us with material (objective) truth, no one, by means of logic alone, can venture to predicate anything of or decide concerning objects, unless he has obtained, independently of logic, well-grounded information about them, in order afterwards to examine, according to logical laws, into the use and connection, in a cohering whole, of that information, or, what is still better, merely to test it by them. Notwithstanding, there lies so seductive a charm in the possession of a specious art like this—an art which gives to all our cognitions the form of the understanding, although with respect to the content thereof we may be sadly deficient—that general logic, which is merely a canon of judgement, has been employed as an organon for the actual production, or rather for the semblance of

production, of objective assertions, and has thus been grossly misapplied. Now general logic, in its assumed character of organon, is called *dialectic*.

Different as are the significations in which the ancients used this term for a science or an art, we may safely infer, from their actual employment of it, that with them it was nothing else than a logic of illusion—a sophistical art for giving ignorance, nay, even intentional sophistries, the colouring of truth, in which the thoroughness of procedure which logic requires was imitated, and their topic employed to cloak the empty pretensions. Now it may be taken as a safe and useful warning, that general logic, considered as an organon, must always be a logic of illusion, that is, be dialectical, for, as it teaches us nothing whatever respecting the content of our cognitions, but merely the formal conditions of their accordance with the understanding, which do not relate to and are quite indifferent in respect of objects, any attempt to employ it as an instrument (organon) in order to extend and enlarge the range of our knowledge must end in mere prating; any one being able to maintain or oppose, with some appearance of truth, any single assertion whatever.

Kant, Critique of Pure Reason, Transcendental Logic, Intro.

83 Despite the great wealth of words which Europe-an languages possess, the thinker finds himself often at a loss for an expression exactly suited to his conception, for want of which he is unable to make himself intelligible either to others or to himself. To coin new words is a pretension to legislation in language which is seldom successful; and, before recourse is taken to so desperate

an expedient, it is advisable to examine the dead and learned languages, with the hope and the probability that we may there meet with some adequate expression of the notion we have in our minds. In this case, even if the original meaning of the word has become somewhat uncertain, from carelessness or want of caution on the part of the authors of it, it is always better to adhere to and confirm its proper meaning—even although it may be doubtful whether it was formerly used in exactly this sense—than to make our labour vain by want of sufficient care to render ourselves intelligible.

For this reason, when it happens that there exists only a single word to express a certain conception, and this word, in its usual acceptation, is thoroughly adequate to the conception, the accurate distinction of which from related conceptions is of great importance, we ought not to employ the expression improvidently, or, for the sake of variety and elegance of style, use it as a synonym for other cognate words. It is our duty, on the contrary, carefully to preserve its peculiar signification, as otherwise it easily happens that when the attention of the reader is no longer particularly attracted to the expression, and it is lost amid the multitude of other words of very different import, the thought which it conveyed, and which it alone conveyed, is lost with it.

Kant, Critique of Pure Reason, Transcendental Dialectic

- 84 That the strictest laws of honesty should be observed in the discussion of a purely speculative subject is the least requirement that can be made. If we could reckon with security even upon so little, the conflict of speculative reason regarding the important questions of God, immortality, and freedom, would have been either

decided long ago, or would very soon be brought to a conclusion. But, in general, the uprightness of the defence stands in an inverse ratio to the goodness of the cause; and perhaps more honesty and fairness are shown by those who deny than by those who uphold these doctrines.

Kant, Critique of Pure Reason, Transcendental Method

85 The arts of speech are rhetoric and poehy. Rhetoric is the art of transacting a serious business of the understanding as if it were a free play of the imagination; poetry that of conducting a free play of the imagination as if it were a serious business of the understanding.

Kant, Critique of Aesthetic Judgement, 51

86 The use of words is to express ideas. Perspicuity, therefore, requires not only that the ideas should be distinctly formed, but that they should be expressed by words distinctly and exclusively appropriate to them. But no language is so copious as to supply words and phrases for every complex idea, or so correct as not to include many equivocally denoting different ideas. Hence it must happen that however accurately objects may be discriminated in themselves, and however accurately the discrimination may be considered, the definition of them may be rendered inaccurate by the inaccuracy of the terms in which it is delivered. And this unavoidable inaccuracy must be greater or less, according to the complexity and novelty of the objects defined. When the Almighty himself condescends to address mankind in their own language, his meaning, luminous as it must be,

is rendered dim and doubtful by the cloudy medium through which it is communicated.

Here, then, are three sources of vague and incorrect definitions: indistinctness of the object, imperfection of the organ of conception, inadequateness of the vehicle of ideas. Any one of these must produce a certain degree of obscurity,

Madison, Federalist 37

87 Grammar, in its extended and consistent form, is the work of thought, which makes its categories distinctly visible therein.

Hegel, Philosophy of History, Intro., 3

88 Consider for a moment what grammar is. It is the most elementary part of logic. It is the beginning of the analysis of the thinking process. The principles and rules of grammar are the means by which the forms of language are made to correspond with the universal forms of thought. The distinctions between the various parts of speech, between the cases of nouns, the moods and tenses of verbs, the functions of particles, are distinctions in thought, not merely in words. Single nouns and verbs express objects and events, many of which can be cognized by the senses: but the modes of putting nouns and verbs together express the relations of objects and events, which can be cognized only by the intellect; and each different mode corresponds to a different relation. The structure of every sentence is a lesson in logic.

Mill, Inaugural Address at St. Andrews

89 The things that words mean differ more than words do. There are different sorts of words, distinguished by the grammarians; and there are logical distinctions, which are connected to some extent, though not so closely as was formerly supposed, with the grammatical distinctions of parts of speech. It is easy, however, to be misled by grammar, particularly if all the languages we know belong to one family. In some languages, according to some authorities, the distinction of parts of speech does not exist; in many languages it is widely different from that to which we are accustomed in the Indo-European languages. These facts have to be borne in mind if we are to avoid giving metaphysical importance to mere accidents of our own speech.

Russell, Analysis of Mind, X

90 In psycho-analytic treatment nothing happens but an exchange of words between the patient and the physician. The patient talks, tells of his past experiences and present impressions, complains, and expresses his wishes and his emotions. The physician listens, attempts to direct the patient's thought-processes, reminds him, forces his attention in certain directions, gives him explanations and observes the reactions of understanding or denial thus evoked. The patient's unenlightened relatives—people of a kind to be impressed only by something visible and tangible, preferably by the sort of action that may be seen at a cinema—never omit to express their doubts of how "mere talk can possibly cure anybody." Their reasoning is of course as illogical as it is inconsistent. For they are the same people who are always convinced that the sufferings of neurotics are purely "in their own

imagination." Words and magic were in the beginning one and the same thing, and even today words retain much of their magical power. By words one of us can give to another the greatest happiness or bring about utter despair; by words the teacher imparts his knowledge to the student; by words the orator sweeps his audience with him and determines its judgments and decisions. Words call forth emotions and are universally the means by which we influence our fellow-creatures. Therefore let us not despise the use of words in psycho-therapy.

Freud, General Introduction to Psycho-Analysis, I

- 91 Imagine that you had undertaken to replace a political leading article in a newspaper by a series of illustrations; you would have to abandon alphabetic characters in favour of hieroglyphics. The people and concrete objects mentioned in the article could be easily represented, perhaps even more satisfactorily, in pictorial form; but you would expect to meet with difficulties when you came to the portrayal of all the abstract words and all those parts of speech which indicate relations between the various thoughts, e.g., particles, conjunctions, and so forth. With the abstract words you would employ all manner of devices: for instance, you would try to render the text of the article into other words, more unfamiliar perhaps, but made up of parts more concrete and therefore more capable of such representation. This will remind you of the fact that most abstract words were originally concrete, their original significance having faded; and therefore you will fall back on the original concrete meaning of these words wherever possible. So you will be glad that you can represent the possessing of an object as a literal, physical sitting upon it

(possess= potis+ sedeo). This is just how the dream-work proceeds. In such circumstances you can hardly demand great accuracy of representation, neither will you quarrel with the dream-work for replacing an element which is difficult to reduce to pictorial form, such as the idea of breaking marriage vows, by some other kind of breaking, e.g., that of an arm or leg. In this way you will to some extent succeed in overcoming the awkwardness of rendering alphabetic characters into hieroglyphs.

Freud, General Introduction to Psycho-Analysis, XI

92 The Chinese language, both spoken and written, exceedingly ancient but is still used today by four hundred million people. Don't suppose that I understand it at all; I only obtained some information about it because I hoped to find in it analogies to the kinds of indefiniteness occurring in dreams; nor was I disappointed in my expectation, for Chinese is so full of uncertainties as positively to terrify one. As is well known, it consists of a number of syllabic sounds which are pronounced singly or doubled in combination. One of the chief dialects has about four hundred of these sounds, and since the vocabulary of this dialect is estimated at somewhere about four thousand words it is evident that every sound has an average of ten different meanings—some fewer, but some all the more. For this reason there are a whole series of devices to escape ambiguity, for the context alone will not show which of the ten possible meanings of the syllable the speaker wishes to convey to the hearer. Amongst these devices is the combining of two sounds into a single word and the use of four different "tones" in which these syllables may be spoken. For purposes of our comparison a still more interesting

fact is that this language is practically without grammar: it is impossible to say of any of the one-syllable words whether it is a noun, a verb or an adjective; and, further there are no inflections to show gender, number, case, tense or mood. The language consists, as we may say, of the raw material only; Just as our thought-language is resolved into its raw material by the dream-work omitting to express the relations in it. Wherever there is any uncertainty in Chinese the decision is left to the intelligence of the listener, who is guided by the context. I made a note of a Chinese saying which literally translated runs thus: "Little what sec, much what wonderful." This is simple enough to understand. It may mean: "The less a man has seen, the more he finds to wonder at," or "There is much to wonder at for the man who has seen little." Naturally there is no occasion to choose between these two translations which differ only in grammatical construction. We are assured that in spite of these uncertainties the Chinese language is a quite exceptionally good medium of expression; so it is clear that indefiniteness does not necessarily lead to ambiguity.

Freud, General Introduction to Psycho-Analysis, XV

Chapter 8

EDUCATION

Chapter 8 is divided into three sections: 8.1 The Ends and Means of Education, 8.2 Habit, and 8.3 The Arts of Teaching and Learning.

Education, broadly conceived, covers much more than schooling, or the period in which the young are under tutelage. It embraces every activity by which an individual grows mentally, morally, and spiritually. Whatever contributes to the development of a human person or the fulfillment of his potentialities should be regarded as educative.

The development may be an improvement of the person's mind through acquired knowledge or skill; it may be an improvement of his character; it may be an improvement in the use of his body. For that improvement to be a stable and relatively permanent acquisition, and not a momentarily transient one, it must become habitual. That is why the subject of Section 8.2—habit and habit formation—is an important consideration in this chapter.

What is called formal or organized education, the kind that takes place in institutions of learning—schools at any level—usually involves teaching as well as learning, but even during the years of formal schooling, and certainly thereafter, there is much learning without teachers. This situation is reflected in an ambiguity in the word "learning." As a verb, the word connotes an activity of the pupil or

student whereby he learns, usually under the guidance of an instructor. But as a noun, the word often refers to what has been or can be learned—and by extension to the whole range of things that men can know: the world of learning. Human beings who are at home in that world are ordinarily called learned, and they are usually conceived as no longer needing to be instructed, although even here there is an ambiguity, for the childlike innocence of the learned has often been noted and described.

Texts having to do with learning in the latter sense of the word will be found in Section 8.1, for in this sense of the word learning is the end, or an end, of education. Quotations having to do with learning in the former sense—where it refers to a process ordinarily undergone by students in schools—will be found in Section 8.3.

Education as a process of human improvement is intimately related to subjects treated in other chapters, especially Chapter 1 on Man, Chapter 5 on Mind, Chapter 6 on Knowledge, Chapter 7 on Language, Chapter 9 on Ethics, and Chapter 16 on Art and Aesthetics.

• • •

8.1 The Ends and Means of Education

That the goal of education is the improvement of human beings can hardly be disputed; but that does not preclude wide differences of opinion about what constitutes such improvement and what factors or devices contribute to it. The quotations here assembled conceive the educative

process differently according as they define in a different manner the end it should be designed to achieve and outline different programs for accomplishing it. Associated with these differences are differences in the way that the ideal of an educated man is portrayed.

Some of the passages quoted get down to the nuts and bolts of specific programs of instruction—the order of studies, the materials of learning, in short, the content of the curriculum. Some are concerned with the order of learning and with the stages or periods into which the whole process of education should be divided. Still others deal with the responsibility of the family and the state for the education of the young.

For the most part, the education of the young, under the tutelage of teachers, occupies the center of attention; but there are passages that concern themselves with education as the process of a lifetime, begun in school but not concluded there. Closely related to these are the biographical quotations in which men look back upon their early training and evaluate it in the light of what they have learned much later in life.

There are also quotations, for the most part written by very learned men, about the life of the scholar. It is interesting to note that many of these are uncomplimentary. The scholar or man of learning is often viewed as simple or vain, as hindered by the very weight of his learning from leading a normal, happy, successful life. Such animadversions are not universal, however, and there are texts that laud the scholar and recommend his way of life as the best of all.

■ ■ ■

- 1 Socrates. Indeed, Lysimachus, I should be very wrong in refusing to aid in the improvement of anybody. And if I had shown in this conversation that I had a knowledge which Nicias and Laches have not, then I admit that you would be right in inviting me to perform this duty; but as we are all in the same perplexity, why should one of us be preferred to another? I certainly think that no one should; and under these circumstances, let me offer you a piece of advice (and this need not go further than ourselves). I maintain, my friends, that every one of us should seek out the best teacher whom he can find, first for ourselves, who are greatly in need of one, and then for the youth, regardless of expense or anything. But I cannot advise that we remain as we are. And if any one laughs at us for going to school at our age, I would quote to them the authority of Homer, who says, that "Modesty is not good for a needy man." Let us, then, regardless of what may be said of us, make the education of the youths our own education.

Plato, Laches, 200B

- 2 *Socrates*. Calculation and geometry and all the other elements of instruction, which are a preparation for dialectic, should be presented to the mind in childhood....

That is a very rational notion, he [Glaucón] said.

Do you remember that the children, too, were to be taken to see the battle on horseback; and that if there were no danger they were to be brought close up and, like young hounds, have a taste of blood given them?

Yes, I remember.

The same practice may be followed, I said, in all these things—labours, lessons, dangers—and he who is most at home in all of them ought to be enrolled in a select number.

At what age?

At the age when the necessary gymnastics are over: the period whether of two or three years which passes in this sort of training is useless for any other purpose; for sleep and exercise are unpropitious to learning; and the trial of who is first in gymnastic exercises is one of the most important tests to which our youth are subjected.

Certainly, he replied.

After that time those who are selected from the class of twenty years old will be promoted to higher honour, and the sciences which they learned without any order in their early education will now be brought together, and they will be able to see the natural relationship of them to one another and to true being.

Yes, he said, that is the only kind of knowledge which takes lasting root.

Yes, I said; and the capacity for such knowledge is the great criterion of dialectical talent: the comprehensive mind is always the dialectical.

I agree with you, he said.

These, I said, are the points which you must consider; and those who have most of this comprehension, and who are more steadfast in their learning, and in their military and other appointed duties, when they have arrived at the age of thirty will have to be chosen by you out of the select class, and elevated to higher honour; and you will have to prove them by the help of dialectic, in order to learn which of them is able to give up the use of sight

and the other senses, and in company with truth to attain absolute being.. . .

Suppose, I said, the study of philosophy to take the place of gymnastics and to be continued diligently and earnestly and exclusively for twice the number of years which were passed in bodily exercise—will that be enough?

Would you say six or four years? he asked.

Say five years, I replied; at the end of the time they must be sent down again into the den and compelled to hold any military or other office which young men are qualified to hold: in this way they will get their experience of life, and there will be an opportunity of trying whether when they are drawn all manner of ways by temptation, they will stand firm or flinch.

And how long is this stage of their lives to last?

Fifteen years, I answered; and when they have reached fifty years of age, then let those who still survive and have distinguished themselves in every action of their lives and in every branch of knowledge come at last to their consummation; the time has now arrived at which they must raise the eye of the soul to the universal light which lightens all things, and behold the absolute good; for that is the pattern according to which they are to order the State and the lives of individuals, and the remainder of their own lives also; making philosophy their chief pursuit, but, when their turn comes, toiling also at politics and ruling for the public good, not as though they were performing some heroic action, but simply as a matter of duty; and when they have brought up in each generation others like themselves and left them in their place to be governors of the State, then they will depart to the Islands of the Blest and dwell

there; and the city will give them public memorials and sacrifices and honour them, if the Pythian oracle consent, as demigods, but if not, as in any case blessed and divine.

You are a sculptor, Socrates, and have made statues of our governors faultless in beauty.

Yes, I said, Glaucon, and of our governesses too; for you must not suppose that what I have been saying applies to men only and not to women as far as their natures can go.

Plato, Republic, VII, 536B

3 *Athenian Stranger*. Any one who would be good at anything must practise that thing from his youth upwards, both in sport and earnest, in its several branches: for example, he who is to be a good builder, should play at building children's houses; he who is to be a good husbandman, at tilling the ground; and those who have the care of their education should provide them when young with mimic tools. They should learn beforehand the knowledge which they will afterwards require for their art. For example, the future carpenter should learn to measure or apply the line in play; and the future warrior should learn riding, or some other exercise, for amusement, and the teacher should endeavour to direct the children's inclinations and pleasures, by the help of amusements, to their final aim in life. The most important part of education is right training in the nursery. The soul of the child in his play should be guided to the love of that sort of excellence in which when he grows up to manhood he will have to be perfected. Do you agree with me thus far?

Cleinias. Certainly.

Ath. Then let us not leave the meaning of education ambiguous or ill-defined. At present, when we speak in terms of praise or blame about the bringing-up of each person, we call one man educated and another uneducated, although the uneducated man may be sometimes very well educated for the calling of a retail trader, or of a captain of a ship, and the like. For we are not speaking of education in this narrower sense, but of that other education in virtue from youth upwards, which makes a man eagerly pursue the ideal perfection of citizenship, and teaches him how rightly to rule and how to obey. This is the only education which, upon our view, deserves the name; that other sort of training, which aims at the acquisition of wealth or bodily strength, or mere cleverness apart from intelligence and justice, is mean and illiberal, and is not worthy to be called education at all. But let us not quarrel with one another about a word, provided that the proposition which has just been granted hold good: to wit, that those who are rightly educated generally become good men. Neither must we cast a slight upon education, which is the first and fairest thing that the best of men can ever have, and which, though liable to take a wrong direction, is capable of reformation. And this work of reformation is the great business of every man while he lives.

Plato, Laws, I, 643A

- 4 *Athenian Stranger.* I mean by education that training which is given by suitable habits to the first instincts of virtue in children;—when pleasure, and friendship, and pain, and hatred, are rightly implanted in souls not yet capable of understanding the nature of them, and who find them, after they have attained reason, to be in

harmony with her. This harmony of the soul, taken as a whole, is virtue; but the particular training in respect of pleasure and pain, which leads you always to hate what you ought to hate, and love what you ought to love from the beginning of life to the end, may be separated off; and, in my view, will be rightly called education.

Plato, Laws, II, 653A

- 5 Every systematic science, the humblest and the noblest alike, seems to admit of two distinct kinds of proficiency; one of which may be properly called scientific knowledge of the subject, while the other is a kind of educational acquaintance with it. For an educated man should be able to form a fair off-hand judgement as to the goodness or badness of the method used by a professor in his exposition. To be educated is in fact to be able to do this; and even the man of universal education we deem to be such in virtue of his having this ability. It will, however, of course, be understood that we only ascribe universal education to one who in his own individual person is thus critical in all or nearly all branches of knowledge, and not to one who has a like ability merely in some special subject. For it is possible for a man to have this competence in some one branch of knowledge without having it in all.

Aristotle, Parts of Animals, 639a1

- 6 Moral excellence is concerned with pleasures and pains; it is on account of the pleasure that we do bad things, and on account of the pain that we abstain from noble ones. Hence we ought to have been brought up in a particular way from our very youth, as Plato says, so as both to

delight in and to be pained by the things that we ought;
for this is the right education.

Aristotle, Ethics, 1104b9

- 7 The legislator should direct his attention above all to the education of youth; for the neglect of education does harm to the constitution. The citizen should be moulded to suit the form of government under which he lives. For each government has a peculiar character which originally formed and which continues to preserve it. The character of democracy creates democracy, and the character of oligarchy creates oligarchy; and always the better the character, the better the government....

And since the whole city has one end, it is manifest that education should be one and the same for all, and that it should be public, and not private.... The training in things which are of common interest should be the same for all. Neither must we suppose that any one of the citizens belongs to himself, for they all belong to the state, and are each of them a part of the state, and the care of each part is inseparable from the care of the whole.

Aristotle, Politics, 1337b9

- 8 That education should be regulated by law and should be an affair of state is not to be denied, but what should be the character of this public education, and how young persons should be educated, are questions which remain to be considered. As things are, there is disagreement about the subjects. For mankind are by no means agreed about the things to be taught, whether we look to virtue or the best life. Neither is it clear whether education is

more concerned with intellectual or with moral virtue. The existing practice is perplexing; no one knows on what principle we should proceed—should the useful in life, or should virtue, or should the higher knowledge, be the aim of our training; all three opinions have been entertained. Again, about the means there is no agreement; for different persons, starting with different ideas about the nature of virtue, naturally disagree about the practice of it.

Aristotle, Politics, 1337a33

- 9 Nature herself... requires that we should be able, not only to work well, but to use leisure well; for... the first principle of all action is leisure. Both are required, but leisure is better than occupation and is its end; and therefore the question must be asked, what ought we to do when at leisure? Clearly we ought not to be amusing ourselves, for then amusement would be the end of life, . . . It is clear then that there are branches of learning and education which we must study merely with a view to leisure spent in intellectual activity, and these are to be valued for their own sake; whereas those kinds of knowledge which are useful in business are to be deemed necessary, and exist for the sake of other things.

Aristotle, Politics, 1337a31

- 10 What greater or more beneficial service can I render the republic than to teach and train the youth, considering how far astray our young men have gone because of the prevailing moral looseness. The greatest effort will be needed to restore them and to point them in the right direction.

Cicero, Divination, II, 2

- 11 If you want a man to keep his head when the crisis comes you must give him some training before it comes.

Seneca, Letters to Lucilius, 18

- 12 Why 'liberal studies' are so called is obvious: it is because they are the ones considered worthy of a free man. But there is really only one liberal study that deserves the name—because it makes a person free—and that is the pursuit of wisdom. Its high ideals, its steadfastness and spirit make all other studies puerile and puny in comparison.

Seneca, Letters to Lucilius, 88

- 13 A father should, as soon as his son is born, conceive the greatest possible hopes for the child's future. He will thereby grow the more solicitous about his improvement from the very beginning. For it is an assertion without foundation that "to very few people is granted the faculty of comprehending what is imparted to them, and that most, through dulness of understanding, lose their labour and their time." On the contrary, you will find that the greater number of men are both ready in apprehending and quick in learning, since such a faculty is natural to man. As birds are born to fly, horses to run, and wild beasts to show fierceness, so to us peculiarly belong activity and sagacity of understanding. Therefore the mind is considered to be a gift from heaven. Dull and unteachable persons are no more produced in the course of nature than are persons marked by deformity or monstrosity. Such are certainly few, A simple proof of this assertion is that among boys, most of them show good

promise. And if it turns out that this promise never materializes, it is not usually for lack of latent ability, but because care was never taken in nurturing it. You may respond that some surpass others in ability. I grant this to be true, in that some accomplish more and others less. But there is no one who does not gain by some studying.

Quintilian, Institutio Oratoria, 1,1

- 14 When a wise man like Numa had received the sovereignty over a new and docile people, was there anything that would better deserve his attention than the education of children, and the training up of the young, not to, contrariety and discordance of character, but to the unity of the common model of virtue, to which from their cradle they should have been formed and moulded? One benefit among many that Lycurgus obtained by his course was the permanence which it secured to his laws. The obligation of oaths to preserve them would have availed but little, if he had not, by discipline and education, infused them into the children's characters, and imbued their whole early life with a love of his government.

Plutarch, Lycurgus and Numa Compared

- 15 Ingenious men have long observed a resemblance between the arts and the bodily senses. And they were first led to do so, I think, by noticing the way in which, both in the arts and with our senses, we examine opposites. Judgment once obtained, the use to which we put it differs in the two cases. Our senses are not meant to pick out black rather than white, to prefer sweet to bitter, or soft and yielding to hard and resisting objects;

all they have to do is to receive impressions as they occur, and report to the understanding the impressions as received. The arts, on the other hand, which reason institutes expressly to choose and obtain some suitable, and to refuse and get rid of some unsuitable object, have their proper concern in the consideration of the former; though, in a casual and contingent way, they must also, for the very rejection of them, pay attention to the latter..

. .

In the same manner, it seems to me likely enough that we shall be all the more zealous and more zealous to read, observe, and imitate the better lives, if we are not left in ignorance of the blameworthy and the bad.

Plutarch, Demetrius

- 16 *Socrates*, the great sage of antiquity, used to say, and very aptly, that if such a thing were possible he would ascend to the loftiest height of the city and cry out; "Where, mankind are you heading? Upon the acquisition of money you bestow every zeal, but of your sons, to whom you will leave this money, you take little thought." For my part I should add that the procedure of such fathers is very like that of a man who would take thought for his shoe but neglect his foot. But many fathers reach such a pitch in their love of money as well as hatred of children that to avoid paying a larger stipend they choose as teachers for their children men worth nothing at all, shopping for ignorance at bargain prices. On this point Aristippus very neatly and with great cleverness made a jesting remark to a father who had no sense and no brains. When the man asked him his price for educating his son, he replied "A thousand drachmas." "By Heracles," the man said, "what an exorbitant figure! I can

buy a slave for a thousand." "Then you will have two slaves," Aristippus retorted, "your son and the fellow you buy."

Plutarch, Education of Children

- 17 Education is the learning how ... to distinguish that of things some are in our power, but others are not; in our power are will and all acts which depend on the will; things not in our power are the body, the parts of the body, possessions, parents, brothers, children, country, and, generally, all with whom we live in society.

Epictetus, Discourses, I, 22

- 18 We must not believe the many, who say that free persons only ought to be educated, but we should rather believe the philosophers, who say that the educated only are free.

Epictetus, Discourses, II, 1

- 19 The carpenter does not come and say, "Hear me talk about the carpenter's art"; but having undertaken to build a house, he makes it, and proves that he knows the art. You also ought to do something of the kind; eat like a man, drink like a man, dress, marry, beget children, do the office of a citizen, endure abuse, bear with an unreasonable brother, bear with your father, bear with your son, neighbour, companion. Show us these things that we may see that you have in truth learned something from the philosophers.

Epictetus, Discourses, III, 21

20 My parents seemed to be amused at the torments inflicted upon me as a boy by my masters, though I was no less afraid of my punishments or zealous in my prayers to You for deliverance. But in spite of my terrors I still did wrong, by writing or reading or studying less than my set tasks. It was not, Lord, that I lacked mind or memory, for You had given me as much of these as my age required; but the one thing I revelled in was play; and for this I was punished by men who after all were doing exactly the same things themselves. But the idling of men is called business; the idling of boys, though exactly like, is punished by those same men: and no one pities either boys or men. Perhaps an unbiased observer would hold that I was rightly punished as a boy for playing with a ball: because this hindered my progress in studies— studies which would give me the opportunity as a man to play at things more degraded. And what difference was there between me and the master who flogged me? For if on some trifling point he had the worst of the argument with some fellow-master, he was more torn with angry vanity than I when I was beaten in a game of ball.

Augustine, Confessions, I, 9

21 A clerk from Oxford was with us also,
Who'd turned to getting knowledge, long ago.
As meagre was his horse as is a rake.
Nor he himself too fat, I'll undertake.
But he looked hollow and went soberly.
Right threadbare was his overcoat; for he
Had got him yet no churchly benefice.
Nor was so worldly as to gain office.
For he would rather have at his bed's head

Some twenty books, all bound in black and red.
Of Aristotle and his philosophy
Than rich robes, fiddle, or gay psaltery.
Yet, and for all he was philosopher,
He had but little gold within his coffer;
But all that he might borrow from a friend
On books and learning he would swiftly spend,
And then he'd pray right busily for the souls
Of those who gave him wherewithal for schools.
Of study took he utmost care and heed.
Not one word spoke he more than was his need;
And that was said in fullest reverence
And short and quick and full of high good sense.
Pregnant of moral virtue was his speech;
And gladly would he learn and gladly teach.

Chaucer, Canterbury Tales: The Prologue

- 22 We can get along without burgomasters, princes, and noblemen, but we can't do without schools, for they must rule the world.

Luther, Table Talk, 5247

- 23 He put himself into such a road and way of studying that he lost not any one hour in the day, but employed all his time in learning, and honest knowledge. Gargantua awak'd, then about four o'clock in the morning. Whilst they were in rubbing of him, there was read unto him some chapter of the Holy Scripture aloud and clearly, with a pronunciation fit for the matter, and hereunto was appointed a young page born in Basche, named Anagnostes. According to the purpose and argument of that lesson, he oftentimes gave himself to worship, adore,

pray, and send up his supplications to that good God, whose word did show his majesty and marvellous judgment. Then went he into the secret places to make excretion of his natural digestions. There his master repeated what had been read, expounding unto him the most obscure and difficult points. In returning, they considered the face of the sky, if it was such as they had observed it the night before, and into what signs the sun was entering, as also the moon for that day. This done, he was appareled, combed, curled, trimmed and perfumed, during which time they repeated to him the lessons of the day before. He himself said them by heart, and upon them would ground some practical cases concerning the estate of man, which he would prosecute sometimes two or three hours, but ordinarily they ceased as soon as he was fully clothed. Then for three good hours he had a lecture read unto him. This done, they went forth, still conferring of the substance of the lecture, either unto a field near the university called the Brack, or unto the meadows where they played at the ball, the long-tennis, and at the pile trigone, most gallantly exercising their bodies, as formerly they had done their minds. All their play was but in liberty, for they left off when they pleased, and that was commonly when they did sweat over all their body, or were otherwise weary. Then were they very well wiped and rubbed, shifted their shirts, and walking soberly, went to see if dinner was ready. Whilst they stayed for that, they did clearly and eloquently pronounce some sentences that they had retained of the lecture. In the meantime Master Appetite came, and then very orderly sat they down at table. At the beginning of the meal, there was read some pleasant history of the warlike actions of former times, until he had taken a glass

of wine. Then, if they thought good, they continued reading, or began to discourse merrily together; speaking first of the virtue, propriety, efficacy and nature of all that was served in at that table; of bread, of wine, of water, of salt, of fleshs, fishes, fruits, herbs, roots, and of their dressing. By means whereof, he learned in a little time all the passages competent for this, that were to be found in Pliny, Athenaeus, Dioscorides, Julius Pollux, Galen, Porphyrius, Oppian, Polybius, Heliodorus, Aristotle, Aelian, and others. Whilst they talked of these things, many times, to be the more certain, they caused the very books to be brought to the table, and so well and perfectly did he in his memory retain the things above said, that in that time there was not a physician that knew half so much as he did. Afterwards they conferred of the lessons read in the morning, and, ending their repast with some conserve or marmalade of quinces, he picked his teeth with mastic tooth-pickers, washed his hands and eyes with fair fresh water, and gave thanks unto God in some fine canticks, made in praise of the divine bounty and munificence. This done, they brought in cards, not to play, but to learn a thousand pretty tricks, and new inventions, which were all grounded upon arithmetic. By this means he fell in love with that numerical science, and every day after dinner and supper he passed his time in it as pleasantly, as he was wont to do at cards and dice: so that at last he understood so well both the theory and practical part thereof, that Tunstal the Englishman, who had written very largely of that purpose, confessed that verily in comparison of him he had no skill at all. And not only in that, but in the other mathematical sciences, as geometry, astronomy, music, etc. For in waiting on the concoction, and attending the digestion of his food, they

made a thousand pretty instruments and geometrical figures and did in some measure practice the astronomical canons.

After this they recreated themselves with singing musically, in four or five parts, or upon a set theme or ground at random, as it best pleased them. In matter of musical instruments he learned to play upon the lute, the virginals, the harp, the Allman flute with nine holes, the violin and the sackbut. This hour thus spent, and digestion finished, he did purge his body of natural excrements, then betook himself to his principal study for three hours together, or more, as well to repeat his matutinal lectures, as to proceed in the book wherein he was, as also to write handsomely, to draw and form the antique and Roman letters. This being done, they went out of their house, and with them a young gentleman of Touraine, named the Esquire Gymnast, who taught him the art of riding. Changing then his clothes, he rode a Naples courser, Dutch roussin, a Spanish gennet, a barbed or trapped steed, then a light fleet horse, unto whom he gave a hundred carieres, made him go the high saults, bounding in the air, free a ditch with a skip, leap over a stile or pale, turn short in a ring both to the right and left hand. There he broke not his lance; for it is the greatest foolery in the world to say, I have broken ten lances at tilts or in fight. A carpenter can do even as much. But it is a glorious and praiseworthy action, with one lance to break and overthrow ten enemies. Therefore with a sharp, stiff, strong, and well-steeled lance, would he usually force up a door, pierce a harness, beat down a tree, carry away the ring, lift up a cuirassier saddle, with the mail-coat and gauntlet. All this he did in complete arms from head to foot. As for the prancing flourishes,

and smacking popisms, for the better cherishing of the horse, commonly used in riding, none did them better than he. The voltiger of Ferrara was but as an ape compared to him. He was singularly skilful in leaping nimbly from one horse to another without putting foot to ground, and these horses were called desultories. He could likewise from either side, with a lance in his hand, leap on horseback without stirrups, and rule the horse at his pleasure without a bridle, for such things are useful in military engagements. Another day he exercised the battle-axe, which he so dexterously wielded, both in the nimble, strong, and smooth management of that weapon, and that in all the feats practiceable by it, that he passed knight of arms In the field, and at all essays.

Then tossed he the pike, played with the two-handed sword, with the back sword, with the Spanish tuck, the dagger, poniard, armed, unarmed, with a buckler, with a cloak, with a target Then would he hunt the hart, the roebuck, the bear, the deer, the wild boar, the hare, the pheasant, the partridge and the bustard. He played at the balloon, and made it bound in the air, both with fist and foot. He wrestled, ran, jumped, not at three steps and a leap, called the hops, nor at *clochepied*, called the hare's leap, nor yet at the Almanes; for, said Gymnast, these jumps are for the wars altogether unprofitable, and of no use: but at one leap he would skip over a ditch, spring over a hedge, mount six paces upon a wall, ramp and grapple after this fashion up against a window, of the full height of a lance. He did swim in deep waters on his belly, on his back, sideways, with all his body, with his feet only, with one hand in the air, wherein he held a book, crossing thus the breadth of the River Seine, without wetting, and dragging along his cloak with his

teeth, as did Julius Caesar; then with the help of one hand he entered forcibly into a boat, from whence he cast himself again headlong into the water, sounded the depths, hollowed the rocks, and plunged into the pits and gulfs. Then turned he the boat about, governed it, led it swiftly or slowly with the stream and against the stream, stopped it in his course, guided it with one hand, and with the other laid hard about him with a huge great oar, hoisted the sail, hied up along the mast by the shrouds, ran upon the edge of the decks, set the compass in order, tackled the bowlines, and steered the helm. Coming out of the water, he ran furiously up against a hill, and with the same alacrity and swiftness ran down again. He climbed up trees like a cat, leaped from the one to the other like a squirrel. He did pull down the great boughs and branches, like another Milo; then with two sharp well-steeled daggers, and two tried bodkins, would be run up by the wall to the very top of a house like a rat; then suddenly come down from the top to the bottom with such an even composition of members, that by the fall he would catch no harm.

He did cast the dart, throw the bar, put the stone, practise the javelin, the boar spear or partisan, and the halbert. He broke the strongest bows in drawing, bended against his breast the greatest cross-bow's of steel, took his aim by the eye with the hand-gun, and shot well, traversed and planted the cannon, shot at but-marks, at the papgay from below upwards, or to a height from above downwards or to a descent; then before him sidewise, and behind him, like the Parthians. They tied a cable-rope to the top of a high tower, by one end whereof hanging near the ground he wrought himself with his hands to the very top; then upon the same tract came

down so sturdily and firm that you could not on a plain meadow have run with more assurance. They set up a great pole fixed upon two trees. There would he hang by his hands, and with them alone, his feet touching at nothing, would go back and fore along the aforesaid rope with so great swiftness, that hardly could one overtake him with running; and then, to exercise his breast and lungs, he would shout like all the devils in hell. I heard him once call Eudemon from St. Victor's gate to Montmartre. Stentor never had such a voice at the siege of Troy. Then for the strengthening of his nerves or sinews, they made him two great sows of lead, each of them weighing eight thousand and seven hundred quintals, which they called Alteres. Those he took up from the ground, in each hand one, then lifted them up over his head, and held them so without stirring three quarters of an hour or more, which was an inimitable force. He fought at barriers with the stoutest and most vigorous champions; and when it came to the cope, he stood so sturdily on his feet, that he abandoned himself unto the strongest, in ease they could remove him from his place, as Milo was wont to do of old. In whose imitation likewise he held a pomegranate in his hand, to give it unto him that could take it from him. The time being thus bestowed, and himself rubbed, cleansed, wiped and refreshed with other clothes, he returned fair and softly; and passing through certain meadow's, or other grassy places, beheld the trees and plants, comparing them with what is written of them in the books of the ancients, such as Theophrast, Dioscorides, Marinus, Pliny, Nicander, Macer, and Galen, and carried home to the house great handfuls of them, whereof a young page called Rizotomos had charge; together with little mattocks, pickaxes,

gnibbling hooks, cabbies, pruning knives, and other instruments requisite for herborising. Being come to their lodging, whilst supper was making ready, they repeated certain passages of that which had been read, and then sat down at table. Here remark, that his dinner was sober and thrifty, for he did then eat only to prevent the gnawings of his stomach, but his supper was copious and large; for he took then as much as was fit to maintain and nourish him; which indeed is the true diet prescribed by the art of good and sound physic, although a rabble of loggerheaded physicians, muzzled in the brabbling shop of sophisters, counsel the contrary. During that repast was continued the lesson read at dinner as long as they thought good: the rest was spent in good discourse, learned and profitable. After that they had given thanks, he set himself to sing vocally, and play upon harmonious instruments, or otherwise passed his time at some pretty sports, made with cards and dice, or in practising the feats of legerdemain with cups and balls. There they staid some nights in frolicking thus, and making themselves merry till it was time to go to bed; and on other nights they would go make visits unto learned men, or to such as had been travellers in strange and remote countries. When it was full night before they retired themselves, they went unto the most open place of the house to see the face of the sky, and there beheld the comets, if any were, as likewise the figures, situations, aspects, oppositions and conjunctions of both the fixed stars and planets.

Then with his master did he briefly recapitulate, after the manner of the Pythagoreans, that which he had read, seen, learned, done and understood in the whole course of that day.

Then prayed they unto God the Creator, in falling down before him, and strengthening their faith towards him, and glorifying him for his boundless bounty; and, giving thanks unto him for the time that was past, they recommended themselves to his divine clemency for the future. Which being done, they went to bed, and betook themselves to their repose and rest.

Rabelais, Gargantua and Pantagruel, I, 23

24 Since it is philosophy that teaches us to live, and since there is a lesson in it for childhood as well as for the other ages, why is it not imparted to children?... They teach us to live, when life is past. A hundred students have caught the syphilis before they came to Aristotle's lesson on temperance.... Our child is in much more of a hurry: he owes to education only the first fifteen or sixteen years of his life; the rest he outs to action. Let us use so short a time for the necessary teachings. The others are abuses: away with all those thorny subtleties of dialectics, by which our lives cannot be amended. Take the simple teachings of philosophy, know how to choose them and treat them at the right time; they are easier to understand than a tale of Boccaccio. A child is capable of that when he leaves his nurse, much more than of learning to read and write. Philosophy has lessons for the birth of men as well as for their decrepitude.

Montaigne, Essays, I, 26, Education of Children

25 My late father, having made all the inquiries a man can make, among men of learning and understanding, about a superlative system of education, became aware of the drawbacks that were prevalent; and he was told that the

long time we put into learning languages which cost the ancient Greeks and Romans nothing was the only reason we could not attain their greatness in soul and in knowledge. I do not think that that is the only reason. At all events, the expedient my father hit upon was this, that while I was nursing and before the first loosening of my tongue, he put me in the care of a German, who has since died a famous doctor in France, wholly ignorant of our language and very well versed in Latin. This man, whom he had sent for expressly, and who was very highly paid, had me constantly in his hands. There were also two others with him, less learned, to attend me and relieve him. These spoke to me in no other language than Latin. As for the rest of my father's household, it was an inviolable rule that neither my father himself, nor my mother, nor any valet or housemaid, should speak anything in my presence but such Latin words as each had learned in order to jabber with me.

It is wonderful how everyone profited from this. My father and mother learned enough Latin in this way to understand it, and acquired sufficient skill to use it when necessary, as did also the servants who were most attached to my service. Altogether, we Latinized ourselves so much that it overflowed all the way to our villages on every side, where there still remain several Latin names for artisans and tools that have taken root by usage. As for me, I was over six before I understood any more French or Perigordian than Arabic,

Montaigne, Essays, I, 26, Education of Children

- 26 The ignorance that was naturally in us we have by long study confirmed and verified. To really learned men has happened what happens to ears of wheat: they rise high

and lofty, heads erect and proud, as long as they are empty; but when they are full and swollen with grain in their ripeness, they begin to grow humble and lower their horns. Similarly, men who have tried everything and sounded everything, having found in that pile of knowledge and store of so many various things nothing solid and firm, and nothing but vanity, have renounced their presumption and recognized their natural condition.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

27 *Tranio. Mi perdonato*, gentle master mine,
I am in all affected as yourself;
Glad that you thus continue your resolve
To suck the sweets of sweet philosophy.
Only, good master, while we do admire
This virtue and this moral discipline,
Let's be no stoics nor no stocks, I pray;
Or so devote to Aristotle's checks
As Ovid be an outcast quite abjured:
Balk logic with acquaintance that you have
And practise rhetoric in your common talk;
Music and poesy use to quicken you;
The mathematics and the metaphysics,
Fall to them as you find your stomach serves you;
No profit grows where is no pleasure ta'en:
In brief, sir, study what you most affect.

Shakespeare, Taming of the Shrew, I, i, 25

28 *Biron*. Study is like the heaven's glorious sun
That will not be deep-search'd with saucy looks:
Small have continual plodders ever won
Save base authority from others' books.

These earthly godfathers of heaven's lights
That give a name to every fixed star
Have no more profit of their shining nights
Than those that walk and wot not what they are.
Too much to know is to know nought by fame;
And every godfather can give a name.

Shakespeare, Love's Labour's Lost, I, i, 84

29 Sir, said he, you seem to me to have frequented the Schools; pray what Science has been your particular Study? That of Knight-Errantry, answer'd Don *Quixote*, which is as good as that of Poetry, and somewhat better too. I don't know what sort of a Science that is, said Don *Lorenzo*, nor indeed did I ever hear of it before. 'Tis a Science answer'd Don *Quixote*, that includes in itself all the other Sciences in the World, or at least the greatest Part of them: Whoever professes it, ought to be learned in the laws, and understand distributive and commutative Justice, in order to right all Mankind. He ought to be a Divine, to give a Reason of his Faith, and vindicate his Religion by Dint of Argument. He ought to be skill'd in Physick, especially in the Botanick Part of it, that he may know the Nature of Simples, and have recourse to those Herbs that can cure Wounds; for a Knight-Errant must not expect to find Surgeons in the Woods and Desarts. He must be an Astronomer, to understand the Motions of the Celestial Orbs, and find out by the Stars the Hour of the Night, and the Longitude and Latitude of the Climate on which Fortune throws him: and he ought to be well instructed in all the other Parts of the Mathematicks, that Science being of constant use to a Professor of Arms, on many Accounts too numerous to be related. I need not tell you, that all the divine and moral Virtues must center

in his Mind. To descend to less material Qualifications; he must be able to swim like a Fish, know how to shoe a Horse, mend a Saddle or Bridle: and returning to higher Matters, he ought to be inviolably devoted to Heaven and his Mistress, Chaste in his Thoughts, Modest in Words, and Liberal and Valiant in Deeds; Patient in Afflictions, Charitable to the Poor; and finally a Maintainer of Truth, though it cost him his Life to defend it. These are the Endowments to constitute a good Knight-Errant; and now, Sir, be you a Judge, whether the Professors of Chivalry have an easy Task to perform, and whether such a Science may not stand in Competition with the most celebrated and best of those that are taught in Colleges?

Cervantes, Don Quixote, II, 18

30 Studies serve for delight, for ornament, and for ability. Their chief use for delight is in privateness and retiring; for ornament, is in discourse; and for ability, in the judgment and disposition of business. For expert men can execute, and perhaps judge of particulars, one by one; but the general counsels, and the plots and marshalling of affairs, come best from those that are learned. To spend too much time in studies is sloth; to use them too much for ornament is affectation; to make judgment wholly by their rules is the humour of a scholar. They perfect nature, and are perfected by experience: for natural abilities are like natural plants, that need pruning by study; and studies themselves do give forth directions too much at large, except they be bounded in by experience.

Bacon, Of Studies

- 31 Crafty men condemn studies; simple men admire them; and wise men use them: for they teach not their own use; but that is a wisdom without them and above them, won by observation.

Bacon, Of Studies

- 32 Histories make men wise; poets witty; the mathematics subtile; natural philosophy deep; moral grave; logic and rhetoric able to contend.... There is no stound or impediment in the wit, but may be wrought out by fit studies: like as diseases of the body may have appropriate exercises.

Bacon, Of Studies

- 33 The end of study should be to direct the mind towards the enunciation of sound and correct judgments on all matters that come before it.

Descartes, Rules for Direction of the Mind, I

- 34 The end ... of learning is to repair the ruins of our first parents by regaining to know God aright, and out of that knowledge to love him, to imitate him, to be like him, as we may the nearest by possessing our souls of true virtue, which being united to the heavenly grace of faith, makes up the highest perfection.

Milton, Of Education

- 35 I call ... a complete and generous education, that which fits a man to perform justly, skilfully, and magnanimously all the offices, both private and public, of peace and war.

Milton, Of Education

36 There is nothing by which a person can better show how much skill and talent he possesses than by so educating men that at last they will live under the direct authority of reason.

Spinoza, Ethics, IV, Appendix IX

37 Children when they come first into it, are surrounded with a world of new things, which, by a constant solicitation of their senses, draw the mind constantly to them; forward to take notice of new, and apt to be delighted with the variety of changing objects. Thus the first years are usually employed and diverted in looking abroad. Men's business in them is to acquaint themselves with what is to be found without; and so growing up in a constant attention to outward sensations, seldom make any considerable reflection on what passes within them, till they come to be of riper years; and some scarce ever at all.

Locke, Concerning Human Understanding, Bk. II, I, 8

38 A sound mind in a sound body is a short but full description of a happy state in this world. He that has these two has little more to wish for; and he that wants either of them will be but little the better for anything else. Men's happiness or misery is most part of their own making. He whose mind directs not wisely will never take the right way; and he whose body is crazy and feeble will never be able to advance in it. I confess there are some men's constitutions of body and mind so vigorous and well framed by nature that they need not much assistance from others; but by the strength of their natural genius they are from their cradles carried towards

what is excellent; and by the privilege of their happy constitutions are able to do wonders. But examples of this kind are but few; and I think I may say that of all the men we meet with, nine parts of ten are what they are, good or evil, useful or not, by their education. 'Tis that which makes the great difference in mankind.

Locke, Some Thoughts Concerning Education, I

- 39 'Tis virtue . . . , which is the hard and valuable part to be aimed at in education, and not a forward pertness or any little arts of shifting. All other considerations and accomplishments should give way and be postponed to this. This is the solid and substantial good which tutors should not only read lectures and talk of, but the labor and art of education should furnish the mind with and fasten there, and never cease till the young man had a true relish of it, and placed his strength, his glory, and his pleasure in it.

The more this advances, the easier way will be made for other accomplishments in their turns. For he that is brought to submit to virtue will not be refractory, or restive, in anything that becomes him; and therefore I cannot but prefer breeding of a young gentleman at home in his father's sight, under a good governor, as much the best and safest way to this great and main end of education, when it can be had, and is ordered as it should be.

Locke, Some Thoughts Concerning Education, 70

- 40 He that at any rate procures his child a good mind, well-principled, tempered to virtue and usefulness, and adorned with civility and good breeding, makes a better

purchase for him than if he laid out the money for an addition of more earth to his former acres. Spare it in toys and play-games, in silk and ribbons, laces, and other useless expenses, as much as you please; but be not sparing in so necessary a part as this. 'Tis not good husbandry to make his fortune rich, and his mind poor.

Locke, Some Thoughts Concerning Education, 90

- 41 From frequently reflecting upon the course and method of educating youth in this and a neighbouring kingdom, with the general success and consequence thereof, I am come to this determination, that education is always the worse in proportion to the wealth of and grandeur of the parents.

Swift, Essay on Modem Education

- 42 A little learning is a dangerous thing;
Drink deep, or taste not the Pierian spring.
There shallow draughts intoxicate the brain,
And drinking largely sobers us again.
Fired at first sight with what the Muse imparts,
In fearless youth we tempt the heights of arts,
While from the bounded level of our mind
Short views we take, nor see the lengths behind;
But more advanced, behold with strange surprise
New distant scenes of endless science rise!

Pope, Essay on Criticism, II, 215

- 43 The bookful blockhead, ignorantly read,
With loads of learned lumber in his head.
With his own tongue still edifies his ears.
And always list'ning to himself appears.

Pope, Essay on Criticism, III, 612

44 The mere philosopher is a character, which is commonly but little acceptable in the world, as being supposed to contribute nothing either to the advantage or pleasure of society; while he lives remote from communication with mankind, and is wrapped up in principles and notions equally remote from their comprehension. On the other hand, the mere ignorant is still more despised; nor is anything deemed a surer sign of an illiberal genius in an age and nation where the sciences flourish, than to be entirely destitute of all relish for those noble entertainments. The most perfect character is supposed to lie between those extremes; retaining an equal ability and taste for books, company, and business; preserving in conversation that discernment and delicacy which arise from polite letters; and in business, that probity and accuracy which are the natural result of a just philosophy.

Hume, Concerning Human Understanding, I, 4

45 Whatever propensity one may have to vice, it is not easy for an education, with which love has mingled, to be entirely thrown away.

Rousseau, Origin of Inequality, Dedication

46 From the first moment of life, men ought to begin learning to deserve to live; and, as at the instant of birth we partake of the rights of citizenship, that instant ought to be the beginning of the exercise of our duty. If there are laws for the age of maturity, there ought to be laws for infancy, teaching obedience to others: and as the reason of each man is not left to be the sole arbiter of his duties, government ought the less indiscriminately to

abandon to the intelligence and prejudices of fathers the education of their children, as that education is of still greater importance to the State than to the fathers: for, according to the course of nature, the death of the father often deprives him of the final fruits of education; but his country' sooner or later perceives its effects. Families dissolve, but the State remains.

Rousseau, Political Economy

47 All that we lack at birth, all that we need when we come to man's estate, is the gift of education.

Rousseau, Emile, I

48 Education comes to us from nature, from men, or from things. The inner growth of our organs and faculties is the education of nature, the use we learn to make of this growth is the education of men, what we gain by our experience of our surroundings is the education of things.

Thus we are each taught by three masters. 1/ their teaching conflicts, the scholar is ill-educated and will never be at peace with himself; if their teaching agrees, he goes straight to his goal, he lives at peace with himself, he is well-educated.

Rousseau, Emile, I

49 *Johnson*. While learning to read and w'rite is a distinction, the few who have that distinction may be the less inclined to work; but when every body learns to read and write, it is no longer a distinction.

Boswell, Life of Johnson (Apr. 14, 1772)

50 He [Johnson] allowed very great influence to education. "I do not deny, Sir, but there is some original difference in minds; but it is nothing in comparison of what is formed by education. We may instance the science of *numbers*, which all minds are equally capable of attaining; yet we find a prodigious difference in the powers of different men, in that respect, after they are grown up, because their minds have been more or less exercised in it: and I think the same cause will explain the difference of excellence in other things, gradations admitting always some difference in the first principles."

Boswell, Life of Johnson (Mar. 16, 1776)

51 Though the common people cannot, in any civilised society, be so well instructed as people of some rank and fortune, the most essential parts of education, however, to read, write, and account, can be acquired at so early a period of life that the greater part even of those who are to be bred to the lowest occupations have time to acquire them before they can be employed in those occupations. For a very small expense the public can facilitate, can encourage, and can even impose upon almost the whole body of the people the necessity of acquiring those most essential parts of education.

Adam Smith, Wealth of Nations, V, 1

52 A man without the proper use of the intellectual faculties of a man, is, if possible, more contemptible than even a coward, and seems to be mutilated and deformed in a still more essential part of the character of human nature. Though the state was to derive no advantage from the instruction of the inferior ranks of people, it would still

deserve its attention that they should not be altogether uninstructed. The state, however, derives no inconsiderable advantage from their instruction. The more they are instructed the less liable they are to the delusions of enthusiasm and superstition, which, among ignorant nations, frequently occasion the most dreadful disorders. An instructed and intelligent people, besides, are always more decent and orderly than an ignorant and stupid one. They feel themselves, each individually, more respectable and more likely to obtain the respect of their lawful superiors, and they are therefore more disposed to respect those superiors. They are more disposed to examine, and more capable of seeing through, the interested complaints of faction and sedition, and they are, upon that account, less apt to be misled into any wanton or unnecessary opposition to the measures of government. In free countries, where the safety of government depends very much upon the favourable judgment which the people may form of its conduct, it must surely be of the highest importance that they should not be disposed to judge rashly or capriciously concerning it.

Adam Smith, Wealth of Nations, V, 1

53 Education is the art of making men ethical. It begins with pupils whose life is at the instinctive level and shows them the way to a second birth, the way to change their instinctive nature into a second, intellectual, nature, and makes this intellectual level habitual to them. At this point the clash between the natural and the subjective will disappears, the subject's internal struggle dies away. To this extent, habit is part of ethical life as it is of philosophic thought also, since such thought demands

that mind be trained against capricious fancies, and that these be destroyed and overcome to leave the way clear for rational thinking. It is true that a man is killed by habit, i.e. if he has once come to feel completely at home in life, if he has become mentally and physically dull, and if the clash between subjective consciousness and mental activity' has disappeared; for man is active only in so far as he has not attained his end and wills to develop his potentialities and vindicate himself in struggling to attain it. When this has been fully achieved, activity and vitality are at an end, and the result—loss of interest in life—is mental or physical death.

Hegel, Philosophy of Right, Additions, Par. 151

54 Man has to acquire for himself the position which he ought to attain; he is not already in possession of it by instinct. It is on this fact that the child's right to education is based. Peoples under patriarchal government are in the same position as children; they are fed from central stores and not regarded as self-subsistent and adults. The services which may be demanded from children should therefore have education as their sole end and be relevant thereto; they must not be ends in themselves, since a child in slavery is in the most unethical of all situations whatever. One of the chief factors in education is discipline, the purport of which is to break down the child's self-will and thereby eradicate his purely natural and sensuous self. We must not expect to achieve this by mere goodness, since it is just the immediate will which acts on immediate fancies and caprices, not on reasons and representative thinking. If we advance reasons to children, we leave it open to them to decide whether the reasons are weighty or not, and

thus we make everything depend on their whim. So far as children are concerned, universality and the substance of things reside in their parents, and this implies that children must be obedient. If the feeling of subordination, producing the longing to grow up, is not fostered in children, they become forward and impertinent.

Hegel, Philosophy of Right, Additions, Par, 174

55 A man sees a great many things when he looks at the world for himself, and he sees them from many sides; but this method of learning is not nearly so short or so quick as the method which employs abstract ideas and makes hasty generalizations about everything. Experience, therefore, will be a long time in correcting preconceived ideas, or perhaps never bring its task to an end; for wherever a man finds that the aspect of things seems to contradict the general ideas he has formed, he will begin by rejecting the evidence it offers as partial and one-sided; nay, he will shut his eyes to it altogether and deny that it stands in any contradiction at all with his preconceived notions, in order that he may thus preserve them uninjured. So it is that many a man carries about a burden of wrong notions all his life long—crotchets, whims, fancies, prejudices, which at last become fixed ideas. The fact is that he has never tried to form his fundamental ideas for himself out of his own experience of life, his own way of looking at the world, because he has taken over his ideas ready-made from other people; and this it is that makes him—as it makes how many others!—so shallow and superficial.

Schopenhauer, Education

56 No child under the age of fifteen should recieve instruction in subjects which may possibly be the vehicle of serious error, such as philosophy, religion, or any other branch of knowledge where it is necessary to take large views; because wrong notions imbibed early can seldom be rooted out, and of all the intellectual faculties, judgment is the last to arrive at maturity. The child should give its attention either to subjects where no error is possible at all, such as mathematics, or to those in which there is no particular danger in making a mistake, such as languages, natural science, history and so on.

Schopenhauer, Education

57 If we think of it, all that a University, or final highest School can do for us, is still but what the first School began doing—teach us to *read*. We learn to *read*, in various languages, in various sciences; we learn the alphabet and letters of all manner of Books. But the place where we are to get knowledge, even theoretic knowledge, is the Books themselves! It depends on what we read, after all manner of Professors have done their best for us. The true University of these days is a Collection of Books.

Carlyle, The Hero as Man of Letters

58 Man is thus metamorphosed into a thing, into many things. The planter, who is Man sent out into the field to gather food, is seldom cheered by any idea of the true dignity of his ministry. He sees his bushel and his cart, and nothing beyond, and sinks into the farmer, instead of Man on the farm. The tradesman scarcely ever gives an ideal worth to his work, but is ridden by the routine of his

craft, and the soul is subject to dollars. The priest becomes a form; the attorney a statute-book; the mechanic a machine; the sailor a rope of the ship.

In this distribution of functions the scholar is the delegated intellect. In the right state he is *Man Thinking*. In the degenerate state, when the victim of society, he tends to become a mere thinker, or still worse, the parrot of other men's thinking.

In this view of him, as Man Thinking, the theory of his office is contained. Him Nature solicits with all her placid, all her monitory pictures; him the past instructs; him the future invites.

Emerson, The American Scholar

59 Books are good only as far as a boy is ready for them. He sometimes gets ready very slowly. You send your child to the schoolmaster, but 't is the schoolboys who educate him. You send him to the Latin class, but much of his tuition comes, on his way to school, from the shop-windows. You like the strict rules and the long terms; and he finds his best leading in a by-way of his own, and refuses any companions but of his own choosing. He hates the grammar and *Gradus*, and loves guns, fishing-rods, horses and boats. Well, the boy is right, and you are not fit to direct his bringing-up if your theory leaves out his gymnastic training. Archery, cricket, gun and fishing-rod, horse and boat, are all educators, liberalizers; and so are dancing, dress and the street talk; and provided only the boy has resources, and is of a noble and ingenuous strain, these will not serve him less than the books.

Emerson, Culture

60 One of the benefits of a college education is to show the boy its little avail.

Emerson, Culture

61 We are students of words: we are shut up in schools, and colleges, and recitation-rooms, for ten or fifteen years, and come out at last with a bag of wind, a memory of words, and do not know a thing.

Emerson, New England Reformers

62 At Mr. Wackford Squeers's Academy, Dotheboys Hall, at the delightful village of Dotheboys, near Greta Bridge in Yorkshire, Youth are boarded, clothed, booked, furnished with pocket-money, provided with all necessaries, instructed in all languages living and dead, mathematics, orthography, geometry, astronomy, trigonometry, the use of the globes, algebra, single stick (if required), writing, arithmetic, fortification, and every other branch of classical literature. Terms, twenty guineas per annum. No extras, no vacations, and diet unparalleled.

Dickens, Nicholas Nickleby, III

63 Perhaps many who watch over the interests of the community, and are anxious for its welfare, will conclude that the development of the judgment cannot properly be included in the general idea of education; that as the education proposed must, to a very large degree, be of *self*, it is so far incommunicable; that the master and the scholar merge into one, and both disappear; that the instructor is no wiser than the one to be instructed, and thus the usual relations of the two lose their power. Still, I believe that the judgment may be educated to a very

large extent, and might refer to the fine arts, as giving proof in the affirmative; and though, as respects the community and its improvement in relation to common things, any useful education must be of self, I think that society, as a body, may act powerfully in the cause. Or it may still be objected that my experience is imperfect, is chiefly derived from exercise of the mind within the precincts of natural philosophy, and has not that generality of application which can make it of any value to society at large. I can only repeat my conviction, that society occupies itself now-a-days about physical matters, and judges them as common things. Failing in relation to them, it is equally liable to carry such failures into other matters of life. The proof of deficient judgment in one department shows the habit of mind, and the general want, in relation to others. I am persuaded that all persons may find in natural things an admirable school for self-instruction, and a field for the necessary mental exercise; that they may easily apply their habits of thought, thus formed, to a social use; and that they ought to do this, as a duty to themselves and their generation.

Faraday, Observations on Mental Education

64 As for me, if, by any possibility, there be any as yet undiscovered prime thing in me; if I shall ever deserve any real repute in that small but high hushed world which I might not be unreasonably ambitious of; if hereafter I shall do anything that, upon the whole, a man might rather have done than to have left undone; if, at my death, my executors, or more properly my creditors, find any precious MSS. in my desk, then here I prospectively

ascribe all the honour and the glory to whaling; for a whale ship was my Yale College and my Harvard.

Melville, Moby Dick, XXIV

65 The mode of founding a college is, commonly, to get up a subscription of dollars and cents, and then, following blindly the principles of a division of labor to its extreme—a principle which should never be followed but with circumspection—to call in a contractor who makes this a subject of speculation, and he employs Irishmen or other operatives actually to lay the foundations, while the students that are to be are said to be fitting themselves for it; and for these oversights successive generations have to pay. I think that it would be *better than this*, for the students, or those who desire to be benefited by it, even to lay the foundation themselves. The student who secures his coveted leisure and retirement by systematically shirking any labor necessary to man obtains but an ignoble and unprofitable leisure, defrauding himself of the experience which alone can make leisure fruitful, ‘But,’ says one, ‘you do not mean that the students should go to work with their hands instead of their heads?’ I do not mean that exactly, but I mean something which he might think a good deal like that; I mean that they should not *play* life, or *study* it merely, while the community supports them at this expensive game, but earnestly *live* it from beginning to end. How could youths better learn to live than by at once trying the experiment of living? Methinks this would exercise their minds as much as mathematics. If I wished a boy to know something about the arts and sciences, for instance, I would not pursue the common course, which is merely to send him into the neighborhood of some

professor, where anything is professed and practised but the art of life;—to survey the world through a telescope or a microscope, and never with his natural eye; to study chemistry and not learn how his bread is made, or mechanics, and not learn how it is earned; to discover new satellites to Neptune, and not detect the motes in his eyes, or to what vagabond he is a satellite himself; or to be devoured by the monsters that swarm all around him, while contemplating the monsters in a drop of vinegar. Which would have advanced the most at the end of a month—the boy who had made his own jackknife from the ore which he had dug and smelted, reading as much as would be necessary for this—or the boy who had attended the lecture on metallurgy at the Institute in the meanwhile, and had received a Rodgers penknife from his father? Which would be most likely to cut his fingers?... To my astonishment I was informed on leaving college that I had studied navigation!—why, if I had taken one turn down the harbor I should have known more about it. Even the poor student studies and is taught only political economy, while that economy of living which is synonymous with philosophy is not even sincerely professed in our colleges. The consequence is, that while he is reading Adam Smith, Ricardo, and Say, he runs his father in debt irretrievably.

Thoreau, Walden: Economy

- 66 Education is the instruction of the intellect in the laws of Nature, under which name I include not merely things and their forces, but men and their ways; and the fashioning of the affections and of the will into an earnest and loving desire to move in harmony with those laws.

T. H. Huxley, A Liberal Education

67 From the Factory system budded... the germ of the education of the future, an education that will, in the case of every child over a given age, combine productive labour with instruction and gymnastics, not only as one of the methods of adding to the efficiency of production, but as the only method of producing fully developed human beings.

Marx, Capital, Vol. I, IV, 15

68 When we turn to subjects infinitely more complicated, to morals, religion, politics, social relations, and the business of life, three-fourths of the arguments for every disputed opinion consist in dispelling the appearances which favour some opinion different from it. The greatest orator, save one, of antiquity, has left it on record that he always studied his adversary's case with as great, if not still greater, intensity than even his own. What Cicero practised as the means of forensic success requires to be imitated by all who study any subject in order to arrive at the truth. He who knows only his own side of the case, knows little of that. His reasons may be good, and no one may have been able to refute them. But if he is equally unable to refute the reasons on the opposite side- if he does not so much as know what they are he has no ground for preferring either opinion, rational position for him would be suspension of judgment, and unless he contents himself with that, he is either led by authority, or adopts, like the generality of the world, the side to which he feels most inclination. Nor is it enough that he should hear the arguments of adversaries from his own teachers, presented as they state them, and

accompanied by what they offer as refutations. That is not the way to do justice to the arguments or bring them into real contact with his own mind. He must be able to hear them from persons who actually believe them; who defend them in earnest, and do their very utmost for them. He must know them in their most plausible and persuasive form; he must feel the whole force of the difficulty which the true view of the subject has to encounter and dispose of; else he will never really possess himself of the portion of truth which meets and removes that difficulty.

Ninety-nine in a hundred of what are called educated men are in this condition; even of those who can argue fluently for their opinions. Their conclusion may be true, but it might be false for anything they know; they have never thrown themselves into the mental position of those who think differently from them, and considered what such persons may have to say; and consequently they do not, in any proper sense of the word, know the doctrine which they themselves profess. They do not know those parts of it which explain and justify the remainder; the considerations which show that a fact which seemingly conflicts with another is reconcilable with it, or that, of two apparently strong reasons, one and not the other ought to be preferred. All that part of the truth which turns the scale, and decides the judgment of a completely informed mind, they are strangers to; nor is it ever really known, but to those who have attended equally and impartially to both sides, and endeavoured to see the reasons of both in the strongest light. So essential is this discipline to a real understanding of moral and human subjects, that if opponents of all important truths do not exist, it is indispensable to imagine them, and

supply them with the strongest arguments which the most skilful devil's advocate can conjure up.

Mill, On Liberty, II

69 A cultivated mind—I do not mean that of a philosopher, but any mind to which the fountains of knowledge have been opened, and which has been taught, in any tolerable degree, to exercise its faculties—finds sources of inexhaustible interest in all that surrounds it; in the objects of nature, the achievements of art, the imaginations of poetry, the incidents of history, the ways of mankind, past and present, and their prospects in the future. It is possible, indeed, to become indifferent to all this, and that too without having exhausted a thousandth part of it; but only when one has had from the beginning no moral or human interest in these things, and has sought in them only the gratification of curiosity.

Now there is absolutely no reason in the nature of things why an amount of mental culture sufficient to give an intelligent interest in these objects of contemplation, should not be the inheritance of every one born in a civilised country.

Mill, Utilitarianism, II

70 It has often been said, and requires to be repeated still oftener, that books and discourses alone are not education; that life is a problem, not a theorem; that action can only be learned in action. A child learns to write its name only by a succession of trials; and is a man to be taught to use his mind and guide his conduct by mere precept? What can be learned in schools is important, but not all-important. The main branch of the

education of human beings is their habitual employment, which must be either their individual vocation or some matter of general concern, in which they are called to take a part. The private money-getting occupation of almost everyone is more or less a mechanical routine; it brings but few of his faculties into action, while its exclusive pursuit tends to fasten his attention and interest exclusively upon himself, and upon his family as an appendage of himself—making him indifferent to the public, to the more generous objects and the nobler interests, and, in his inordinate regard for his personal comforts, selfish and cowardly. Balance these tendencies by contrary ones; give him something to do for the public, whether as a vestryman, a jurymen, or an elector; and in that degree, his ideas and feelings are taken out of this narrow circle. He becomes acquainted with more varied business and a larger range of considerations. He is made to feel that besides the interests which separate him from his fellow citizens, he has interests which connect him with them; that not only the common weal is his weal but that it partly depends upon his exertions. Whatever might be the case in some other constitutions of society, the spirit of a commercial people will be, we are persuaded, essentially mean and slavish wherever public spirit is not cultivated by an extensive participation of the people in the business of government in detail: nor will the desideratum of a general diffusion of intelligence among either the middle or lower classes be realized, but by a corresponding dissemination of public functions, and a voice in public affairs.

Mill, Review of Tocqueville's "Democracy in America"

71 Education ... is one of the subjects which most essentially require to be considered by various minds, and from a variety of points of view. For, of all many-sided subjects, it is the one which has the greatest number of sides. Not only does it include whatever we do for ourselves, and whatever is done for us by others, for the express purpose of bringing us somewhat nearer to the perfection of our nature; it does more: in its largest acceptation, it comprehends even the indirect effects produced on character and on the human faculties, by things of which the direct purposes are quite different; by laws, by forms of government, by the industrial arts, by modes of social life; nay even by physical facts not dependent on human will; by climate, soil, and local position. Whatever helps to shape the human being; to make the individual what he is, or hinder him from being what he is not—is part of his education. And a very bad education it often is; requiring all that can be done by cultivated intelligence and will, to counteract its tendencies.

Mill, Inaugural Address at St. Andrews

72 Men are men before they are lawyers, or physicians, or merchants, or manufacturers; and if you make them capable and sensible men, they will make themselves capable and sensible lawyers or physicians. What professional men should carry away with them from an University, is not professional knowledge, but that which should direct the use of their professional knowledge, and bring the light of general culture to illuminate the technicalities of a special pursuit. Men may be competent lawyers without general education, but it depends on general education to make them philosophic lawyers—who demand, and are capable of apprehending,

principles, instead of merely cramming their memory with details. And so of all other useful pursuits, mechanical included. Education makes a man a more intelligent shoemaker, if that be his occupation, but not by teaching him how to make shoes; it does so by the mental exercise it gives, and the habits it impresses.

Mill, Inaugural Address at St. Andrews

73 It has always seemed to me a great absurdity that history and geography should be taught in schools; except in elementary schools for the children of the labouring classes, whose subsequent access to books is limited. Who ever really learnt history and geography except by private reading? and what an utter failure a system of education must be, if it has not given the pupil a sufficient taste for reading to seek for himself those most attractive and easily intelligible of all kinds of knowledge? ... Of the mere facts of history, as commonly accepted, what educated youth of any mental activity does not learn as much as is necessary, if he is simply turned loose into an historical library? What he needs on this, and on most other matters of common information, is not that he should be taught it in boyhood, but that abundance of books should be accessible to him.

Mill, Inaugural Address at St. Andrews

74 Health is a good in itself, though nothing came of it, and is especially worth seeking and cherishing: yet, after all, the blessings which attend its presence are so great, while they are so close to it and so redound back upon it and encircle it, that we never think of it except as useful as well as good, and praise and prize it for what it does,

as well as for what it is, though at the same time we cannot point out any definite and distinct work or production which it can be said to effect. And so as regards intellectual culture, I am far from denying utility in this large sense as the end of Education, when I lay it down, that the culture of the intellect is a good in itself and its own end; I do not exclude from the idea of intellectual culture what it cannot but be, from the very nature of things; I only deny that we must be able to point out, before we have any right to call it useful, some art, or business, or profession, or trade, or work, as resulting from it, and as its real and complete end. The parallel is exact: As the body may be sacrificed to some manual or other toil, whether moderate or oppressive, so may the intellect be devoted to some specific profession; and I do not call this the culture of the intellect. Again, as some member or organ of the body may be inordinately used and developed, so may memory, or imagination, or the reasoning faculty; and this again is not intellectual culture. On the other hand, as the body may be tended, cherished, and exercised with a simple view to its general health, so may the intellect also be generally exercised in order to its perfect state; and this is its cultivation.

Newman, Idea of a University, Discourse VII

75 Culture is indispensably necessary, and culture is *reading*; but reading with a purpose to guide it, and with system. He does a good work who does anything to help this: indeed, it is the one essential service now to be rendered to education.

Arnold, Literature and Dogma, Pref.

76 Soap and education are not as sudden as a massacre, but they are more deadly in the long run.

Mark Twain, The Facts Concerning the Recent Resignation

77 Education in the long run is an affair that works itself out between the individual student and his opportunities. Methods of which we talk so much, play but a minor part. Offer the opportunities, leave the student to his natural reaction on them, and he will work out his personal destiny, be it a high one or a low one.

William James, Stanford's Ideal Destiny

78 There are many paths to knowledge already discovered; and no enlightened man doubts that there are many more waiting to be discovered. Indeed, all paths lead to knowledge; because even the vilest and stupidest action teaches us some-thing about vileness and stupidity, and may accidentally teach us a good deal more.

Shaw, Doctor's Dilemma, Pref.

79 In truth, mankind cannot be saved from without by schoolmasters or any other sort of masters: it can only be lamed and enslaved by them. It is said that if you wash a cat it will never again wash itself. This may or may not be true: what is certain is that if you teach a man anything he will never learn it; and if you cure him of a disease he will be unable to cure himself the next time it attacks him. Therefore, if you want to see a cat clean, you throw a bucket of mud over it, when it will immediately take extraordinary pains to lick the mud off, and finally be cleaner than it was before. In the same way doctors who

are up-to-date (say .00005 per cent of all the registered practitioners, and 20 per cent of the unregistered ones), when they want to rid you of a disease or a symptom, inoculate you with that disease or give you a drug that produces that symptom, in order to provoke you to resist it as the mud provokes the cat to wash itself.

Shaw, Back to Methuselah, Pref.

80 Culture is activity of thought, and receptiveness to beauty and humane feeling. Scraps of information have nothing to do with it, A merely well-in-formed man is the most useless bore on God's earth. What we should aim at producing is men who possess both culture and expert knowledge in some special direction. Their expert knowledge will give them the ground to start from, and their culture will lead them as deep as philosophy and as high as art. We have to remember that the valuable intellectual development is self-development, and that it mostly takes place between the ages of sixteen and thirty. As to training, the most important part is given by mothers before the age of twelve.

Whitehead, Aims of Education

81 There is only one subject-matter for education, and that is Life in all its manifestations. Instead of this single unity, we offer children—Algebra, from which nothing follows; Geometry, from which nothing follows; Science, from which nothing follows; History, from which nothing follows; a Couple of Languages, never mastered; and lastly, most dreary of all, Literature, represented by plays of Shakespeare, with philological notes and short analyses of plot and character to be in substance

committed to memory. Can such a list be said to represent Life, as it is known in the midst of the living of it? The best that can be said of it is, that it is a rapid table of contents which a deity might run over in his mind while he was thinking of creating a world, and had not yet determined how to put it together.

Whitehead, Aims of Education

82 The merit of this study [of Roman history] in the education of youth is its concreteness, its inspiration to action, and the uniform greatness of persons, in their characters and their staging. Their aims were great, their virtues were great, and their vices were great. They had the saving merit of sinning with cart-ropes. Moral education is impossible apart from the habitual vision of greatness. If we are not great, it does not matter what we do or what is the issue. Now the sense of greatness is an immediate intuition and not the conclusion of an argument. It is permissible for youth in the agonies of religious conversion to entertain the feeling of being a worm and no man, so long as there remains the conviction of greatness sufficient to justify the eternal wrath of God. The sense of greatness is the groundwork of morals. We are at the threshold of a democratic age, and it remains to be determined whether the equality of man is to be realised on a high level or a low level. There was never a time in which it was more essential to hold before the young the vision of Rome: in itself a great drama, and with issues greater than itself.

Whitehead, The Place of Classics in Education

83 Education is, as a rule, the strongest force on the side of what exists and against fundamental change: threatened institutions, while they are still powerful, possess themselves of the educational machine, and instill a respect for their own excellence into the malleable minds of the young. Reformers retort by trying to oust their opponents from their position of vantage. The children themselves are not considered by either party; they are merely so much material, to be recruited into one army or the other. If the children themselves were considered, education would not aim at making them belong to this party or that, but at enabling them to choose intelligently between the parties; it would aim at making them able to think, not at making them think what their teachers think. Education as a political weapon could not exist if we respected the rights of children. If we respected the rights of children, we should educate them so as to give them the knowledge and the mental habits required for forming independent opinions; but education as a political institution endeavors to form habits and to circumscribe knowledge in such a way as to make one set of opinions inevitable.

Russell, Education

84 The joy of mental adventure is far commoner in the young than in grown men and women. Among children it is very common, and grows naturally out of the period of make-believe and fancy. It is rare in later life because everything is done to kill it during education.

Russell, Education

85 A community of men and women possessing vitality, courage, sensitiveness, and intelligence, in the highest degree that education can produce, would be very different from anything that has hitherto existed. Very few people would be unhappy. The main causes of unhappiness at present are: ill-health, poverty, and an unsatisfactory sex-life. All of these would become very rare. Good health could be almost universal, and even old age could be postponed. Poverty, since the industrial revolution, is only due to collective stupidity. Sensitiveness would make people wish to abolish it, intelligence would show them the way, and courage would lead them to adopt it. (A timid person would rather remain miserable than do anything unusual.) Most people's sex-life, at present, is more or less unsatisfactory. This is partly due to bad education, partly to persecution by the authorities and Mrs. Grundy. A generation of women brought up without irrational sex fears would soon make an end of this. Fear has been thought the only way to make women "virtuous," and they have been deliberately taught to be cowards, both physically and mentally. Women in whom love is cramped encourage brutality and hypocrisy in their husbands, and distort the instincts of their children. One generation of fearless women could transform the world, by bringing into it a generation of fearless children, not contorted into unnatural shapes, but straight and candid, generous, affectionate, and free. Their ardor would sweep away the cruelty and pain which we endure because we are lazy, cowardly, hard-hearted and stupid. It is education that gives us these bad qualities, and education that must give us the opposite virtues. Education is the key to the new world.

Russell, Aims of Education

86 The educability of a young person as a rule comes to an end when sexual desire breaks out in its final strength. Educators know this and act accordingly; but perhaps they will yet allow themselves to be influenced by the results of psycho-analysis so that they will transfer the main emphasis in education to the earliest years of childhood, from the suckling period onward. The little human being is frequently a finished product in his fourth or fifth year, and only gradually reveals in later years what lies buried in him.

Freud, General Introduction to Psycho-Analysis, XXII

87 We may reject knowledge of the past as the *end* of education and thereby only emphasize its importance as a *means*. When we do that we have a problem that is new in the story of education: How shall the young become acquainted with the past in such a way that the acquaintance is a potent agent in appreciation of the living present?

Dewey, Experience and Education, I

88 Education as growth or maturity- should be an ever-present process.

Dewey, Experience and Education, III

89 In its contrast with the ideas both of unfolding of latent powers from within, and of formation from without, whether by physical nature or by the cultural products of the past, the ideal of growth results in the conception that education is a constant reorganizing or reconstructing of experience. It has all the time an

immediate end, and so far as activity is educative, it reaches that end—the direct transformation of the quality of experience. Infancy, youth, adult life--all stand on the same educative level in the sense that what is really learned at any and every stage of experience constitutes the value of that experience, and in the sense that it is the chief business of life at every point to make living thus contribute to an enrichment of its own perceptible meaning.

We thus reach a technical definition of education: It is that reconstruction or reorganization of experience which adds to the meaning of experience, and which increases ability to direct the course of subsequent experience.

Dewey, Democracy and Education, VI

90 The only adequate training for occupations is training *through* occupations. The principle... that the educative process is its own end, and that the only sufficient preparation for later responsibilities comes by making the most of immediately present life, applies in full force to the vocational phases of education. The dominant vocation of all human beings at all times is living—intellectual and moral growth.

Dewey, Democracy and Education, XXIII

8.2 Habit

The ancient saying that habit is a kind of second nature explains the significance of habit and habit-formation for the process of education. If men were born with their natures perfected, with no room for improvement, with no

potentialities to be realized, they would not need and could not use education. Precisely because they are born with room for improvement, they can be and need to be educated, and this usually takes the form of giving them a "second nature"—a set of acquired habits that, once they are well established, operate as smoothly as their original nature.

Some of the passages quoted deal with the psychology of habit and habit-formation, and with the conditions under which habits are acquired, strengthened, weakened, and changed. Other passages present distinctions among kinds of habit, especially the difference between habits of mind (of thought and knowledge) and habits of character (of action and of emotion). This, of course, has a bearing on the distinction between intellectual and moral training—the effort, on the one hand, to form or inculcate good intellectual habits; and the effort, on the other hand, to instill good moral habits. The discussion here tends to move from the domain of psychology to that of ethics, for the qualification of habits as good and bad introduces the notions of virtue and vice.

Learning would be fruitless if what is learned were not retained. One aspect of such retention, especially when the learning is verbal, is discussed under the head of memory, in Section 5.3 of Chapter 5 on Mind. The other, and much broader, aspect is discussed here.

■ ■ ■

- 1 Those things which one has been accustomed to for a long time, although worse than things which one is not

accustomed to, usually give less disturbance; but a change must sometimes be made to things one is not accustomed to.

Hippocrates, Aphorisms, II, 50

- 2 *Socrates*. Is not the bodily habit spoiled by rest and idleness, but preserved for a long time by motion and exercise?

Theaetetus. True.

Soc. And what of the mental habit? Is not the soul informed, and improved, and preserved by study and attention, which are motions; but when at rest, which in the soul only means want of attention and study, is uninformed, and speedily forgets whatever she has learned?

Theaet. True.

Plato, Theaetetus, 153A

- 3 The effect which lectures produce on a hearer depends on his habits; for we demand the language we are accustomed to, and that which is different from this seems not in keeping but somewhat unintelligible and foreign because of its unwontedness. For it is the customary that is intelligible. The force of habit is shown by the laws, in which the legendary and childish elements prevail over our knowledge about them, owing to habit. Thus some people do not listen to a speaker unless he speaks mathematically, others unless he gives instances, while others expect him to cite a poet as witness. And some want to have everything done accurately, while others are annoyed by accuracy, either because they cannot follow the connexion of thought or

because they regard it as pettifoggery. For accuracy has something of this character, so that as in trade so in argument some people think it mean. Hence one must be already trained to know how to take each sort of argument.

Aristotle, Metaphysics, 994b31

- 4 Virtue, then, being of two kinds, intellectual and moral, intellectual virtue in the main owes both its birth and its growth to teaching (for which reason it requires experience and time), while moral virtue comes about as a result of habit, whence also its name is one that is formed by a slight variation from the word habit. From this it is also plain that none of the moral virtues arises in us by nature; for nothing that exists by nature can form a habit contrary to its nature. For instance the stone which by nature moves downwards cannot be habituated to move upwards, not even if one tries to train it by throwing it up ten thousand times; nor can fire be habituated to move downwards, nor can anything else that by nature behaves in one way be trained to behave in another. Neither by nature, then, nor contrary to nature do the virtues arise in us; rather we are adapted by nature to receive them, and are made perfect by habit.

Again, of all the things that come to us by nature we first acquire the potentiality and later exhibit the activity (this is plain in the case of the senses; for it was not by often seeing or often hearing that we got these senses, but on the contrary we had them before we used them, and did not come to have them by using them); but the virtues we get by first exercising them, as also happens in the case of the arts as well. For the things we have to learn before we can do them, we learn by doing them, for

example, men become builders by building and lyre-players by playing the lyre; so too we become just by doing just acts, temperate by doing temperate acts, brave by doing brave acts....

Thus, in one word, states of character arise out of like activities. This is why the activities we exhibit must be of a certain kind; it is because the states of character correspond to the differences between these. It makes no small difference, then, whether we form habits of one kind or of another from our very youth; it makes a very great difference, or rather *all* the difference.

Aristotle, 1103a14

- 5 By abstaining from pleasures we become temperate, and it is when we have become so that we are most able to abstain from them; and similarly too in the case of courage; for by being habituated to despise things that are terrible and to stand our ground against them we become brave, and it is when we have become so that we shall be most able to stand our ground against them.

Aristotle, Ethics, 1104a33

- 6 Habit is a kind of second nature.

Cicero, De Finibus, V

- 7 Every habit and faculty is maintained and increased by the corresponding actions: the habit of walking by walking, the habit of running by running. If you would be a good reader, read; if a writer, write.

Epictetus, Discourses, II, 18

- 8 If you would make anything a habit, do it; if you would not make it a habit, do not do it, but accustom yourself to do something else in place of it.

Epictetus, Discourses, II, 18

- 9 Some habits are infused by God into man, for two reasons. The first reason is because there are some habits by which man is well disposed to an end which exceeds the power of human nature, namely, the ultimate and perfect happiness of man. . . And since habits must be in proportion with that to which man is disposed by them, therefore it is necessary that those habits, which dispose to this end, exceed the power of human nature. Hence such habits can never be in man except by Divine infusion, as is the case with all gratuitous virtues.

The other reason is, because God can produce the effects of second causes without these second causes.... Just as, therefore, sometimes, in order to show His power. He causes health without its natural cause, but which nature could have caused, so also, at times, for the manifestation of His power, He infuses into man even those habits which can be caused by a natural power.

Aquinas, Summa Theologica, I-II, 51, 4

- 10 A habit is like a second nature, and yet it falls short of it. And so it is that while the nature of a thing cannot in any way be taken away from a thing, a habit is removed, though with difficulty.

Aquinas, Summa Theologica, 53, 1

- 11 The destruction or diminution of a habit results through cessation from act, in so far, that is, as we cease from

exercising an act which overcame the causes that destroyed or weakened that habit. For... habits are destroyed or diminished directly through some contrary agency. Consequently all habits that are gradually undermined by contrary agencies which need to be counteracted by acts proceeding from those habits are diminished or even destroyed altogether by long cessation from act, as is clearly seen in the case both of science and of virtue. For it is evident that a habit of moral virtue makes a man ready to choose the mean in deeds and passions. And when a man fails to make use of his virtuous habit in order to moderate his own passions or deeds, the necessary result is that many passions and deeds occur outside the mode of virtue, by reason of the inclination of the sensitive appetite and of other external agencies. Therefore virtue is destroyed or lessened through cessation from act.—The same applies to the intellectual habits, which render man ready to judge rightly of those things that are pictured by his imagination. Hence when man ceases to make use of his intellectual habits, strange fancies, sometimes in opposition to them, arise in his imagination, so that unless those fancies be, as it were, cut off or kept back by frequent use of his intellectual habits, man becomes less fit to judge rightly and sometimes is even wholly disposed to the contrary'; and thus the intellectual habit is diminished or even wholly destroyed by cessation from act.

Aquinas, Summa Theologica, I-II, 53, 3

12 Virtue is a habit by which we work well.

Aquinas, Summa Theologica, I-II, 56, 3

13 Habit is a violent and treacherous schoolmistress. She establishes in us, little by little, stealthily, the foothold of her authority; but having by this mild and humble beginning settled and planted it with the help of time, she soon uncovers to us a furious and tyrannical face against which we no longer have the liberty of even raising our eyes. We see her at every turn forcing the rules of nature,

Montaigne, Essays, I, 23, Of Custom

14 I find that our greatest vices take shape from our tenderest childhood, and that our most important training is in the hands of nurses. It is a pastime for mothers to see a child wring the neck of a chicken or amuse itself by hurting a dog or a cat; and there are fathers stupid enough to take it as a good omen of a martial soul when they see a son unjustly striking a peasant or a lackey who is not defending himself, and as a charming prank when they see him trick his playmate by a bit of malicious dishonesty and deceit. Nevertheless these are the true seeds and roots of cruelty, tyranny, and treason; they sprout there, and afterward shoot up lustily, and flourish mightily in the hands of habit. And it is a very dangerous educational policy to excuse our children for these ugly inclinations on the grounds of their tender age and the triviality of the subject. In the first place, it is nature speaking, whose voice then is all the purer and stronger because it is more tenuous. Second, the ugliness of cheating does not depend on the difference between crown pieces and pins: it depends on itself. I find it much more just to come to this conclusion: "Why would he not cheat for crowns, since he cheats for pins?" than, as they do: "It is only for pins, he would

never do it for crowns." Children must be carefully taught to hate vices for their own sake, and taught the natural deformity of vices, so that they will shun them not only in their actions but above all in their heart, so that the very thought of them may be odious, whatever mask they wear.

Montaigne, Essays, I, 23, Of Custom

15 Habituation puts to sleep the eye of our judgment.

Montaigne, Essays, I, 23, Of Custom

16 Habit is a second nature, and no less powerful. What my habit lacks, I hold that I lack. And I would almost as soon be deprived of life as have it reduced and cut down very far from the state in which I have lived it for so long.

Montaigne, Essays, III, 10, Of Husbanding Your Will

17 *Hamlet* Assume a virtue, if you have it not.
That monster, custom, who all sense doth cat,
Of habits devil, is angel yet in this,
That to the use of actions fair and good
He likewise gives a frock or livery,
That aptly is put on. Refrain to-night,
And that shall lend a kind of easiness
o the next abstinence; the next more easy;
For use almost can change the stamp of nature,
And either master the devil, or throw him out
With wondrous potency.

Shakespeare, Hamlet, III, iv, 160

18 *Hamlet*. Has this fellow no feeling of his business,
that he sings at grave-making?

Horatio. Custom hath made it in him a property of easiness.

Ham. 'Tis e'en so. The hand of little employment hath the daintier sense.

Shakespeare, Hamlet, V, i, 73

- 20 Custom is most perfect when it beginneth in young years: this we call education; which is, in effect, but an early custom.

Bacon, Of Custom and Education

- 20 Our senses, our appetites, and our passions, are our lawful and faithful guides in most things that relate solely to this life; and therefore, by the hourly necessity of consulting them, we gradually sink into an implicit submission and habitual confidence. Every act of compliance with their motions facilitates a second compliance, every new step towards depravity is made with less reluctance than the former, and thus the descent to life merely sensual is perpetually accelerated.

Johnson, Rambler No. 7

- 21 Johnson observed, that the force of our early habits was so great, that though reason approved, nay, though our senses relished a different course, almost every man returned to them. I do not believe there is any observation upon human nature better founded than this; and, in many cases, it is a very painful truth; for where early habits have been mean and wretched, the joy and elevation resulting from better modes of life must be damped by the gloomy consciousness of being under an almost inevitable doom to sink back into a situation

which we recollect with disgust. It surely may be prevented, by constant attention and unremitting exertion to establish contrary habits of superiour efficacy.

Boswell, Life of Johnson (Apr. 18, 1775)

If habit is not a result of resolute and firm principles ever more and more purified, then, like any jt Cr mechanism of technically-practical reason, it is neither armed for all eventualities nor adequately secured against changes that may be brought about by new allurements.

Kant, Introduction to the Metaphysical Elements of Ethics, II

23 The habitual practice of ethical living appear, as a second nature which, put in the place of the initial, purely natural will, is the soul of custom permeating it through and through.

Hegel, Philosophy of Right, 151

24 Habit is everything. Hence to be calm and unruffled is merely to anticipate a habit; and it is a great advantage not to need to form it.

Schopenhauer, Wisdom of Life: Aphorisms

25 The force of character is cumulative. AH the foregone days of virtue work their health into this.

Emerson, Self-Reliance

26 That which is the result of habit affords no presumption of being intrinsically good.

Mill, Utilitarianism, IV

27 Habit is habit, and not to be flung out of the window by any man, but coaxed downstairs a step at a time.

Mark Twain, Pudd'nhead Wilson's Calendar, VI

28 Nothing so needs reforming as other people's habits.

Mark Twain, Pudd'nhead Wilson's Calendar, XV

29 One will seldom go wrong if one attributes extreme actions to vanity, average ones to habit, and petty ones to fear.

Nietzsche, Human, All-Too-Human, 74

30 Habit is . . . the enormous fly-wheel of society, its most precious conservative agent. It alone is what keeps us all within the bounds of ordinance, and saves the children of fortune from the envious uprisings of the poor. It alone prevents the hardest and most repulsive walks of life from being deserted by those brought up to tread therein. It keeps the fisherman and the deck-hand at sea through the winter; it holds the miner in his darkness, and nails the countryman to his log-cabin and his lonely farm through all the months of snow; it protects us from invasion by the natives of the desert and the frozen zone. It dooms us all to fight out the battle of life upon the lines of our nurture or our early choice, and to make the best of a pursuit that disagrees, because there is no other for which we are fitted, and it is too late to begin again. It keeps different social strata from mixing. Already at the age of twenty-five you see the professional mannerism settling down on the young commercial traveller, on the young doctor, on the young minister, on the young counsellor-at-law. You see the little lines of cleavage

running through the character, the tricks of thought, the prejudices, the ways of the “shop,” in a word, from which the man can by-and-by no more escape than his coat-sleeve can suddenly fall into a new set of folds. On the whole, it is best he should not escape. It is well for the world that in most of us, by the age of thirty, the character has .set like plaster, and will never soften again.

William James, Psychology, IV

- 31 The physiological study of mental conditions is thus the most powerful ally of hortatory ethics. The hell to be endured hereafter, of which theology tells, is no worse than the hell we make for ourselves in this world by habitually fashioning our characters in the wrong way. Could the young but realize how soon they will become mere walking bundles of habits, they would give more heed to their conduct while in the plastic state. We are spinning our own fates, good or evil, and never to be undone. Every smallest stroke of virtue or of vice leaves its never so little scar. The drunken Rip Van Winkle, in Jefferson’s play, excuses himself for every fresh dereliction by saying, “I won’t count this lime!” Well! he may not count it, and a kind Heaven may not count it; but it is being counted none the less. Down among his nerve-cells and fibres the molecules are counting it, registering and storing it up to be used against him when the next temptation comes. Nothing we ever do is, in strict scientific literalness, wiped out. Of course, this has its good side as well as its bad one. As we become permanent drunkards by so many separate drinks, so we become saints in the moral, and authorities and experts in the practical and scientific spheres, by so many

separate acts and hours of work. Let no youth have any anxiety about the upshot of his education, whatever the line of it may be. If he keep faithfully busy each hour of the working-day, he may safely leave the final result to itself. He can with perfect certainty-count on waking up some fine morning, to find himself one of the competent ones of his generation, in whatever pursuit he may have singled out. Silently, between all the details of his business, the power of judging in all that class of matter will have built itself up within him as a possession that will never pass away. Young people should know this truth in advance. The ignorance of it has probably engendered more discouragement and faintheartedness in youths embarking on arduous careers than all other causes put together.

William James, Psychology, IV

- 32 We may say that an "instinctive" movement is a vital movement performed by an animal the first time that it finds itself in a novel situation; or more correctly, one which it would perform if the situation were novel....

On the other hand, a movement is "learnt," or embodies a "habit," if it is due to previous experience of similar situations, and is not what it would be if the animal had had no such experience.

Russell, The Analysis of Mind, II

- 33 The basic characteristic of habit is that every- experience enacted and undergone modifies the one who acts and undergoes, while this modification affects, whether we wish it or not, the quality of subsequent experiences. For it is a somewhat different person who enters into them.

The principle of habit so understood obviously goes deeper than the ordinary- conception of a habit as a more or less fixed way of doing things, although it includes the latter as one of its special cases. It covers the formation of attitudes, attitudes that are emotional and intellectual; it covers our basic sensitivities and ways of meeting and responding to all the conditions which we meet in living.

Dewey, Experience and Education, III

34 It is a significant fact that in order to appreciate the peculiar place of habit in activity we have to betake ourselves to bad habits, foolish idling, gambling, addiction to liquor and drugs. When we think of such habits, the union of habit with desire and with propulsive power is forced upon us. When we think of habits in terms of walking, playing a musical instrument, typewriting, we are much given to thinking of habits as technical abilities existing apart from our likings and as lacking in urgent impulsion. We think of them as passive tools waiting to be called into action from without. A bad habit suggests an inherent tendency to action and also a hold, command over us. It makes us do things we are ashamed of, things which we tell ourselves we prefer not to do. It overrides our formal resolutions, our conscious decisions. When we are honest with ourselves we acknowledge that a habit has this power because it is so intimately a part of ourselves. It has a hold upon us because we are the habit.

Dewey, Human Nature and Conduct, 1, 2

8.3 The Arts of Teaching and Learning

The Greek sophists, we are told, were the first professional teachers, who performed their services for pay. In replying to his accusers at his trial, Socrates called attention to the fact that he never took money for the kind of teaching he did. Yet many of the passages quoted here and in other sections dialogues of Plato not only exhibit Socrates as an extraordinary teacher, but also expound his conception of teaching it-self. Perhaps the most illuminating passage on the subject is the one in which Socrates compares himself to a midwife who does nothing more than help the mother give birth to offspring. So the teacher helps anyone wishing to learn give birth to ideas. The primary activity is in the learner, not the teacher, as it is in the mother, not the mid-wife.

There are other passages in which education and medicine, or teaching and healing, are compared. They are said to be alike in being arts that cooperate with living nature rather than make products by transforming inert matter. Human beings have a natural aptitude for acquiring knowledge and health without the help of teachers and physicians, though those who have skill in teaching or healing can facilitate the natural process.

One of the puzzling questions touched on by several of the writers quoted here is whether anything that one person can teach another must itself have been learned by someone without the aid of a teacher. From an affirmative answer spring controlling insights about the institutions, methods, and resources of education.

Another puzzling question is whether, or to what extent, coercion or punishment should be employed by the teacher in instructing his pupils. On the one hand, it is asserted that things learned under duress are not really learned, or at least not retained. On the other hand, it is pointed out that

some kind of discipline must be maintained by the teacher if he is to do his job effectively.

Finally, on the side of learning itself, there is the fundamental distinction proposed by Aquinas—that between learning by instruction (i.e., with the aid of teachers) and learning by discovery (i.e., without the aid of teachers). But if, as other passages in this section suggest, the teacher is always only an instrumental, and never the principal, cause of learning, then perhaps all genuine learning is learning by discovery, involving intense activity on the part of the learner, whether such discovery is accomplished with the instrumentality of teachers or not.

■ ■ ■

- 1 Whoever is to acquire a competent knowledge of medicine, ought to be possessed of the following advantages: a natural disposition; instruction; a favorable position for the study; early tuition; love of labor; leisure. First of all, a natural talent is required; for, when Nature opposes, everything else is in vain; but when Nature leads the way to what is most excellent, instruction in the art takes place, which the student must try to appropriate to himself by reflection, becoming an early pupil in a place well adapted for instruction. He must also bring to the task a love of labor and perseverance, so that the instruction taking root may bring forth proper and abundant fruits.

Hippocrates, The Law, 2

2 Instruction ... is like the culture of the productions of the earth. For our natural disposition is, as it were, the soil; the tenets of our teacher are, as it were, the seed; instruction in youth is like the planting of the seed in the ground at the proper season; the place where the instruction is communicated is like the food imparted to vegetables by the atmosphere; diligent study is like the cultivation of the fields; and it is time which imparts strength to all things and brings them to maturity.

Hippocrates, The Law, 3

3 *Socrates*. We are enquiring, which of us is skilful or successful in the treatment of the soul, and which of us has had good teachers?

Laches. Well but, *Socrates*; did you never observe that some persons, who have had no teachers, are more skilful than those who have, in some things?

Soc. Yes, *Laches*, I have observed that; but you would not be very willing to trust them if they only professed to be masters of their art, unless they could show some proof of their skill or excellence in one or more works.

La. That is true.

Soc. And therefore, *Laches* and *Nicias*, as *Lysimachus* and *Melesias*, in their anxiety to improve the minds of their sons, have asked our advice about them, we too should tell them who our teachers were, if we say that we have had any, and prove them to be in the first place men of merit and experienced trainers of the minds of youth and also to have been really our teachers. Or if any of us says that he has no teacher, but that he has works of his own to show; then he should point out to them what Athenians or strangers, bond or free, he is generally acknowledged to have improved. But if he can show

neither teachers nor works, then he should tell them to look out for others; and not run the risk of spoiling the children of friends, and thereby incurring the most formidable accusation which can be brought against any one by those nearest to him. As for myself, ... I am the first to confess that I have never had a teacher of the art of virtue; although I have always from my earliest youth desired to have one. But I am too poor to give money to the Sophists, who are the only professors of moral improvement; and to this day I have never been able to discover the art myself, though I should not be surprised if Nicias or Laches may have discovered or learned it; for they are far wealthier than I am, and may therefore have learnt of others. And they are older too; so that they have had more time to make the discovery. And I really believe that they are able to educate a man; for unless they had been confident in their own knowledge, they would never have spoken thus decidedly of the pursuits which are advantageous or hurtful to a young man.

Plato, Laches, 185B

- 4 *Socrates*. Is not a Sophist, Hippocrates, one who deals wholesale or retail in the food of the soul? To me that appears to be his nature.

Hippocrates. And what, Socrates, is the food of the soul?

Surely,... knowledge is the food of the soul-and we must take care, my friend, that the Sophist does not deceive us when he praises what he sells, like the dealers wholesale or retail who sell the food of the body; for they praise indiscriminately all their goods, without knowing what are really beneficial or hurtful; neither do their customers know, with the exception of any trainer or

physician who may happen to buy of them. In like manner those who carry about the wares of knowledge, and make the round of the cities, and sell or retail them to any customer who is in want of them, praise them all alike; though I should not wonder, O my friend, if many of them were really ignorant of their effect upon the soul; and their customers equally ignorant, unless he who buys of them happens to be a physician of the soul. If, therefore, you have understanding of what is good and evil, you may safely buy knowledge of Protagoras or of any one; but if not, then, O my friend, pause, and do not hazard your dearest interests at a game of chance. For there is far greater peril in buying knowledge than in buying meat and drink: the one you purchase of the wholesale or retail dealer, and carry them away in other vessels, and before you receive them into the body as food, you may deposit them at home and call in any experienced friend who knows what is good to be eaten or drunken, and what not, and how much, and when; and then the danger of purchasing them is not so great. But you cannot buy the wares of knowledge and carry them away in another vessel; when you have paid for them you must receive them into the soul and go your way, either greatly harmed or greatly benefited; and therefore we should deliberate and take counsel with our elders; for we are still young—too young to determine such a matter.

Plato, Protagoras, 313B

- 5 *Meno*. How will you enquire, Socrates, into that which you do not know? What will you put forth as the subject of enquiry? And if you find what you want, how will you ever know that this is the thing which you did not know?

Socrates. I know, Meno, what you mean; but just see what a tiresome dispute you are introducing. You argue that a man cannot enquire either about that which he knows, or about that which he does not know; for if he knows, he has no need to enquire; and if not, he cannot; for he does not know the very subject about which he is to enquire.

Meno. Well, Socrates, and is not the argument sound?

Soc. I think not.

Meno. Why not?

Soc. I will tell you why: I have heard from certain wise men and women who spoke of things divine that—

Meno. What did they say?

Soc. They spoke of a glorious truth, as I conceive.

Meno. What was it? and who were they?

Soc. Some of them were priests and priestesses, who had studied how they might be able to give a reason of their profession: there have been poets also, who spoke of these things by inspiration, like Pindar, and many others who were inspired. And they say . . . , that the soul of man is immortal, and at one time has an end, which is termed dying, and at another time is born again, but is never destroyed.... The soul, then, as being immortal, and having been born again many times, and having seen all things that exist, whether in this world or in the world below, has knowledge of them all; and it is no wonder that she should be able to call to remembrance all that she ever knew about virtue, and about everything; for as all nature is akin, and the soul has learned all things, there is no difficulty in her eliciting or as men say learning, out of a single recollection all the rest, if a man is strenuous and does not faint; for all enquiry and all learning is but recollection. And therefore we ought not to

listen to this sophistical argument about the impossibility of enquiry: for it will make us idle, and is sweet only to the sluggard; but the other saying will make us active and inquisitive.

Plato, Meno, 80B

- 6 *Soaates*. As little foundation is there for the report that I am a teacher, and take money; this accusation has no more truth in it than the other. Although, if a man were really able to instruct mankind, to receive money for giving instruction would, in my opinion, be an honour to him.

Plato, Apology, 19B

- 7 *Socrales*. the power and capacity of learning exists in the soul already; and . . . , just as the eye was unable to turn from darkness to light without the whole body, so too the instrument of knowledge can only by the movement of the whole soul be turned from the world of becoming into that of being, and learn by degrees to endure the sight of being, and of the brightest and best of being, or in other words, of the good.

Plato, Republic, VII, 518B

- 8 *Socrates*. Such are the midwives, whose task is a very important one, but not so important as mine; for women do not bring into the world at one time real children, and at another time counterfeits which are with difficulty distinguished from them; If they did, then the discernment of the true and false birth would be the crowning achievement of the art of midwifery—you would think so?

Theaetetus. Indeed I should.

Soc. Well, my art of midwifery is in most respects like theirs; but differs, in that I attend men and not women, and I look after their souls when they are in labour, and not after their bodies: and the triumph of my art is in thoroughly examining whether the thought which the mind of the young man brings forth is a false idol or a noble and true birth. And like the midwives, I am barren, and the reproach which is often made against me, that I ask questions of others and have not the wit to answer them myself, is very just—the reason is, that the god compels me to be a midwife, but does not allow me to bring forth. And therefore I am not myself at all wise, nor have I anything to show which is the invention or birth of my own soul, but those who converse with me profit. Some of them appear dull enough at first, but afterwards, as our acquaintance ripens, if the god is gracious to them, they all make astonishing progress; and this in the opinion of others as well as in their own. It is quite clear that they never learned anything from me; the many fine discoveries to which they cling are of their own making. But to me and the god they owe their delivery. And the proof of my words is, that many of them in their ignorance, either in their self-conceit despising me, or falling under the influence of others, have gone away too soon; and have not only lost the children of whom I had previously delivered them by an ill bringing up, but have stifled whatever else they had in them by evil communications, being fonder of lies and shams than of the truth; and they have at last ended by seeing themselves, as others see them, to be great fools.

Plato, Theaetetus, 150A

9 I imagine there is nothing to prevent a man in one sense knowing what he is learning, in another not knowing it. The strange thing would be, not if in some sense he knew what he was learning, but if he were to know it in that precise sense and manner in which he was learning it.

Aristotle, Posterior Analytics, 71b6

10 In general it is a sign of the man who knows and of the man who does not know, that the former can teach, and therefore we think art more truly knowledge than experience is; for artists can teach, and men of mere experience cannot.

Aristotle, Metaphysics, 981b7

11 Learning proceeds for all in this way—through that which is less knowable by nature to that which is more knowable; and just as in conduct our task is to start from what is good for each and make what is without qualification good good for each, so it is our task to start from what is more knowable to oneself and make what is knowable by nature knowable to oneself. Now what is knowable and primary for particular sets of people is often knowable to a very small extent, and has little or nothing of reality. But yet one must start from that which is barely knowable but knowable to oneself, and try to know what is knowable without qualification, passing, as has been said, by way of those very things which one does know.

Aristotle, Metaphysics, 1029b4

12 The pleasures arising from thinking and learning will make us think and learn all the more.

Aristotle, Ethics, 1153a22

- 13 The authority wielded by teachers is often a real hindrance to those who want to learn. Students fail to use their own judgment and rely on the opinions of their master to settle issues.

Cicero, De Natura Deorum, I, 5

- 14 Whosoever heareth these sayings of mine, and doeth them, I will liken him unto a wise man, which built his house upon a rock:

And the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell not; for it was founded upon a rock.

And every one that heareth these sayings of mine, and doeth them not, shall be likened unto a foolish man, which built his house upon the sand:

And the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell: and great was the fall of it.

And it came to pass, when Jesus had ended these sayings, the people were astonished at his doctrine:

For he taught them as one having authority, and not as the scribes.

Matthew 7:24—29

- 15 In education, it is most important to take care that the child does not come to despise working at lessons for which he has as yet developed no real appreciation. For then he will continue to dread them well beyond the years of childhood. Make his lessons an amusement for him. Question him on them and praise him for his work. Let him never be made to feel that he does not know a

thing. Sometimes, if he is unwilling to learn, teach someone else first, and he may become envious. Let him be occasionally competitive and allow him to feel successful in his attainments. Appeal to his abilities by offering rewards that are attractive to him.

Quintilian, Institutio Oratoria, I, 1

16 Would that we ourselves did not corrupt the morals of our children. We enervate their very infancy with luxuries. That delicacy of education which we call fondness, weakens all their powers, both of body and mind. What luxury will he not covet in his manhood, who has crawled about on purple as a child. He cannot yet articulate his first words, when he can already distinguish scarlet and wants his purple finery. we prompt the palate of the child to develop fine tastes, before we teach him to speak. Our children grow up riding in sedan chairs. If they touch the ground, they cling to the hands of attendants who support them on each side. we are delighted if they utter something immodest, Expressions which would not even be tolerated from the effeminate youths of Alexandria, we hear from our own young people with a smile and a kiss. And this is hardly amazing, for we are the ones who have taught them. They have heard such language from ourselves. They see our mistresses and our male objects of affection. Every banquet hall rings with impure songs. Things that are shameful to talk about are on public display. From such practices spring habit, and out of habit character is formed. The unfortunate children learn these vices before they know that they are vices. Thus they are made effeminate and luxury-loving. They do not imbibe immorality from the schools; they carry it to school with them.

Quintilian, Institutio Oratoria, I, 2

- 17 There is nothing to prevent a "one pupil-one teacher" relationship from being put into practice in the classroom. But even if this situation cannot be developed in school, I still prefer the daylight of a good school to the dark solitude of a private education. Every eminent teacher delights in having a large number of pupils, and he thinks himself worthy of an even larger hearing than he gets. But inferior teachers are conscious of their lack of ability and do not hesitate to fasten themselves on single pupils if they can get them. But they amount to nothing more than pedant-babysitters.

Quintilian, Institutio Oratoria, I, 2

- 18 A good schoolmaster should not encumber himself with a greater number of pupils than he can adequately handle. we also feel it vitally important that the teacher be a real friend to his pupils, so that he will turn his task from a performance of duty into a labor of love.

Quintilian, Institutio Oratoria, I, 2

- 19 Narrow-necked vessels reject a great deal of any liquid that is poured over them, but are filled up with whatever is gradually poured into them. Likewise, it is for us to ascertain how much the minds of boys can receive at any one time. What is too much for their minds to grasp will not enter at all, because their minds are not sufficiently expanded to accept it. It is a real advantage for any boy to have classmates whom he may imitate, and eventually surpass. By this means he will gradually come to hope to reach higher excellence.

Quintilian, Institutio Oratoria, 1, 2

20 I do not believe that boys should have to suffer corporal punishment, even though it has long been an accepted custom. First of all, it is a disgrace and a punishment fit for slaves, and (if you can imagine it being inflicted at a later age) an affront. Secondly, if a boy's disposition is so abject that he cannot be corrected by reproof, he is only likely to be hardened, as a slave would be, by a whipping. And lastly, if the teacher really knows how to be a disciplinarian, there will not be the least need of any such chastisement. There currently seems to be so much negligence among teachers, that boys are not obliged to do what is right, yet they are punished whenever they have not done it. But consider, after you have coerced a boy with punishment, how will you treat him when he has become a young man to whom a threat of such punishment is meaningless, but whose studies are even more difficult? On top of all this, you realize that many unpleasant things often happen to boys as they are punished, things which they later recall with shame. Such shame depresses and enervates the mind, makes them shun other people, and feel constantly uneasy. Moreover, if there has been too little care taken in choosing teachers and tutors of reputable character, I am ashamed to mention how scandalously unworthy men may abuse their privilege of inflicting punishment, as well as what opportunities may be offered to others in the terrors of unhappy children.

Quintilian, Institutio Oratoria, 1, 3

23 Looking upon the instruction and tuition of his youth to be of greater difficulty and importance than to be wholly

trusted to the ordinary masters in music and poetry, and the common school subjects ... he [Philip] sent for Aristotle, the most learned and most celebrated philosopher of his time, and rewarded him with a munificence proportionable to and becoming the care he took to instruct his son. For he repeopled his native city Stagira, which he had caused to be demolished a little before, and restored all the citizens, who were in exile or slavery, to their habitations.

As a place for the pursuit of their studies and exercise, he assigned the temple of the Nymphs, near Mieza, where, to this very day, they show you Aristotle's stone seats, and the shady walks which he was wont to frequent.

It would appear that Alexander received from him not only his doctrines of morals and of politics, but also something of those more abstruse and profound theories which these philosophers, by the very names they gave them, professed to reserve for oral communications to the initiated, and did not allow many to become acquainted with. ...

Doubtless also it was to Aristotle that he owed the inclination he had, not to the theory only, but likewise to the practice of the art of medicine. For when any of his friends were sick, he would often prescribe them their course of diet, and medicines proper to their disease, as we may find in his epistles. He was naturally a great lover of all kind of learning and reading; and Onesicritus informs us that he constantly laid Homer's *Iliad* according to the copy corrected by Aristotle, called the casket copy, with his dagger under his pillow, declaring that he esteemed it a perfect portable treasure of all military virtue and knowledge....

For a while he loved and cherished Aristotle no less, as he was wont to say himself, than if he had been his father, giving this reason for it, that as he had received life from the one, so the other had taught him to live well. But afterwards, upon some mistrust of him, yet not so great as to make him do him any hurt, his familiarity and friendly kindness to him abated so much of its former force and affectionateness, as to make it evident he was alienated from him. However, his violent thirst after and passion for learning, which were once implanted, still grew up with him, and never decayed.

Plutarch, Alexander

- 22 The teachers we select for our children must live lives immune to scandal, be irreproachable in conduct, and conversant with respectable society. The fountain and root of gentlemanliness is the acquisition of traditional education.

Plutarch, Education of Children

- 23 The memorizing aspect of learning contributes no small share not only to education but also to the practical conduct of life, for the memory of past deeds provides examples in taking good counsel for the future.

Plutarch, Education of Children

- 24 Each schoolboy, in turn, gets up, and, standing, delivers What he's just read sitting down, in the most monotonous singsong.
This is the kind of rehash that kills unfortunate masters.

Juvenal, Satire VII

25 It is no easy task to keep your eye on the students,
Watching the hands and the eyes of the impudent
mischievous devils.
"That's your job," they say, and your pay, at the end of a
twelve-month.
Equals a jockey's fee if he's ridden only one winner.

Juvenal, Satire VII

26 Not even wisdom perhaps is enough to enable a man to
take care of youths: a man must have also a certain
readiness and fitness for this purpose, and a certain
quality of body, and above all things he must have God
to advise him to occupy this office, as God advised
Socrates to occupy the place of one who confutes error,
Diogenes the office of royalty and reproof, and the office
of teaching precepts.

Epictetus, Discourses, III, 21

27 He whose purpose is to know anything better than the
multitude do must far surpass all others both as regards
his nature and his early training. And when he reaches
early adolescence he must become possessed with an
ardent love for truth, like one inspired; neither day nor
night may he cease to urge and strain himself in order to
learn thoroughly all that has been said by the most
illustrious of the Ancients. And when he has learnt this,
then for a prolonged period he must test and prove it,
observing what part of it is in agreement, and what in
disagreement with obvious fact; thus he will choose this
and turn away from that,

Galen, Natural Faculties, III, 10

28 I disliked learning and hated to be forced to it. But I was forced to it, so that good was done to me though it was not my doing. Short of being driven to it, I certainly would not have learned. But no one does well against his will, even if the thing he does is a good thing to do.

Augustine, Confessions, I, 12

29 The drudgery of learning a foreign language sprinkled bitterness over all the sweetness of the Greek tales. I did not know a word of the language: and I was driven with threats and savage punishments to learn. There had been a time of infancy when I knew no Latin either. Yet I learnt it without threat or punishment merely by keeping my eyes and ears open, amidst the Battering of nurses and the jesting and pleased laughter of elders leading me on, I learnt it without the painful pressure of compulsion, by the sole pressure of my own desire to express what was in my mind, which would have been impossible unless I had learnt words: and I learnt them not through people teaching me but simply through people speaking: to whom I was striving to utter my own feelings. All this goes to prove That free curiosity is of more value in learning than harsh discipline.

Augustine, Confessions, I, 14

30 It is the duty ... of the interpreter and teacher of Holy Scripture, the defender of the true faith and the opponent of error, both to teach what is right and to refute what is wrong, and in the performance of this task to conciliate the hostile, to rouse the careless, and to tell the ignorant both what is occurring at present and what is probable in the future. But once that his hearers are friendly,

attentive, and ready to learn, whether he has found them so, or has himself made them so, the remaining objects are to be carried out in whatever way the case requires. If the hearers need teaching, the matter treated of must be made fully known by means of narrative. On the other hand, to clear up points that are doubtful requires reasoning and the exhibition of proofs. If, however, the hearers require to be roused rather than instructed, in order that they may be diligent to do what they already know, and to bring their feelings into harmony with the truths they admit greater vigour of speech is needed. Here entreaties and reproaches, exhortations and upbraidings and all the other means of rousing the emotions, are necessary.

Augustine, Christian Doctrine, IV 4

- 31 To strive about words is not to be careful about the way to overcome error by truth, but to be anxious that your mode of expression should be preferred to that of another. The man who does not strive about words, whether he speak quietly, temperately, or vehemently, uses words with no other purpose than to make the truth plain, pleasing, and effective.

Augustine, Christian Doctrine, IV, 28

- 32 Do teachers profess that it is their thoughts which are perceived and grasped by the students, and not the sciences themselves which they convey through speaking? For who is so stupidly curious as to send his son to school in order that he may learn what the teacher thinks? But all those sciences which they profess to teach, and the science of virtue itself and wisdom,

teachers explain through words. Then those who are called pupils consider within themselves whether what has been explained has been said truly; looking of course to that interior truth, according to the measure of which each is able. Thus they learn, and when the interior truth makes known to them that true things have been said, they applaud, but without knowing that instead of applauding teachers they are applauding learners, if indeed their teachers know what they are saying. But men are mistaken, so that they call those teachers who are not, merely because for the most part there is no delay between the time of speaking and the time of cognition. And since after the speaker has reminded them, the pupils quickly learn within, they think that they have been taught outwardly by him who prompts them.

Augustine, On the Teacher, XIV

33 Progress in knowledge occurs in two ways. First, on the part of the teacher, be he one or many, who makes progress in knowledge as time goes on. And this is the kind of progress that takes place in sciences devised by man. Secondly, on the part of the learner; thus the master, who has perfect knowledge of the art, does not deliver it all at once to his disciple from the very outset, for he would not be able to take it all in, but he condescends to the disciple's capacity and instructs him little by little.

Aquinas, Summa Theologica, II-II, 1, 7

34 Since there is a twofold way of acquiring knowledge—by discovery and by being taught—the way of discovery is the higher, and the way of being taught is secondary.

Aquinas, Summa Theologica, III, 9, 4

35 Certain seeds of knowledge pre-exist in us, namely, the first concepts of understanding, which by the light of the agent intellect are immediately known through the species abstracted from sensible things. These are either complex, as axioms, or simple, as the notions of being, of the one, and so on, which the understanding grasps immediately. In these general principles, however, all the consequences are included as in certain seminal principles. When, therefore, the mind is led from these general notions to actual knowledge of the particular things, which it knew previously in general and, as it were, potentially, then one is said to acquire knowledge.

We must bear in mind, nevertheless, that in natural things something can pre-exist in potency in two ways. In one, it is in an active and completed potency, as when an intrinsic principle has sufficient power to flow into perfect act. Healing is an obvious example of this, for the sick person is restored to health by the natural power within him. The other appears in a passive potency, as happens when the internal principle does not have sufficient power to bring it into act. This is clear when air becomes fire, for this cannot result from any power existing in the air.

Therefore, when something pre-exists in active completed potency, the external agent acts only by helping the internal agent and providing it with the means by which it can enter into act. Thus, in healing the doctor assists nature, which is the principal agent, by strengthening nature and prescribing medicines, which nature uses as instruments for healing. On the other hand, when something pre-exists only in passive potency,

then it is the external agent which is the principal cause of the transition from potency to act. Thus, fire makes actual fire of air, which is potentially fire.

Knowledge, therefore, pre-exists in the learner potentially, not, however, in the purely passive, but in the active, sense. Otherwise, man would not be able to acquire knowledge independently. Therefore, as there are two ways of being cured, that is, either through the activity of unaided nature or by nature with the aid of medicine, so also there are two ways of acquiring knowledge. In one way, natural reason by itself reaches knowledge of unknown things, and this way is called discovery; in the other way, when someone else aids the learner's natural reason, and this is called *learning by instruction*.

Aquinas, On Truth, XI, 1

- 36 We do not say that a teacher communicates knowledge to the pupil, as though the knowledge which is in the teacher is numerically the same as that which arises in the pupil. It is rather that the knowledge which arises in the pupil through teaching is similar to that which is in the teacher.

Aquinas, On Truth, XI, 1

- 37 A doctor heals in so far as he has health, not actually, but in the knowledge of his art. But the teacher teaches in so far as he has knowledge actually. Hence, he who does not have health actually can cause health in himself because he has health in the knowledge of his art. However, it is impossible for one actually to have knowledge and not to have it, in such a way that he could teach himself.

Aquinas, On Truth, XI, 2

38 *Pantagruel*. Nature, I am persuaded, did not without a cause frame our ears open, putting thereto no gate at all, nor shutting them up with any manner of inclosures, as she hath done upon the tongue, the eyes, and other such out-jetting parts of the body. The cause as I imagine, is, to the end that every day and every night, and that continually, we may be ready to hear, and by a perpetual hearing apt to learn. For, of all the senses, it is the fittest for the reception of the knowledge of arts, sciences, and disciplines.

Rabelais, Gargantua and Pantagruel, III, 16

39 Our tutors never stop bawling into our ears, as though they were pouring water into a funnel; and our task is only to repeat what has been told us. I should like the tutor to correct this practice, and right from the start, according to the capacity of the mind he has in hand, to begin putting it through its paces, making it taste things, choose them, and discern them by itself; sometimes clearing the way for him, sometimes letting him clear his own way. I don't want him to think and talk alone, I want him to listen to his pupil speaking in his turn. Socrates, and later Arcesilaus, first had their disciples speak, and then they spoke to them. ... It is good that he should have his pupil trot before him, to judge the child's pace and how much he must stoop to match his strength. For lack of this proportion we spoil everything; and to be able to hit it right and to go along in it evenly is one of the hardest tasks that I know; it is the achievement of a lofty and very strong soul to know how to come down to a childish gait and guide it.

Montaigne, Essays, I, 26, Education of Children

- 40 Let the tutor make his charge pass everything through a sieve and lodge nothing in his head on mere authority and trust.

Montaigne, Essays, I, 26, Education of Children

- 41 To know by heart is not to know; it is to retain what we have given our memory to keep. What we know rightly we dispose of, without looking at the model, without turning our eyes toward our book. Sad competence, a purely bookish competence!

Montaigne, Essays, I, 26, Education of Children

- 42 I condemn all violence in the education of a tender soul which is being trained for honor and liberty. There is a sort of servility about rigor and constraint; and I hold that what cannot be done by reason, and by wisdom and tact, is never done by force.

Montaigne, Essays, II, 8, Affection of Fathers

- 43 There is still more intelligence needed to teach others than to be taught.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

- 44 The study of books is a languishing and feeble activity that gives no heat, whereas discussion teaches and exercises us at the same time.

Montaigne, Essays, III, 8, Of the Art of Discussion

- 45 As regards the academies, they are established in order to regulate the studies of the pupils and are concerned

not to have the program of teaching change very often: in such places, because it is a question of the progress of the students, it frequently happens that the things which have to be chosen are not those which are most true but those which are most easy.

Kepler, Epitome of Copernican Astronomy, IV, To the Reader

46 *Portia*. It is a good divine that follows his own instructions: I can easier teach twenty what were good to be done, than be one of the twenty to follow mine own teaching.

Shakespeare, Merchant of Venice, I, ii, 15

47 Disciples do owe unto masters only a temporary belief and a suspension of their own judgement till they be fully instructed, and not an absolute resignation or perpetual captivity.

Bacon, Advancement of Learning, Bk. I, IV, 12

48 There is no defect in the faculties intellectual, but seemeth to have a proper cure contained in some studies: as, for example, if a child be bird-wilted, that is, hath not the faculty of attention, the mathematics giveth a remedy thereunto; for in them, if the wit be caught away but a moment, one is new to begin. And as sciences have a propriety towards faculties for cure and help, so faculties or powers have a sympathy towards sciences for excellency or speedy profiting: and therefore it is an inquiry of great wisdom, what kinds of wits and natures are most apt and proper for what sciences.

Bacon, Advancement of Learning, Bk. II, XIX, 2

49 Practise all things chiefly at two several times the one when the mind is best disposed, the other when it is worst disposed; that by the one you may gain a great step, by the other you may work out the knots and stonds of the mind, and make the middle times the more easy and pleasant.

Bacon, Advancement of Learning, Bk. II, XXII, 10

50 But all animals which along with memory have the faculty of hearing are susceptible of education. Other creatures, again, live possessed of fancy and memory, but they have little store of experience; the human kind, however, have both art and reasoning, Now experience comes to man through memory; for many memories of the same thing have the force of a single experience: so that experience appears to be almost identical with certain kinds of art and science; and, indeed, men acquire both art and science by experience: for experience, as Polus rightly remarks, begets art, inexperience is waited on by accident.

By this he plainly tells us that no one can truly be entitled discreet or well-informed, who does not of his own experience, i.e., from repeated memory, frequent perception by sense, and diligent observation, know that a thing is so in fact. Without these, indeed, we only imagine or believe, and such knowledge is rather to be accounted as belonging to others than to us. The method of investigating truth commonly pursued at this time, therefore, is to be held as erroneous and almost foolish, in which so many inquire what others have said, and omit to ask whether the things themselves be actually so or not; and single universal conclusions being deduced from several premises, and analogies being thence shaped

out, we have frequently mere verisimilitudes handed down to us instead of positive truths.

William Harvey, Animal Generation, Intro.

51 When we wish to correct with advantage and to show another that he errs, we must notice from what side he views the matter, for on that side it is usually true, and admit that truth to him, but reveal to him the side on which it is false. He is satisfied with that, for he sees that he was not mistaken and that he only failed to see all sides. Now, no one is offended at not seeing everything; but one does not like to be mistaken, and that perhaps arises from the fact that man naturally cannot see everything, and that naturally he cannot err in the side he looks at, since the perceptions of our senses are always true.

Pascal, Pensées, I, 9

52 People are generally better persuaded by the reasons which they have themselves discovered than by those which have come into the mind of others.

Pascal, Pensées, I, 10

53 Discerning minds know how much difference there is between two similar remarks, depending upon the place and accompanying circumstances. Will anyone really believe that two persons who have read and learned by heart the same book know it equally well, if one understands it in such a way that he knows all its principles, the force of its conclusions, the replies to the objections that can be made, and the entire organization of the work, whereas in the other the book is dead words

and seeds which, though the same as those that produced such fertile trees, have remained dry and unfruitful in the sterile mind which received them in vain?

Pascal, Geometrical Demonstration

54 The usual lazy and short way by chastisement and the rod, which is the only instrument of government that tutors generally know or ever think of, is the most unfit of any to be used in education.

Locke, Some Thoughts Concerning Education, 47

55 Esteem and disgrace are, of all others, the most powerful incentives to the mind, when once it is brought to relish them,. If you can once get into children a love of credit, and an apprehension of shame and disgrace, you have put into 'em the true principle, which will constantly work and incline them to the right.

Locke, Some Thoughts Concerning Education, 56

56 Children are not to be taught by rules which will be always slipping out of their memories. What you think necessary for them to do, settle in them by an indispensable practice, as often as the occasion returns; and if it be possible, make occasions. This will beget habits in them which being once established, operate of themselves easily and naturally, without the assistance of the memory.

Locke, Some Thoughts Concerning Education, 66

57 God has stamped certain characters upon men's minds, which like their shapes, may perhaps be a little mended,

but can hardly be totally altered and transformed into the contrary. He therefore that is about children should well study their natures and aptitudes, and see by often trials what turn they easily take, and what becomes them; observe what their native stock is, how it may be improved, and what it is fit for: he should consider what they want, whether they be capable of having it wrought into them by industry, and incorporated there by practice; and whether it be worth while to endeavor it. For in many cases, all that we can do, or should aim at, is to make the best of what nature has given, to prevent the vices and faults to which such a constitution is most inclined, and give it all the advantages it is capable of. Everyone's natural genius should be carried as far as it could; but to attempt the putting another upon him will be but labor in vain; and what is so plastered on will at best sit but untowardly, and have always hanging to it the ungracefulness of constraint and affectation.

Locke, Some Thoughts Concerning Education, 66

58 Of all the ways whereby children are to be instructed, and their manners formed, the plainest, easiest, and most efficacious, is to set before their eyes the examples of those things you would have them do or avoid; which, when they are pointed out to them, in the practice of persons within their knowledge, with some reflections on their beauty and unbecomingness, are of more force to draw or deter their imitation than any discourses which can be made to them. Virtues and vices can by no words be so plainly set before their understandings as the actions of other men will show them, when you direct their observation, and bid them view this or that good or bad quality in their practice. And the beauty or

uncomeliness of many things, in good and ill breeding, will be better learnt and make deeper impressions on them, in the examples of others, than from any rules or instructions can be given about them.

Locke, Some Thoughts Concerning Education, 82

59 As the father's example must teach the child respect for his tutor, so the tutor's example must lead the child into those actions he would have him do. His practice must by no means cross his precepts, unless he intend to set him wrong. It will be to no purpose for the tutor to talk of the restraint of the passions whilst any of his own are let loose; and he will in vain endeavor to reform any vice or indecency in his pupil which he allows in himself.

Locke, Some Thoughts Concerning Education, 89

60 In all the whole business of education, there is nothing like to be less hearkened to, or harder to be well observed, than what I am now going to say; and that is, that children should, from their first beginning to talk, have some discreet, sober, nay, wise person about them, whose care it should be to fashion them aright, and keep them from all ill, especially the infection of bad company, I think this province requires great sobriety, temperance, tenderness, diligence, and discretion; qualities hardly to be found united in persons that are to be had for ordinary salaries, nor easily to be found anywhere.

Locke, Some Thoughts Concerning Education, 90

61 The great skill of a teacher is to get and keep the attention of his scholar; whilst he has that, he is sure to advance as fast as the learner's abilities will carry him;

and without that, all his bustle and pother will be to little or no purpose. To attain this, he should make the child comprehend, as much as may be, the usefulness of what he teaches him, and let him see, by what he has learned, that he can do something which he could not do before; something which gives him some power and real advantage above others who are ignorant of it. To this he should add sweetness in all his instructions, and by a certain tenderness in his whole carriage make the child sensible that he loves him and designs nothing but his good, the only way to beget love in the child, which will make him hearken to his lessons, and relish what he teaches him.

Locke, Some Thoughts Concerning Education, 167

62 There are a thousand unnoticed openings, continued my father, which let a penetrating eye at once into a man's soul; and I maintain it, added he, that a man of sense does not lay down his hat in coming into a room,—or take it up in going out of it, but something escapes, which discovers him.

It is for these reasons, continued my father, that the governor I make choice of shall neither lisp, or squint, or wink, or talk loud, or look fierce, or foolish;—or bite his Ups, or grind his teeth, or speak through his nose, or pick it, or blow it with his fingers.

He shall neither walk fast,—or slow, or fold his arms,—for that is laziness;—or hang them down,—for that is folly; or hide them in his pocket, for that is nonsense.—

He shall neither strike, or pinch, or tickle,—or bite, or cut his nails, or hawk, or spit, or snift, or drum with his feet or fingers in company;—nor (according to Erasmus) shall he speak to any one in making water,—nor shall he

point to carrion or excrement.-- Now this is all nonsense again, quoth my uncle Toby to himself.--

I will have him, continued my father, cheerful, facetious, jovial; at the same time, prudent, attentive to business, vigilant, acute, argute, inventive, quick in resolving doubts and speculative questions;—he shall be wise, and judicious, and learned:—And why not humble, and moderate, and gentle-tempered, and good? said Yorick:—And why not, cried my uncle Toby, free, and generous, and bountiful, and brave? He shall, my dear Toby, replied my father, getting up and shaking him by his hand.

Sterne, Tristram Shandy, VI, 5

- 63 Contrary to the received opinion, a child's tutor should be young, as young indeed as a man may well be who is also wise. Were it possible, he should become a child himself, that he may be the companion of his pupil and win his confidence by sharing his games.

Rousseau, Emile, I

- 64 It is very strange that ever since people began to think about education they should have hit upon no other way of guiding children than emulation, jealousy, envy, vanity, greediness, base cowardice, all the most dangerous passions, passions ever ready to ferment, ever prepared to corrupt the soul even before the body is full-grown. With every piece of precocious instruction which you try to force into their minds you plant a vice in the depths of their hearts; foolish teachers think they are doing wonders when they are making their scholars wicked in order to teach them what goodness is, and then

they tell us seriously, "Such is man." Yes, such is man, as you have made him.

Rousseau, Emile, II

65 In the country of the blind the one-eyed are kings;
I passed for a good master, since all the rest were bad.

Rousseau, Confessions, V

66 Johnson, upon all occasions, expressed his approbation of enforcing instructions by means of the rod. "I would rather (said he) have the rod to be the general terrour to all, to make them learn, than tell a child, if you do thus, or thus, you will be more esteemed than your brothers or sisters. The rod produces an effect which terminates in itself, A child is afraid of being whipped, and gets his task, and there's an end on't; whereas, by exciting emulation and comparisons of superiority, you lay the foundation of lasting mischief; you make brothers and sisters hate each other."

Boswell, Life of Johnson (1719)

67 *Johnson*. "In my early years I read very hard. It is a sad reflection, but a true one, that I knew almost as much at eighteen as I do now. My judgement, to be sure, was not so good; but I had all the facts. I remember very well, when I was at Oxford, an old gentleman said to me, 'Young man, ply your book diligently now, and acquire a stock of knowledge; for when years come upon you, you will find that poring upon books will be but an irksome task.' "

Boswell, Life of Johnson (July 21, 1763)

68 We talked of the education of children; and I asked him what he thought was best to teach them first. *Johnson*. "Sir, it is no matter what you teach them first, any more than what leg you shall put into your breeches first. Sir, you may stand disputing which is best to put in first, but in the mean time your breech is bare. Sir, while you are considering which of two things you should teach your child first, another boy has learnt them both."

Boswell, Life of Johnson (July 26, 1763)

69 *Johnson*. The government of a schoolmaster is somewhat of the nature of military government; that is to say, it must be arbitrary, it must be exercised by the will of one man, according to particular circumstances. You must shew some learning upon this occasion. You must shew, that a schoolmaster has a prescriptive right to beat; and that an action of assault and battery cannot be admitted against him, unless there is some great excess, some barbarity. This man has maimed none of his boys. They are all left with the full exercise of their corporeal faculties. In our schools in England, many boys have been maimed; yet I never heard of an action against a schoolmaster on that account. Puffendorf, I think, maintains the right of a schoolmaster to beat his scholars.

Boswell, Life of Johnson (Mar. 23, 1772)

70 On Saturday, April 11, he [Johnson] appointed me to come to him in the evening, when he should be at leisure to give me some assistance for the defence of Hastie, the schoolmaster of Campbell-town, for whom I was to appear in the House of Lords. When I came, I found him unwilling to exert himself. I pressed him to write down his thoughts

upon the subject. He said, "There's no occasion for my writing. I'll talk to you." He was, however, at last prevailed on to dictate to me, while I wrote as follows:

"The charge is, that he has used immoderate and cruel correction. Correction, in itself, is not cruel; children, being not reasonable, can be governed only by fear. To impress this fear, is therefore one of the first duties of those who have the care of children. It is the duty of a parent; and has never been thought inconsistent with parental tenderness. It is the duty of a master, who is in his highest exaltation when he is *loco parentis*. Yet, as good things become evil by excess, correction, by being immoderate, may become cruel. But when is correction immoderate? When it is more frequent or more severe than is required *ad monendum et docendum*, for reformation and instruction. No severity is cruel which obstinacy makes necessary; for the greatest cruelty would be to desist, and leave the scholar too careless for instruction, and too much hardened for reproof. Locke, in his treatise of Education, mentions a mother, with applause, who whipped an infant eight times before she had subdued it; for had she stopped at the seventh act of correction, her daughter, says he, would have been ruined. The degrees of obstinacy in young minds are very different; as different must be the degrees of persevering severity. A stubborn scholar must be corrected till he is subdued. The discipline of a school is military. There must be either unbounded licence or absolute authority. The master, who punishes, not only consults the future happiness of him who is the immediate subject of correction; but he propagates obedience through the whole school; and establishes regularity by exemplary justice. The victorious obstinacy of a single boy would

make his future endeavours of reformation or instruction totally ineffectual. Obstinacy, therefore, must never be victorious. Yet, it is well known, that there sometimes occurs a sullen and hardy resolution, that laughs at all common punishment, and bids defiance to all common degrees of pain. Correction must be proportioned to occasions. The flexible will be reformed by gentle discipline, and the refractory must be subdued by harsher methods. The degrees of scholastick, as of military punishment, no stated rules can ascertain. It must be enforced till it overpowers temptation; till stubbornness becomes flexible, and perverseness regular."

Boswell, Life of Johnson (Apr, 11, 1772)

- 71 *Johnson*. A child should not be discouraged from reading any thing that he takes a liking to, from a notion that it is above his reach. If that be the case, the child will soon find it out and desist; if not, he of course gains the instruction; which is so much the more likely to come, from the inclination with which he takes up the study.

Boswell, Life of Johnson (1780)

- 72 It has been considered as of so much importance that a proper number of young people should be educated for certain professions, that sometimes the public and sometimes the piety of private founders have established many pensions, scholarships, exhibitions, bursaries, etc., for this purpose, which draw many more people into those trades than could otherwise pretend to follow them. In all Christian countries, I believe, the education of the greater part of churchmen is paid for in this manner. Very

few of them are educated altogether at their own expense. The long, tedious, and expensive education, therefore, of those who are, will not always procure them a suitable reward, the church being crowded with people who, in order to get employment, are willing to accept of a much smaller recompense than what such an education would otherwise have entitled them to....

[The greater part of] that unprosperous race of men commonly called men of letters are pretty much in the situation which lawyers and physicians probably would be in upon the foregoing supposition. In every part of Europe the greater part of them have been educated for the church, but have been hindered by different reasons from entering into holy orders. They have generally, therefore, been educated at the public expense, and their numbers are everywhere so great as commonly to reduce the price of their labour to a very paltry recompense.

Before the invention of the art of printing, the only employment by which a man of letters could make anything by his talents was that of a public or private teacher, or by communicating to other people the curious and useful knowledge which he had acquired himself: and this is still surely a more honourable, a more useful, and in general even a more profitable employment than that other of writing for a bookseller, to which the art of printing has given occasion. The time and study, the genius, knowledge, and application requisite to qualify an eminent teacher of the sciences, are at least equal to what is necessary for the greatest practitioners in law and physic. But the usual reward of the eminent teacher bears no proportion to that of the lawyer or physician; because the trade of the one is crowded with indigent people who have been brought up to it at the public

expense; whereas those of the other two are encumbered with very few who have not been educated at their own....

This inequality is upon the whole, perhaps, rather advantageous than hurtful to the public. It may somewhat degrade the profession of a public teacher; but the cheapness of literary education is surely an advantage which greatly overbalances this trifling inconveniency.

Adam Smith, Wealth of Nations, I, 10

73 In... [some] universities the teacher is prohibited from receiving any honorary or fee from his pupils, and his salary constitutes the whole of the revenue which he derives from his office. His interest is, in this case, set as directly in opposition to his duty as it is possible to set it. It is the interest of every man to live as much at his ease as he can; and if his emoluments are to be precisely the same, whether he does or does not perform some very laborious duty, it is certainly his interest, at least as interest is vulgarly understood, either to neglect it altogether, or, if he is subject to some authority which will not suffer him to do this, to perform it in as careless and slovenly a manner as that authority will permit. If he is naturally active and a lover of labour, it is his interest to employ that activity in any way from which he can derive some advantage, rather than in the performance of his duty, from which he can derive none.

If the authority to which he is subject resides in the body corporate, the college, or university, of which he himself is a member, and which the greater part of the other members are, like himself, persons who either are or ought to be teachers, they are likely to make a

common cause, to be all very indulgent to one another, and every man to consent that his neighbour may neglect his duty, provided he himself is allowed to neglect his own. In the university of Oxford, the greater part of the public professors have, for these many years, given up altogether even the pretence of teaching.

Adam Smith, Wealth of Nations, V, 1

74 No discipline is ever requisite to force attendance upon lectures which are really worth the attending, as is well known wherever any such lectures are given. Force and restraint may, no doubt, be in some degree requisite in order to oblige children, or very young boys, to attend to those parts of education which it is thought necessary for them to acquire during that early period of life; but after twelve or thirteen years of age, provided the master does his duty, force or restraint can scarce ever be necessary to carry on any part of education. Such is the generosity of the greater part of young men, that, so far from being disposed to neglect or despise the instructions of their master, provided he shows some serious intention of being of use to them, they are generally inclined to pardon a great deal of incorrectness in the performance of his duty, and sometimes even to conceal from the public a good deal of gross negligence.

Adam Smith, Wealth of Nations, V, 1

75 In England it becomes every day more and more the custom to send young people to travel in foreign countries immediately upon their leaving school, and without sending them to any university. Our young people, it is said, generally return home much improved

by their travels. A young man who goes abroad at seventeen or eighteen, and returns home at one and twenty, returns three or four years older than he was when he went abroad; and at that age it is very difficult not to improve a good deal in three or four years. In the course of his travels he generally acquires some knowledge of one or two foreign languages; a knowledge, however, which is seldom sufficient to enable him either to speak or write them with propriety. In other respects he commonly returns home more conceited, more unprincipled, more dissipated, and more incapable of any serious application either to study or to business than he could well have become in so short a time had he lived at home. By travelling so very young, by spending in the most frivolous dissipation the most precious years of his life, at a distance from the inspection and control of his parents and relations, every useful habit which the earlier parts of his education might have had some tendency to form in him, instead of being riveted and confirmed, is almost necessarily either weakened or effaced. Nothing but the discredit into which the universities are allowing themselves to fall could ever have brought into repute so very absurd a practice as that of travelling at this early period of life. By sending his son abroad, a father delivers himself at least for some time, from so disagreeable an object as that of a son unemployed, neglected, and going to ruin before his eyes.

Adam Smith, Wealth of Nations, V, 1

- 76 The power of instruction is seldom of much efficacy, except in those happy dispositions where it is almost superfluous.

Gibbon, Decline and Fall of the Roman Empire, IV

77 Although education may furnish, and, as it were, engraft upon a limited understanding rules borrowed from other minds, yet the power of employing these rules correctly must belong to the pupil himself; and no rule which we can prescribe to him with this purpose is, in the absence or deficiency of this gift of nature, secure from misuse. A physician therefore, a judge or a statesman, may have in his head many admirable pathological, juridical, or political rules, in a degree that may enable him to be a profound teacher in his particular science, and yet in the application of these rules he may very possibly blunder—either because he is wanting in natural judgement (though not in understanding) and, whilst he can comprehend the general *in abstracto*, cannot distinguish whether a particular case *in concreto* ought to rank under the former; or because his faculty of judgement has not been sufficiently exercised by examples and real practice. Indeed, the grand and only use of examples, is to sharpen the judgement. For as regards the correctness and precision of the insight of the understanding, examples are commonly injurious rather than otherwise, because, as *casus in terminis*, they seldom adequately fulfil the conditions of the rule. Besides, they often weaken the power of our understanding to apprehend rules or laws in their universality, independently of particular circumstances of experience; and hence, accustom us to employ them more as formulae than as principles. Examples are thus the go-cart of the Judgement, which he who is naturally deficient in that faculty cannot afford to dispense with.

Kant, Critique of Pure Reason, Transcendental Analytic

78 It is not to the history of the science, or of the human mind, that we are to attend in an elementary treatise: our only aim ought to be ease and perspicuity and with the utmost care to keep everything out of view which might draw aside the attention of the student; it is a road which we should be continually rendering more smooth, and from which we should endeavour to remove every obstacle which can occasion delay.

Lavoisier, Elements of Chemistry, Pref.

79 Instead of developing the child's own faculties of discernment, and teaching it to judge and think for itself, the teacher uses all his energies to stuff its head full of the ready-made thoughts of other people.

Schopenhauer, Education

80 The fatal tendency to be satisfied with words instead of trying to understand things—to learn phrases by heart, so that they may prove a refuge in time of need—exists, as a rule, even in children; and the tendency lasts on into manhood, making the knowledge of many learned persons to consist in mere verbiage.

Schopenhauer, Education

81 The memory should be specially taxed in youth, since it is then that it is strongest and most tenacious. But in choosing the things that should be committed to memory the utmost care and forethought must be exercised; as lessons well learnt in youth are never forgotten.

Schopenhauer, Education

82 The Socratic dialectics, so magnificently exemplified in the dialogues of Plato, were a contrivance... [for making the difficulties of a question present to the learner's consciousness]. They were essentially a negative discussion of the great question of philosophy and life, directed with consummate skill to the purpose of convincing any one who had merely adopted the common-places of received opinion that he did not understand the subject—that he as yet attached no definite meaning to the doctrines he professed; in order that, becoming aware of his ignorance, he might be put in the way to obtain a stable belief, resting on a clear apprehension both of the meaning of doctrines and of their evidence. The school disputations of the Middle Ages had a somewhat similar object. They were intended to make sure that the pupil understood his own opinion, and (by necessary correlation) the opinion opposed to it, and could enforce the grounds of the one and confute those of the other.

Mill, On liberty, II

83 It is but a poor education that associates ignorance with ignorance, and leaves them, if they care for knowledge, to grope their way to it without help, and to do without it if they do not. What is wanted is, the means of making ignorance aware of itself, and able to profit by knowledge; accustoming minds which know only routine to act upon, and feel the value of, principles: teaching them to compare different modes of action, and learn, by the use of their reason, to distinguish the best. When we desire to have a good school, we do not eliminate the teacher. The old remark, "as the schoolmaster is, so will be the school," is as true of the indirect schooling of

grown people by public business as of the schooling of youth in academies and colleges.

Mill, Representative Government, XV

84 A pupil from whom nothing is ever demanded which he cannot do, never does all he can.

Mill, Autobiography, I

85 I do not believe that boys can be induced to apply themselves with vigour, and what is so much more difficult, perseverance, to dry and irksome studies, by the sole force of persuasion and soft words. Much must be done, and much must be learnt, by children, for which rigid discipline and known liability to punishment are indispensable as means. It is, no doubt, a very laudable effort, in modern teaching, to render as much as possible of what the young are required to learn easy and interesting to them. But when this principle is pushed to the length of not requiring them to learn anything but what has been made easy and interesting, one of the chief objects of education is sacrificed. I rejoice in the decline of the old brutal and tyrannical system of teaching, which, however, did succeed in enforcing habits of application; but the new, as it seems to me, is training up a race of men who will be incapable of doing anything which is disagreeable to them. I do not, then, believe that fear, as an element in education, can be dispensed with; but I am sure that it ought not to be the main element; and when it predominates so much as to preclude love and confidence on the part of the child to those who should be the unreservedly trusted advisers of after-years, and perhaps to seal up the fountains of frank

and spontaneous communicativeness in the child's nature, it is an evil for which a large abatement must be made from the benefits, moral and intellectual, which may flow from any other part of the education.

Mill, Autobiography, II

86 There is a need for educators who are themselves educated; superior, noble spirits, who prove themselves every moment by what they say and by what they do not say: cultures grown ripe and sweet—and *not* the learned bores which grammar school and university offer youth today as 'higher nurses.'

Nietzsche, Twilight of the Idols: What the Germans Lack

87 Things learned thus in a few hours, on one occasion, for one purpose, cannot possibly have formed many associations with other things in the mind. Their brain-processes are led into by few paths, and are relatively little liable to be awakened again. Speedy oblivion is the almost inevitable fate of all that is committed to memory in this simple way. Whereas, on the contrary, the same materials taken in gradually, day after day, recurring in different contexts, considered in various relations, associated with other external incidents, and repeatedly reflected on, grow into such a system, form such connections with the rest of the mind's fabric, lie open to so many paths of approach, that they remain permanent possessions. This is the *intellectual* reason why habits of continuous application should be enforced in educational establishments. Of course there is no moral turpitude in cramming. If it led to the desired end of secure learning it would be infinitely the best method

of study. But it does not; and students themselves should understand the reason why.

William James, Psychology, XVI

88 As the art of reading (after a certain stage in one's education) is the art of skipping, so the art of being wise is the art of knowing what to overlook. The first effect on the mind of growing cultivated is that processes once multiple get to be performed by a single act. Lazarus has called this the progressive "condensation" of thought. But in the psychological sense it is less a condensation than a loss, a genuine dropping out and throwing overboard of conscious content. Steps really sink from sight. An advanced thinker sees the relations of his topics in such masses and so instantaneously that when he comes to explain to younger men it is often hard to say which grows the more perplexed, he or the pupil. In every university there are admirable investigators who are notoriously bad lecturers. The reason is that they never spontaneously see the subject in the minute articulate way in which the student needs to have it offered to his slow reception. They grope for the links, but the links do not come. Bowditch, who translated and annotated Laplace's *Mecanique celeste*, said that whenever his author prefaced a proposition by the words "it is evident," he knew that many hours of hard study lay before him.

William James, Psychology, XXII

89 In all pedagogy the great thing is to strike the iron while hot, and to seize the wave of the pupil's interest in each successive subject before its ebb has come, so that knowledge may be got and a habit of skill acquired—a

headway of interest, in short, secured, on which afterward the individual may float. There is a happy moment for fixing skill in drawing, for making boys collectors in natural history, and presently dissectors and botanists; then for initiating them into the harmonies of mechanics and the wonders of physical and chemical law. Later, introspective psychology and the metaphysical and religious mysteries take their turn; and, last of all, the drama of human affairs and worldly wisdom in the widest sense of the term. In each of us a saturation-point is soon reached in all these things; the impetus of our purely intellectual zeal expires, and unless the topic be one associated with some urgent personal need that keeps our wits constantly whetted about it, we settle into an equilibrium, and live on what we learned when our interest was fresh and instinctive, without adding to the store. Outside of their own business, the ideas gained by men before they are twenty-five are practically the only ideas they shall have in their lives. They *cannot* get anything new. Disinterested curiosity is past, the mental grooves and channels set, the power of assimilation gone. If by chance we ever do learn anything about some entirely new topic we are afflicted with a strange sense of insecurity, and we fear to advance a resolute opinion. But with things learned in the plastic days of instinctive curiosity we never lose entirely our sense of being at home. There remains a kinship, a sentiment of intimate acquaintance, which, even when we know we have failed to keep abreast of the subject, flatters us with a sense of power over it, and makes us feel not altogether out of the pale.

William James, Psychology, XXIV

90 He who can, does. He who cannot, teaches.

Shaw, Man and Superman, Maxims for Revolutionists

91 The result of teaching small parts of a large number of subjects is the passive reception of disconnected ideas, not illumined with any spark of vitality. Let the main ideas which are introduced into a child's education be few and important, and let them be thrown into every combination possible.

Whitehead, Aims of Education

92 The mind is never passive; it is a perpetual activity, delicate, receptive, responsive to stimulus. You cannot postpone its life until you have sharpened it. Whatever interest attaches to your subject-matter must be evoked here and now; whatever powers you are strengthening in the pupil, must be exercised here and now; whatever possibilities of mental life your teaching should impart, must be exhibited here and now. That is the golden rule of education, and a very difficult rule to follow.

Whitehead, Aims of Education

93 A man who is to educate really well, and is to make the young grow and develop into their full stature, must be filled through and through with the spirit of reverence. It is reverence towards others that is lacking in those who advocate machine-made cast-iron systems,... Reverence requires imagination and vital warmth; it requires most imagination in respect of those who have least actual achievement or power. The child is weak and superficially foolish, the teacher is strong, and in an everyday sense wiser than the child. The teacher without reverence, or

the bureaucrat without reverence, easily despises the child for these outward inferiorities.

Russell, Education

- 94 What makes obedience seem necessary in schools is the large classes and overworked teachers demanded by a false economy. Those who have no experience of teaching are incapable of imagining the expense of spirit entailed by any really living instruction. They think that teachers can reasonably be expected to work as many hours as bank clerks.

Russell, Education

- 95 A teacher ought to have only as much teaching as can be done, on most days, with actual pleasure in the work, and with an awareness of the pupil's menial needs. the result would be a relation of friendliness instead of hostility between teacher and pupil, a realization on the part of most pupils that education serves to develop their own lives and is not merely an outside imposition, interfering with play and demanding many hours of sitting still.

Russell, Education

- 96 Passive acceptance of the teacher's wisdom is easy to most boy's and girls. It involves no effort of independent thought, and seems rational because the teacher knows more than his pupils; it is moreover the way to win the favor of the teacher unless he is a very exceptional man. Yet the habit of passive acceptance is a disastrous one in later life. It causes men to seek a leader, and to accept as a leader whoever is established in that position.

Russell, Education

97 Let us get a clear idea of what the primary business of education is. the child has to learn to control its instincts. To grant it complete freedom, so that it obeys all its impulses without any restriction, IS impossible. It would be a very instructive experiment for chi Id-psychologists, but it would make life impossible for the parents and would do serious damage to the children themselves, as would be seen partly at the lime, and partly during subsequent years. The function of education, therefore is to inhibit, forbid, and suppress, and it has at all times carried out this function to admiration. But we have learnt from analysis that it is this very suppression of instincts that involves the danger of neurotic illness. You will remember that we have gone into the question of how this comes about in some detail. Education has therefore to steer its way between the Scylla of giving the instincts free play and the Charybdis of frustrating them. Unless the problem is altogether insoluble, an optimum of education must be discovered, which will do the most good and the least harm. It is a matter of finding out how much one may forbid, at which times, and by what methods. And then it must further be considered that the children have very different constitutional dispositions, so that the same educational procedure cannot possibly be equally good for all children. A moment's consideration will show us that, so far, education has fulfilled its function very badly, and has done children serious injury. If we can find an optimum of education which will carry out its task ideally, then we may hope to abolish one of the factors in the aetiology of neurotic illness, viz., the influence of accidental infantile traumas. The other factor, the power of a refractory instinctual constitution, can never be got rid of by education. When,

therefore, one comes to think of the difficult tasks with which the educator is confronted; when one reflects that he has to recognize the characteristic constitution of each child» to guess from small indications what is going on in its unformed mind, to give him the right amount of love and at the same time to preserve an effective degree of authority, then one cannot help saying to oneself that the only adequate preparation for the profession of educator is a good grounding in psycho-analysis. The best thing would be for him to be analysed himself, for, after all, without personal experience one cannot get a grasp of analysis. The analysis of teachers and educators seems to be a more practicable prophylactic measure than the analysis of children themselves; and there are not such great obstacles against putting it into practice.

*Freud, New Introductory Lectures on Psycho-Analysis,
XXXIV*

98 No one would question that a child in a slum tenement has a different experience from that of a child in a cultured home; that the country lad has a different kind of experience from the city boy, or a boy on the seashore one different from the lad who is brought up on inland prairies. ... A primary responsibility of educators is that they not only be aware of the general principle of the shaping of actual experience by environing conditions, but that they also recognize in the concrete what surroundings are conducive to having experiences that lead to growth. Above all, they should know how to utilize the surroundings, physical and social, that exist so as to extract from them all that they have to contribute to building up experiences that are worthwhile.

Traditional education did not have to face this problem; it could systematically dodge this responsibility. The school environment of desks, blackboards, a small school yard, was supposed to suffice. There was no demand that the teacher should become intimately acquainted with the conditions of the local community, physical, historical, economic, occupational, etc., in order to utilize them as educational resources. A system of education based upon the necessary connection of education with experience must, on the contrary, if faithful to its principle, take these things constantly into account. This tax upon the educator is another reason why progressive education is more difficult to carry on than was ever the traditional system.

Dewey, Experience and Education, III

- 99 Almost everyone has had occasion to look back upon his school days and wonder what has become of the knowledge he was supposed to have amassed during his years of schooling, and why it is that the technical skills he acquired have to be learned over again in changed form in order to stand him in good stead. Indeed, he is lucky who does not find that in order to make progress, in order to go ahead intellectually, he does not have to unlearn much of what he learned in school. These questions cannot be disposed of by saying that the subjects were not actually learned, for they were learned at least sufficiently to enable a pupil to pass examinations in them. One trouble is that the subject-matter in question was learned in isolation; it was put, as it were, in a water-tight compartment. When the question is asked, then what has become of it, where has it gone to the right answer is that it is still there in the special

compartment in which it was originally stowed away. If exactly the same conditions recurred as those under which it was acquired, it would also recur and be available. But it was segregated when it was acquired and hence is so disconnected from the rest of experience that it is not available under the actual conditions of life. It is contrary to the law's of experience that learning of this kind, no matter how thoroughly engrained at the time, should give genuine preparation.

Dewey, Experience and Education, 111

100 The principle that development of experience comes about through interaction means that education is essentially a social process. This quality is realized in the degree in which individuals form a community' group. It is absurd to exclude the teacher from membership in the group. As the most mature member of the group he has a peculiar responsibility for the conduct of the interactions and intercommunications which are the very life of the group as a community. That children are individuals whose freedom should be respected while the more mature person should have no freedom as an individual is an idea too absurd to require refutation. The tendency to exclude the teacher from a positive and leading share in the direction of the activities of the community of which he is a member is another instance of reaction from one extreme to another. When pupils were a class rather than a social group, the teacher necessarily acted largely from the outside, not as a director of processes of exchange in which all had a share. When education is based upon experience and educative experience is seen to be a social process, the situation changes radically. The

teacher loses the position of external boss or dictator but takes on that of leader of group activities.

Dewey, Experience and Education, IV

101 That teaching is an art and the true teacher an artist is a familiar saying. Now the teacher's own claim to rank as an artist is measured by his ability to foster the attitude of the artist in those who study with him, whether they be youth or little children. Some succeed in arousing enthusiasm, in communicating large ideas, in evoking energy. So far, well; but the final test is whether the stimulus thus given to wider aims succeeds in transforming itself into power, that is to say, into the attention to detail that ensures mastery over means of execution. If not, the zeal flags, the interest dies out, the ideal becomes a clouded memory. Other teachers succeed in training facility, skill, mastery of the technique of subjects. Again it is well—so far. But unless enlargement of mental vision, power of increased discrimination of final values, a sense for ideas—for principles—accompanies this training, forms of skill ready to be put indifferently to any end be the result. Such modes of technical skill may display themselves, according to circumstances, as cleverness in serving self-interest, as docility in carrying out the purposes of others, or as unimaginative plodding in nits. To nurture inspiring aim and executive means into harmony with each other is at once the difficulty and the reward of the teacher.

Dewey, How We Think, Pt. III, XVI, 2

Chapter 9

ETHICS

Chapter 9 is divided into fifteen sections: 9.1 Moral Philosophy and Morality, 9.2 Custom, 9.3 Moral Law, 9.4 Moral Freedom, 9.5 Conscience, 9.6 Good and Evil, 9.7 Right and Wrong, 9.8 Happiness, 9.9 Duty: Moral Obligation, 9.10 Virtue and Vice, 9.11 Courage AND Cowardice, 9.12 Temperance and Intemperance, 9.13 Prudence, 9.14 Honesty, and 9.15 Wisdom and Folly.

An ancient tradition divided philosophy into two principal domains: one called "speculative" or "theoretical" because it was concerned with the nature of things, with the order and structure of the cosmos, and with being and becoming; the other called "practical" because it was concerned with action, both on the part of the individual and on the part of society, and, in the sphere of human action, with what ought to be sought or ought to be done, not with what exists or occurs. Practical philosophy was divided into two main branches, either called "ethics" and "politics," or "moral philosophy" and "political philosophy." This chapter is devoted to the persistent themes or topics that have been discussed from antiquity to the present day by those concerned with moral or ethical questions.

The opening two sections deal with questions about the character, scope, and method of ethics or moral philosophy as a discipline, and questions about the relation of morality to custom. The next two sections consider subjects that are

treated in other contexts, such as law and freedom; but here, in Sections 9.3 and 9.4, the treatment is specifically directed to law and freedom in their moral aspects. Conscience, which is involved in the application of the moral law and in the exercise of moral freedom, is treated in Section 9.5.

Next come the four pivotal issues in moral philosophy, posed by divergent answers to questions about good and evil (Section 9.6), right and wrong (Section 9.7), happiness (Section 9.8), and duty or moral obligation (Section 9.9). These four sections, the reader will find, contain quotations that often deal with two or more of the concepts involved in these issues; the discussion of happiness, for example, employs the notions of good and evil; and the discussion of duty or moral obligation cannot avoid considerations of right and wrong; and there is a cross fire between passages that emphasize happiness and the good and those that stress duty and the right.

The chapter concludes with six sections that begin with the consideration of virtue and vice (Section 9.10) and then take up particular virtues and vices, such as courage and cowardice (Section 9.11), temperance and intemperance (Section 9.12), prudence (Section 9.13), honesty (Section 9.14), and wisdom and folly (Section 9.15). The reader may query the absence of justice and injustice from this list. In order to avoid unnecessary duplication, this virtue and vice, together with the consideration of what is just and unjust in human conduct, are treated in Section 9.7 along with right and wrong. Justice and right are also treated in other contexts in Chapter 12 on Law and Justice. For the consideration of matters closely related to the subjects of this chapter, the reader is referred to Chapter 20 on Religion.

...

9.1 Moral Philosophy and Morality

The reader will find that some writers use the word "ethics" to name the discipline that other writers call "moral philosophy." Under whichever name it goes, the subject matter and problems being considered are substantially the same. However, among those who use "ethics" as the name for it, some will speak of the discipline as "the science of ethics" but their doing so does not mean that they differ from those who regard ethics and politics as branches of moral, practical, or normative philosophy. They are not using the word "science," as it is used in Section 17.2 on Science and Scientific Method, to signify a sphere of knowledge or inquiry that differs in method and subject matter from philosophy, as that is discussed in Section 17.1 on Philosophy and Philosophers.

The statement made above that moral philosophy or ethics is a practical and normative discipline means that its principles and conclusions are concerned with human action or conduct, with its ends and means, and that, with regard to human conduct and its ends and means, the basic propositions of moral philosophy or ethics prescribe what ought to be sought and what ought to be done. They do not simply describe how men do in fact behave, or what goals they seek and how they seek them.

However, some of the passages quoted below deal with morals and morality in a descriptive manner, reporting what general rules of conduct prevail in a particular society or

culture and discussing the difference between the *mores* — the established canons of behavior—that exist at one time and another, or in one place and another. The relativity of the *mores* or customary morality is more fully treated in Section 9.2 on Custom. Other problems touched on here, such as the relation between knowing what it is right to do and doing it, or the degree of precision with which moral problems can be solved, are commented on in subsequent sections of this chapter. For the consideration of politics as a related branch of moral philosophy, the reader is referred to Section 10.2 on The Realm of Politics.

■ ■ ■

- 1 The whole account of matters of conduct must be given in outline and not precisely... the accounts we demand must be in accordance with the subject-matter; matters concerned with conduct and questions of what is good for us have no fixity, any more than matters of health. The general account being of this nature, the account of particular cases is yet more lacking in exactness; for they do not fall under any art or precept but the agents themselves must in each case consider what is appropriate to the occasion.

Aristotle, Ethics, 1104a2

- 2 Everything morally right derives from one of four sources: it concerns either full perception or intelligent development of what is true; or the preservation of organized society, where every man is rendered his due and all obligations are faithfully discharged; or the

greatness and strength of a noble, invincible spirit; or order and moderation in everything said and done, whereby there is temperance and self-control.

Cicero, De Officiis, I, 5

- 3 In theory, there is nothing which draws us away from following what is taught; but in the matters of life, many are the things which distract us.

Epictetus, Discourses, I, 26

- 4 It is not by running hither and thither outside of itself that the soul understands morality and right conduct: it learns them of its own nature, in its contact with itself, in its intellectual grasp of itself, seeing deeply impressed upon it the images of its primal state.

Plotinus, Fourth Ennead, VII, 10

- 5 The moral precepts, distinct from the ceremonial and judicial precepts, are about things pertaining of their very nature to good morals. Now since human morals depend on their relation to reason, which is the proper principle of human acts, those morals are called good which accord with reason, and those are called bad which are discordant from reason. And as every judgment of speculative reason proceeds from the natural knowledge of first principles, so every judgment of practical reason proceeds from principles known naturally... from which principles one may proceed in various ways to judge of various matters. For some matters connected with human actions are so evident that after very little consideration one is able at once to approve or disapprove of them by means of these general first principles. But some matters

cannot be the subject of judgment without much consideration of the various circumstances which all are not able to do carefully, but only those who are wise, just as it is not possible for all to consider the particular conclusions of sciences but only for those who are versed in philosophy. And lastly there are some matters of which man cannot judge unless he be helped by Divine instruction, such as the articles of faith.

It is therefore evident that since the moral precepts are about matters which concern good morals, and since good morals are those which are in accord with reason, and since also every judgment of human reason must be derived in some way from natural reason, it follows, of necessity, that all of the moral precepts belong to the law of nature.

Aquinas, Summa Theologica, I-II, 100, 1

6 Moral philosophy is nothing else but the science of what is good and evil in the conversation and society of mankind. *Good* and *evil* are names that signify our appetites and aversions, which in different tempers, customs, and doctrines of men are different: and diverse men differ not only in their judgement on the senses of what is pleasant and unpleasant to the taste, smell, hearing, touch, and sight; but also of what is conformable or disagreeable to reason in the actions of common life. Nay, the same man, in diverse times, differs from himself; and one time praiseth, that is, calleth good, what another time he dispraiseth, and calleth evil: from whence arise disputes, controversies, and at last war. And therefore so long as a man is in the condition of mere nature, which is a condition of war, private appetite is the measure of good and evil: and consequently all men agree on this,

that peace is good, and therefore also the way or means of peace, which (as I have shown before) are *justice, gratitude, modesty, equity, mercy*, and the rest of the laws of nature, are good; that is to say, moral virtues; and their contrary vices, evil. Now the science of virtue and vice is moral philosophy; and therefore the true doctrine of the laws of nature is the true moral philosophy. But the writers of moral philosophy, though they acknowledge the same virtues and vices; yet, not seeing wherein consisted their goodness, nor that they come to be praised as the means of peaceable, sociable, and comfortable living, place them in a mediocrity of passions: as if not the cause, but the degree of daring, made fortitude; or not the cause, but the quantity of a gift, made liberality.

Hobbes, Leviathan, I, 15

- 7 Physical science will not console me for the ignorance of morality in the time of affliction. But the science of ethics will always console me for the ignorance of the physical sciences.

Pascal, Pensées, II, 67

- 8 The best thing ... we can do, so long as we lack a perfect knowledge of our affects, is to conceive a right rule of life, or sure maxims of life—to commit these latter to memory, and constantly to apply them to the particular cases which frequently meet us in life, so that our imagination may be widely affected by them, and they may always be ready to hand.

Spinoza, Ethics, V, Prop. 10, Schol.

9 If natural philosophy in all its parts, by pursuing this method, shall at length be perfected, the bounds of moral philosophy will be also enlarged. For so far as we can know by natural philosophy what is the First Cause, what power He has over us, and what benefits we receive from Him, so far our duty towards Him, as well as that towards one another, will appear to us by the light of Nature. And no doubt, if the worship of false gods had not blinded the heathen, their moral philosophy would have gone farther than to the four cardinal virtues; and instead of teaching the transmigration of souls, and to worship the Sun and Moon, and dead heroes, they would have taught us to worship our true Author and Benefactor, as their ancestors did under the government of Noah and his sons before they corrupted themselves.

Newton, Optics, III, 1

10 A good life, in which consist not the least part of religion and true piety, concerns also the civil government; and in it lies the safety both of men's souls and of the commonwealth. Moral actions belong, therefore, to the jurisdiction both of the outward and inward court; both of the civil and domestic governor; I mean both of the magistrate and conscience. Here, therefore, is great danger, lest one of these jurisdictions intrench upon the other, and discord arise between the keeper of the public peace and the overseers of souls.

Locke, Letter Concerning Toleration

11 Confident I am, that, if men would in the same method, and with the same indifferency, search after moral as they do mathematical truths, they would find them have

a stronger connexion one with another, and a more necessary consequence from our clear and distinct ideas, and to come nearer perfect demonstration than is commonly imagined. But much of this is not to be expected, whilst the desire of esteem, riches, or power makes men espouse the well-endowed opinions in fashion, and then seek arguments either to make good their beauty, or varnish over and cover their deformity. Nothing being so beautiful to the eye as truth is to the mind; nothing so deformed and irreconcilable to the understanding as a lie.

Locke, Concerning Human Understanding, Bk. IV, III, 20

- 12 The merit of delivering true general precepts in ethics is indeed very small. Whoever recommends any moral virtues, really does no more than is implied in the terms themselves. That people who invented the word charity, and used it in a good sense, inculcated more clearly, and much more efficaciously, the precept. Be charitable, than any pretended legislator or prophet who should insert such a maxim in his writings.

Hume, Of the Standard of Taste

- 13 The end of all moral speculations is to teach us our duty; and, by proper representations of the deformity of vice, and beauty of virtue, beget correspondent habits, and engage us to avoid the one, and embrace the other. But is this ever to be expected from inferences and conclusions of the understanding, which of themselves have no hold of the affections, or set in motion the active powers of men? They discover truths: But where the truths which they discover are indifferent, and beget no

desire or aversion, they can have no influence on conduct and behaviour. What is honourable, what is fair, what is becoming, what is noble, what is generous, takes possession of the heart, and animates us to embrace and maintain it. What is intelligible, what is evident, what is probable, what is true, procures only the cool assent of the understanding; and gratifying a speculative curiosity, puts an end to our researches.

Hume, Concerning Principles of Morals, I

- 14 If morality had naturally no influence on human passions and actions, 'twere in vain to take such pains to inculcate it; and nothing wou'd be more fruitless than that multitude of rules and precepts, with which all moralists abound. Philosophy is commonly divided into *speculative* and *practical*; and as morality is always comprehended under the latter division, 'tis supposed to influence our passions and actions, and to go beyond the calm and indolent judgments of the understanding. And this is confirm'd by common experience, which informs us, that men are often govern'd by their duties, and are deter'd from some actions by the opinion of injustice, and impell'd to others by that of obligation.

Since morals, therefore, have an influence on the actions and affections, it follows, that they cannot be deriv'd from reason; and that because reason alone, as we have already prov'd, can never have any such influence. Morals excite passions, and produce or prevent actions. Reason of itself is utterly impotent in this particular. The rules of morality, therefore, are not conclusions of our reason.

Hume, Treatise of Human Nature, Bk. III, I, 1

15 It is then certain that compassion is a natural feeling, which, by moderating the violence of love of self in each individual, contributes to the preservation of the whole species. It is this compassion that hurries us without reflection to the relief of those who are in distress: it is this which in a state of nature supplies the place of laws, morals and virtues, with the advantage that none are tempted to disobey its gentle voice: it is this which will always prevent a sturdy savage from robbing a weak child or a feeble old man of the sustenance they may have with pain and difficulty acquired, if he sees a possibility of providing for himself by other means: it is this which, instead of inculcating that sublime maxim of rational justice, *Do to others as you would have them do unto you*, inspires all men with that other maxim of natural goodness, much less perfect indeed, but perhaps more useful; *Do good to yourself with as little evil as possible to others*. In a word, it is rather in this natural feeling than in any subtle arguments that we must look for the cause of that repugnance, which every man would experience in doing evil, even independently of the maxims of education. Although it might belong to Socrates and other minds of the like craft to acquire virtue by reason, the human race would long since have ceased to be, had its preservation depended only on the reasonings of the individuals composing it.

Rousseau, Origin of Inequality, I

16 "I have found," said the prince at his return to Imlac, "a man who can teach all that is necessary to be known; who, from the unshaken throne of rational fortitude, looks down on the scenes of life changing beneath him. He speaks, and attention watches his lips. He reasons, and

conviction closes his periods. This man shall be my future guide; I will learn his doctrines, and imitate his life."

"Be not too hasty," said Imlac, "to trust or to admire the teachers of morality: they discourse like angels, but they live like men."

Johnson, Rasselas, XVIII

17 In every civilised society, in every society where the distinction of ranks has once been completely established, there have been always two different schemes or systems of morality current at the same time; of which the one may be called the strict or austere; the other the liberal, or, if you will, the loose system. The former is generally admired and revered by the common people: the latter is commonly more esteemed and adopted by what are called people of fashion. The degree of disapprobation with which we ought to mark the vices of levity, the vices which are apt to arise from great prosperity, and from the excess of gaiety and good humour, seems to constitute the principal distinction between those two opposite schemes or systems. In the liberal or loose system, luxury, wanton and even disorderly mirth, the pursuit of pleasure to some degree of intemperance, the breach of chastity, at least in one of the two sexes, etc., provided they are not accompanied with gross indecency, and do not lead to falsehood or injustice, are generally treated with a good deal of indulgence, and are easily either excused or pardoned altogether. In the austere system, on the contrary, those excesses are regarded with the utmost abhorrence and detestation. The vices of levity are always ruinous to the common people, and a single week's thoughtlessness and dissipation is often sufficient to undo a poor workman

for ever, and to drive him through despair upon committing the most enormous crimes. The wiser and better sort of the common people, therefore, have always the utmost abhorrence and detestation of such excesses, which their experience tells them are so immediately fatal to people of their condition. The disorder and extravagance of several years, on the contrary, will not always ruin a man of fashion, and people of that rank are very apt to consider the power of indulging in some degree of excess as one of the advantages of their fortune, and the liberty of doing so without censure or reproach as one of the privileges which belong to their station. In people of their own station, therefore, they regard such excesses with but a small degree of disapprobation, and censure them either very slightly or not at all.

Adam Smith, Wealth of Nations, V, 1

- 18 A censor may maintain, he can never restore, the morals of a state. It is impossible for such a magistrate to exert his authority with benefit, or even with effect, unless he is supported by a quick sense of honour and virtue in the minds of the people, by a decent reverence for the public opinion, and by a train of useful prejudices combating on the side of national manners. In a period when these principles are annihilated, the censorial jurisdiction must either sink into empty pageantry, or be converted into a partial instrument of vexatious oppression.

Gibbon, Decline and Fall of the Roman Empire, X

- 19 We do not need science and philosophy to know what we should do to be honest and good, yea, even wise and

virtuous. Indeed we might well have conjectured beforehand that the knowledge of what every man is bound to do, and therefore also to know, would be within the reach of every man, even the commonest.

Kant, Fundamental Principles of the Metaphysic of Morals, I

20 Morality, and humanity as capable of it, is that which alone has dignity. Skill and diligence in labour have a market value; wit, lively imagination, and humour, have fancy value; on the other hand, fidelity to promises, benevolence from principle (not from instinct), have an intrinsic worth. Neither nature nor art contains anything which in default of these it could put in their place, for their worth consists not in the effects which spring from them, not in the use and advantage which they secure, but in the disposition of mind, that is, the maxims of the will which are ready to manifest themselves in such actions, even though they should not have the desired effect. These actions also need no recommendation from any subjective taste or sentiment, that they may be looked on with immediate favour and satisfaction: they need no immediate propension or feeling for them; they exhibit the will that performs them as an object of an immediate respect, and nothing but reason is required to *impose* them on the will; not to *flatter* it into them, which, in the case of duties, would be a contradiction. This estimation therefore shows that the worth of such a disposition is dignity, and places it infinitely above all value, with which it cannot for a moment be brought into comparison or competition without as it were violating its sanctity.

*Kant, Fundamental Principles of the Metaphysic of
Morals, II*

- 21 Morality is not properly the doctrine how we should *make* ourselves happy, but how we should become *worthy* of happiness.

Kant, Critique of Practical Reason, Pt. I, II, 2

- 22 Morality... must have the more power over the human heart the more purely it is exhibited. Whence it follows that, if the law of morality and the image of holiness and virtue are to exercise any influence at all on our souls, they can do so only so far as they are laid to heart in their purity as motives, unmixed with any view to prosperity, for it is in suffering that they display themselves most nobly.

*Kant, Critique of Practical Reason, 11, Methodology of
Pure Practical Reason*

- 23 The supreme principle of ethics (the doctrine of virtue) is: "Act on a maxim, the *ends* of which are such as it might be a universal law for everyone to have." On this principle a man is an end to himself as well as others, and it is not enough that he is not permitted to use either himself or others merely as means (which would imply that he might be indifferent to them), but it is in itself a duty of every man to make mankind in general his end.

The principle of ethics being a categorical imperative does not admit of proof, but it admits of a justification from principles of pure practical reason. Whatever in relation to mankind, to oneself, and others, can be an end, that is an end for pure practical reason: for this is a faculty of assigning ends in general; and to be indifferent

to them, that is, to take no interest in them, is a contradiction; since in that case it would not determine the maxims of actions (which always involve an end), and consequently would cease to be practical reasons, Pure reason, however, cannot command any ends *a priori*, except so far as it declares the same to be also a duty, which duty is then called a *duty of virtue*.

Kant, Introduction to the Metaphysical Elements of Ethics, IX

24 No free communities ever existed without morals, and... morals are the work of woman.

Tocqueville, Democracy in America, Vol, II, III, 9

25 A moral being is one who is capable of comparing his past and future actions or motives, and of approving or disapproving of them. We have no reason to suppose that any of the lower animals have this capacity; therefore, when a Newfoundland dog drags a child out of the water, or a monkey faces danger to rescue its comrade, or takes charge of an orphan monkey, we do not call its conduct moral. But in the case of man, who alone can with certainty be ranked as a moral being, actions of a certain class are called moral, whether performed deliberately, after a struggle with opposing motives, or impulsively through instinct, or from the effects of slowly-gained habit.

Darwin, Descent of Man, I, 4

26 It was assumed formerly by philosophers of the derivative school of morals that the foundation of morality lay in a form of Selfishness; but more recently the "Greatest

happiness principle" has been brought prominently forward. It is, however, more correct to speak of the latter principle as the standard, and not as the motive of conduct. Nevertheless, all the authors whose works I have consulted, with a few exceptions, write as if there must be a distinct motive for every action, and that this must be associated with some pleasure or displeasure. But man seems often to act impulsively, that is from instinct or long habit, without any consciousness of pleasure, in the same manner as does probably a bee or ant, when it blindly follows its instincts. Under circumstances of extreme peril, as during a fire, when a man endeavours to save a fellow-creature without a moment's hesitation, he can hardly feel pleasure; and still less has he time to reflect on the dissatisfaction which he might subsequently experience if he did not make the attempt. Should he afterwards reflect over his own conduct, he would feel that there lies within him an impulsive power widely different from a search after pleasure or happiness; and this seems to be the deeply planted social instinct.

Darwin, Descent of Man, I, 4

- 27 It must not be forgotten that although a high standard of morality gives but a slight or no advantage to each individual man and his children over the other men of the same tribe, yet that an increase in the number of well-endowed men and an advancement in the standard of morality will certainly give an immense advantage to one tribe over another. A tribe including many members who, from possessing in a high degree the spirit of patriotism, fidelity, obedience, courage, and sympathy, were always ready to aid one another, and to sacrifice themselves for

the common good, would be victorious over most other tribes; and this would be natural selection. At all times throughout the world tribes have supplanted other tribes; and as morality is one important element in their success, the standard of morality and the number of well-endowed men will thus everywhere tend to rise and increase.

Darwin, Descent of Man, I, 5

28 I regard utility as the ultimate appeal on all ethical questions; but it must be utility in the largest sense, grounded on the permanent interests of a man as a progressive being. Those interests, I contend, authorise the subjection of individual spontaneity to external control, only in respect to those actions of each, which concern the interest of other people. If any one does an act hurtful to others, there is a *prima facie* case for punishing him, by law, or, where legal penalties are not safely applicable, by general disapprobation. There are also many positive acts for the benefit of others, which he may rightfully be compelled to perform; such as to give evidence in a court of justice; to bear his fair share in the common defence, or in any other joint work necessary to the interest of the society of which he enjoys the protection; and to perform certain acts of individual beneficence, such as saving a fellow creature's life, or interposing to protect the defenceless against ill-usage, things which whenever it is obviously a man's duty to do, he may rightfully be made responsible to society for not doing. A person may cause evil to others not only by his actions but by his inaction, and in either case he is justly accountable to them for the injury. The latter case, it is true, requires a much more cautious exercise of compulsion than the former. To make any one answerable

for doing evil to others is the rule; to make him answerable for not preventing evil is, comparatively speaking, the exception. Yet there are many cases clear enough and grave enough to justify that exception. In all things which regard the external relations of the individual, he is *de jure* amenable to those whose interests are concerned, and, if need be, to society as their protector. There are often good reasons for not holding him to the responsibility; but these reasons must arise from the special expedencies of the case: either because it is a kind of case in which he is on the whole likely to act better, when left to his own discretion, than when controlled in any way in which society have it in their power to control him; or because the attempt to exercise control would produce other evils, greater than those which it would prevent. When such reasons as these preclude the enforcement of responsibility, the conscience of the agent himself should step into the vacant judgment seat, and protect those interests of others which have no external protection; judging himself all the more rigidly, because the case does not admit of his being made accountable to the judgment of his fellow creatures.

Mill, On Liberty, I

- 29 The creed which accepts as the foundation of morals, Utility, or the Greatest Happiness Principle, holds that actions are right in proportion as they tend to promote happiness, wrong as they tend to produce the reverse of happiness. By happiness is intended pleasure, and the absence of pain; by unhappiness, pain, and the privation of pleasure. To give a clear view of the moral standard set up by the theory, much more requires to be said; in

particular, what things it includes in the ideas of pain and pleasure; and to what extent this is left an open question. But these supplementary explanations do not affect the theory of life on which this theory of morality is grounded — namely, that pleasure, and freedom from pain, are the only things desirable as ends; and that all desirable things (which are as numerous in the utilitarian as in any other scheme) are desirable either for the pleasure inherent in themselves, or as means to the promotion of pleasure and the prevention of pain.

Mill, Utilitarianism, II

30 It is the business of ethics to tell us what are our duties, or by what test we may know them; but no system of ethics requires that the sole motive of all we do shall be a feeling of duty; on the contrary, ninety-nine hundredths of all our actions are done from other motives, and rightly so done, if the rule of duty does not condemn them.

Mill, Utilitarianism, II

31 Knowledge is one thing, virtue is another; good sense is not conscience, refinement is not humility, nor is largeness and justness of view faith. Philosophy, however enlightened, however profound, gives no command over the passions, no influential motives, no vivifying principles.

Newman, Idea of a University, Discourse V

32 Then he [Satan] said: "The difference between man and me? The difference between a mortal and an immortal? between a cloud and a spirit?" He picked up a wood-louse

that was creeping along a piece of bark: "What is the difference between Caesar and this?"

I said, "One cannot compare things which by their nature and by the interval between them are not comparable."

"You have answered your own question," he said. "I will expand it. Man is made of dirt—I saw him made. I am not made of dirt. Man is a museum of diseases, a home of impurities; he comes today and is gone tomorrow; he begins as dirt and departs as stench; I am of the aristocracy of the Imperishables. And man has the *Moral Sense*. You understand? He has the *Moral Sense*. That would seem to be difference enough between us, all by itself."

Mark Twain, Mysterious Stranger, HI

33 There was a question which we wanted to ask Father Peter, and finally we went there the second evening, a little diffidently, after drawing straws, and I asked it as casually as I could, though it did not sound as casual as I wanted, because I didn't know how:

"What is the Moral Sense, sir?"

He looked down, surprised, over his great spectacles, and said, "Why, it is the faculty which enables us to distinguish good from evil."

It threw some light but not a glare, and I was a little disappointed, also to some degree embarrassed. He was waiting for me to go on, so, in default of anything else to say, I asked, "Is it valuable?"

"Valuable? Heavens! lad, it is the one thing that lifts man above the beasts that perish and makes him heir to immortality!"

Mark Twain, Mysterious Stranger, IV

34 I said it was a brutal thing.

"No, it was a human thing [said Satan]. You should not insult the brutes by such a misuse of that word; they have not deserved it," and he went on talking like that. "It is like your paltry race—always lying, always claiming virtues which it hasn't got, always denying them to the higher animals, which alone possess them. No brute ever does a cruel thing—that is the monopoly of those with the Moral Sense. When a brute inflicts pain he does it innocently; it is not wrong; for him there is no such thing as wrong. And he does not inflict pain for the pleasure of inflicting it—only man does that. Inspired by that mongrel Moral Sense of his! A sense whose function is to distinguish between right and wrong, with liberty to choose which of them he will do. Now what advantage can he get out of that? He is always choosing, and in nine cases out of ten he prefers the wrong. There shouldn't be any wrong; and without the Moral Sense there couldn't be any. And yet he is such an unreasoning creature that he is not able to perceive that the Moral Sense degrades him to the bottom layer of animated beings and is a shameful possession."

Mark Twain, Mysterious Stranger, V

35 To be ashamed of one's immorality-- that is a step on the staircase at whose end one is also ashamed of one's morality.

Nietzsche, Beyond Good and Evil, IV, 95

36 All naturalism in morality, that is all *healthy* morality, is dominated by an instinct of life—some commandment of

life is fulfilled through a certain canon of 'shall' and 'shall not', some hindrance and hostile element on life's road is thereby removed. *Anti~natural* morality, that is virtually every morality that has hitherto been taught, revered and preached, turns on the contrary precisely *against* the instincts of life—it is a now secret, now loud and impudent *condemnation* of these instincts. By saying 'God sees into the heart' it denies the deepest and the highest desires of life and takes God for the *enemy of life*.

Nietzsche, Twilight of the Idols: Morality as Anti-Nature

37 An act has no ethical quality whatever unless it be chosen out of several all equally possible. To sustain the arguments for the good course and keep them ever before us, to stifle our longing for more flowery ways, to keep the foot unflinchingly on the arduous path, these are characteristic ethical energies. But more than these; for these but deal with the means of compassing interests already felt by the man to be supreme. The ethical energy *par excellence* has to go farther and choose which *interest* out of several, equally coercive, shall become supreme. The issue here is of the utmost pregnancy, for it decides a man's entire career. When he debates, Shall I commit this crime? choose that profession? accept that office, or marry this fortune?—his choice really lies between one of several equally possible future characters. What he shall *become* is fixed by the conduct of this moment.... The problem with the man is less what act he shall now choose to do, than what being he shall now resolve to become.

William James, Psychology, IX

38 It is obvious . . . that the whole idea of good and bad has some connection with *desire*. *Prima facie*, anything that we all desire is "good," and anything that we all dread is "bad." If we all agreed in our desires, the matter could be left there, but unfortunately our desires conflict. If I say "what I want is good," my neighbour will say "No, what I want." Ethics is an attempt—though not, I think, a successful one—to escape from this subjectivity.

Russell, Religion and Science, IX

39 The ideally virtuous man, if we had got rid of asceticism, would be the man who permits the enjoyment of all good things whenever there is no evil consequence to outweigh the enjoyment.

Russell, The Conquest of Happiness, I, 7

40 Morals must be a growing science if it is to be a science at all, not merely because all truth has not yet been appropriated by the mind of man, but because life is a moving affair in which old moral truth ceases to apply.

Dewey, Human Nature and Conduct, III, 7

41 There is a peculiar inconsistency in the current idea that morals *ought* to be social. The introduction of the moral "ought" into the idea contains an implicit assertion that morals depend upon something apart from social relations. Morals are social. The question of ought, should be, is a question of better and worse in social affairs.

Dewey, Human Nature and Conduct, IV, 4

42 Morality comprises two different parts, one of which follows from the original structure of human society,

while the other finds its explanation in the principle which explains this structure. In the former, obligation stands for the pressure exerted by the elements of society on one another in order to maintain the shape of the whole; a pressure whose effect is prefigured in each of us by a system of habits which, so to speak, go to meet it: this mechanism, of which each separate part is a habit, but whose whole is comparable to an instinct, has been prepared by nature. In the second, there is still obligation, if you will, but that obligation is the force of an aspiration or an impetus, of the very impetus which culminated in the human species, in social life, in a system of habits which bears a resemblance more or less to instinct: the primitive impetus here comes into play directly, and no longer through the medium of the mechanisms it had set up, and at which it had provisionally halted. In short, to sum up what has gone before, we should say that nature, setting down the human species along the line of evolution, intended it to be sociable, in the same way as it did the communities of ants and bees; but since intelligence was there, the maintenance of social life had to be entrusted to an all but intelligent mechanism: intelligent in that each piece could be remodelled by human intelligence, yet instinctive in that man could not, without ceasing to be a man, reject all the pieces together and cease to accept a mechanism of preservation. Instinct gave place temporarily to a system of habits, each one of which became contingent, their convergence towards the preservation of society being alone necessary, and this necessity bringing back instinct with it. The necessity of the whole, felt behind the contingency of the parts, is what we call moral obligation in general—it being

understood that the parts are contingent in the eyes of society only; to the individual, into whom society inculcates its habits, the part is as necessary as the whole.

Bergson, Two Sources of Morality and Religion, I

43 A mock feeling and a true feeling are almost indistinguishable; to decide that I love my mother and will remain with her, or to remain with her by putting on an act, amount somewhat to the same thing. In other words, the feeling is formed by the acts one performs; so, I cannot refer to it in order to act upon it. Which means that I can neither seek within myself the true condition which will impel me to act, nor apply to a system of ethics for concepts which will permit me to act.... No general ethics can show you what is to be done; there are no omens in the world.

Sartre, Existentialism

9.2 Custom

The line between conduct that conforms to moral rules and conduct that exemplifies customary manners is often shadowy. The word "mores," which signifies the established customs of a society or culture, has an obvious etymological connection with the word "morals." A certain brand of skepticism about the universality of moral principles derives from the tendency of sociologists and cultural anthropologists to identify what they call the "value system" of a community, and hence its morality, with its mores —its customary patterns of conduct, its customary standards of

approbation, its customary taboos or prohibitions. Since the mores differ from community to community and, in a given community, from one time to another, the conclusion is easily—but, perhaps, illicitly—reached that morality is relative to the institutions of a particular society and varies with the time and place. Quotations taking the opposite point of view, in defense of universal moral truths, will be found in Section 9.1 on Moral Philosophy and Morality and in Section 9.3 on the Moral Law.

The quotations collected here discuss custom as a conservative force in society, relate social customs to the stable habits of society's members, call attention to and comment on the wide diversity of customs, assess the authority that attaches to or derives from social conventions, and discuss the causes and effects of change in customs. The consideration of established customs as having the force of law occurs both here and in Section 12.1 on Law and Lawyers. The effect of custom on standards of taste in the sphere of art and on the prevalence of certain opinions in the sphere of thought is touched on here, but it is also discussed in Section 16.7 on Criticism and the Standards of Taste and in Section 6.5 on Opinion, Belief, and Faith.

■ ■ ■

- 1 If one were to offer men to choose out of all the customs in the world such as seemed to them the best, they would examine the whole number, and end by preferring their own; so convinced are they that their own usages far surpass those of all others.

Herodotus, History, III, 38

- 2 *Callicles*. Convention and nature are generally at variance with one another.

Plato, Gorgias, 482B

- 3 *Athenian Stranger*. All the matters which we are now describing are commonly called by the general name of unwritten customs, and what are termed the laws of our ancestors are all of similar nature. And the reflection which lately arose in our minds, that we can neither call these things laws, nor yet leave them unmentioned, is justified; for they are the bonds of the whole state, and come in between the written laws which are or are hereafter to be laid down; they are just ancestral customs of great antiquity, which, if they are rightly ordered and made habitual, shield and preserve the previously existing written law; but if they depart from right and fall into disorder, then they are like the props of builders which slip away out of their place and cause a universal ruin—one part drags another down, and the fair superstructure falls because the old foundations are undermined. Reflecting upon this, Cleinias, you ought to bind together the new state in every possible way, omitting nothing, whether great or small, of what are called laws or manners or pursuits, for by these means a city is bound together, and all these things are only lasting when they depend upon one another; and, therefore, we must not wonder if we find that many apparently trifling customs or usages come pouring in and lengthening out our laws.

Plato, Laws, VII, 793A

- 4 If you are at Rome live in the Roman style; if you are elsewhere live as they live elsewhere.

Ambrose, qu. by Taylor, Ductor Dubitantium, I, 1

- 5 Ignorant men who apply the tests of their human minds, and measure all the conduct of the human race by the measure of their own custom... are like a man handling armour and not knowing what piece is meant for what part of the body and so putting a greave on his head and a helmet on his feet and complaining that they do not fit.

Augustine, Confessions, III, 7

- 6 Actions which are against the customs of human societies are to be avoided according to the variety of such customs; so that that which is agreed upon by the custom, or decreed by the law, of state or people, is not to be violated at the mere pleasure whether of citizen or alien. For every part is defective that is not in harmony with the whole.

But when God orders something against the custom or covenant of a state, though it never had been done it must be done; and if it was... allowed to lapse, it must be restored; and if it was not a law before, it must be made a law now.

Augustine, Confessions, III, 8

- 7 When men unacquainted with other modes of life than their own meet with the record of such actions, unless they are restrained by authority, they look upon them as sins, and do not consider that their own customs either in regard to marriage, or feasts, or dress, or the other necessities and adornments of human life, appear sinful

to the people of other nations and other times. And, distracted by this endless variety of customs, some... have thought that there was no such thing as absolute right, but that every nation took its own custom for right; and that, since every nation has a different custom, and right must remain unchangeable, it becomes manifest that there is no such thing as right at all. Such men did not perceive, to take only one example, that the precept, "Whatsoever ye would that men should do to you, do ye even so to them," cannot be altered by any diversity of national customs. And this precept, when it is referred to the love of God, destroys all vices; when to the love of one's neighbour, puts an end to all crimes.

Augustine, Christian Doctrine, III, 14

- 8 When a thing is done again and again, it seems to proceed from a deliberate judgment of reason. Accordingly, custom has the force of a law, abolishes law, and is the interpreter of law.

Aquinas, Summa Theologica, I-II, 97, 3

- 9 And what all philosophy cannot implant in the head of the wisest men, does not custom by her sole ordinance teach the crudest common herd?

Montaigne, Essays, I, 23, Of Custom

- 10 The principal effect of the power of custom is to seize and ensnare us in such a way that it is hardly within our power to get ourselves back out of its grip and return into ourselves to reflect and reason about its ordinances. In truth, because we drink them with our milk from birth, and because the face of the world presents itself in this

aspect to our first view, it seems that we are born on condition of following this course. And the common notions that we find in credit around us and infused into our soul by our fathers' seed, these seem to be the universal and natural ones. Whence it comes to pass that what is off the hinges of custom, people believe to be off the hinges of reason: God knows how unreasonably, most of the time.

Montaigne, Essays, I, 23, Of Custom

- 11 Each man calls barbarism whatever is not his own practice; for indeed it seems we have no other test of truth and reason than the example and pattern of the opinions and customs of the country we live in.

Montaigne, Essays, I, 31, Of Cannibals

- 12 We are nothing but ceremony; ceremony carries us away, and we leave the substance of things; we hang on to the branches and abandon the trunk and body.

Montaigne, Essays, II, 17, Of Presumption

- 13 True is, that whilome that good poet sayd.
The gentle minde by gentle deeds is knowne:
For a man by nothing is so well bewrayd
As by his manners, in which plaine is showne
Of what degree and what race he is growne.

Spenser, Faerie Queene, Bk. VI, III, 1

- 14 *King Henry*. Nice customs curtsy to great kings.

Shakespeare, Henry V, V, ii, 291

- 15 *Corin*. Those that are good manners at the court are as ridiculous in the country as the behaviour of the country is most mockable at the court.

Shakespeare, As You Like It, III, ii, 46

- 16 *Polonius*. Costly thy habit as thy purse can buy.
But not express'd in fancy; rich, not gaudy;
For the apparel oft proclaims the man.

Shakespeare, Hamlet, I, iii, 70

- 17 Where a man will plead a title of prescription of custom he shall say that such custom hath been used from time whereof the memory of man runneth not to the contrary, that is as much as to say, no man then alive hath heard any proof to the contrary.

Sir Edward Coke, Commentary Upon Littleton, 170

- 18 Men's thoughts are much according to their inclination; their discourse and speeches according to their learning and infused opinions; but their deeds are after as they have been accustomed. And therefore as Machiavel well noteth (though in an evil-favoured instance,) there is no trusting to the force of nature nor to the bravery of words, except it be corroborate by custom.

Bacon, Of Custom and Education

- 19 I... recognised in the course of my travels that all those whose sentiments are very contrary to ours are yet not necessarily barbarians or savages, but may be possessed of reason in as great or even a greater degree than ourselves. I also considered how very different the self-same man, identical in mind and spirit, may become,

according as he is brought up from childhood amongst the French or Germans, or has passed his whole life amongst Chinese or cannibals. I likewise noticed how even in the fashions of one's clothing the same thing that pleased us ten years ago, and which will perhaps please us once again before ten years are passed, seems at the present time extravagant and ridiculous. I thus concluded that it is much more custom and example that persuade us than any certain knowledge, and yet in spite of this the voice of the majority does not afford a proof of any value in truths a little difficult to discover, because such truths are much more likely to have been discovered by one man than by a nation.

Descartes, Discourse on Method, II

- 20 For we must not misunderstand ourselves; we are as much automatic as intellectual; and hence it comes that the instrument by which conviction is attained is not demonstrated alone. How few things are demonstrated! Proofs only convince the mind. Custom is the source of our strongest and most believed proofs. It bends the automaton, which persuades the mind without its thinking about the matter.

Pascal, Pensées, IV, 252

- 21 Montaigne is wrong. Custom should be followed only because it is custom, and not because it is reasonable or just. But people follow it for this sole reason, that they think it just. Otherwise they would follow it no longer, although it were the custom; for they will only submit to reason or justice. Custom without this would pass for tyranny; but the sovereignty of reason and justice is no

more tyrannical than that of desire. They are principles natural to man.

It would, therefore, be right to obey laws and customs, because they are laws; but we should know that there is neither truth nor justice to introduce into them, that we know nothing of these, and so must follow what is accepted. By this means we would never depart from them. But people cannot accept this doctrine; and, as they believe that truth can be found, and that it exists in law and custom, they believe them and take their antiquity as a proof of their truth, and not simply of their authority apart from truth. Thus they obey laws, but they are liable to revolt when these are proved to be valueless; and this can be shown of all, looked at from a certain aspect.

Pascal, Pensées, V, 325

22 Ideas that in themselves are not all of kin, come to be so united in some men's minds, that it is very hard to separate them; they always keep in company, and the one no sooner at any time comes into the understanding, but its associate appears with it; and if they are more than two which are thus united, the whole gang, always inseparable, show themselves together.

This strong combination of ideas, not allied by nature, the mind makes in itself either voluntarily or by chance; and hence it comes in different men to be very different, according to their different inclinations, education, interests, etc. Custom settles habits of thinking in the understanding, as well as of determining in the will, and of motions in the body: all which seems to be but trains of motions in the animal spirits, which, once set a going, continue in the same steps they have used to; which, by

often treading, are worn into a smooth path, and the motion in it becomes easy, and as it were natural.

Locke, Concerning Human Understanding, Bk. II, XXXIII, 5-6

23 How many men have no other ground for their tenets, than the supposed honesty, or learning, or number of those of the same profession? As if honest or bookish men could not err; or truth were to be established by the vote of the multitude: yet this with most men serves the turn. The tenet has had the attestation of reverend antiquity; it comes to me with the passport of former ages, and therefore I am secure in the reception I give it: other men have been and are of the same opinion, (for that is all is said,) and therefore it is reasonable for me to embrace it. A man may more justifiably throw up cross and pile for his opinions, than take them up by such measures. All men are liable to error, and most men are in many points, by passion or interest, under temptation to it. If we could but see the secret motives that influenced the men of name and learning in the world, and the leaders of parties, we should not always find that it was the embracing of truth for its own sake, that made them espouse the doctrines they owned and maintained. This at least is certain, there is not an opinion so absurd, which a man may not receive upon this ground. There is no error to be named, which has not had its professors: and a man shall never want crooked paths to walk in, if he thinks that he is in the right way, wherever he has the footsteps of others to follow.

Locke, Concerning Human Understanding, Bk. IV, XX, 17

24 Custom ... is the great guide of human life. It is that principle alone which renders our experience useful to us, and makes us expect, for the future, a similar train of events with those which have appeared in the past. Without the influence of custom, we should be entirely ignorant of every matter of fact beyond what is immediately present to the memory and senses. We should never know how to adjust means to ends, or to employ our natural powers in the production of any effect. There would be an end at once of all action, as well as of the chief part of speculation.

Hume, Concerning Human Understanding, V, 36

25 Since no man has a natural authority over his fellow, and force creates no right, we must conclude that conventions form the basis of all legitimate authority among men.

Rousseau, Social Contract, I, 4

26 Most peoples, like most men, are docile only in youth; < is they grow old they become incorrigible. When once customs have become established and prejudices inveterate, it is dangerous and useless to attempt their reformation; the people, like the foolish and cowardly patients who rave at sight of the doctor, can no longer bear that any one should lay hands on its faults to remedy them.

Rousseau, Social Contract, II, 8

27 [The] most important [law] of all... is not graven on tablets of marble or brass, but on the hearts of the citizens. This forms the real constitution of the State,

takes on every day new powers, when other laws decay or die out, restores them or takes their place, keeps a people in the ways in which it was meant to go, and insensibly replaces authority by the force of habit. I am speaking of morality, of custom, above all of public opinion; a power unknown to political thinkers, on which none the less success in everything else depends. With this the great legislator concerns himself in secret, though he seems to confine himself to particular regulations; for these are only the arch, while manners and morals, slower to arise, form in the end its immovable keystone.

Rousseau, Social Contract, II, 12

- 28 The great art of living easy and happy in society is to study proper behaviour, and even with our most intimate friends to observe politeness; otherwise we will insensibly treat each other with a degree of rudeness, and each will find himself despised in some measure by the other.

Boswell, London Journal (Dec. I, 1762)

- 29 Johnson's profound reverence for the Hierarchy made him expect from bishops the highest degree of decorum; he was offended even at their going to taverns; "A bishop (said he,) has nothing to do at a tippling-house. It is not indeed immoral in him to go to a tavern; neither would it be immoral in him to whip a top in Grosvenor-square. But, if he did, I hope the boys would fall upon *him*, and apply the whip to him. There are gradations in conduct; there is morality,—decency,—propriety. None of these should be violated by a bishop. A bishop should not go to a house where he may meet a young fellow leading out a wench."

Boswell, Life of Johnson (March 1781)

30 Mere *customary life* (the watch wound up and going on of itself) is that which brings on natural death. Custom is activity without opposition, for which there remains only a formal duration; in which the fulness and zest that originally characterized the aim of life are out of the question—a merely external sensuous existence which has ceased to throw itself enthusiastically into its object. Thus perish individuals, thus perish peoples by a natural death; and though the latter may continue in being, it is an existence without intellect or vitality; having no need of its institutions, because the need for them is satisfied—a political nullity and tedium. In order that a truly universal interest may arise, the spirit of a people must advance to the adoption of some new purpose; but whence can this new purpose originate? It would be a higher, more comprehensive conception of itself, a transcending of its principle, but this very act would involve a principle of a new order, a new national spirit.

Hegel, Philosophy of History, Introduction, 3

31 No way of thinking or doing, however ancient can be trusted without proof. What everybody echoes or in silence passes by as true today may turn out to be falsehood tomorrow, mere smoke or opinion, which some had trusted for a cloud that would sprinkle fertilizing rain on their fields. What old people say you cannot do, you try and find that you can. Old deeds for old people, and new deeds for new.

Thoreau, Walden: Economy

32 Nobody denies that people should be so taught and trained in youth as to know and benefit by the

ascertained results of human experience. But it is the privilege and proper condition of a human being, arrived at the maturity of his faculties, to use and interpret experience in his own way. It is for him to find out what part of recorded experience is properly applicable to his own circumstances and character. The traditions and customs of other people are, to a certain extent, evidence of what their experience has taught them; presumptive evidence, and as such, have a claim to his deference: but, in the first place, their experience may be too narrow; or they may not have interpreted it rightly. Secondly, their interpretation of experience may be correct, but unsuitable to him. Customs are made for customary circumstances and customary characters; and his circumstances or his character may be uncustomary. Thirdly, though the customs be both good as customs, and suitable to him, yet to conform to custom, merely as custom, does not educate or develop in him any of the qualities which are the distinctive endowment of a human being. The human faculties of perception, judgment, discriminative feeling, mental activity, and even moral preference, are exercised only in making a choice. He who does anything because it is the custom makes no choice. He gains no practice either in discerning or in desiring what is best. The mental and moral, like the muscular powers, are improved only by being used. The faculties are called into no exercise by doing a thing merely because others do it, no more than by believing a thing only because others believe it. If the grounds of an opinion are not conclusive to the person's own reason, his reason cannot be strengthened, but is likely to be weakened, by his adopting it: and if the inducements to an act are not such as are consentaneous

to his own feelings and character (where affection, or the rights of others, are not concerned) it is so much done towards rendering his feelings and character inert and torpid, instead of active and energetic.

Mill, On Liberty, III

- 33 It is important to give the freest scope possible to uncustomary things, in order that it may in time appear which of these are fit to be converted into customs.

Mill, On Liberty, III

- 34 A man's *fame*, good or bad, and his *honor* or dishonor, are names for one of his social selves. The particular social self of a man called his honor is usually the result of one of those splittings of which we have spoken. It is his image in the eyes of his own "set," which exalts or condemns him as he conforms or not to certain requirements that may not be made of one in another walk of life. Thus a layman may abandon a city infected with cholera; but a priest or a doctor would think such an act incompatible with his honor. A soldier's honor requires him to fight or to die under circumstances where another man can apologize or run away with no stain upon his social self. A judge, a statesman, are in like manner debarred by the honor of their cloth from entering into pecuniary relations perfectly honorable to persons in private life. Nothing is commoner than to hear people discriminate between their different selves of this sort: "As a man I pity you, but as an official I must show you no mercy; as a politician I regard him as an ally, but as a moralist I loathe him"; etc., etc. What may be called "club-opinion" is one of the very strongest forces in life.

The thief must not steal from other thieves; the gambler must pay his gambling-debts, though he pay no other debts in the world. The code of honor of fashionable society has throughout history been full of permissions as well as of vetoes, the only reason for following either of which is that so we best serve one of our social selves. You must not lie in general, but you may lie as much as you please if asked about your relations with a lady; you must accept a challenge from an equal, but if challenged by an inferior you may laugh him to scorn: these are examples of what is meant.

William James, Psychology, X

35 In general, parents and similar authorities follow the dictates of their own super-egos in the upbringing of children. Whatever terms their ego may be on with their super-ego, in the education of the child they are severe and exacting. They have forgotten the difficulties of their own childhood, and are glad to be able to identify themselves fully at last with their own parents, who in their day subjected them to such severe restraints. The result is that the super-ego of the child is not really built up on the model of the parents, but on that of the parents' super-ego; it takes over the same content, it becomes the vehicle of tradition and of all the age-long values which have been handed down in this way from generation to generation.

Freud, New Introductory Lectures on Psycho-Analysis, XXXI

36 The girl thought for a time of what he had said. "I suppose," she then said, "that even in your country you

have parties, balls and *conversazione*?"

"Yes," he said, "we have those."

"Then you will know," she went on slowly, "that the part of a guest is different from that of a host or hostess, and that people do not want or expect the same things in the two different capacities?"

"I think you are right," said Augustus.

"Now God," she said, "when he created Adam and Eve . . . arranged it so that man takes, in these matters, the part of a guest, and woman that of a hostess. Therefore man takes love lightly, for the honor and dignity of his house is not involved therein. And you can also, surely, be a guest to many people to whom you would never want to be a host. Now, tell me, Count, what does a guest want?"

"I believe," said Augustus when he had thought for a moment, "that if we do, as I think we ought to here, leave out the crude guest, who comes to be regaled, takes what he wants and goes away, a guest wants first of all to be diverted, to get out of his daily monotony or worry. Secondly the decent guest wants to shine, to expand himself and impress his own personality upon his surroundings. And thirdly, perhaps, he wants to find some justification for his existence altogether. But since you put it so charmingly. Signora, please tell me now: What does a hostess want?"

"The hostess," said the young lady, "wants to be thanked."

Isak Dincsen, The Roads Around Pisa, IV

37 The life-history of the individual is first and foremost an accommodation to the patterns and standards traditionally handed down in his community. From the

moment of his birth the customs into which he is born shape his experience and behaviour. By the time he can talk, he is the little creature of his culture, and by the time he is grown and able to take part in its activities, its habits are his habits, its beliefs his beliefs, its impossibilities his impossibilities. Every child that is born into his group will share them with him, and no child born into one on the opposite side of the globe can ever achieve the thousandth part. There is no social problem it is more incumbent upon us to understand than this of the role of custom. Until we are intelligent as to its laws and varieties, the main complicating facts of human life must remain unintelligible.

Benedict, Patterns of Culture, I

38 Custom did not challenge the attention of social theorists because it was the very stuff of their own thinking: it was the lens without which they could not see at all.

Benedict, Patterns of Culture, I

9.3 Moral Law

When the word "law" is used to signify a rule of conduct that individuals may obey or violate, or a prescribed course of behavior to which they may or may not conform, such expressions as "natural law" and "law of nature" are interchangeable with "moral law." To characterize a law as natural or as moral is, negatively at least, to say the same thing; namely, that it represents a rule of conduct which is *not* made by a political ruler or ruling body and is *not* enforced by the state. On the positive side, the reader will

find that whereas some authors regard the moral law as based on the needs or tendencies of human nature (and so they think of it as natural in that sense), other authors regard it as emanating from the dictates of reason (and so they think of it as a law of reason rather than as a law of nature).

For the discussion of rules of conduct that are man-made and state-enforced, the reader is referred to Section 12.1 on Law and Lawyers. Quotations both here and in that section consider the relation of positive law or the law of the state to the natural moral law or the law of reason. Another body of law is mentioned here—the law of God or the divine law, which to the extent that it lays down rules of conduct as contrasted with prescribing religious rituals or ceremonies consists of rules that are often identical in substance with the prescriptions of the natural moral law. The law that, according to the Old Testament, God gave to Moses includes, in addition to many ceremonial precepts, the Ten Commandments, at least six of which prescribe virtuous conduct or prohibit iniquitous or unrighteous acts.

The reader will find the moral law epitomized in the golden rule and in the categorical imperative; he will find some quotations that indicate the connection between the natural law and natural rights, and some that derive moral duties or obligations from the basic oughts and ought-nots of the moral law. For the discussion of these matters in other contexts, the reader is referred to Section 12.3 on Rights—Natural and Civil, Section 9.9 on Duty: Moral Obligation, and Section 20.8 on Worship and Service.

■ ■ ■

1 And God spake all these words, saying,

I am the Lord thy God, which have brought thee out of the land of Egypt, out of the house of bondage.

Thou shalt have no other gods before me.

Thou shalt not make unto thee any graven image, or any likeness of any thing that is in heaven above, or that is in the earth beneath, or that is in the water under the earth:

Thou shalt not bow down thyself to them, nor serve them: for I the Lord thy God am a jealous God, visiting the iniquity of the fathers upon the children unto the third and fourth generation of them that hate me;

And shewing mercy unto thousands of them that love me, and keep my commandments.

Thou shalt not take the name of the Lord thy God in vain; for the Lord will not hold him guiltless that taketh his name in vain.

Remember the sabbath day, to keep it holy.

Six days shall thou labour, and do all thy work;

But the seventh day is the sabbath of the Lord thy God: in it thou shalt not do any work, thou, nor thy son, nor thy daughter, thy manservant, nor thy maidservant, nor thy cattle, nor thy stranger that is within thy gates:

For in six days the Lord made heaven and earth, the sea, and all that in them is, and rested the seventh day: wherefore the Lord blessed the sabbath day, and hallowed it.

Honour thy father and thy mother: that thy days may be long upon the land which the Lord thy God giveth thee.

Thou shalt not kill.

Thou shalt not commit adultery.

Thou shalt not steal.

Thou shalt not bear false witness against thy neighbour.

Thou shalt not covet thy neighbour's house, thou shalt not covet thy neighbour's wife, nor his manservant, nor his maidservant, nor his ox, nor his ass, nor any thing that is thy neighbour's

Exodus 20:1-17

- 2 *Hecuba*. The gods are strong and over them there stands some absolute, some moral order principle of law more final still. Upon this moral law the world depends; though it the gods exist; by it we live, defining good and evil.

Euripides, Hecuba, 799

- 3 *Athenian Stranger*. Dealings between man and man require to be suitably regulated. The principle of them is very simple: Thou shalt not, if thou canst help, touch that which is mine, or remove the least thing which belongs to me without my consent; and may I be of a sound mind, and do to others as I would that they should do to me.

Plato, Laws, XI, 913A

- 4 If by nature one man desires to promote the welfare of another man, whoever he may be, only because he is a fellow human being; then it follows that in accordance with that same nature, there are some interests all men have in common. If this is true, we are all subject to the same law of nature. And if this is true, the law of nature forbids us to wrong our neighbor.

Cicero, De Officiis, III, 6

5 We possess no living image of true law or of genuine justice. The barest outline is all that we have. Would that we could be true to even this; for it is drawn from the models that nature and truth afford.

Cicero, De Officiis, III, 17

6 When the Gentiles, which have not the law, do by nature the things contained in the law, these, having not the law, are a law unto themselves:

Which shew the work of the law written in their hearts, their conscience also bearing witness, and their thoughts the mean while accusing or else excusing one another.

Romans 2:14-15

7 Do not look around thee to discover other men's ruling principles, but look straight to this, to what nature leads thee, both the universal nature & rough the things which happen to thee, and thy own nature through the acts which must be done y thee. But every being ought to do that which is according to its constitution; and all other things have been constituted for the sake of rational beings, just as among irrational things the inferior for the sake of the superior, but the rational for the sake of one another.

The prime principle then in man's constitution is the social. And the second is not to yield to the persuasions of the body, for it is the peculiar office of the rational and intelligent motion to circumscribe itself, and never to be overpowered either by the motion of the senses or of the appetites, for both are animal; but the intelligent motion claims superiority and does not permit itself to be overpowered by the others. And with good reason, for it is

formed by nature to use all of them. The third thing in the rational constitution is freedom from error and from deception. Let then the ruling principle holding fast to these things go straight on, and it has what is its own.

Marcus Aurelius, Meditations, VII, 55

- 8 Your law, O Lord, punishes theft; and this law is so written in the hearts of men that not even the breaking of it blots it out.

Augustine, Confessions, II, 4

- 9 Those sins which are against nature, like those of the men of Sodom, are in all times and places to be detested and punished. Even if all nations committed such sins, they should all alike be held guilty by God's law which did not make men so that they should use each other thus.

Augustine, Confessions, III, 8

- 10 All those things to which man has a natural inclination are naturally apprehended by reason as being good, and consequendy as objects of pursuit, and their contraries as evil, and objects of avoidance. Therefore the order of the precepts of the natural law is according to the order of natural inclinations.

Aquinas, Summa Theologica, I—II, 94, 2

- 11 There is in man an inclination to good, according to the nature of his reason, which nature is proper to him; thus man has a natural inclination to know the truth about God, and to live in society. And in this respect, whatever pertains to this inclination belongs to the natural law; for instance, to shun ignorance, to avoid offending those

among whom one has to live, and other such things regarding the above inclination.

Aquinas, Summa Theologica, I-II, 94, 2

- 12 A thing is said to belong to the natural law in two ways. First, because nature inclines there; for example, that one should not do harm to another. Secondly, because nature did not bring in the contrary; thus we might say that for man to be naked is of the natural law, because nature did not give him clothes, but art invented them. In this sense, "the possession of all things in common, and uniform freedom" are said to be of the natural law, because, that is, the distinction of possessions and slavery were not brought in by nature, but devised by human reason for the benefit of human life. Accordingly the law of nature was not changed in this respect, except by addition.

Aquinas, Summa Theologica, I-II, 94, 5

- 13 As to... common principles, the natural law, in its universal character, can in no way be blotted out from men's hearts. But it is blotted out in the case of a particular action, in so far as reason is hindered from applying the common principle to a particular point of practice, on account of concupiscence or some other passion.... But as to the other, that is, the secondary precepts, the natural law can be blotted out from the human heart, either by evil persuasions, just as in speculative matters errors occur in respect of necessary conclusions; or by vicious customs and corrupt habits, as among some men, theft, and even unnatural vices.

Aquinas, Summa Theologica, I-II, 94, 6

- 14 The goodness of the human will depends on the eternal law much more than on human reason. And when human reason fails we must have recourse to the Eternal Reason.

Aquinas, Summa Theologica, I-II, 19, 4

- 15 Natural law is a practical first principle in the sphere of morality; it forbids evil and commands good. Positive law is a decision that takes circumstances into account and conforms with natural law on credible grounds. The basis of natural law is God, who has created this light, but the basis of positive law is civil authority.

Luther, Table Talk, 3911

- 16 The moral law... with which I shall begin, being comprised in two leading articles, of which one simply commands us to worship God with pure faith and piety, and the other enjoins us to embrace men with sincere love,—this law, I say, is the true and eternal rule of righteousness, prescribed to men of all ages and nations, who wish to conform their lives to the will of God. For this is his eternal and immutable will, that he himself be worshipped by us all, and that we mutually love one another.

Calvin, Institutes of the Christian Religion, IV, 20

- 17 Whatsoever men are to take knowledge of for law, not upon other men's words, but every one from his own reason, must be such as is agreeable to the reason of all men; which no law can be, but the law of nature. The laws of nature therefore need not any publishing nor proclamation; as being contained in this one sentence, approved by all the world, *Do not that to another which*

thou thinkest unreasonable to be done by another to thyself.

Hobbes, Leviathan, II, 26

- 18 That part of the Scripture which was first law was the Ten Commandments, written in two tables of stone and delivered by God Himself to Moses, and by Moses made known to the people. Before that time there was no written law of God, who, as yet having not chosen any people to be His peculiar kingdom, had given no law to men, but the law of nature, that is to say, the precepts of natural reason, written in every man's own heart.

Hobbes, Leviathan, III, 42

- 19 To act absolutely in conformity with virtue is nothing but acting according to the laws of our own proper nature. But only in so far as we understand do we act. Therefore, to act in conformity with virtue is nothing but acting, living, and preserving our being as reason directs, and doing so from the ground of seeking our own profit.

Spinoza, Ethics, IV, Prop. 24, Demonstr.

- 20 The state of Nature has a law of Nature to govern it, which obliges every one, and reason, which is that law, teaches all mankind who will but consult it, that being all equal and independent, no one ought to harm another in his life, health, liberty or possessions; for men being all the workmanship of one omnipotent and infinitely wise Maker; all the servants of one sovereign Master, sent into the world by His order and about His business; they are His property, whose workmanship they are made to last during His, not one another's pleasure. And, being

furnished with like faculties, sharing all in one community of Nature, there cannot be supposed any such subordination among us that may authorise us to destroy one another, as if we were made for one another's uses, as the inferior ranks of creatures are for ours. Every one as he is bound to preserve himself, and not to quit his station wilfully, so by the like reason, when his own preservation comes not in competition, ought he as much as he can to preserve the rest of mankind, and not unless it be to do justice on an offender, take away or impair the life, or what tends to the preservation of the life, the liberty, health, limb, or goods of another.

Locke, II Civil Government, II, 6

21 I think there *cannot any one moral rule be proposed whereof a man may not justly demand a reason*: which would be perfectly ridiculous and absurd if they were innate; or so much as self-evident, which every innate principle must needs be, and not need any proof to ascertain its truth, nor want any reason to gain it approbation. He would be thought void of common sense who asked on the one side, or on the other side went to give a reason *why* "it is impossible for the same thing to be and not to be." It carries its own light and evidence with it, and needs no other proof: he that understands the terms assents to it for its own sake or else nothing will ever be able to prevail with him to do it. But should that most unshaken rule of morality and foundation of all social virtue, "That one should do as he would be done unto," be proposed to one who never heard of it before, but yet is of capacity to understand its meaning; might he not without any absurdity ask a reason why? And were not he that proposed it bound to make out the truth and

reasonableness of it to him? Which plainly shows it not to be innate; for if it were it could neither want nor receive any proof; but must needs (at least as soon as heard and understood) be received and assented to as an unquestionable truth, which a man can by no means doubt of. So that the truth of all these moral rules plainly depends upon some other antecedent to them, and from which they must be *deduced*; which could not be if either they were innate or so much as self-evident.

Locke, Concerning Human Understanding, Bk. I, II, 4

- 22 That God has given a rule whereby men should govern themselves, I think there is nobody so brutish as to deny. He has a right to do it; we are his creatures: he has goodness and wisdom to direct our actions to that which is best: and he has power to enforce it by rewards and punishments of infinite weight and duration in another life; for nobody can take us out of his hands. This is the only true touchstone of moral rectitude; and, by comparing them to this law, it is that men judge of the most considerable moral good or evil of their actions; that is, whether, as duties or sins, they are like to procure them happiness or misery from the hands of the Almighty.

Locke, Concerning Human Understanding, Bk. II, XXVIII,

8

- 23 The mind of man is so formed by nature that, upon the appearance of certain characters, dispositions, and actions, it immediately feels the sentiment of approbation or blame; nor are there any emotions more essential to its frame and constitution. The characters which engage our approbation are chiefly such as contribute to the peace

and security of human society; as the characters which excite blame are chiefly such as tend to Public detriment and disturbance: Whence it may reasonably be presumed, that the moral sentiments arise, either mediately or immediately, from a reflection of these opposite interests.

Hume, Concerning Human Understanding, VIII, 80

24 I assume that there are pure moral laws which determine, entirely *a priori* (without regard to empirical motives, that is, to happiness), the conduct of a rational being, or in other words, the use which it makes of its freedom, and that these laws are *absolutely* imperative (not merely hypothetically, on the supposition of other empirical ends), and therefore in all respects necessary. I am warranted in assuming this, not only by the arguments of the most enlightened moralists, but by the moral judgement of every man who will make the attempt to form a distinct conception of such a law.

Kant, Critique of Pure Reason, Transcendental Method

25 I call the world *a moral world*, in so far as it may be in accordance with all the ethical laws—which, by virtue of the *freedom* of reasonable beings, it *can* be, and according to the necessary laws of morality it *ought to be*. But this world must be conceived only as an intelligible world, inasmuch as abstraction is therein made of all conditions (ends), and even of all impediments to morality (the weakness or pravity of human nature). So far, then, it is a mere idea—though still a practical idea—which may have, and ought to have, an influence on the world of sense, so as to bring it

as far as possible into conformity with itself. The idea of a moral world has, therefore, objective reality, not as referring to an object of intelligible intuition—for of such an object we can form no conception whatever—but to the world of sense—conceived, however, as an object of pure reason in its practical use—and to a *corpus mysticum* of rational beings in it, in so far as the *liberum arbitrium* of the individual is placed, under and by virtue of moral laws, in complete systematic unity both with itself and with the freedom of all others.

Kant, Critique of Pure Reason, Transcendental Method

- 26 Not only are moral laws with their principles essentially distinguished from every other kind of practical knowledge in which there is anything empirical, but all moral philosophy rests wholly on its pure part. When applied to man, it does not borrow the least thing from the knowledge of man himself (anthropology), but gives laws a priori to him as a rational being. No doubt these laws require a judgement sharpened by experience, in order on the one hand to distinguish in what cases they are applicable, and on the other to procure for them access to the will of the man and effectual influence on conduct; since man is acted on by so many inclinations that, though capable of the idea of a practical pure reason, he is not so easily able to make it effective *in concreto* in his life.

Kant, Fundamental Principles of the Metaphysic of Morals, Pref.

- 27 The moral worth of an action does not lie in the effect expected from it, nor in any principle of action which

requires to borrow its motive from this expected effect. For all these effects—agreeableness of one's condition and even the promotion of the happiness of others—could have been also brought about by other causes, so that for this there would have been no need of the will of a rational being; whereas it is in this alone that the supreme and unconditional good can be found. The pre-eminent good which we call moral can therefore consist in nothing else than the conception of law in itself, *which certainly is only possible in a rational being*, in so far as this conception, and not the expected effect, determines the will. This is a good which is already present in the person who acts accordingly, and we have not to wait for it to appear first in the result.

*Kant, Fundamental Principles of the Metaphysic of
Morals, I*

28 There is ... but one categorical imperative, namely, this:
*Act only on that maxim whereby thou canst at the same
time will that it should become a universal law.*

*Kant, Fundamental Principles of the Metaphysic of
Morals, II*

29 We are indeed legislative members of a moral kingdom rendered possible by freedom, and presented to us by reason as an object of respect; but yet we are subjects in it, not the sovereign, and to mistake our inferior position as creatures, and presumptuously to reject the authority of the moral law, is already to revolt from it in spirit, even though the letter of it is fulfilled.

Kant, Critique of Practical Reason, Pt. I, I, 3

30 That in the order of ends, man (and with him every rational being) is an end in himself, that is, that he can never be used merely as a means by any (not even by God) without being at the same time an end also himself, that therefore humanity in our person must be holy to ourselves, this follows now of itself because he is the subject of the moral law, in other words, of that which is holy in itself, and on account of which and in agreement with which alone can anything be termed holy. For this moral law is founded on the autonomy of his will, as a free will which by its universal laws must necessarily be able to agree with that to which it is to submit itself.

Kant, Critique of Practical Reason, Pt. I, II, 2

31 Two things fill the mind with ever new and in-creasing admiration and awe, the oftener and the more steadily we reflect on them: the starry heavens above and the moral law within.

Kant, Critique of Practical Reason, II, Conclusion

32 Imagine a man at the moment when his mind is disposed to moral feeling! If, amid beautiful natural surroundings, he is in calm and serene enjoyment of his existence, he feels within him a need—a need of being grateful for it to some one. Or, at another time, in the same frame of mind he may find himself in the stress of duties which he can only perform and will perform by submitting to a voluntary sacrifice; then he feels within him a need—a need of having, in so doing, carried out some command and obeyed a Supreme Lord, Or he may in some thoughtless manner have diverged from the path of duty, though not so as to have made himself answerable to

man; yet words of stern self-reproach will then fall upon an inward ear, and he will seem to hear the voice of a judge to whom he has to render account. In a word, he needs a moral intelligence; because he exists for an end, and this end demands a Being that has formed both him and the world with that end in view. It is waste of labour to go burrowing behind these feelings for motives; for they are immediately connected with the purest moral sentiment: gratitude, obedience, and humiliation—that is, submission before a deserved chastisement—being special modes of a mental disposition towards duty.... It may be that such a disposition of the mind is but a rare occurrence, or, again, does not last long, but rather is fleeting and of no permanent effect, or, it may be, passes away without the mind bestowing a single thought upon the object so shadowed forth, and without troubling to reduce it to clear conceptions. Yet the source of this disposition is unmistakable. It is the original moral bent of our nature, as a subjective principle, that will not let us be satisfied, in our review of the world, with the finality which it derives through natural causes, but leads us to introduce into it an underlying supreme Cause governing nature according to moral laws.

Kant, Critique of Teleological Judgement, 86

- 33 *The Lord*. A good man, though his striving be obscure.
Remains aware that there is one right way.

Goethe, Faust, Prologue in Heaven, 328

- 34 The sentiment of virtue is a reverence and delight in the presence of certain divine laws. It perceives that this homely game of life we play, covers, under what seem

foolish details, principles that astonish. The child amidst his baubles is learning the action of light, motion, gravity, muscular force; and in the game of human life, love, fear, justice, appetite, man, and God, interact. These laws refuse to be adequately stated. They will not be written out on paper, or spoken by the tongue. They elude our persevering thought; yet we read them hourly in each other's faces, in each other's actions, in our own remorse. The moral traits which are all globed into every virtuous act and thought—in speech we must sever, and describe or suggest by painful enumeration of many particulars. Yet, as this sentiment is the essence of all religion, let me guide your eye to the precise objects of the sentiment....

The intuition of the moral sentiment is an insight of the perfection of the laws of the soul. These laws execute themselves. They are out of time, out of space, and not subject to circumstance. Thus in the soul of man there is a justice whose retributions are instant and entire. He who does a good deed is instantly ennobled. He who does a mean deed is by the action itself contracted. He who puts off impurity, thereby puts on purity. If a man is at heart just, then in so far is he God.

Emerson, Address to Harvard Divinity School

- 35 If, as is my own belief, the moral feelings are not innate, but acquired, they are not for that reason the less natural. It is natural to man to speak, to reason, to build cities, to cultivate the ground, though these are acquired faculties. The moral feelings are not indeed a part of our nature, in the sense of being in any perceptible degree present in all of us; but this, unhappily, is a fact admitted by those who believe the most strenuously in their transcendental origin. Like the other acquired capacities above referred

to, the moral faculty, if not a part of our nature, is a natural outgrowth from it; capable, like them, in a certain small degree, of springing up spontaneously; and susceptible of being brought by cultivation to a high degree of development. Unhappily it is also susceptible, by a sufficient use of the external sanctions and of the force of early impressions, of being cultivated in almost any direction: so that there is hardly anything so absurd or so mischievous that it may not, by means of these influences, be made to act on the human mind with all the authority of conscience.

Mill, Utilitarianism, III

- 36 Since man is endowed with intelligence and determines his own ends, it is up to him to put himself in tune with the ends necessarily demanded by his nature. This means that there is, by very virtue of human nature, an order or a disposition which human reason can discover and according to which the human will must act in order to attune itself to the necessary ends of the human being. The unwritten law, or natural law, is nothing more than that.

Maritain, Rights of Man and Natural Law, II

- 37 Natural law is not a written law. Men know it with greater or less difficulty, and in different degrees, running the risk of error here as elsewhere. the only practical knowledge all men have naturally and infallibly in common is that we must do good and avoid evil. This is the preamble and (he principle of natural law; it is not the law itself. Natural law is the ensemble of things to do and not to do which follow therefrom in *necessary* fashion,

and *from the simple fact that man is man*, nothing else being taken into account. That every sort of error and deviation is possible in the determination of these things merely proves that our sight is weak and that innumerable accidents can corrupt our judgment. Montaigne maliciously remarked that, among certain peoples, incest and thievery were considered virtuous acts. Pascal was scandalized by this. We are scandalized by the fact that cruelty, denunciation of parents, the lie for the service of the party, the murder of old or sick people should be considered virtuous actions by young people educated according to Nazi methods. All this proves nothing against natural law, any more than a mistake in addition proves anything against arithmetic, or the mistakes of certain primitive peoples, for whom the stars were holes in the tent which covered the world, prove anything against astronomy.

Maritain, Rights of Man and Natural Law, II

9.4 Moral Freedom

The image of the man deprived of freedom as one in chains or behind bars, or as one coerced or intimidated into acting contrary to his own wishes, typifies the kind of liberty that is discussed in Section 13.1 on Freedom in Society, but not here. The man in prison and the slave in chains, the poor man lacking the means of satisfying his desires and the oppressed subjects of a tyrant, all these can enjoy the kind of inner or moral freedom that is discussed here. It is neither freedom of choice (which is treated in Section 5.7) nor freedom to do as one wills, but rather the freedom that

consists in being able to will as one ought. It is sometimes described, negatively, as freedom from the passions, subjection to which Spinoza characterizes as "human bondage." It is also described as a liberty that derives from having the willpower to do one's duty or to act in conformity with the moral law.

As the reader will find in the quotations below, moral freedom takes many forms, varying remarkably as one passes from the discussion of it by Plato and the Roman Stoics in antiquity, to what is said on the subject by Spinoza, Rousseau, Kant, and Hegel, or by Freud and Dewey. However, what is common to them all is the fact that a man's possession of moral freedom does not in any way depend on the outer circumstances of his life or upon his inherited nature, but upon his acquirement of virtue, or wisdom or a certain type of moral character, or even, as in the case of Freud, a certain type of psychological adjustment. The other element that is common to moral liberty in all its forms is the moral law or the moral ideal to which a man can conform only by mastering the intransigent, recalcitrant, or antagonistic factors in his own make-up. That is why the morally free man is said to have achieved self-mastery. The reader is, therefore, referred to Section 9.3 on Moral Law for materials relevant to moral freedom.

■ ■ ■

- 1 If a man were born so divinely gifted that he could naturally apprehend the truth, he would have no need of laws to rule over him; for there is no law or order which is

above knowledge, nor can mind, without impiety, be deemed the subject or slave of any man, but rather the lord of all. I speak of mind, true and free, and in harmony with nature. But then there is no such mind anywhere, or at least not much; and therefore we must choose law and order, which are second best.

Plato, Laws, IX, 875B

- 2 The most learned men have told us that only the wise man is free. What is freedom but the ability to live as one will? The man who lives as he wills is none other than the one who strives for the right, who does his duty, who plans his life with forethought, and who obeys the laws because he knows it is good for him, and not out of fear. Everything he says, does, or thinks is spontaneous and free. His tasks and conduct begin and end in himself, because nothing has so much influence over him as his own counsel and decision. Even the supreme power of fortune is submissive to him. The wise poet has reminded us that fortune is moulded for each man by the manner of his life. Only the wise man does nothing against his will, or with regret and by compulsion. Though this truth deserves to be discussed at greater length, it is nevertheless proverbial that no one is free except the wise. Evil men are nothing but slaves.

Cicero, Paradoxes of the Stoics, V

- 3 To conclude that the condition of slavery involves a person's whole being, is an error. The better part of the man is exempt. The slave-master has at his disposition only the body of the slave; but the mind is its own master. It is free and unchained; it is not even the

prisoner of the body. It can use its own powers, follow its own great aims, and escape into infinity to keep company with the stars.

Seneca, On Benefits, III, 20

- 4 Behold the wretched and dismal slavery of him who is in thrall to pleasures and pains, those utterly capricious and tyrannical masters. We, however, must escape to freedom. But this is only possible if we are indifferent to Fortune. Then we shall attain that one overriding blessing—the serenity and exhaltation of a firmly anchored mind. For when error is banished, we shall have the great and satisfying joy that comes from the discovery of truth, plus a kind disposition and cheerfulness of mind. The source of our pleasure in these things will not derive from their being good, but that they emerge from a good that is one's own.

Seneca, On the Happy Life, IV

- 5 So far as I am concerned that body is nothing more or less than a fetter on my freedom. I place it squarely in the path of fortune, letting her expend her onslaught on it, not allowing any blow to get through it to my actual self. For that body is all that is vulnerable about me: within this dwelling so liable to injury there lives a spirit that is free. Never shall that flesh compel me to feel fear, never shall it drive me to any pretence unworthy of a good man; never shall I tell a lie out of consideration for this petty body. I shall dissolve our partnership when this seems the proper course, and even now while we are bound one to the other the partnership will not be on equal terms: the soul will assume undivided authority.

Refusal to be influenced by one's body assures one's freedom.

Seneca, Letters to Lucilius, 65

- 6 Then said Jesus to those Jews which believed on him, If ye continue in my word, then are ye my disciples indeed; And ye shall know the truth, and the truth shall make you free.

John 8:31-32

- 7 We ourselves also were sometimes foolish, disobedient, deceived, serving divers lusts and pleasures, living in malice and envy, hateful, and hating one another.

But after that the kindness and love of God our Saviour toward man appeared.

Not by works of righteousness which we have done, but according to his mercy he saved us.

Titus 3:3-5

- 8 No one. . . who lives in error is free. Do you wish to live in fear? Do you wish to live in sorrow? Do you wish to live in perturbation? "By no means." No one... who is in a state of fear or sorrow or perturbation is free; but whoever is delivered from sorrows and fears and perturbations, he is at the same time also delivered from servitude.

Epictetus, Discourses, II, 1

- 9 He is free who lives as he wishes to live; who is neither subject to compulsion nor to hindrance, nor to force; whose movements to action are not impeded, whose desires attain their purpose, and who does not fall into that which he would avoid. Who, then, chooses to live in

error? No man. Who chooses to live deceived, liable to mistake, unjust, unrestrained, discontented, mean? No man. Not one then of the bad lives as he wishes; nor is he, then, free. And who chooses to live in sorrow, fear, envy, pity, desiring and failing in his desires, attempting to avoid something and falling into it? Not one. Do we then find any of the bad free from sorrow, free from fear, who does not fall into that which he would avoid, and does not obtain that which he wishes? Not one; nor then do we find any bad man free.

Epictetus, Discourses, IV, 1

- 10 The man who is not under restraint is free, to whom things are exactly in that state in which he wishes them to be; but he who can be restrained or compelled or hindered, or thrown into any circumstances against his will, is a slave. But who is free from restraint? He who desires nothing that belongs to others. And what are the things which belong to others? Those which are not in our power either to have or not to have, or to have of a certain kind or in a certain manner. Therefore the body belongs to another, the parts of the body belong to another, possession belongs to another. If, then, you are attached to any of these things as your own, you will pay the penalty which it is proper for him to pay who desires what belongs to another. This road leads to freedom, that is the only way of escaping from slavery, to be able to say at last with all your soul

Lead me, O Zeus, and thou O destiny.

The way that I am bid by you to go.

Epictetus, Discourses, IV, 1

11 Being naturally noble, magnanimous and free, man sees that of the things which surround him some are free from hindrance and in his power, and the other things are subject to hindrance and in the power of others; that the things which are free from hindrance are in the power of the will; and those which are subject to hindrance are the things which are not in the power of the will. And, for this reason, if he thinks that his good and his interest be in these things only which are free from hindrance and in his own power, he will be free, prosperous, happy, free from harm, magnanimous, pious, thankful to God for all things; in no matter finding fault with any of the things which have not been put in his power, nor blaming any of them. But if he thinks that his good and his interest are in externals and in things which are not in the power of his will, he must of necessity be hindered, be impeded, be a slave to those who have the power over things which he admires and fears; and he must of necessity be impious because he thinks that he is harmed by God, and he must be unjust because he always claims more than belongs to him; and he must of necessity be abject and mean.

Epictetus, Discourses, IV, 7

12 Do what thou hast in hand with perfect and simple dignity, and feeling of affection, and freedom, and justice; and... give thyself relief from all other thoughts. And thou wilt give thyself relief, if thou doest every act of thy life as if it were the last, laying aside all carelessness and passionate aversion from the commands of reason, and all hypocrisy, and self-love, and discontent with the portion which has been given to thee. Thou seest how few the things are, the which if a man lays hold of, he is able to live a life which flows in quiet, and is like the

existence of the gods; for the gods on their part will require nothing more from him who observes these things.

Marcus Aurelius, Meditations, 11, 5

- 13 Let the part of thy soul which leads and governs be undisturbed by the movements in the flesh, whether of pleasure or of pain; and let it not unite with them, but let it circumscribe itself and limit those affects to their parts. But when these affects rise up to the mind by virtue of that other sympathy that naturally exists in a body which is all one, then thou must not strive to resist the sensation, for it is natural: but let not the ruling part of itself add to the sensation the opinion that it is either good or bad.

Marcus Aurelius, Meditations, V, 26

- 14 It is in thy power to live free from all compulsion in the greatest tranquillity of mind, even if all the world cry out against thee as much as they choose, and even if wild beasts tear in pieces the members of this kneaded matter which has grown around thee. For what hinders the mind in the midst of all this from maintaining itself in tranquillity and in a just judgement of all surrounding things and in a ready use of the objects which are presented to it, so that the judgement may say to the thing which falls under its observation: This thou art in substance (reality), though in men's opinion thou mayest appear to be of a different kind; and the use shall say to that which falls under the hand: Thou art the thing that I was seeking; for to me that which presents itself is always a material for virtue both rational and political, and in a

word, for the exercise of art, which belongs to man or God.

Marcus Aurelius, Meditations, VII, 68

- 15 Remember that to change thy opinion and to follow him who corrects thy error is as consistent with freedom as it is to persist in thy error.

Marcus Aurelius, Meditations, VIII, 16

- 16 Soul becomes free when it moves, through Intellectual-Principle, towards The Good; what it does in that spirit is its free act; Intellectual-Principle is free in its own right. That principle of Good is the sole object of desire and the source of self-disposal to the rest, to soul when it fully attains to Intellectual-Principle by connate possession.

Plotinus, Sixth Ennead, VIII, 7

- 17 The wise man is always free; he is always held in honor; he is always master of the laws. The law is not made for the just but for the unjust. The just man is a law unto himself and he does not need to summon the law from afar, for he carries it enclosed in his heart....

The wise man is free, since one who does as he wishes is free. Not every wish is good, but the wise man wishes only that which is good; he hates evil for he chooses what is good. Because he chooses what is good he is master of his choice and because he chooses his work is he free. Then, because he does what he wishes the free man is wise. The wise man does well everything that he does. One who does all things well does all things rightly. But one who does all things rightly does everything without offense, without blame, without loss and disturbance

within himself. And one who does nearly everything without giving offense acts blamelessly and acts without disturbance to himself, without loss. He does not act unwisely but wisely in all things. One who acts with wisdom has nothing to fear, for fear lies in sin. Where there is no fear there is liberty; where there is liberty there is the power of doing what one wishes. Therefore, only the wise man is free.

Ambrose, Letter to Simplicianus (Benedictine 37)

18 I was bound not with the iron of another's chains, but by my own iron will. The enemy held my will; and of it he made a chain and bound me. Because my will was perverse it changed to lust, and lust yielded to became habit, and habit not resisted became necessity. These were like links hanging one on another—which is why I have called it a chain— and their hard bondage held me bound hand and foot. The new will which I now began to have, by which I willed to worship You freely and to enjoy You, O God, the only certain Joy, was not yet strong enough to overcome that earlier will rooted deep through the years. My two wills, one old, one new, one carnal, one spiritual, were in conflict and in their conflict wasted my soul.

Augustine, Confessions, VIII, 5

19 To the just all the evils imposed on them by unjust rulers are not the punishment of crime, but the test of virtue. Therefore the good man, although he is a slave, is free; but the bad man, even if he reigns, is a slave, and that not of one man, but, what is far more grievous, of as many masters as he has vices.

Augustine, City of God, IV, 3

20 The good will ... is the work of God; for God created him with it. But the first evil will, which preceded all man's evil acts, was rather a kind of falling away from the work of God to its own works than any positive work. And therefore the acts resulting were evil, not having God, but the will itself for their end; so that the will or the man himself, so far as his will is bad, was as it were the evil tree bringing forth evil fruit. Moreover, the bad will, though it be not in harmony with, but opposed to nature, inasmuch as it is a vice or blemish, yet it is true of it as of all vice, that it cannot exist except in a nature, and only in a nature created out of nothing, and not in that which the Creator has begotten of Himself, as He begot the Word, by Whom all things were made. For though God formed man of the dust of the earth, yet the earth itself, and every earthly material, is absolutely created out of nothing; and man's soul, too, God created out of nothing, and joined to the body, when He made man. But evils are so thoroughly overcome by good that, though they are permitted to exist for the sake of demonstrating how the most righteous foresight of God can make a good use even of them, yet good can exist without evil, as in the true and supreme God Himself, and as in every invisible and visible celestial creature that exists above this murky atmosphere; but evil cannot exist without good, because the natures in which evil exists, in so far as they are natures, are good. And evil is removed, not by removing any nature, or part of a nature, which had been introduced by the evil, but by healing and correcting that which had been vitiated and depraved. The will, therefore, is then truly free, when it is not the slave of

vices and sins. Such was it given us by God; and this being lost by its own fault, can only be restored by Him Who was able at first to give it. And therefore the truth saith, "If the Son shall make you free, ye shall be free indeed"; which is equivalent to saying, "If the Son shall save you, ye shall be saved indeed." For He is our Liberator, inasmuch as He is our Saviour.

Augustine, City of God, XIV, 11

21 As, after the resurrection, the body, having become wholly subject to the spirit, will live in perfect peace to all eternity; even in this life we must make it an object to have the carnal habit changed for the better, so that its inordinate affections may not war against the soul. And until this shall take place, "the flesh lusteth against the spirit, and the spirit against the flesh"; the spirit struggling, not in hatred, but for the mastery, because it desires that what it loves should be subject to the higher principle; and the flesh struggling, not in hatred, but because of the bondage of habit which it has derived from its parent stock, and which has grown in upon it by a law of nature till it has become inveterate. The spirit, then, in subduing the flesh, is working as it were to destroy the ill-founded peace of an evil habit, and to bring about the real peace which springs out of a good habit.

Augustine, Christian Doctrine, I, 24

22 Our sensual appetite, where the passions reside, is not entirely subject to reason; hence at times our passions forestall and hinder reason's judgment, at other times they follow after reason's judgment, accordingly as the

sensual appetite obeys reason to some extent. But in the state of innocence the inferior appetite was wholly subject to reason, so that in that state the passions of the soul existed only as consequent upon the judgment of reason.

Aquinas, Summa Theologica, I, 95, 2

- 23 Perfection of moral virtue does not wholly take away the passions, but regulates them.

Aquinas, Summa Theologica, I, 95, 2

- 24 In spiritual things there is a twofold servitude and a twofold freedom: for there is the servitude of sin and the servitude of justice; and there is likewise a twofold freedom, from sin, and from justice. . . ,

Now the servitude of sin or justice consists in being inclined to evil by a habit of sin, or inclined to good by a habit of justice: and in like manner freedom from sin is not to be overcome by the inclination to sin, and freedom from justice is not to be held back from evil for the love of justice. Nevertheless, since man, by his natural reason, is inclined to justice, while sin is contrary to natural reason, it follows that freedom from sin is true freedom which is united to the servitude of justice, since they both incline man to that which is becoming to him. In like manner true servitude is the servitude of sin, which is connected with freedom from justice, because man is thereby hindered from attaining that which is proper to him.

Aquinas, Summa Theologica, II-II, 183, 4

- 25 It must be observed that so far as men are concerned, in order that any one attain to a state of freedom or

servitude there is required first of all an obligation or a release. For the mere fact of serving someone does not make a man a slave, since even the free serve.... Nor again does the mere fact of ceasing to serve make a man free, as in the case of a runaway slave. But properly speaking a man is a slave if he be bound to serve, and a man is free if he be released from service. Secondly, it is required that the above obligation be imposed with a certain solemnity, even as a certain solemnity is observed in other matters which among men obtain a settlement in perpetuity. Accordingly, properly speaking, one is said to be in the state of perfection not through having the act of perfect love, but through binding himself in perpetuity and with a certain solemnity to those things that pertain to perfection.

Aquinas, Summa Theologica, II-II, 184, 4

- 26 One must bear in mind that the sons of God are driven not as slaves, but as free men. For, since he is free who is for his own sake, we do that freely which we do of our very selves. But this is what we do of our will, but what we do against our will we do not freely but as slaves: be the violence absolute, as when "the whole principle is extrinsic, with the sufferer contributing nothing"—for instance, a man is pushed into motion; or be the violence mixed with the voluntary—for instance, when one wishes to do or to suffer what is less contrary to his will to avoid what is more contrary to it. But the Holy Spirit so inclines us to act that He makes us act voluntarily, in that He makes us lovers of God. Therefore, the sons of God are impelled by the Holy Spirit freely out of love, not slavishly out of fear.

Aquinas, Summa Contra Gentiles, IV, 22

27 *Marco*. From his hands who fondly loves her ere she is in being, there issues, after the fashion of a little child that sports, now weeping, now laughing,

the simple, tender soul, who knoweth naught save that, sprung from a joyous maker, willingly she turneth to that which delights her.

First she tastes the savour of a trifling good; there she is beguiled and runneth after it, if guide or curb turn not her love aside.

Wherefore 'twas needful to put law as a curb, needful to have a ruler who might discern at least the tower of the true city.

Laws there are, but who putteth his hand to them? None; because the shepherd that leads may chew the cud, but hath not the hoofs divided.

Wherefore the people, that see their guide aiming only at that good whereof he is greedy, feed on that and ask no further.

Clearly canst thou see that evil leadership is the cause which hath made the world sinful, and not nature that may be corrupted within you.

Dante, Purgatorio, XVI, 85

28 And he [Virgil] to me: "So far as reason sees here, I can tell thee; from beyond that point, ever await Beatrice, for 'tis a matter of faith.

Every substantial form, which is distinct from matter and is in union with it, has a specific virtue contained within itself

which is not perceived save in operation, nor is manifested except by its effects, just as life in a plant by

the green leaves.

Therefore man knows not whence the understanding of the first cognitions may come, nor the inclination to the prime objects of appetite,

which are in you, even as the instinct in bees to make honey; and this prime will admits no desert of praise or of blame.

Now in order that to this will every other may be related, innate with you is the virtue which giveth counsel, and ought to guard the threshold of assent.

This is the principle whence is derived the reason of desert in you, according as it garners and winnows good and evil loves.

Those who in their reasoning went to the foundation, perceived this innate freedom, therefore they left ethics to the world.

Wherefore suppose that every love which is kindled within you arise of necessity, the power to arrest it is within you.

Dante, Purgatorio, XVIII, 46

29 A Christian man has no need of any work or of any law in order to be saved, since through faith he is free from every law and does all that he does out of pure liberty and freely, seeking neither benefit nor salvation, since he already abounds in all things and is saved through the grace of God because of his faith, and now seeks only to please God.

Luther, Freedom of a Christian

30 All their (the Thelcmitscs] life was spent not in laws, statutes, or rules, but according to their own free will and

pleasure. They rose out of their beds when they thought good: they did eat, drink, labour, sleep, when they had a mind to it, and were disposed for it. None did awake them, none did offer to constrain them to eat, drink, nor to do any other thing; for so had Gargantua established it. In all their rule, and strictest tie of their order, there was but this one clause to be observed.

DO WHAT THOU WILT.

Because men that are free, well-born, well-bred, and conversant in honest companies, have naturally an instinct and spur that prompteth them unto virtuous actions, and withdraws them from vice, which is called honour. Those same men, when by base subjection and constraint they are brought under and kept down, turn aside from that noble disposition, by which they formerly were inclined to virtue, to shake off and break that bond of servitude, wherein they are so tyrannously enslaved; for it is agreeable with the nature of man to long after things forbidden, and to desire what is denied us.

By this liberty they entered into a way laudable emulation, to do all of them what they saw' did please one.

Rabelais, Gargantua and Pantagruel I, 57

- 31 The children of God are liberated by regeneration from the servitude of sin; not that they have already obtained the full possession of liberty, and experience no more trouble from the flesh, but there remains in them a perpetual cause of contention to exercise them; and not only to exercise them, but also to make them better acquainted with their own infirmity. And on this subject all sound writers are agreed—that there still remains in a regenerate man a fountain of evil, continually producing

irregular desires, which allure and stimulate him to the commission of sin.

Calvin, Institutes of the Christian Religion, III, 3

32 Since it has pleased God to give us some capacity for reason, so that we should not be, like the animals, slavishly subjected to the common laws, but should apply ourselves to them by judgment and voluntary liberty, we must indeed yield a little to the simple authority of Nature, but not let ourselves be carried away tyrannically by her: reason alone must guide our inclinations.

Montaigne, Essays, 11, 8, Affection of Fathers

33 True freedom is to have power over oneself for everything.

Montaigne, Essays, III, 12, Of Physiognomy

34 *Hamlet*. Blest are those
Whose blood and judgement are so well commingled,
That they are not a pipe for fortune's finger
To sound what stop she please. Give me that man
That is not passion's slave, and I will wear him
In my heart's core, ay, in my heart of heart.

Shakespeare, Hamlet, III, ii, 73

35 The impotence of man to govern or restrain the affects I call bondage, for a man who is under their control is not his own master, but is mastered by fortune, in whose power he is, so that he is often forced to follow the worse, although he sees the better before him.

Spinoza, Ethics, IV, Preface

36 It will easily be seen in what consists the difference between a man who is led by affect or opinion alone and one who is led by reason. The former, whether he wills it or not, does those things of which he is entirely ignorant, but the latter does the will of no one but himself, and does those things only which he knows are of greatest importance in life, and which he therefore desires above all things. I call the former, therefore, a slave, and the latter free.

Spinoza, Ethics, IV, Prop. 66, Schol.

37 We may say that we are immune from bondage in so far as we act with a distinct knowledge, but that we are the slaves of passion in so far as our perceptions are confused. In this sense we have not all the freedom of spirit that were to be desired, and we may say with St. Augustine that being subject to sin we have the freedom of a slave. Yet a slave, slave as he is, nevertheless has freedom to choose according to the state wherein he is, although more often than not he is under the stern necessity of choosing between two evils, because a superior force prevents him from attaining the goods whereto he aspires. That which in a slave is effected by bonds and constraint in us is effected by passions, whose violence is sweet, but none the less pernicious. In truth we will only that which pleases us: but unhappily what pleases us now is often a real evil, which would displease us if we had the eyes of the understanding open. Nevertheless that evil state of the slave, which is also our own, does not prevent us, any more than him, from making a free choice of that which pleases us most, in the state to which we are reduced, in proportion to our present strength and knowledge.

Leibniz, Theodicy, 289

38 If through defects that may happen out of the ordinary course of Nature, any one comes not to such a degree of reason wherein he might be supposed capable of knowing the law, and so living within the rules of it, he is never capable of being a free man, he is never let loose to the disposure of his own will; because he knows no bounds to it, has not understanding, its proper guide, but is continued under the tuition and government of others all the time his own understanding is incapable of that charge.

Locke, II Civil Government, VI, 60

39 A man on the rack is not at liberty to lay by the idea of pain, and divert himself with other contemplations: and sometimes a boisterous passion hurries our thoughts, as a hurricane does our bodies, without leaving us the liberty of thinking on other things, which we would rather choose. But as soon as the mind regains the power to stop or continue, begin or forbear, any of these motions of the body without, or thoughts within, according as it thinks fit to prefer either to the other, we then consider the man as a free agent again.

Locke, Concerning Human Understanding, Bk. II, XXI, 12

40 Without liberty, the understanding would be to no purpose: and without understanding, liberty (if it could be) would signify nothing. If a man sees what would do him good or harm, what would make him happy or miserable, without being able to move himself one step towards or from it, what is he the better for seeing? And he that is at liberty to ramble in perfect darkness, what is

his liberty better than if he were driven up and down as a bubble by the force of the wind? The being acted by a blind impulse from without, or from within, is little odds. The first, therefore, and great use of liberty is to hinder blind precipitancy; the principal exercise of freedom is to stand still, open the eyes, look about, and take a view of the consequence of what we are going to do, as much as the weight of the matter requires.

Locke, Concerning Human Understanding, Bk. II, XXI, 69

- 41 When a man gives himself up to the government of a ruling passion,—or, in other words, when his Hobby-Horse grows headstrong,—farewell cool reason and fair discretion!

Sterne, Tristram Shandy, II, 5

- 42 Moral liberty... alone makes [man] truly master of himself; for the mere impulse of appetite is slavery, while obedience to a law which we prescribe to ourselves is liberty.

Rousseau, Social Contract, I, 8

- 43 In vain do we seek freedom under the power of the laws. The laws! Where is there any law? Where is there any respect for law? Under the name of law you have everywhere seen the rule of self-interest and human passion. But the eternal laws of nature and of order exist. For the wise man they take the place of positive law; they are written in the depths of his heart by conscience and reason; let him obey these laws and be free; for there is no slave but the evil-doer, for he always does evil against his will. Liberty is not to be found in any form of

government, she is in the heart of the free man, he bears her with him everywhere.

Rousseau, Emile, V

- 44 It is... the moral law, of which we become directly conscious (as soon as we trace for ourselves maxims of the will), that *first* presents itself to us, and leads directly to the concept of freedom, inasmuch as reason presents it as a principle of determination not to be outweighed by any sensible conditions, nay, wholly independent of them.

Kant, Critique of Practical Reason, Pt. I, I, 1

- 45 Freedom and the consciousness of it as a faculty of following the moral law with unyielding resolution is *independence of inclinations*, at least as motives determining (though not as *affecting*) our desire, and so far as I am conscious of this freedom in following my moral maxims, it is the only source of an unaltered contentment which is necessarily connected with it and rests on no special feeling.

Kant, Critique of Practical Reason, Pt. I, II, 2

- 46 Virtue ... in so far as it is based on internal freedom, contains a positive command for man, namely, that he should bring all his powers and inclinations under his rule (that of reason); and this is a positive precept of command over himself which is additional to the prohibition, namely that he should not allow himself to be governed by his feelings and inclinations (the duty of *apathy*); since, unless reason takes the reins of

government into its own hands, the feelings and inclinations play the master over the man.

Kant, Introduction to the Metaphysical Elements of Ethics, XVI

47 The laws of freedom, as distinguished from the laws of nature, are *moral* laws. So far as they refer only to external actions and their lawfulness, they are called *juridical*; but if they also require that, as laws, they shall themselves be the determining principles of our actions, they are *ethical*. The agreement of an action with juridical laws is its *legality*; the agreement of an action with ethical laws is its *morality*. The freedom to which the former laws refer, can only be freedom in external practice; but the freedom to which the latter laws refer is freedom in the internal as well as the external exercise of the activity of the will in so far as it is determined by laws of reason. So, in theoretical philosophy, it is said that only the objects of the external senses are in space, but all the objects both of internal and external sense are in time; because the representations of both, as being representations, so far belong all to the internal sense. In like manner, whether freedom is viewed in reference to the external or the internal action of the will, its laws, as pure practical laws of reason for the free activity of the will generally, must at the same time be inner principles for its determination, although they may not always be considered in this relation.

Kant, General Introduction to the Metaphysic of Morals, I

48 I am free... when my existence depends upon myself. This self-contained existence of spirit is none other than self-

consciousness, consciousness of one's own being. Two things must be distinguished in consciousness; first, the fact *that I know*; secondly, *what I know*. In *self* consciousness these are merged in one; for spirit *knows itself*. It involves an appreciation of its own nature, as also an energy enabling it to realize itself; to make itself *actually* that which it is *potentially*.

Hegel, Philosophy of History, Introduction, 3

49 The slave is doomed to worship Time and Fate and Death, because they are greater than anything he finds in himself, and because all his thoughts are of things which they devour. But, great as they are, to think of them greatly, to feed their passionless splendor, is greater still. And such thought makes us free men; we no longer bow before the inevitable in Oriental subjection, but we absorb it, and make it a part of ourselves. To abandon the struggle for private happiness, to expel all eagerness of temporary desire, to burn with passion for eternal things—this is emancipation, and this is the free man's worship.

Russell, A Free Man's Worship

50 Anyone who has successfully undergone the training of learning and recognizing the truth about himself is henceforth strengthened against the dangers of immorality, even if his standard of morality should in some respect deviate from the common one.

Freud, General Introduction to Psycho-Analysis, XXVII

51 One might compare the relation of the ego to the id with that between a rider and his horse. The horse provides the locomotive energy, and the rider has the prerogative

of determining the goal and of guiding the movements of his powerful mount towards it. But all too often in the relations between the ego and the id we find a picture of the less ideal situation in which the rider is obliged to guide his horse in the direction in which it itself wants to go.

Freud, New Introductory Lectures on Psycho-Analysis, XXXI

52 If we state the moral law ... as the injunction to each self on every occasion to identify the self with a new growth that is possible, then obedience to law is one with moral freedom.

Dewey, Ethics, Pt. 11, XV, 5

53 The office of the moral law is that of a pedagogue, to protect and educate us in the use of freedom. At the end of this period of instruction, we are enfranchised from every servitude, even from the servitude of law, since Love made us one in spirit with the wisdom that is the source of Law.

Maritain. Freedom in the Modern World

9.5 Conscience

According to its etymology, the word "conscience," deriving as it does from *conscire*, should have almost the same meaning as "conscious," indicating awareness or knowledge. But that is not the meaning of the word as it has come to be used in discourse about moral problems. In that context, it is used either to signify a sense of right and wrong, whether

innate or acquired; or to signify the inner voice that determines the judgment an individual makes concerning what he should or should not do, or approve of, in a particular case.

Conscience does not displace but rather applies the principles or rules of the moral law, which is discussed in Section 9.3. Such principles or rules are universal or general formulations applicable to a wide variety of individual cases, some of which clearly fall under the rule and some of which involve aspects that might make them exceptions to the rule. Conscience is needed to make the judgment that considers the principle or rule in relation to this or that particular case, deciding either that the case calls for conformity to the rule or that the case justifies dispensation from it.

One quotation that the reader might expect to find here—Hamlet's statement that "conscience doth make cowards of us all"—has been placed elsewhere because, when it is read in the context of the whole "To be or not to be" speech, the meaning is clearly that it is a certain kind of knowledge, not the moral conscience, that causes us to become overtimid or overcautious when contemplating suicide.

Among the quotations assembled below, the reader will find some that discuss freedom of conscience and the right of private judgment in moral matters. These should be read in connection with related passages that have been placed in Section 13.2 on Freedom of Thought and Expression: Censorship. The reader will also find, in quotations taken from Freud, the discussion of psychological phenomena that are related to conscience—remorse and a sense of guilt. Other passages from Freud on the sense of guilt will be found in Section 12.4 on Guilt and Punishment. In Freud's

theory of the matter, the reader will learn, the repressive strictures of the superego represent the voice of conscience.

■ ■ ■

- 1 The best audience for the practice of virtue is the approval of one's own conscience.

Cicero, Disputations, II, 26

- 2 Where there is a bad conscience, some circumstance or other may provide one with impunity, but never with freedom from anxiety.

Seneca, Letters to Lucilius, 105

- 3 There is nothing so preoccupied, so distracted, so rent and torn by so many and such varied passions as an evil mind. For when it cherishes some dark design, it is tormented with hope, care and anguish of spirit, and even when it has accomplished its criminal purpose, it is racked by anxiety, remorse and the fear of all manner of punishments.

Quintilian, Institutio Oratorio, XII, 1

- 4 Conscience is said to witness, to bind, or stir up, and also to accuse, torment, or rebuke. And all these follow the application of knowledge or science to what we do, which application is made in three ways. One way in so far as we recognize that we have done or not done something: *Thy conscience knoweth that thou hast often spoken evil of others*, and according to this, conscience is said to

witness. In another way, so far as through the conscience we judge that something should be done or not done, and in this sense, conscience is said to stir up or to bind. In the third way, so far as by conscience we judge that something done is well done or ill done, and in this sense conscience is said to excuse, accuse, or torment. Now, it is clear that all these things follow the actual application of knowledge to what we do.

Aquinas, Summa Theologica, I, 79, 13

- 5 The laws of conscience, which we say are born of nature, are born of custom. Each man, holding in inward veneration the opinions and the behavior approved and accepted around him, cannot break loose from them without remorse, or apply himself to them without self-satisfaction.

Montaigne, Essays, I, 23, Of Custom

- 6 *King Richard*. Conscience is but a word that cowards use.
Devised at first to keep the strong in awe:
Our strong arms be our conscience, swords our law.

Shakespeare, Richard III, V, iii, 309

- 7 *Macbeth*. Better be with the dead,
Whom we, to gain our peace, have sent to peace,
Than on the torture of the mind to lie
In restless ecstasy.

Shakespeare, Macbeth, III, ii, 19

- 8 Another doctrine repugnant to civil society is that whatsoever a man does against his conscience is sin; and it dependeth on the presumption of making himself judge

of good and evil. For a man's conscience and his judgement is the same thing; and as the judgement, so also the conscience may be erroneous. Therefore, though he that is subject to no civil law sinneth in all he does against his conscience, because he has no other rule to follow but his own reason, yet it is not so with him that lives in a Commonwealth, because the law is the public conscience by which he hath already undertaken to be guided.

Hobbes, Leviathan, II, 29

- 9 *God*. And I will place within them as a guide
My Umpire *Conscience*, whom if they will hear,
Light after light well us'd they shall attain,
And to the end persisting, safe arrive.

Milton, Paradise Lost, III, 194

- 10 *Adam*. O Conscience, into what Abyss of fears
And horrors hast thou driv'n me; out of which
I find no way, from deep to deeper plung'd!

Milton, Paradise Lost, X, 842

- 11 A good conscience is never lawless in the worst regulated state, and will provide those laws for itself, which the neglect of legislators hath forgotten to supply.

Fielding, Tom Jones, XVII, 3

- 12 Surely if there is any thing in this life which a man may depend upon, and to the knowledge of which he is capable of arriving upon the most indisputable evidence, it must be this very thing,— whether he has a good conscience or no.

Sterne, Tristram Shandy, II, 17

- 13 Whenever a man talks loudly against religion, always suspect that it is not his reason, but his passions, which have got the better of his creed. A bad life and a good belief are disagreeable and troublesome neighbours, and where they separate, depend upon it, 'tis for no other cause but quietness' sake,

Sterne, Tristram Shandy, II, 17

- 14 I need only consult myself with regard to what I wish to do; what I feel to be right is right, what I feel to be wrong is wrong; conscience is the best casuist; and it is only when we haggle with conscience that we have recourse to the subtleties of argument.

Rousseau, Emile, IV

- 15 There is ... at the bottom of our hearts an innate principle of justice and virtue, by which, in spite of our maxims, we judge our own actions or those of others to be good or evil; and it is this principle that I call conscience.

Rousseau, Emile, IV

- 16 *Johnson.* Conscience is nothing more than a conviction felt by ourselves of something to be done, or something to be avoided; and in questions of simple unperplexed morality, conscience is very often a guide that may be trusted. But before conscience can determine, the state of the question is supposed to be completely known. In questions of law, or of fact, conscience is very often confounded with opinion. No man's conscience can tell him the right of another man; they must be known by rational investigation or historical enquiry. Opinion, which

he that holds it may call his conscience, may teach some men that religion would be promoted, and quiet preserved, by granting to the people universally the choice of their ministers. But it is a conscience very ill informed that violates the rights of one man, for the convenience of another.

Boswell, Life of Johnson (May 1, 1773)

- 17 Conscience is not a thing to be acquired, and it is not a duty to acquire it; but every man, as a moral being, has it originally within him. To be bound to have a conscience would be as much as to say to be under a duty to recognize duties. For conscience is practical reason which, in every case of law', holds before a man his duty for acquittal or condemnation; consequently it does not refer to an object, but only to the subject (affecting the moral feeling by its own act); so that it is an inevitable fact, not an obligation and duty. When, therefore, it is said, "This man has no conscience," what is meant is that he pays no heed to its dictates. For if he really had none, he would not take credit to himself for anything done according to duty, nor reproach himself with violation of duty, and therefore he would be unable even to conceive the duty of having a conscience.

I pass by the manifold subdivisions of conscience, and only observe what follows from what has just been said, namely, that there is no such thing as an *erring* conscience. No doubt it is possible sometimes to err in the objective judgement whether something is a duty or not; but I cannot err in the subjective whether I have compared it with my practical (here judicially acting) reason for the purpose of that judgement: for if I erred I would not have exercised practical judgement at all, and

in that case there is neither truth nor error.

Unconscientiousness is not want of conscience, but the propensity not to heed its judgement. But when a man is conscious of having acted according to his conscience, then, as far as regards guilt or innocence, nothing more can be required of him, only he is bound to enlighten his *understanding* as to what is duty or not; but when it comes or has come to action, then conscience speaks involuntarily and inevitably. To act conscientiously can, therefore, not be a duty, since otherwise it would be necessary to have a second conscience, in order to be conscious of the act of the first.

The duty here is only to cultivate our conscience, to quicken our attention to the voice of the internal judge, and to use all means to secure obedience to it, and is thus our indirect duty.

Kant, Introduction to the Metaphysical Elements of Ethics, XII

- 18 Conscience is an instinct to pass judgment upon ourselves in accordance with moral laws. It is not a mere faculty, but an instinct; and its judgment is not logical, but judicial. We have the faculty to judge ourselves logically in terms of laws of morality; we can make such use as we please of this faculty. But conscience has the power to summon us against our will before the judgment-seat to be judged on account of the righteousness or unrighteousness of our actions. It is thus an instinct and not merely a faculty of judgment, and it is an instinct to judge, not in the logical, but in the judicial sense.

Kant, Lectures on Ethics, Conscience

19 He who has no immediate loathing for what is morally wicked, and finds no pleasure in what is morally good, has no moral feeling, and such a man has no conscience. He who goes in fear of being prosecuted for a wicked deed, does not reproach himself on the score of the wickedness of his misdemeanour, but on the score of the painful consequences which await him; such a one has no conscience, but only a semblance of it. But he who has a sense of the wickedness of the deed itself, be the consequences what they may, has a conscience.

Kant, Lectures on Ethics, Conscience

20 Conscience is the representative within us of the divine judgment-seat: it weighs our dispositions and actions in the scales of a law which is holy and pure; we cannot deceive it, and, lastly, we cannot escape it because, like the divine omnipresence, it is always with us.

Kant, Lectures on Ethics, Conscience

21 We may speak in a very lofty strain about duty, and talk of the kind is uplifting and broadens human sympathies, but if it never comes to anything specific it ends in being wearisome. Mind demands particularity and is entitled to it. But conscience is this deepest inward solitude with oneself where everything external and every restriction has disappeared—this complete withdrawal into oneself. As conscience, man is no longer shackled by the aims of particularity, and consequently in attaining that position he has risen to higher ground, the ground of the modern world, which for the first time has reached this consciousness, reached this sinking into oneself. The more sensuous consciousness of earlier epochs had

something external and given confronting it, either religion or law. But conscience knows itself as thinking and knows that what alone has obligatory force for me is this that I think.

When we speak of conscience, it may easily be thought that, in virtue of its form, which is abstract inwardness, conscience is at this point without more ado true conscience. But true conscience determines itself to will what is absolutely good and obligatory and is this self-determination.

Hegel, Philosophy of Right, Additions, Pars. 136-137

- 22 A man could not have anything upon his conscience if God did not exist, for the relationship between the individual and God, the God-relationship, is the conscience, and that is why it is so terrible to have even the least thing upon one's conscience, because one is immediately conscious of the infinite weight of God.

Kierkegaard, Works of Love, I, 3B

- 23 The conscience really does not, and ought not to monopolize the whole of our lives, any more than the heart or the head- It is as liable to disease as any other part. I have seen some whose consciences, owing undoubtedly to former indulgence, had grown to be as irritable as spoilt children, and at length gave them no peace.

Thoreau, The Christian Fable

- 24 I fully subscribe to the judgment of those writers who maintain that of all the differences between man and the lower animals, the moral sense or conscience is by far the

most important.... It is summed up in that short but imperious word *ought*, so full of high significance. It is the most noble of all the attributes of man, leading him without a moment's hesitation to risk his life for that of a fellow-creature; or after due deliberation, impelled simply by the deep feeling of right or duty, to sacrifice it in some great cause.

Darwin, Descent of Man, 1, 4

25 The moral sense follows, firstly, from the enduring and ever-present nature of the social instincts; secondly, from man's appreciation of the approbation and disapprobation of his fellows; and thirdly, from the high activity of his mental faculties, with past impressions extremely vivid; and in these latter respects he differs from the lower animals. Owing to this condition of mind, man cannot avoid looking both backwards and forwards, and comparing past impressions. Hence after some temporary desire or passion has mastered his social instincts, he reflects and compares the now weakened impression of such past impulses with the ever-present social instincts; and he then feels that sense of dissatisfaction which all unsatisfied instincts leave behind them, he therefore resolves to act differently for the future,—and this is conscience.

Darwin, Descent of Man, III, 21

26 It is not because men's desires are strong that they act ill; it is because their consciences are weak. There is no natural connection between strong impulses and a weak conscience. The natural connection is the other way. To say that one person's desires and feelings are stronger

and more various than those of another, is merely to say that he has more of the raw material of human nature, and is therefore capable, perhaps of more evil, but certainly of more good. Strong impulses are but another name for energy. Energy may be turned to bad uses; but more good may always be made of an energetic nature, than of an indolent and impassive one. Those who have most natural feeling are always those whose cultivated feelings may be made the strongest. The same strong susceptibilities which make the personal impulses vivid and powerful, are also the source from whence are generated the most passionate love of virtue, and the sternest self-control. It is through the cultivation of these that society both does its duty and protects its interests: not by rejecting the stuff of which heroes are made, because it knows not how to make them.

Mill, On Liberty, III

- 27 The internal sanction of duty, whatever our standard of duty may be, is one and the same—a feeling in our own mind; a pain, more or less intense, attendant on violation of duty, which in properly cultivated moral natures rises, in the more serious cases, into shrinking from it as an impossibility. This feeling, when disinterested, and connecting itself with the pure idea of duty, and not with some particular form of it, or with any of the merely accessory circumstances, is the essence of Conscience.

Mill, Utilitarianism, III

- 28 I regard the bad conscience as the serious illness which man was bound to contract under the stress of the most radical change which he has ever experienced—that

change, when he found himself finally imprisoned within the pale of society and of peace.

Nietzsche, Genealogy of Morals, II, 16

29 What means does civilization make use of to hold in check the aggressiveness that opposes it, to make it harmless, perhaps to get rid of it? Some of these measures we have already come to know, though not yet the one that is apparently the most important. We can study it in the evolution of the individual. What happens in him to render his craving for aggression innocuous? Something very curious, that we should never have guessed and that yet seems simple enough. The aggressiveness is introjected, *internalized*; in fact, it is sent back where it came from, i.e., directed against the ego. It is there taken over by a part of the ego that distinguishes itself from the rest as a super-ego, and now, in the form of *conscience*, exercises the same propensity to harsh aggressiveness against the ego that the ego would have liked to enjoy against others. The tension between the strict super-ego and the subordinate ego we call the *sense of guilt*; it manifests itself as the need for punishment. Civilization, therefore, obtains the mastery over the dangerous love of aggression in individuals by enfeebling and disarming it and setting up an institution within their minds to keep watch over it, like a garrison in a conquered city.

Freud, Civilization and Its Discontents, VII

30 This increased sensitivity of morals in consequence of ill-luck has been illustrated by Mark Twain in a delicious little story: The First Melon I ever Stole. This melon, as it

happened, was unripe. I heard Mark Twain tell the story himself in one of his lectures. After he had given out the title, he stopped and asked himself in a doubtful way: "Was it the first?" This was the whole story.

Freud, Civilization and Its Discontents, VII

9.6 Good and Evil

The terms good and evil are used in other contexts than those of ethical or moral discourse. According to *Genesis*, God surveying his creation judged it to be good, very good. Similar judgments are made by human artists, expressing their estimation of the excellence or perfection of the work produced. In this meaning of the word, beauty, excellence, or perfection represents a goodness inherent in the very being of the thing judged good, without regard to its bearing on human conduct or its value for human life. Such goodness is sometimes called "ontological," in contradistinction to the moral goodness of the things that are good for man or good in his behavior. It is in this ontological sense that a mouse is said to be more good than a pearl, though a pearl is more valuable to man.

As the reader will find in the quotations below, the human good or the good for man is sometimes discussed in the singular and sometimes spoken of as a class of goods. The reader will find passages that consider "the Good," or that assert that the only morally good thing in the whole world is a good will. On the other hand, the reader will find enumerations of the variety of goods, discussions of the order of goods and of the relation of one good to another, and different classifications of goods, such as the threefold

division of them into external goods, goods of the body, and goods of the soul.

One distinction that is made by the ancients has great importance for later discussion. It is the distinction between the real and the apparent good. While acknowledging that men always regard as good that which they in fact desire, Socrates calls attention to the fact that they can be mistaken in their judgment, for what they desire may in fact not be good for them or to their advantage. It is generally admitted that the notion of the good and the notion of the desirable are correlative, but the question remains whether we call something good because we desire it; or ought to desire it, whether we do or not, because it is in fact good for us; or both. Fundamental differences in the approach to moral philosophy emerge from different answers to this question.

The quotations below touch on many other points: whether pleasure is the only good or just one of the goods; the goodness of God and the problem of the existence of evil in the world that He created; our knowledge of good and evil and the diremption between knowing what is good and seeking it; the inherent or natural goodness of man and the sources or origin of his propensities for evil. Other discussions of the theological aspects of this subject will be found in Section 20.5 on God and in Section 20.13 on Sin and Temptation, Psychological aspects of it are treated in Section 4.4 on Desire and Section 4.7 on Pleasure and Pain; and also in Section 5.7 on Will: Free Choice. The reader is also referred to Section 16.6 on Beauty and the Beautiful for the relation of goodness to beauty; and to Section 11.2 on Wealth and Poverty for the economic discussion of value and for the consideration of economic goods. In this chapter. Section 9.7 on Right and Wrong, Section 9.8 on Happiness,

and Section 9.10 on Virtue and Vice deal with matters closely related to themes treated here.

■ ■ ■

- 1 And God saw every thing that he had made, and, behold, it was very good.

Genesis 1:31

- 2 So I returned, and considered all the oppressions that are done under the sun: and behold the tears of such as were oppressed, and they had no comforter; and on the side of their oppressors there was power; but they had no comforter.

Wherefore I praised the dead which are already dead more than the living which are yet alive.

Yea, better is he than both they, which hath not yet been, who hath not seen the evil work that is done under the sun.

Ecclesiastes 4:1—3

- 3 For all this I considered in my heart even to declare all this, that the righteous, and the wise, and their works, are in the hand of God: no man knoweth either love or hatred by all that is before them.

All things come alike to all: there is one event to the righteous, and to the wicked; to the good and to the clean, and to the unclean; to him that sacrificeth, and to him that sacrificeth not: as is the good, so is the sinner; and he that swearcth, as he that feareth an oath.

This is an evil among all things that are done under the sun, that there is one event unto all: yea, also the heart of the sons of men is full of evil, and madness is in their heart while they live, and after that they go to the dead.

Ecclesiastes 9:1-3

- 4 *Philoctetes*. The Gods... find their pleasure in turning back from Death the rogues and tricksters, but the just and good they are always sending out of the world.

Sophocles, Philoctetes, 447

- 5 *Hecuba*. Goodness can be taught,
and any man who knows what goodness is
knows evil too, because he judges
from the good.

Euripides, Hecuba, 600

- 6 *Chorus Leader*. I hate all evil men who plot injustice,
Then trick it out with subterfuge. I would
Prefer as friend a good man ignorant
Than one more clever who is evil too.

Euripides, Ion, 832

- 7 *Socrates*. The good are like one another, and friends to one another; and... the bad, as is often said of them, are never at unity with one another or with themselves; for they are passionate and restless, and anything which is at variance and enmity with itself is not likely to be in union or harmony with any other thing.

Plato, Lysis, 214B

- 8 *Socrates*. No man voluntarily pursues evil, or that which he thinks to be evil. To prefer evil to good is not in human nature; and when a man is compelled to choose one of two evils, no one will choose the greater when he may have the less.

Plato, Protagoras, 358B

- 9 *Meno*. Well then, Socrates, virtue, as I take it, is when he, who desires the honourable, is able to provide it for himself; so the poet says, and I say too—

Virtue is the desire of things honourable and the power of attaining them.

Socrates. And does he who desires the honourable also desire the good?

Men. Certainly.

Soc. Then are there some who desire the evil and others who desire the good? Do not all men, my dear sir, desire good?

Men. I think not.

Soc. There are some who desire evil?

Men. Yes.

Soc. Do you mean that they think the evils which they desire, to be good; or do they know that they are evil and yet desire them?

Men. Both, I think.

Soc. And do you really imagine, Meno, that a man knows evils to be evils and desires them notwithstanding?

Men. Certainly I do.

Soc. And desire is of possession?

Men. Yes, of possession.

Soc. And does he think that the evils will do good to him who possesses them, or does he know that they will do him harm?

Men. There are some who think that the evils will do them good, and others who know that they will do them harm.

Soc. And, in your opinion, do those who think that they will do them good know that they are evils?

Men. Certainly not.

Soc. Is it not obvious that those who are ignorant of their nature do not desire them; but they desire what they suppose to be goods although they are really evils; and if they are mistaken and suppose the evils to be good they really desire goods?

Men. Yes, in that case.

Soc. Well, and do those who, as you say, desire evils, and think that evils are hurtful to the possessor of them, know that they will be hurt by them?

Men. They must know it.

Soc. And must they not suppose that those who are hurt are miserable in proportion to the hurt which is inflicted upon them?

Men. How can it be otherwise?

Soc. But are not the miserable ill-fated?

Men. Yes, indeed.

Soc. And does any one desire to be miserable and ill-fated?

Men. I should say not, Socrates.

Soc. But if there is no one who desires to be miserable, there is no one, Meno, who desires evil; for what is misery but the desire and possession of evil?

Men. That appears to be the truth, Socrates, and I admit that nobody desires evil.

Soc. And yet, were you not saying just now that virtue is the desire and power of attaining good?

Men. Yes, I did say so.

Soc. But if this be affirmed, then the desire of good is common to all, and one man is no better than another in that respect?

Men. True.

Soc. And if one man is not better than another in desiring good, he must be better in the power of attaining it?

Men. Exactly.

Soc. Then, according to your definition, virtue would appear to be the power of attaining good?

Men. I entirely approve, Socrates, of the manner in which you now view this matter.

Soc. Then let us see whether what you say is true from another point of view; for very likely you may be right.

Plato, Meno, 77A

- 10 *Socrates.* God, if he be good, is not the author of all things, as the many assert, but he is the cause of a few things only, and not of most things that occur to men. For few are the goods of human life, and many are the evils, and the good is to be attributed to God alone; of the evils the causes are to be sought elsewhere, and not in him.... That God being good is the author of evil to any one is to be strenuously denied, and not to be said or sung or heard in verse or prose by any one whether old or young in any well-ordered commonwealth.

Plato, Republic, II, 379B

11 *Socrates*. No one can deny that all percipient beings desire and hunt after good, and are eager to catch and have the good about them, and care not for the attainment of anything which is not accompanied by good.

Protarchus. That is undeniable.

Soc. Now let us part off the life of pleasure from the life of wisdom, and pass them in review.

Pro. How do you mean?

Soc. Let there be no wisdom in the life of pleasure, nor any pleasure in the life of wisdom, for if either of them is the chief good, it cannot be supposed to want anything, but if either is shown to want anything, then it cannot really be the chief good.

Pro. Impossible.

Soc. And will you help us to test these two lives?

Pro. Certainly.

Soc. Then answer.

Pro. Ask.

Soc. Would you choose, Protarchus, to live all your life long in the enjoyment of the greatest pleasures?

Pro. Certainly I should.

Soc. Would you consider that there was still anything wanting to you if you had perfect pleasure?

Pro. Certainly not.

Soc. Reflect; would you not want wisdom and intelligence and forethought, and similar qualities? would you not at any rate want sight?

Pro. Why should I? Having pleasure I should have all things,

Soc. Living thus, you would always throughout your life enjoy the greatest pleasures?

Pro. I should.

Soc. But if you had neither mind, nor memory, nor knowledge, nor true opinion, you would in the first place be utterly ignorant of whether you were pleased or not, because you would be entirely devoid of intelligence.

Pro. Certainly.

Soc. And similarly, if you had no memory you would not recollect that you had ever been pleased, nor would the slightest recollection of the pleasure which you feel at any moment remain with you; and if you had no true opinion you would not think that you were pleased when you were; and if you had no power of calculation you would not be able to calculate on future pleasure, and your life would be the life, not of a man, but of an oyster or *pulmo marinus*. Could this be otherwise?

Pro. No.

Soc. But is such a life eligible?

Pro. I cannot answer you, Socrates; the argument has taken away from me the power of speech.

Soc. We must keep up our spirits;—let us now take the life of mind and examine it in turn.

Pro. And what is this life of mind?

Soc. I want to know whether any one of us would consent to live, having wisdom and mind and knowledge and memory of all things, but having no sense of pleasure or pain, and wholly unaffected by these and the like feelings?

Pro. Neither life, Socrates, appears eligible to me, or is likely, as I should imagine, to be chosen by any one else,

Soc. What would you say, Protarchus, to both of these in one, or to one that was made out of the union of the two?

Pro. Out of the union, that is, of pleasure with mind and wisdom?

Soc. Yes, that is the life which I mean.

Pro. There can be no difference of opinion; not some but all would surely choose this third rather than either of the other two, and in addition to them.

Soc. But do you see the consequence?

Pro. To be sure I do. The consequence is, that two out of the three lives which have been proposed are neither sufficient nor eligible for man or for animal.

Plato, Philebus, 20B

- 12 *Athenian Stranger.* Goods are of two kinds: there are human and there are divine goods, and the human hang upon the divine; and the state which attains the greater, at the same time acquires the less, or, not having the greater, has neither. Of the lesser goods the first is health, the second beauty, the third strength, including swiftness in running and bodily agility generally, and the fourth is wealth.... Wisdom is chief and leader of the divine class of goods, and next follows temperance; and from the union of these two with courage springs justice, and fourth in the scale of virtue is courage,

Plato, Laws, I, 631A

- 13 *Athenian Stranger.* The goods of which the many speak are not really good: first in the catalogue is placed health, beauty next, wealth third; and then innumerable others, as for example to have a keen eye or a quick ear, and in general to have all the senses perfect; or, again, to be a tyrant and do as you like; and the final consummation of happiness is to have acquired all these things, and when you have acquired them to become at once immortal.... While to the just and holy all these things are the best of

possessions, to the unjust they are all, including even health, the greatest of evils.

Plato, Laws, II, 661A

14 Let us... state, in view of the fact that all knowledge and every pursuit aims at some good, what it is that we say political science aims at and what is the highest of all goods achievable by action. Verbally there is very general agreement; for both the general run of men and people of superior refinement say that it is happiness, and identify living well and doing well with being happy; but with regard to what happiness is they differ, and the many do not give the same account as the wise. For the former think it is some plain and obvious thing, like pleasure, wealth, or honour; they differ, however, from one another—and often even the same man identifies it with different things, with health when he is ill, with wealth when he is poor; but, conscious of their ignorance, they admire those who proclaim some great ideal that is above their comprehension....

To judge from the lives that men lead, most men, and men of the most vulgar type, seem (not without some ground) to identify the good, or happiness, with pleasure; which is the reason why they love the life of enjoyment. For there are, we may say, three prominent types of life—that just mentioned, the political, and thirdly the contemplative life. Now the mass of mankind are evidently quite slavish in their tastes, preferring a life suitable to beasts. ... A consideration of the prominent types of life shows that people of superior refinement and of active disposition identify happiness with honour; for this is, roughly speaking, the end of the political life. But it seems too superficial to be what we are looking for,

since it is thought to depend on those who bestow honour rather than on him who receives it, but the good we divine to be something proper to a man and not easily taken from him....

The life of money-making is one undertaken under compulsion, and wealth is evidently not the good we are seeking; for it is merely useful and for the sake of something else. And so one might rather take the aforementioned objects to be ends; for they are loved for themselves. But it is evident that not even these are ends; yet many arguments have been thrown away in support of them.

Aristotle, Ethics, 1095a13

- 15 Goods have been divided into three classes, and some are described as external, others as relating to soul or to body; we call those that relate to soul most properly and truly goods, and psychical actions and activities we class as relating to soul. Therefore our account must be sound, at least according to this view, which is an old one and agreed on by philosophers. It is correct also in that we identify the end with certain actions and activities; for thus it falls among goods of the soul and not among external goods. Another belief which harmonizes with our account is that the happy man lives well and does well; for we have practically defined happiness as a sort of good life and good action. The characteristics that are looked for in happiness seem also, all of them, to belong to what we have defined happiness as being. For some identify happiness with virtue, some with practical wisdom, others with a kind of philosophic wisdom, others with these, or one of these, accompanied by pleasure or not without pleasure; while others include also external

prosperity. Now some of these views have been held by many men and men of old, others by a few eminent persons; and it is not probable that either of these should be entirely mistaken, but rather that they should be right in at least some one respect or even in most respects.

With those who identify happiness with virtue or some one virtue our account is in harmony; for to virtue belongs virtuous activity. But it makes, perhaps, no small difference whether we place the chief good in possession or in use, in state of mind or in activity. For the state of mind may exist without producing any good result, as in a man who is asleep or in some other way quite inactive, but the activity cannot; for one who has the activity will of necessity be acting, and acting well and as in the Olympic Games it is not the most beautiful and the strongest that are crowned but those who compete. ... So those who act win, and rightly win, the noble and good things in life.

Aristotle, Ethics, 1098b13

- 16 It is harder to fight with pleasure than with anger, to use Heraclitus' phrase, but both art and virtue are always concerned with what is harder; for even the good is better when it is harder.

Aristotle, Ethics, 1105a8

- 17 It is no easy task to be good. For in everything it is no easy task to find the middle, e.g. to find the middle of a circle is not for every one but for him who knows; so, too, any one can get angry—that is easy—or give or spend money; but to do this to the right person, to the right extent, at the right time, with the right motive, and in the

right way, that is not for every one, nor is it easy;
wherefore goodness is both rare and laudable and noble.

Aristotle, Ethics, 1109a24

18 Those who say that the good is the object of wish must admit in consequence that that which the man who does not choose aright wishes for is not an object of wish (for if it is to be so, it must also be good; but it was, if it so happened, bad); while those who say the apparent good is the object of wish must admit that there is no natural object of wish, but only what seems good to each man. Now different things appear good to different people, and, if it so happens, even contrary things.

If these consequences are unpleasing, are we to say that absolutely and in truth the good is the object of wish, but for each person the apparent good; that that which is in truth an object of wish is an object of wish to the good man, while any chance thing may be so to the bad man, as in the case of bodies also the things that are in truth wholesome are wholesome for bodies which are in good condition, while for those that are diseased other things are wholesome—or bitter or sweet or hot or heavy, and so on; since the good man judges each class of things rightly, and in each the truth appears to him? For each state of character has its own ideas of the noble and the pleasant, and perhaps the good man differs from others most by seeing the truth in each class of things, being as it were the norm and measure of them. In most things the error seems to be due to pleasure; for it appears a good when it is not. We therefore choose the pleasant as a good, and avoid pain as an evil.

Aristotle, Ethics, 1113a17

19 Evil destroys even itself, and if it is complete becomes unbearable.

Aristotle, Ethics, 1126a12

20 Those who have done many terrible deeds and are hated for their wickedness even shrink from life and destroy themselves. And wicked men seek for people with whom to spend their days, and shun themselves; for they remember many a grievous deed, and anticipate others like them, when they are by themselves, but when they are with others they forget. And having nothing lovable in them they have no feeling of love to themselves. Therefore also such men do not rejoice or grieve with themselves; for their soul is rent by faction, and one element in it by reason of its wickedness grieves when it abstains from certain acts, while the other part is pleased, and one draws them this way and the other that, as if they were pulling them in pieces. If a man cannot at the same time be pained and pleased, at all events after a short time he is pained *because* he was pleased, and he could have wished that these things had not been pleasant to him; for bad men are laden with repentance.

Therefore the bad man does not seem to be amicably disposed even to himself, because there is nothing in him to love; so that if to be thus is the height of wretchedness, we should strain every nerve to avoid wickedness and should endeavour to be good; for so and only so can one be either friendly to oneself or a friend to another.

Aristotle, Ethics, 1166b12

21 Some think that we are made good by nature, others by habituation, others by teaching. Nature's part evidently does not depend on us, but as a result of some divine causes is present in those who are truly fortunate; while argument and teaching, we may suspect, are not powerful with all men, but the soul of the student must first have been cultivated by means of habits for noble joy and noble hatred, like earth which is to nourish the seed. For he who lives as passion directs will not hear argument that dissuades him, nor understand it if he does; and how can we persuade one in such a state to change his ways? And in general passion seems to yield not to argument but to force. The character, then, must somehow be there already with a kinship to virtue, loving what is noble and hating what is base.

Aristotle, Ethics, 1179b20

22 Ignorance of good and evil is the most upsetting factor of human life. Because of mistaken ideas on these two matters, we are frequently deprived of our greatest pleasures, and our minds are overcome with anxiety.

Cicero, De Finibus, I, 13

23 Here (in Happy Groves] patriots live, who, for their country's good,
In fighting fields, were prodigal of blood:
Priests of unblemish'd lives here make abode
And poets worthy their inspiring god;
And searching wits, of more mechanic parts,
Who grac'd their age with new-invented arts;
Those who to worth their bounty did extend,
And those who knew that bounty to commend.

The heads of these with holy fillets bound,
And all their temples were with garlands crown'd.

Virgil, Aeneid, VI

24 The most part of us desire what is evil through our
strangeness to and ignorance of good.

Plutarch, Artaxerxes

25 What a man applies himself to earnestly, that he
naturally loves. Do men then apply themselves earnestly
to the things which are bad? By no means. Well, do they
apply themselves to things which in no way concern
themselves? Not to these either. It remains, then, that
they employ them-selves earnestly only about things
which are good; and if they are earnestly employed about
things, they love such things also.

Epictetus, Discourses, 11, 22

26 The business of the wise and good man is to use
appearances conformably to nature: and as it is the
nature of every soul to assent to the truth, to dissent from
the false, and to remain in suspense as to that which is
uncertain; so it is its nature to be moved toward the
desire of the good, and to aversion from the evil; and with
respect to that which is neither good nor bad it feels
indifferent For as the money-changer is not allowed to
reject Caesar's coin, nor the seller of herbs, but if you
show the coin, whether he chooses or not, he must give
up what is sold for the coin; so it is also in the matter of
the soul. When the good appears, it immediately attracts
to itself; the evil repels from itself. But the soul will never

reject the manifest appearance of the good, any more than persons will reject Caesar's coin.

Epictetus, Discourses, III, 3

27 Seek not the good in things external; seek it in yourselves: if you do not, you will not find it.

Epictetus, Discourses, III, 24

28 As a mark is not set up for the sake of missing the aim, so neither does the nature of evil exist in the world.

Epictetus, Encheiridion, XXVII

29 Nothing is evil which is according to nature.

Marcus Aurelius, Meditations, II, 17

30 It is a ridiculous thing for a man not to fly from his own badness, which is indeed possible, but to fly from other men's badness, which is impossible.

Marcus Aurelius, Meditations, VII, 71

31 No longer talk at all about the kind of man that a good man ought to be, but be such.

Marcus Aurelius, Meditations, X, 16

32 Health and freedom from pain; which of these has any great charm? As long as we possess them, we set no store upon them. Anything which, present, has no charm and adds nothing to happiness, which when lacking is desired because of the presence of an annoying opposite, may reasonably be called a necessity but not a Good.

Plotinus, First Ennead, IV, 6

33 As necessarily as there is Something after the First, so necessarily there is a Last: this Last is Matter, the thing which has no residue of good in it: here is the necessity of Evil.

Plotinus, First Ennead, VIII, 7

34 The light streaming from the Soul is dulled, is weakened, as it mixes with Matter which offers Birth to the Soul, providing the means by which it enters into generation, impossible to it if no recipient were at hand.

This is the fall of the Soul, this entry into Matter: thence its weakness: not all the faculties of its being retain free play, for Matter hinders their manifestation; it encroaches upon the Soul's territory and, as it were, crushes the Soul back; and it turns to evil all that it has stolen, until the Soul finds strength to advance again.

Thus the cause, at once, of the weakness of Soul and of all its evil is Matter.

Plotinus, First Ennead, VIII, 11

35 Each several thing must be a separate thing; there must be acts and thoughts that are our own; the good and evil done by each human being must be his own; and it is quite certain that we must not lay any vileness to the charge of the All.

Plotinus, Third Ennead, I, 4

36 This Universe is good not when the individual is a stone, but when everyone throws in his own voice towards a total harmony, singing out a life—thin, harsh, imperfect, though it be.

Plotinus, Third Ennead, 11, 17

37 If we do not possess good, we cannot bestow it; nor can we ever purvey any good thing to one that has no power of receiving good.

Plotinus, Fourth Ennead, IV, 45

38 To the lowest of things the good is its immediate higher; each step represents the good to what stands lower so long as the movement does not tend awry but advances continuously towards the superior: thus there is a halt at the Ultimate, beyond which no ascent is possible: that is, the First Good, the authentic, the supremely sovereign, the source of good to the rest of things.

Matter would have Forming-Idea for its good, since, were it conscious, it would welcome that; body would look to soul, without which it could not be or endure; soul must look to virtue; still higher stands Intellectual-Principle; above that again is the principle we call the Primal. Each of these progressive priors must have act upon those minors to which they are, respectively, the good: some will confer order and place, others life, others wisdom and the good life.

Plotinus, Sixth Ennead, VII, 25

39 It was by Your gift that I desired what You gave and no more, by Your gift that those who suckled me willed to give me what You had given them: for it was by the love implanted in them by You that they gave so willingly that milk which by Your gift flowed in the breasts. It was a good for them that I received good from them, though I received it not from them but only through them: since all good things are from You, O God.

Augustine, Confessions, I, 6

40 In goodness of will is our peace.

Augustine, Confessions, XIII, 9

41 Though good and bad men suffer alike, we must not suppose that there is no difference between the men themselves, because there is no difference in what they both suffer. For even in the likeness of the sufferings, there remains an unlikeness in the sufferers; and though exposed to the same anguish, virtue and vice are not the same thing. For as the same fire causes gold to glow brightly, and chaff to smoke; and under the same flail the straw is beaten small, while the grain is cleansed; and as the lees are not mixed with the oil, though squeezed out of the vat by the same pressure, so the same violence of affliction proves, purges, clarifies the good, but damns, ruins, exterminates the wicked.

Augustine, City of God, I, 8

42 According to the utility each man finds in a thing, there are various standards of value, so that it comes to pass that we prefer some things that have no sensation to some sentient beings. And so strong is this preference, that, had we the power, we would abolish the latter from nature altogether, whether in ignorance of the place they hold in nature, or, though, we know it, sacrificing them to our own convenience. Who, for example, would not rather have bread in his house than mice, gold than fleas? But there is little to wonder at in this, seeing that even when valued by men themselves (whose nature is certainly of the highest dignity), more is often given for a horse than for a slave, for a jewel than for a maid. Thus the reason of one contemplating nature prompts very different

judgments from those dictated by the necessity of the needy, or the desire of the voluptuous; for the former considers what value a thing in itself has in the scale of creation, while necessity considers how it meets its need.

Augustine, City of God, XI, 16

43 God, the author of natures, not of vices, created man upright; but man, being of his own will corrupted and justly condemned, begot corrupted and condemned children. For we all were in that one man, since we all were that one man, who fell into sin by the woman who was made from him before the sin. . . . And thus, from the bad use of free will, there originated the whole train of evil, which, with its concatenation of miseries, convoys the human race from its depraved origin, as from a corrupt root, on to the destruction of the second death, which has no end, those only being excepted who are freed by the grace of God.

Augustine, City of God, XIII, 14

44 The possession of goodness is by no means diminished by being shared with a partner either permanent or temporarily assumed; on the contrary, the possession of goodness is increased in proportion to the concord and charity of each of those who share it. In short, he who is unwilling to share this possession cannot have it; and he who is most willing to admit others to a share of it will have the greatest abundance to himself.

Augustine, City of God, XV, 5

45 Life eternal is the supreme good, death eternal the supreme evil.

Augustine, City of God, XIX, 4

46 He [God] judged it better to bring good out of evil, than not to permit any evil to exist.

Augustine, Enchiridion, XXVII

47 Good and being are really the same, and differ only according to reason, which is clear from the following argument. The essence of good consists in this, that it is in some way desirable. Hence the Philosopher [Aristotle] says "The good is what all desire." Now it is clear that a thing is desirable only in so far as it is perfect; for all desire their own perfection. But everything is perfect so far as it is in act. Therefore it is clear that a thing is good so far as it is being; for it is being is the actuality of all things.... Hence it is clear that good and being are the same really. But good presents the aspect of desirableness, which being does not present.

Aquinas, Summa Theologica, I, 5, 1

48 Non-being is desirable not of itself, but only accidentally—that is, in so far as the removal of an evil, which can only be removed by non-being, is desirable. Now the removal of an evil cannot be desirable except so far as this evil deprives a thing of some being. Therefore being is desirable of it-self, and non-being only accidentally, in so far as one seeks some being of which one cannot bear to be deprived; thus even non-being can be spoken of as relatively good.

Aquinas, Summa Theologica, I, 5, 2

49 No being can be spoken of as evil, in so far as it is being, but only so far as it lacks being. Thus a man is said to be

evil because he lacks the being of virtue; and an eye is said to be evil because it lacks the power to see well.

Aquinas, Summa Theologica, I, 5,3

50 He who has a will is said to be good, so far as he has a good will, because it is by our will that we employ whatever powers we may have. Hence a man is said to be good, not by his good understanding, but by his good will. Now the will relates to the end as to its proper object. Thus the saying, "we are because God is good" has reference to the final cause.

Aquinas, Summa Theologica, I, 5, 4

51 The evil which consists in the defect of action is always caused by the defect of the agent. But in God there is no defect, but the highest perfection.... Hence, the evil which consists in defect of action, or which is caused by defect of the agent, is not reduced to God as to its cause.

But the evil which consists in the corruption of some things is reduced to God as the cause. And this appears as regards both natural things and voluntary things. For . . . , some agent, in so far as it produces by its power a form to which follow corruption and defect, causes by its power that corruption and defect. But it is manifest that the form which God chiefly intends in things created is the good of the order of the universe. Now, the order of the universe requires... that there should be some things that can, and do sometimes, fail. And thus God, by causing in things the good of the order of the universe, consequently and as it were by accident, causes the corruptions of things. . . . , But when we read that God hath not *made death*, the sense is that God does not will

death for its own sake. Nevertheless the order of justice belongs to the order of the universe, and this requires that penalty should be dealt out to sinners. And so God is the author of the evil which is penalty, but not of the evil which is fault, by reason of what is said above.

Aquinas, Summa Theologica, I, 49, 2

52 It appears, . . . that there is no one first principle of evil, as there is one first principle of good.

First, indeed, because the first principle of good is essentially good.... But nothing can be essentially bad. For... every being, as such, is good, and... evil can exist only in good as in its subject.

Secondly, because the first principle of good is the highest and perfect good which contains beforehand in itself all goodness.. . . But there cannot be a supreme evil, because... although evil always lessens good, yet it never wholly consumes it; and thus, since good always remains, nothing can be wholly and perfectly bad. Therefore, the Philosopher [Aristotle] says that "if the wholly evil could be, it would destroy itself," because all good being destroyed (which it need be for something to be wholly evil), evil itself would be taken away, since its subject is good.

Aquinas, Summa Theologica, I, 49, 3

53 Evil can only have an accidental cause.... Hence reduction to any *per se* cause of evil is impossible. And to say that evil is in the greater number is simply false. For things which are generated and corrupted, in which alone can there be natural evil, are the smaller part of the whole universe. And again, in every species the defect of

nature is in the smaller number. In man alone does evil appear as in the greater number, because the good of man as regards the senses is not the good of man as man—that is, in regard to reason, and more men follow the senses than the reason.

Aquinas, Summa Theologica, I, 49, 3

54 As being is the first thing that falls under the apprehension absolutely, so good is the first thing that falls under the apprehension of the practical reason, which is directed to action; for every agent acts for an end, which has the aspect of good. Consequently the first principle in the practical reason is one founded on the notion of good, namely, that the good is what all desire. Hence this is the first precept of law, that good is to be pursued and done, and evil is to be avoided. All other precepts of the natural law are based upon this, so that whatever the practical reason naturally apprehends as man's good belongs to the precepts of the natural law as something to be done or avoided.

Aquinas, Summa Theologica, I-II, 94, 2

55 Generally it may be stated that what people consider to be good is really bad and most of the things that are considered to be bad are really good.

Maimonides, Preservation of Youth, III

56 Men, says an old Greek maxim, are tormented by the opinions they have of things, not by the things themselves. There would be a great point gained for the relief of our wretched human lot if someone could prove this statement true in every case. For if evils have no

entry into us but by our judgment, it seems to be in our power to disdain them or turn them to good use. If things give themselves up to our mercy, why shall we not dispose of them and arrange them to our advantage? If what we call evil and torment is neither evil nor torment in itself, if it is merely our fancy that gives it this quality, it is in us to change it. And having the choice, if no one forces us, we are strangely insane to tense ourselves for the course that is more painful to us, and to give sicknesses, poverty, and slights a bitter and unpleasant taste if we can give them a good one and if, fortune furnishing merely the material, it is for us to give it form. But let us see whether this can be maintained: that what we call evil is not evil in itself—or at least, whatever it is, that it depends on us to give it a different savor and a different complexion; for all this comes to the same thing.

Montaigne, Essays, I, 14, That the Taste of Good

57 Confidence in the goodness of others is no slight testimony to one's own goodness.

Montaigne, Essays, I, 14, That the Taste of Good

58 *Antonio*. An evil soul producing holy witness
Is like a villain with a smiling cheek,
A goodly apple rotten at the heart:
O, what a goodly outside falsehood hath!

Shakespeare, Merchant of Venice, I, iii, 100

59 *Falstaff*. If sack and sugar be a fault, God help the wicked! if to be old and merry be a sin, then many an old host that I know is damned: if to be fat be to be hated, then Pharaoh's lean kine are to be loved.

Shakespeare, I Henry IV, II, iv, 516

60 *King Henry*. There is some soul of goodness in things evil.
Would men observingly distil it out.
For our bad neighbour makes us early stirrers,
Which is both healthful and good husbandry:
Besides, they are our outward consciences,
And preachers to us all, admonishing
That we should dress us fairly for our end.
Thus may we gather honey from the weed,
And make a moral of the devil himself.

Shakespeare, Henry V, IV, i, 4

61 *Hamlet*. One may smile, and smile, and be a villain.

Shakespeare, Hamlet, I, v, 108

62 *Hamlet*. There is nothing either good or bad, but thinking
makes it so.

Shakespeare, Hamlet, II, ii, 255

63 *Pandarus*. O world! world! world! thus is the poor agent
despised! O traitors and bawds, how earnestly are you set
a-work, and how ill requited! why should our endeavour
be so loved and the performance so loathed?

Shakespeare, Troilus and Cressida, V, x, 36

64 *Gloucester*. Here, take this purse, thou whom the
heavens' plagues
Have humbled to all strokes. That I am wretched
Makes thee the happier. Heavens, deal so still!
Let the superfluous and lust-dieted man.
That slaves your ordinance, that will not see

Because he doth not feel, feel your power quickly;
So distribution should undo excess,
And each man have enough.

Shakespeare, Lear, IV, i, 67

65 *Albany*. Wisdom and goodness to the vile seem vile;
Filths savour but themselves.

Shakespeare, Lear, IV, ii, 38

66 *Lady Macduff*. Whither should I fly?
I have done no harm. But I remember now
I am in this earthly world; where to do harm
Is often laudable, to do good sometime
Accounted dangerous folly. Why then, alas,
Do I put up that womanly defence.
To say I have done no harm?

Shakespeare, Macbeth, IV, ii, 73

67 *Antony*. But when we in our viciousness grow hard—
O misery' on't!—the %s'ise gods seel our eyes;
In our own filth drop our clear judgements; make us
Adore our errors; laugh at's, while we strut
To our confusion.

Shakespeare, Antony and Cleopatra, II, xiii, 111

68 No more be grieved at that which thou hast done: Roses
have thorns, and silver fountains mud; Clouds and
eclipses stain both moon and sun, And loathsome canker
lives in sweetest bud.

Shakespeare, Sonnet XXXV

69 Sweetest things turn sourest by their deeds; Lilies that fester smell far worse than weeds.

Shakespeare, Sonnet XCIV

70 We are much beholden to Machiavel and others, that write what men do, and not what they ought to do. For it is not possible to join serpentine wisdom with the columbine innocency, except men know exactly all the conditions of the serpent; his baseness and going upon his belly, his volubility and lubricity, his envy and sting, and the rest; that is, all forms and natures of evil. For without this, virtue lieth open and unfenced. Nay, an honest man can do no good upon those that are wicked, to reclaim them, without the help of the knowledge of evil. For men of corrupted minds presuppose that honesty groweth out of simplicity of manners, and believing of preachers schoolmasters, and men's exterior language. So as except you can make them perceive that you blow the utmost reaches of their own corrupt opinions they despise all morality.

Bacon, Advancement of Learning, Bk, II, XXI, 9

71 Whatsoever is the object of any man's appetite or desire, that is it which he for his part calleth *good*; and the object of his hate and aversion, *evil*; and of his contempt, *vile* and *inconsiderable*. For these words of *good*, *evil*, and *contemptible* are ever used with relation to the person that useth them: there being nothing simply and absolutely so; nor any common rule of good and evil to be taken from the nature of the objects themselves; but from the person of the man, where there is no Commonwealth; or, in a Commonwealth, from the person

that representeth it; or from an arbitrator or judge, whom men disagreeing shall by consent set up and make his sentence the rule thereof.

Hobbes, Leviathan, I, 6

72 Evil is easy, and has infinite forms; good is almost unique. But a certain kind of evil is as difficult to find as what we call good; and often on this account such particular evil gets passed off as good. An extraordinary greatness of soul is needed in order to attain to it as well as to good.

Pascal, Pensées, VI, 408

73 Men never do evil so completely and cheerfully as when they do it from religious conviction.

Pascal, Pensées, XIV, 895

74 Nothing is more common than good things; the only question is how to discern them; it is certain that all of them are natural and within our reach and even known by every one. But we do not know how to distinguish them. This is universal. It is not in things extraordinary and strange that excellence of any kind is found. We reach up for it, and we are further away; more often than not we must stoop. The best books are those whose readers think they could have written them. Nature, which alone is good, is familiar and common throughout.

Pascal, Geometrical Demonstration

75 To measure life, learn thou betimes, and know
Toward solid good what leads the nearest way;
For other things mild Heav'n a time ordains,

And disapproves that care, though wise in show,
That with superfluous burden loads the day,
And when God sends a cheerful hour, refrains.

Milton, Cyriack, whose Grandsire on the Royal Bench

76 *Satan*. To do ought good never will be our task, But ever
to do ill our sole delight.

Milton, Paradise Lost, I, 159

77 Whence,

But from the Author of all ill could Spring
So deep a malice, to confound the race
Of mankind in one root, and Earth with Hell
To mingle and involve, done all to spite
The great Creatour?

Milton, Paradise Lost, II, 380

78 Such Pleasure took the Serpent to behold
This Flourie Plat, the sweet recess of Eve
Thus earlie, thus alone; her Heavenly forme
Angelic, but more soft, and Feminine,
Her graceful Innocence, her every Aire
Of gesture or lest action overawd
His Malice, and with rapine sweet bereav'd
His fierceness of the fierce intent it brought:
That space the Evil one abstracted stood
From his own evil, and for the time remaind
Stupidly good, of enmitie disarm'd
Of guile, of hate, of envie, of revenge;
But the hot Hell that alwayes in him burnes.
Though in mid Heav'n, soon ended his delight,
And tortures him now more, the more he sees

Of pleasure not for him ordain'd: then soon
Fierce hate he recollects, and all his thoughts
Of mischief, gratulating, thus excites.

Milton, Paradise Lost, IX, 455

79 Good unknown, sure is not had, or had And yet unknown,
is as not had at all.

Milton, Paradise Lost, IX, 756

80 *Samson*. Weakness is thy excuse.
And I believe it, weakness to resist
Philistian gold: if weakness may excuse,
What Murtherer, what Traytor, Parricide,
Incestuous, Sacrilegious, but may plead it?
All wickedness is weakness: that plea therefore
With God or Man will gain thee no remission.

Milton, Samson Agonistes, 829

81 Good and evil we know in the field of this world grow up
together almost inseparably; and the knowledge of good
is so involved and interwoven with the knowledge of evil,
and in so many cunning resemblances hardly to be
discerned, that those confused seeds which were
imposed upon Psyche as an incessant labour to cull out,
and sort asunder, were not more intermixed. It was from
out the rind of one apple tasted, that the knowledge of
good and evil, as two twins cleaving together, leaped
forth into the world. And perhaps this is that doom which
Adam fell into of knowing good and evil, that is to say of
knowing good by evil. As therefore the state of man now
is; what wisdom can there be to choose, what continence
to forbear without the knowledge of evil? He that can

apprehend and consider vice with all her baits and seeming pleasures, and yet abstain, and yet distinguish, and yet prefer that which is truly better, he is the true wayfaring Christian.

Milton, Areopagitica

82 If all things have followed from the necessity of the most perfect nature of God, how is it that so many imperfections have arisen in nature—corruption, for instance, of things till they stink; deformity, exciting disgust; confusion, evil, crime, etc.? But, as I have just observed, all this is easily answered. For the perfection of things is to be judged by their nature and power alone; nor are they more or less perfect because they delight or offend the human senses, or because they are beneficial or prejudicial to human nature,

Spinoza, Ethics, I, Appendix

83 With regard to good and evil, these terms indicate nothing positive in things considered in themselves, nor are they anything else than modes of thought, or notions which we form from the comparison of one thing with another. For one and the same thing may at the same time be both good and evil or indifferent. Music, for example, is good to a melancholy person, bad to one mourning, while to a deaf man it is neither good nor bad. But although things are so, we must retain these words. For since we desire to form for ourselves an idea of man upon which we may look as a model of human nature, it will be of service to us to retain these expressions in the sense I have mentioned. By *good*, therefore, I understand... everything which we are certain is a means

by which we may approach nearer and nearer to the model of human nature we set before us. By *evil*, on the contrary, I understand everything which we are certain hinders us from reaching that model. Again, I shall call men more or less perfect or imperfect in so far as they approach more or less nearly to this same model. For it is to be carefully observed, that when I say that an individual passes from a less to a greater perfection and vice versa, I do not understand that from one essence or form he is changed into another (for a horse, for instance, would be as much destroyed if it were changed into a man as if it were changed into an insect), but rather we conceive that his power of action, in so far as it is understood by his own nature, is increased or diminished. Finally, by perfection generally, I understand... reality; that is to say, the essence of any object in so far as it exists and acts in a certain manner, no regard being paid to its duration. For no individual thing can be said to be more perfect because for a longer time it has persevered in existence.

Spinoza, Ethics, IV, Preface

84 Things then are good or evil, only in reference to pleasure or pain. That we call *good*, which is apt to cause or increase pleasure, or diminish pain in us; or else to procure or preserve us the possession of any other good or absence of any evil. And, on the contrary, we name that evil which is apt to produce or increase any pain, or diminish any pleasure in us: or else to procure us any evil, or deprive us of any good.

Locke, Concerning Human Understanding, Bk, 11, XX, 2

85 As for the mixture of pain or uneasiness which is in the world, pursuant to the general laws of nature, and the actions of finite, imperfect spirits, this, in the state we are in at present, is indispensably necessary to our well-being. But our prospects are too narrow. We take, for instance, the idea of some one particular pain into our thoughts, and account it evil; whereas, if we enlarge our view, so as to comprehend the various ends, connexions, and dependencies of things, on what occasions and in what proportions we are affected with pain and pleasure, the nature of human freedom, and the design with which we are put into the world; we shall be forced to acknowledge that those particular things which, considered in themselves, appear to be evil, have the nature of good, when considered as linked with the whole system of beings.

Berkeley, Principles of Human Knowledge, 153

86 Absolute good and evil are unknown to us. In this life they are blended together; we never enjoy any perfectly pure feeling, nor do we remain for more than a moment in the same state. The feelings of our minds, like the changes in our bodies, are in a continual flux. Good and ill are common to all, but in varying proportions. The happiest is he who suffers least; the most miserable is he who enjoys least. Ever more sorrow than joy—this is the lot of all of us. Man's happiness in this world is but a negative state; it must be reckoned by the fewness of his ills.

Rousseau, Emile, II

87 "The causes of good and evil," answered Imlac, "are so various and uncertain, so often entangled with each other, so diversified by various relations, and so much subject to accidents which cannot be foreseen, that he who would fix his condition upon incontestable reasons of preference, must live and die inquiring and deliberating."

Johnson, Rasselas, XVI

88 *Johnson*. If possibility of evil be to exclude good, no good ever can be done. If nothing is to be attempted in which there is danger, we must all sink into hopeless inactivity. The evils that may be feared from this practice arise not from any defect in the institution, but from the infirmities of human nature. Power, in whatever hands it is placed, will be sometimes improperly exerted; yet courts of law must judge, though they will sometimes judge amiss. A father must instruct his children, though he himself may often want instruction. A minister must censure sinners, though his censure may be sometimes erroneous by want of judgement, and sometimes unjust by want of honesty.

Boswell, Life of Johnson (1776)

89 Nothing can possibly be conceived in the world or even out of it, which can be called good, without qualification, except a good will. Intelligence, wit, judgement, and the other *talents* of the mind, however they may be named, or courage, resolution, perserverance, as qualities of temperament, are undoubtedly good and desirable in many respects; but these gifts of nature may also become extremely bad and mischievous if the will which is to make use of them, and which, therefore, constitutes what is called character, is not good.

*Kant, Fundamental Principles of the Metaphysic of
Morals, I*

- 90 A good will is good not because of what it performs or effects, not by its aptness for the attainment of some proposed end, but simply by virtue of the volition; that is, it is good in itself, and considered by itself is to be esteemed much higher than all that can be brought about by it in favour of any inclination, nay even of the sum total of all inclinations.

*Kant, Fundamental Principles of the Metaphysic of
Morals, I*

- 91 The only objects of practical reason are therefore those of *good* and *evil*. For by the former is meant an object necessarily desired according to a principle of reason; by the latter one necessarily shunned, also according to a principle of reason.

Kant, Critique of Practical Reason, Pt. I, I, 2

- 92 What we call *good* must be an object of desire in the judgement of every rational man, and evil an object of aversion in the eyes of everyone.

Kant, Critique of Practical Reason, Pt. I, I, 2

- 93 The evils visited upon us, now by nature, now by the truculent egoism of man, evoke the energies of the soul, and give it strength and courage to submit to no such force, and at the same time quicken in us a sense that in the depths of our nature there is an aptitude for higher ends.

Kant, Critique of Teleological Judgement, 83

94 Without Contraries is no progression. Attraction and Repulsion, Reason and Energy, Love and Hate, are necessary to Human existence.

From these contraries spring what the religious call Good & Evil. Good is the passive that obeys Reason. Evil is the active springing from Energy.

Good is Heaven. Evil is Hell.

Blake, Marriage of Heaven and Hell, 3

95 *The voice of the Devil.* All Bibles or sacred codes have been the causes of the following Errors:

1. That Man has two real existing principles; Viz: a Body & a Soul.

2. That Energy, call'd Evil, is alone from the Body, & that Reason, call'd Good, is alone from the Soul.

3. That God will torment Man in Eternity for following his Energies. But the following Contraries to these are True:

1. Man has no Body distinct from his Soul; for that call'd Body is a portion of Soul discern'd by the five Senses, the chief inlets of Soul in this age.

2. Energy is the only life, and is from the Body; and Reason is the bound or outward circumference of Energy.

3. Energy is Eternal Delight,

Blake, Marriage of Heaven and Hell, 4

96 It seems highly probable that moral evil is absolutely necessary to the production of moral excellence. A being with only good placed in view may be justly said to be impelled by a blind necessity. The pursuit of good in this case can be no indication of virtuous propensities. It might be said, perhaps, that Infinite Wisdom cannot want

such an indication as outward action, but would foreknow with certainty whether the being would choose good or evil. This might be a plausible argument against a state of trial, but will not hold against the supposition that mind in this world is in a state of formation. Upon this idea, the being that has seen moral evil and has felt disapprobation and disgust at it is essentially different from the being that has seen only good. They are pieces of clay that have received distinct impressions; they must, therefore, necessarily be in different shapes; or, even if we allow them both to have the same lovely form of virtue, it must be acknowledged that one has undergone the further process necessary to give firmness and durability to its substance, while the other is still exposed to injury, and liable to be broken by every accidental impulse. An ardent love and admiration of virtue seems to imply the existence of something opposite to it, and it seems highly probable that the same beauty of form and substance, the same perfection of character could not be generated without the impressions of disapprobation which arise from the spectacle of moral evil.

Malthus, Population, XIX

- 97 Evil exists in the world not to create despair but activity. We are not patiently to submit to it, but to exert ourselves to avoid it. It is not only the interest but the duty of every individual to use his utmost efforts to remove evil from himself and from as large a circle as he can influence, and the more he exercises himself in this duty, the more wisely he directs his efforts, and the more successful these efforts are, the more he will probably improve and

exalt his own mind, and the more completely does he appear to fulfill the will of his Creator.

Malthus, Population, XIX

- 98 The Christian doctrine that man is by nature evil is loftier than the other which takes him to be by nature good. This doctrine is to be understood as follows in accordance with the philosophical exegesis of it: As mind, man is a free substance which is in the position of not allowing itself to be determined by natural impulse. When man's condition is immediate and mentally undeveloped, he is in a situation in which he ought not to be and from which he must free himself. This is the meaning of the doctrine of original sin without which Christianity would not be the religion of freedom.

Hegel, Philosophy of Right, Additions, Par. 18

- 99 It is only man who is good, and he is good only because he can also be evil. Good and evil are inseparable, and their inseparability is rooted in the fact that the concept becomes an object to itself, and as object it *eo ipso* acquires the character of difference. The evil will wills something opposed to the universality of the will, while the good will acts in accordance with its true concept.

Hegel, Philosophy of Right, Additions, Par. 139

- 100 Individuals, to the extent of their freedom, are responsible for the depravation and enfeeblement of morals and religion. This is the seal of the absolute and sublime destiny of man—that he knows what is good and what is evil; that his destiny is his very ability to will either good or evil—in one word, that he is the subject of

moral imputation, imputation not only of evil, but of good; and not only concerning this or that particular matter, and all that happens ab extra, but also the good and evil attaching to his individual freedom. The brute alone is simply innocent.

Hegel, Philosophy of History, Introduction, 3

101 This is a deep truth, that evil lies in consciousness: for the brutes are neither evil nor good; the merely natural man quite as little.

Hegel, Philosophy of History, Pt. III, III, 2

102 In a list of definitions included in the authentic translation of Plato, a list attributed to him, occurs this: "Natural Depravity: a depravity according to nature," a definition which, though savoring of Calvinism, by no means involves Calvin's dogma as to total mankind. Evidently its intent makes it applicable but to individuals. Not many are the examples of this depravity which the gallows and jail supply. At any rate, for notable instances, since these have no vulgar alloy of the brute in them, but invariably are dominated by intellectuality, one must go elsewhere. Civilization, especially if of the austerer sort, is auspicious to it. It folds itself in the mantle of respectability. It has its certain negative virtues serving as silent auxiliaries. It never allows wine to get within its guard. It is not going too far to say that it is without vices or small sins. There is a phenomenal pride in it that excludes them. It is never mercenary or avaricious. In short, the depravity here meant partakes nothing of the sordid or sensual. It is serious, but free from acerbity. Though no flatterer of mankind it never speaks ill of it.

But the thing which in eminent instances signalizes so exceptional a nature is this: Though the man's even temper and discreet bearing would seem to intimate a mind peculiarly subject to the law of reason, not the less in heart he would seem to riot in complete exemption from that law, having apparently little to do with reason further than to employ it as an ambidexter implement for effecting the irrational. That is to say: Toward the accomplishment of an aim which in wantonness of atrocity would seem to partake of the insane, he will direct a cool judgment sagacious and sound. These men are madmen, and of the most dangerous sort, for their lunacy is not continuous, but occasional, evoked by some special object; it is protectively secretive, which is as much as to say it is self-contained, so that when, moreover, most active it is to the average mind not distinguishable from sanity, and for the reason above suggested: that whatever its aims may be—and the aim is never declared—the method and the course of proceeding are always perfectly rational.

Now something such a one was Claggart, in whom was the mania of an evil nature, not engendered by vicious training or corrupting books or licentious living, but born with him and innate, in short "a depravity according to nature."

Melville, Billy Budd

103 Men have a singular desire to be good without being good for anything, because, perchance, they think vaguely that so it will be good for them in the end.

Thoreau, The Christian Fable

104 Men say, practically, Begin where you are and such as you are, without aiming mainly to become of more worth, and with kindness aforethought go about doing good. If I were to preach at all in this strain, I should say rather. Set about being good. As if the sun should stop when he has kindled his fires up to the splendor of a moon or a star of the sixth magnitude, and go about like a Robin Goodfellow, peeping in at every cottage window, inspiring lunatics, and tainting meats, and making darkness visible, instead of steadily increasing his genial heat and beneficence till he is of such brightness that no mortal can look him in the face, and then, and in the meanwhile too, going about the world in his own orbit, doing it good, or rather, as a truer philosophy has discovered, the world going about him getting good.. . .

There is no odor so bad as that which arises from goodness tainted. It is human, it is dime carrion. If I knew for a certainty that a man was coming to my house with the conscious design of doing me good, I should run for my life, as from that dry and parching wind of the African deserts called the simoom, which fills the mouth and nose and ears and eyes with dust till you are suffocated, for fear that I should get some of his good done to me—some of its virus mingled with my blood. No—in this case I would rather suffer evil the natural way.

Thoreau, Walden Economy

105 It is a misapprehension of the utilitarian mode of thought, to conceive it as implying that people should fix their minds upon so wide a generality as the world, or society at large. The great majority of good actions are intended not for the benefit of the world, but for that of individuals, of which the good of the world is made up;

and the thoughts of the most virtuous man need not on these occasions travel beyond the particular persons concerned, except so far as is necessary' to assure himself that in benefiting them he is not violating the rights, that is, the legitimate and authorised expectations, of any one else.

Mill, Utilitarianism, 11

106 Absolute fiends are as rare as angels, perhaps rarer: ferocious savages, with occasional touches of humanity, are however very frequent: and in the wide interval which separates these from any worthy representatives of the human species, how many are the forms and gradations of animalism and selfishness, often under an outward varnish of civilisation and even cultivation, living at peace with the law, maintaining a creditable appearance to all who are not under their power, yet sufficient often to make the lives of all who are so, a torment and a burthen to them!

Mill, Subjection of Women, 11

107 Good is not only good, but reproductive of good; this is one of its attributes; nothing is excellent, beautiful, perfect, desirable for its own sake, but it overflows, and spreads the likeness of itself all around it. Good is prolific; it is not only good to the eye, but to the taste; it not only attracts us, but it communicates itself: it excites first our admiration and love, then our desire and our gratitude, and that, in proportion to its intenseness and fulness in particular instances. A great good will impart great good.

Newman, Idea of a University, Discourse VII

108 "I can't say what I should have done about that, Godfrey. I should never have married anybody else. But I wasn't worth doing wrong for—nothing is in this world. Nothing is as good as it seems beforehand—not even our marrying wasn't, you see." There was a faint sad smile on Nancy's face as she said the last words.

George Eliot, Silas Marner, XVIII

109 What is good?—All that heightens the feeling of power, the will to power, power itself in man.
What is bad?—All that proceeds from weakness.

Nietzsche, Antichrist, II

110 All Goods are disguised by the vulgarity of their concomitants, in this work-a-day world; but woe to him who can only recognize them when he thinks them in their pure and abstract form!

William James, Psychology, IV

111 I find myself willing to take the universe to be really dangerous and adventurous, without therefore backing out and crying "no play." I am willing to think that the prodigal son attitude, open to us as it is in many vicissitudes, is not the right and final attitude toward the whole of life. I am willing that there should be real losses and real losers, and no total preservation of all that is. I can believe in the ideal as an ultimate, not as an origin, and as an extract, not the whole. When the cup is poured off, the dregs are left behind for ever, but the possibility of what is poured off is sweet enough to accept....

Those puritans who answered "yes" to the question: are you willing to be damned for God's glory? were in this

objective and magnanimous condition of mind. The way of escape from evil on this system is *not* by getting it 'aufgehoben' ["compensated"], or preserved in the whole as an element essential but 'overcome.' *It is by dropping it out altogether, throwing it overboard and getting beyond it, helping to make a universe that shall forget its very place and name.*

It is then perfectly possible to accept sincerely a drastic kind of a universe from which the element of 'seriousness' is not to be expelled. Whoso does so is, it seems to me, a genuine pragmatist. He is willing to live on a scheme of uncertified possibilities which he trusts; willing to pay with his own person, if need be, for the realization of the ideals which he frames.

William James, Pragmatism, VIII

112 The method of averting one's attention from evil, and living simply in the light of good is splendid as long as it will work. It will work with many persons; it will work far more generally than most of us are ready to suppose; and within the sphere of its successful operation there is nothing to be said against it as a religious solution. But it breaks down impotently as soon as melancholy comes; and even though one be quite free from melancholy one's self, there is no doubt that healthy-mindedness is inadequate as a philosophical doctrine, because the evil facts which it refuses positively to account for are a genuine portion of reality; and they may after all be the best key to life's significance, and possibly the only openers of our eyes to the deepest levels of truth.

William James, Varieties of Religious Experience, VI-VII

113 If a man cannot look evil in the face without illusion, he will never know what it really is, or combat it effectually.

Shaw, Major Barbara, Pref.

114 The common character of all evil is that its realization in fact involves that there is some concurrent realization of a purpose towards elimination. The purpose is to secure the avoidance of evil. The fact of the instability of evil is the moral order in the world.

Evil, triumphant in its enjoyment, is so far good in itself; but beyond itself it is evil in its character of a destructive agent among things greater than itself. In the summation of the more complete fact it has secured a descent towards nothingness, in contrast to the creativeness of what can without qualification be termed good. Evil is positive and destructive; what is good is positive and creative. . . .

Thus evil promotes its own elimination by destruction, or degradation, or by elevation. But in its own nature it is unstable. It must be noted that the state of degradation to which evil leads, when accomplished, is not in itself evil, except by comparison with what might have been. A hog is not an evil beast, but when a man is degraded to the level of a hog, with the accompanying atrophy of finer elements, he is no more evil than a hog. The evil of the final degradation lies in the comparison of what is with what might have been. During the process of degradation the comparison is an evil for the man himself, and at its final stage it remains an evil for others....

The contrast in the world between evil and good is the contrast between the turbulence of evil and the "peace which passeth all understanding." There is a self-

preservation inherent in that which is good in itself. Its destruction may come from without but not from within. Good people of narrow sympathies are apt to be unfeeling and unprogressive, enjoying their egotistical goodness. Their case, on a higher level, is analogous to that of the man completely degraded to a hog. They have reached a state of stable goodness, so far as their own interior life is concerned. This type of moral correctitude is, on a larger view, so like evil that the distinction is trivial.

Whitehead, Religion in the Making, III, 4

115 I will say nothing of how you may appear in your own eyes, but have you met with so much goodwill in your superiors and rivals, so much chivalry in your enemies and so little envy amongst your acquaintances, that you feel it incumbent on you to protest against the idea of the part played by egoistic baseness in human nature? Do you not know how uncontrolled and unreliable the average human being is in all that concerns sexual life? Or are you ignorant of the fact that all the excesses and aberrations of which we dream at night are crimes actually committed every day by men who are wide awake? What does psychoanalysis do in this connection but confirm the old saying of Plato that the good are those who content themselves with dreaming of what others, the wicked, actually do?

And now look away from individuals to the great war still devastating Europe: think of the colossal brutality, cruelty and mendacity which is now allowed to spread itself over the civilized world. Do you really believe that a handful of unprincipled place-hunters and corrupters of men would have succeeded in letting loose all this latent

evil, if the millions of their followers were not also guilty? Will you venture, even in these circumstances, to break a lance for the exclusion of evil from the mental constitution of humanity?

You will accuse me of taking a one-sided view of war, and tell me that it has also called out all that is finest and most noble in mankind, heroism, self-sacrifice, and public spirit. That is true; but do not now commit the injustice, from which psycho-analysis has so often suffered, of reproaching it that it denies one thing because it affirms another. It is no part of our intention to deny the nobility in human nature, nor have we ever done anything to disparage its value. On the contrary, I show you not only the evil wishes which are censored but also the censorship which suppresses them and makes them unrecognizable. We dwell upon the evil in human beings with the greater emphasis only because others deny it, thereby making the mental life of mankind not indeed better, but incomprehensible. If we give up the one-sided ethical valuation then, we are sure to find the truer formula for the relation of evil to good in human nature.

Freud, General Introduction to Psycho-Analysis, IX

116 In reality, there is no such thing as *eradicating* evil tendencies. . . . The inmost essence of human nature consists of elemental instincts, which are common to all men and aim at the satisfaction of certain primal needs. These instincts in themselves are neither good nor evil. We but classify them and their manifestations in that fashion according as they meet the needs and demands of the human community. It is admitted that all those instincts which society condemns as evil--let us take as

representatives the selfish and the cruel—are of this primitive type.

These primitive instincts undergo a lengthy process of development before they are allowed to become active in the adult being. They are inhibited, directed towards other aims and departments, become commingled, alter their objects and are to some extent turned back upon their possessor. Reaction-formations against certain instincts take the deceptive form of a change in content, as though egoism had changed into altruism, or cruelty into pity,...

It is not until all these *vicissitudes to which instincts are subject* have been surmounted that what we call the character of a human being is formed, and this, as we know, can only very inadequately be classified as *good* or *bad*. A human being is seldom altogether good or bad; he is usually *good* in one relation and *bad* in another, or *good* in certain external circumstances and in others decidedly *bad*. It is interesting to learn that the existence of strong *bad* impulses in infancy is often the actual condition for an unmistakable inclination towards *good* in the adult person. Those who as children have been the most pronounced egoists may well become the most helpful and self-sacrificing members of the community; most of our sentimentalists, friends of humanity, champions of animals, have been evolved from little sadists and animal-tormentors.

Freud, Thoughts on War and Death, I

- 117 Good consists in the meaning that is experienced to belong to an activity when conflict and entanglement of various incompatible impulses and habits terminate in a unified orderly release in action. This human good, being

a fulfilment conditioned upon thought, differs from the pleasures which an animal nature—of course we also remain animals so far as we do not think—hits upon accidentally. Moreover there is a genuine difference between a false good, a spurious satisfaction, and a "true" good, and there is an empirical test for discovering the difference.

Dewey, Human Nature and Conduct, III, 5

118 It would take a good deal of time to become a misanthrope if we confined ourselves to the observation of others. It is when we detect our own weaknesses that we come to pity or despise mankind. The human nature from which we then turn away is the human nature we have discovered in the depths of our own being. The evil is so well screened, the secret so universally kept, that in this case each individual is the dupe of all; however severely we may profess to judge other men, at bottom we think them better than ourselves. On this happy illusion much of our social life is grounded.

Bergson, Two Sources of Morality and Religion, I

9.7 Right and Wrong

In ethics or moral philosophy, there is a fundamental division between two types of problems: on the one hand, the problem of what is good or evil for the individual man considered without reference to other men or to the community in which he lives; on the other hand, the problem of what is right or wrong in the behavior of one individual as it affects the lives of others or the welfare of the community. Unfortunately, this does not give us a rigid rule for using the words "good" and "right" in a nonoverlapping way; for it is often said in ordinary discourse that what is really good for the individual is right for him to seek, and that the individual who acts rightly toward others is a good man or one whose conduct is good. Nevertheless, the words "right" and "wrong" are most frequently applied to acts that affect others or the community. Wrongdoing injures others; conduct is said to be rightful or righteous if it benefits others or at least avoids injuring them.

Because the words "right" and "wrong" are usually employed with this connotation, they are often interchangeable with another pair of terms—"just" and "unjust." We have, therefore, placed here quotations that discuss justice and injustice in the conduct of one individual toward others or toward the community, and along with them discussions of the just and unjust man, justice as a moral virtue and injustice as a vice, and considerations of the question of whether it is better to do injustice or to suffer it, to wrong others or be wronged by them. The reader

will find that the treatment of Justice and Injustice in Section 12.2 deals mainly with social, political, and economic justice, not justice as a moral virtue or as a quality of human acts. The placement here of quotations dealing with justice as a virtue also explains why the enumeration of the virtues in the titles of Sections 9.11 through 9.15 omits justice and injustice.

Other closely related terms appear in the quotations below, such as righteousness, wickedness, benevolence, and iniquity. Since it is thought that to wrong another involves the violation or transgression of one's rights, the reader should consult the discussion of Rights—Natural and Civil in Section 12.3. Since it is also thought that wrongdoing involves the violation of the moral law and that it is one's basic moral obligation or duty to act righteously or in conformity with the moral law, the reader should consult Section 9.3 on Moral Law, Section 9.9 on Duty: Moral Obligation, and Section 20.13 on Sin and Temptation.

■ ■ ■

1 And David said to Saul, Wherefore hearest thou men's words, saying, Behold, David seeketh thy hurt?

Behold, this day thine eyes have seen how that the Lord had delivered thee to day into mine hand in the cave: and some bade me kill thee: but mine eye spared thee; and I said, I will not put forth mine hand against my lord; for he is the Lord's anointed.

Moreover, my father, see, yea, see the skirt of thy robe in my hand: for in that I cut off the skirt of thy robe, and killed thee not, know thou and see that there is neither

evil nor transgression in mine hand, and I have not sinned against thee; yet thou huntest my soul to take it.

The Lord judge between me and thee, and the Lord avenge me of thee: but mine hand shall not be upon thee.

As saith the proverb of the ancients, Wickedness proceedeth from the wicked: but mine hand shall not be upon thee.

After whom is the king of Israel come out? after whom dost thou pursue? after a dead dog, after a flea.

The Lord therefore be judge, and judge between me and thee, and see, and plead my cause, and deliver me out of thine hand.

And it came to pass, when David had made an end of speaking these words unto Saul, that Saul said, Is this thy voice, my son David? And Saul lifted up his voice, and wept.

And he said to David, Thou art more righteous than I: for thou hast rewarded me good, whereas I have rewarded thee evil.

And thou hast shewed this day how that thou hast dealt well with me: forasmuch as when the Lord had delivered me into thine hand, thou killedst me not.

For if a man find his enemy, will he let him go well away? wherefore the Lord reward thee good for that thou hast done unto me this day.

1 Samuel 24:9-19

2 How should man be just with God?

If he will contend with him, he cannot answer him one of a thousand.

He is wise in heart, and mighty in strength: who hath hardened himself against him, and hath prospered?

Which removeth the mountains, and they know not:
which overturneth them in his anger.

Which shaketh the earth out of her place, and the
pillars thereof tremble.

Which commandeth the sun, and it riseth not; and
scaleth up the stars.

Which alone spreadeth out the heavens, and treadeth
upon the waves of the sea.

Which maketh Arc-tu-rus, O-ri-on, and Plei-a-des, and
the chambers of the south.

Which doeth great things past finding out; yea, and
wonders without number.

Lo, he goeth by me, and I see him not: he passeth on
also, but I perceive him not.

Behold, he taketh away, who can hinder him? who will
say unto him, What doest thou?

If God will not withdraw his anger, the proud helpers
do stoop under him.

How much less shall I answer him, and choose out my
words to reason with him?

Whom, though I were righteous, yet would I not
answer, but I would make supplication to ray judge.

If I had called, and he had answered me; yet would I
not believe that he had hearkened unto my voice.

For he breaketh me with a tempest, and multiplieth
my wounds without cause.

He will not suffer me to take my breath, but filleth me
with bitterness.

If I speak of strength, lo, he is strong: and if of
judgment, who shall set me a time to plead?

If I justify myself, mine own mouth shall condemn me:
if I say, I am perfect, it shall also prove me perverse.

Though I were perfect, yet would I not know my soul: I would despise my life.

This is one thing, therefore I said it, He destroyeth the perfect and the wicked.

If the scourge slay suddenly, he will laugh at the trial of the innocent.

The earth is given into the hand of the wicked: he covereth the faces of the judges thereof; if not, where, and who is he?

Job 9:2-24

3 Blessed is the man that walketh not in the counsel of the ungodly, nor standeth in the way of sinners, nor sitteth in the seat of the scornful.

But his delight is in the law of the Lord; and in his law doth he meditate day and night.

And he shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither; and whatsoever he doeth shall prosper.

The ungodly are not so: but are like the chaff which the wind driveth away.

Therefore the ungodly shall not stand in the judgment, nor sinners in the congregation of the righteous.

For the Lord knoweth the way of the righteous: but the way of the ungodly shall perish.

Psalms 1:1-6

4 Withhold not good from them to whom it is due, when it is in the power of thine hand to do it.

Say not unto thy neighbour. Go, and come again, and to morrow I will give; when thou hast it by thee.

Devise not evil against thy neighbour, seeing he dwelleth securely by thee.

Strive not with a man without cause, if he have done thee no harm.

Envy thou not the oppressor, and choose none of his ways.

For the froward is abomination to the Lord: but his secret is with the righteous.

The curse of the Lord is in the house of the wicked: but he blesseth the habitation of the just.

Proverbs 3:27-33

5 Execute true judgment, and shew mercy and compassions every man to his brother:

And oppress not the widow, nor the fatherless, the stranger, nor the poor; and let none of you imagine evil against his brother in your heart.

Zechariah 7:9-10

6 *Chorus*. The man who does right, free-willed, without constraint

shall not lose happiness

nor be wiped out with all his generation.

But the transgressor, I tell you, the bold man who brings in confusion of goods unrightly won, at long last and perforce, when ship toils under tempest must strike his sail in the wreck of his rigging.

Aeschylus, Eumenides, 550

7 *Chorus*. God will not punish the man

Who makes return for an injury:

Deceivers may be deceived.

Sophocles, Oedipus at Colonus, 228

8 *Athenians at the Congress of the Peloponnesian*

Confederacy. Men's indignation, it seems, is more excited by legal wrong than by violent wrong; the first looks like being cheated by an equal, the second like being compelled by a superior.

Thucydides, Peloponnesian War, 1, 77

- 9 *Glaucon* Now that those who practise justice do so involuntarily and because they have not the power to be unjust will best appear if we imagine something of this kind: having given both to the just and the unjust power to do what they will, let us watch and see whither desire will lead them; then we shall discover in the very act the just and unjust man to be proceeding along the same road, following their interest, which all natures deem to be their good, and are only diverted into the path of justice by the force of law. The liberty which we are supposing may be most completely given to them in the form of such a power as is said to have been possessed by Gyges the ancestor of Croesus the Lydian. According to the tradition, Gyges was a shepherd in the service of the king of Lydia; there was a great storm, and an earthquake made an opening in the earth at the place where he was feeding his flock. Amazed at the sight, he descended into the opening, where, among other marvels, he beheld a hollow brazen horse, having doors, at which he stooping and looking in saw a dead body of stature, as appeared to him, more than human, and having nothing on but a gold ring; this he took from the

finger of the dead and reascended. Now the shepherds met together, according to custom, that they might send their monthly report about the flocks to the king; into their assembly he came having the ring on his finger, and as he was sitting among them he chanced to turn the collet of the ring inside his hand, when instantly he became invisible to the rest of the company and they began to speak of him as if he were no longer present. He was astonished at this, and again touching the ring he turned the collet outwards and reappeared; he made several trials of the ring, and always with the same result—when he turned the collet inwards he became invisible, when outwards he reappeared. Whereupon he contrived to be chosen one of the messengers who were sent to the court; where as soon as he arrived he seduced the queen, and with her help conspired against the king and slew him, and took the kingdom. Suppose now that there were two such magic rings, and the just put on one of them and the unjust the other; no man can be imagined to be of such an iron nature that he would stand fast in justice. No man would keep his hands off what was not his own when he could safely take what he liked out of the market, or go into houses and lie with any one at his pleasure, or kill or release from prison whom he would, and in all respects be like a God among men. Then the actions of the just would be as the actions of the unjust; they would both come at last to the same point. And this we may truly affirm to be a great proof that a man is just, not willingly or because he thinks that justice is any good to him individually, but of necessity, for wherever any one thinks that he can safely be unjust, there he is unjust. For all men believe in their hearts that injustice is far more profitable to the individual than justice, and he

who argues as I have been supposing, will say that they are right. If you could imagine any one obtaining this power of becoming invisible, and never doing any wrong or touching what was another's, he would be thought by the lookers-on to be a most wretched idiot, although they would praise him to one another's faces, and keep up appearances with one another from a fear that they too might suffer injustice. Enough of this.

Now, if we are to form a real judgment of the life of the just and unjust, we must isolate them; there is no other way; and how is the isolation to be effected? I answer: Let the unjust man be entirely unjust, and the just man entirely just; nothing is to be taken away from either of them, and both are to be perfectly furnished for the work of their respective lives. First, let the unjust be like other distinguished masters of craft; like the skilful pilot or physician, who knows intuitively his own powers and keeps within their limits, and who, if he fails at any point, is able to recover himself. So let the unjust make his unjust attempts in the right way, and lie hidden if he means to be great in his injustice (he who is found out is nobody): for the highest reach of injustice is, to be deemed just when you are not. Therefore I say that in the perfectly unjust man we must assume the most perfect injustice; there is to be no deduction, but we must allow him, while doing the most unjust acts, to have acquired the greatest reputation for justice. If he have taken a false step he must be able to recover himself; he must be one who can speak with effect, if any of his deeds come to light, and who can force his way where force is required by his courage and strength, and command of money and friends. And at his side let us place the just man in his nobleness and simplicity, wishing, as

Aeschylus says, to be and not to seem good. There must be no seeming, for if he seem to be just he will be honoured and rewarded, and then we shall not know whether he is just for the sake of justice or for the sake of honours and rewards; therefore, let him be clothed in justice only, and have no other covering; and he must be imagined in a state of life the opposite of the former. Let him be the best of men, and let him be thought the worst; then he will have been put to the proof; and we shall see whether he will be affected by the fear of infamy and its consequences. And let him continue thus to the hour of death; being just and seeming to be unjust. When both have reached the uttermost extreme, the one of justice and the other of injustice, let judgment be given which of them is the happier of the two.

Socrates. Heavens! my dear Glaucon... how energetically you polish them up for the decision, first one and then the other, as if they were two statues.

I do my best, he said. And now that we know what they are like there is no difficulty in tracing out the sort of life which awaits either of them. This I will proceed to describe; but as you may think the description a little too coarse, I ask you to suppose, Socrates, that the words which follow are not mine. Let me put them into the mouths of the eulogists of injustice: They will tell you that the just man who is thought unjust will be scourged, racked, bound—will have his eyes burnt out; and, at last, after suffering every kind of evil, he will be impaled: Then he will understand that he ought to seem only, and not to be, just.

Plato, Republic, II, 359A

10 *Socrates*. And surely... we have explained again and again how and by virtue of what quality a man will be just.

Adeimantus. That is very certain.

And is justice dimmer in the individual, and is her form different, or is she the same which we found her to be in the State?

There is no difference in my opinion, he said.

Because, if any doubt is still lingering in our minds, a few commonplace instances will satisfy us of the truth of what I am saying.

What sort of instances do you mean?

If the case is put to us, must we not admit that the just State, or the man who is trained in the principles of such a State, will be less likely than the unjust to make away with a deposit of gold or silver? Would any one deny this?

No one....

Will the just man or citizen ever be guilty of sacrilege or theft, or treachery either to his friends or to his country?

Never.

Neither will he ever break faith where there have been oaths or agreements?

Impossible.

No one will be less likely to commit adultery, or to dishonour his father and mother, or to fail in his religious duties?

No one.

And the reason is that each part of him is doing its own business, whether in ruling or being ruled?

Exactly so.

Are you satisfied then that the quality which makes such men and such states is justice, or do you hope to

discover some other?

Not I, indeed.

Then our dream has been realized; and the suspicion which we entertained at the beginning of our work of construction, that some divine power must have conducted us to a primary form of justice, has now been verified?

Yes, certainly.

And the division of labour which required the carpenter and the shoemaker and the rest of the citizens to be doing each his own business, and not another's, was a shadow of justice, and for that reason it was of use?

Clearly.

But in reality justice was such as we were describing, being concerned however, not with the outward man, but with the inward, which is the true self and concernment of man: for the just man does not permit the several elements within him to interfere with one another, or any of them to do the work of others,—he sets in order his own inner life, and is his own master and his own law, and at peace with himself; and when he has bound together the three principles within him, which may be compared to the higher, lower, and middle notes of the scale, and the intermediate intervals—when he has bound all these together, and is no longer many, but has become one entirely temperate and perfectly adjusted nature, then he proceeds to act, if he has to act, whether in a matter of property, or in the treatment of the body, or in some fair of politics or private business; always thinking and calling that which preserves and co-operates with this harmonious condition, just and good action, and the knowledge which presides over it, wisdom, and that which at any time impairs this

condition, he will call unjust action, and the opinion which presides over it ignorance.

You have said the exact truth, Socrates.

Very good; and if we were to affirm that we had discovered the just man and the just State, and the nature of justice in each of them, we should not be telling a falsehood?

Most certainly not.

Plato, Republic, IV, 442B

- 11 *Athenian Stranger*. And now I can define to you clearly, and without ambiguity, what I mean by the just and unjust, according to my notion of them:—When anger and fear, and pleasure and pain, and jealousies and desires, tyrannize over the soul, whether they do any harm or not—I call all this injustice. But when the opinion of the best, in whatever part of human nature states or individuals may suppose that to dwell, has dominion in the soul and orders the life of every man, even if it be sometimes mistaken, yet what is done in accordance therewith, and the principle in individuals which obeys this rule, and is best for the whole life of man, is to be called just; although the hurt done by mistake is thought by many to be involuntary injustice.

Plato, Laws, IX, 863B

- 12 The one thing which is wholly right and noble is to strive for that which is most honourable for a man's self and for his country, and to face the consequences whatever they may be.

Plato, Seventh Letter

- 13 It is only between what is right and what seems right from habit, that some people are mad enough to see no difference.

Aristotle, On Generation and Corruption, 325a22

- 14 There being three objects of choice and three of avoidance, the noble, the advantageous, the pleasant, and their contraries, the base, the injurious, the painful, about all of these the good man tends to go right and the bad man to go wrong, and especially about pleasure.

Aristotle, Ethics, 1104b31

- 15 Not every action nor every passion admits of a mean; for some have names that already imply badness, e.g. spite, shamelessness, envy, and in the case of actions adultery, theft, murder; for all of these and suchlike things imply by their names that they are themselves bad, and not the excesses or deficiencies of them. It is not possible, then, ever to be right with regard to them; one must always be wrong. Nor does goodness or badness with regard to such things depend on committing adultery with the right woman, at the right time, and in the right way, but simply to do any of them is to go wrong. It would be equally absurd, then, to expect that in unjust, cowardly, and voluptuous action there should be a mean, an excess, and a deficiency; for at that rate there would be a mean of excess and of deficiency, an excess of excess, and a deficiency of deficiency. But as there is no excess and deficiency of temperance and courage because what is intermediate is in a sense an extreme, so too of the actions we have mentioned there is no mean nor any

excess and deficiency, but however they are done they are wrong.

Aristotle, Ethics, 1107a9

- 16 Justice, alone of the virtues, is thought to be 'another's good', because it is related to our neighbour; for it does what is advantageous to another, either a ruler or a copartner. Now the worst man is he who exercises his wickedness both towards himself and towards his friends, and the best man is not he who exercises his virtue towards himself but he who exercises it towards another; for this is a difficult task. Justice in this sense, then, is not part of virtue but virtue entire, nor is the contrary injustice a part of vice but vice entire.

Aristotle, 1130a3

- 17 It is a good precept that tells us not to do a thing if there is doubt whether it is right or wrong. Righteousness shines with its own brilliance. But doubt is a sign that we are possibly considering a wrong.

Cicero, De Officiis, I, 9

- 18 While wrong may be committed by force or by treachery, both ways are bestial. Treachery belongs to the fox and force to the lion. Both are utterly unworthy of a man. But treachery is the more contemptible.

Cicero, De Officiis, I, 13

- 19 The man that's just and resolute of mood
No craze of people's perverse vote can shake,
Nor frown of threat'ning monarch make
To quit a purposed good.

Horace, Odes, III, 3

20 It is a mark of a good way of life that, among other things, it satisfies and abides; bad behaviour, constantly changing, not for the better, simply into different forms, has none of this stability.

Seneca, Letters to Lucilius, 47

21 Enter ye in at the strait gate: for wide is the gate, and broad is the way, that leadeth to destruction, and many there be which go in thereat:

Because strait is the gate, and narrow is the way, which leadeth unto life, and few there be that find it.

Matthew 7:13—14

22 Even so every good tree bringeth forth good fruit; but a corrupt tree bringeth forth evil fruit.

A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit.

Every tree that bringeth not forth good fruit is hewn down, and cast into the fire.

Wherefore by their fruits ye shall know them.

Matthew 7:17-20

23 Dearly beloved, avenge not yourselves, but rather give place unto wrath: for it is written. Vengeance is mine; I will repay, saith the Lord.

Therefore if thine enemy hunger, feed him; if he thirst, give him drink; for in so doing thou shalt heap coals of fire on his head.

Romans 12:19-20

24 Who can hesitate to number among the faults an affectation which makes one ashamed to do what is right?

Quintilian, Institutio Oratoria, XII, 5

25 Courage and wisdom are, indeed, rarities amongst men, but of all that is good, a just man it would seem is the most scarce.

Plutarch, Flamininus

26 In his ordinary language he [Agesilaus] was always observed to be a great maintainer of justice, and would commend it as the chief of virtues, saying, that valour without justice was useless, and if all the world were just, there would be no need of valour.

Plutarch, Agesilaus

27 A good man does nothing for the sake of appearance, but for the sake of doing right.

Epictetus, Discourses, III, 24

28 I who have seen the nature of the good that it is beautiful, and of the bad that it is ugly, and the nature of him who does wrong, that it is akin to me, not only of the same blood or seed, but that it participates in the same intelligence and the same portion of the divinity, I can neither be injured by any of them, for no one can fix on me what is ugly, nor can I be angry with my kinsman, nor hate him. For we are made for co-operation, like feet, like hands, like eyelids, like the rows of the upper and lower teeth. To act against one another then is contrary to

nature; and it is acting against one another to be vexed and to turn away.

Marcus Aurelius, Meditations, II, 1

29 One thing here is worth a great deal, to pass thy life in truth and justice, with a benevolent disposition even to liars and unjust men.

Marcus Aurclius, Meditations, VI, 47

30 Generally, wickedness does no harm at all to the universe; and particularly, the wickedness of one man does no harm to another. It is only harmful to him who has it in his power to be released from it, as soon as he shall choose.

Marcus Aurelius, Meditations, VIII, 55

31 It is owing to the various conditions of men that certain acts are virtuous for some, as being proportionate and fitting to them, while they are vicious for others, as being not proportioned to them.

Aquinas, Summa Theologica, I-II 94 3

32 To his neighbours a man behaves himself well both in particular and in general. In particular, as to those to whom he is indebted by paying his debts, and in this sense is to be taken the commandment about honouring one's parents. In general, as to all men by doing harm to none, either by deed, or by word, or by thought. By deed harm is done to one's neighbour sometimes in his person, that is, to his personal existence, and this is forbidden by the words. *Thou shall not kill*; sometimes in a person united to him as to the propagation of offspring, and this

is prohibited by the words. *Thou shalt not commit adultery*; sometimes in his possessions, which are directed to both of these, and with regard to this it is said, *Thou shalt not steal*. Harm done by word is forbidden when it is said, *Thou shalt not bear false witness against thy neighbour*; harm done by thought is forbidden in the words. *Thou shalt not covet*.

Aquinas, Summa Theologica, I-II, 100, 5

- 33 If we speak of legal justice, it is evident that it stands foremost among all the moral virtues, for as much as the common good transcends the individual good of one person. In this sense the Philosopher [Aristotle] declares that the most excellent of the virtues would seem to be justice, and more glorious than either the evening or the morning star. But, even if we speak of particular justice, it excels the other moral virtues for two reasons. The first reason may be taken from the subject, because justice is in the more excellent part of the soul, viz. the rational appetite or will, whereas the other moral virtues are in the sensitive appetite, whereunto appertain the passions which are the matter of the other moral virtues. The second reason is taken from the object, because the other virtues are commendable in respect of the sole good of the virtuous person himself, whereas justice is praiseworthy in respect of the virtuous person being well disposed towards another, so that justice is somewhat the good of another person.

Aquinas, Summa Theologica, II-II, 58, 12

- 34 Every excellence proper to a thing is to be loved in that thing; as in masculinity to be well bearded, and in

femininity to be well smooth of beard over all the face. As in a setter, good scent, and in a boarhound, good speed. And the more proper is the excellence the better is it to be loved; wherefore, though every virtue is to be loved in man, that is most to be loved in him which is most human; and that is justice, which abides only in the rational or intellectual part, to wit in the will. This is so much to be loved that. . . they who are its foes, as are robbers and plunderers, love it; and therefore we see that its contrary, to wit injustice, is most hated; as treachery, ingratitude, forgery, theft, rapine, cheating and their likes.

Dante, Convivio, I, 12

35 Enough is opened to thee now the labyrinth which hid from thee the living justice of which thou hast made question so incessantly; for thou didst say: 'A man is born upon the bank of Indus and there is none to tell of Christ, nor none to read, nor none to write;

and all his volitions and his deeds are good so far as human reason sceth, sinless in life or in discourse.

He dieth unbaptised and without faith; where is that justice which condemneth him? where is his fault, in that he not believes?'

Now who art thou who wouldst sit upon the scat to judge at a thousand miles away with the short sight that carries but a span?

Truly to him who goeth subtly to work with me, were not the Scripture over you, there were marvellous ground for questioning.

O animals of earth, minds gross! the primal Will, good in itself, never departed from its own self which is the highest good.

All is just which doth harmonise with it; no created good draweth it to itself, but it by raying forth giveth rise to it.

Dante, Paradiso, XIX, 67

36 There are lawful vices, as there are many either good or excusable actions that are unlawful.

Montaigne, Essays, III, 1, The Useful and the Honorable

37 *The King*. What stronger breastplate than a heart untainted!

Thrice is he arm'd that hath his quarrel just,
And he but naked, though lock'd up in steel.
Whose conscience with injustice is corrupted.

Shakespeare, II Henry VI, III, ii, 232

38 *Lear*. O, ho, are you there with me? No eyes in your head, nor no money in your purse? Your eyes are in a heavy ease, your purse in a light. Yet you see how this world goes.

Gloucester. I see it feelingly.

Lear. What, art mad? A man may see how this world goes with no eyes. Look with thine cars: see how yond justice rails upon yond simple thief. Hark, in thine car: change places; and, handy-dandy, which is the justice, which is the thief? Thou hast seen a farmer's dog bark at a beggar?

Glou. Ay, sir.

Lear. And the creature run from the cur?
There thou mightst behold the great image of authority: a dog's obeyed in office.
Thou rascal beadle, hold thy bloody hand!

Why dost thou lash that whore? Strip thine own back;
Thou hotly lust'st to use her in that kind
For which thou whipp'st her. The usurer hangs the
cozener.

Through tatter'd clothes small vices do appear;
Robes and furr'd gowns hide all. Plate sin with gold.
And the strong lance of justice hurtless breaks;
Arm it in rags, a pigmy's straw does pierce it.
None does offend, none, I say, none; I'll able 'em.
Take that of me, my friend, who have the power
To seal the accuser's lips. Get thee glass eyes;
And, like a scurvy politician, seem
To see the things thou dost not.

Shakespeare, Lear, IV, vi, 148

- 39 The names *just* and *unjust*, when they are attributed to men, signify one thing, and when they are attributed to actions, another. When they are attributed to men, they signify conformity, or inconformity of manners, to reason. But when they are attributed to actions, they signify the conformity, or inconformity to reason, not of manners, or manner of life, but of particular actions. A just man therefore is he that taketh all the care he can that his actions may be all just; and an unjust man is he that neglecteth it. And such men are more often in our language styled by the names of righteous and unrighteous than just and unjust, though the meaning be the same. Therefore a righteous man does not lose that title by one or a few unjust actions that proceed from sudden passion, or mistake of things or persons, nor does an unrighteous man lose his character for such actions as he does, or forbears to do, for fear: because his will is not framed by the justice, but by the apparent benefit of

what he is to do. That which gives to human actions the relish of justice is a certain nobleness or gallantness of courage, rarely found, by which a man scorns to be beholding for the contentment of his life to fraud, or breach of promise. This justice of the manners is That which is meant where justice is called a virtue; and injustice, a vice.

But the justice of actions denominates men, not just, but *guiltless*: and the injustice of the same (which is also called injury) gives them but the name of *guilty*.

Hobbes, Leviathan, I, 15

40 Wrong-doing cannot be conceived of, but under dominion—that is, where, by the general right of the whole dominion, it is decided what is good and what evil, and where no one does anything rightfully, save what he does in accordance with the general decree or consent. For that ... is wrong-doing, which cannot lawfully be committed, or is by law forbidden. But obedience is the constant will to execute that, which by law is good, and by the general decree ought to be done.

Yet we are accustomed to call that also wrong, which is done against the sentence of sound reason, and to give the name of obedience to the constant will to moderate the appetite according to the dictate of reason: a manner of speech which I should quite approve, did human liberty consist in the licence of appetite, and slavery in the dominion of reason. But as human liberty is the greater, the more man can be guided by reason, and moderate his appetite, we cannot without great impropriety call a rational life obedience, and give the name of wrong-doing to that which is, in fact, a weakness of the mind, not a licence of the mind directed against

itself, and for which a man may be called a slave, rather than free.

Spinoza, Political Treatise, 11, 19-20

41 We find in history a thousand examples of pusillanimous or ambitious rulers, who were ruined by their slackness or their pride; not one who suffered for having been strictly just. But we ought not to confound negligence with moderation, or clemency with weakness. To be just, it is necessary to be severe; to permit vice, when one has the right and the power to suppress it, is to be oneself vicious.

Rousseau, Political Economy

42 Right... comprehends the whole of the conditions under which the voluntary actions of any one person can be harmonized in reality with the voluntary actions of every other person, according to a universal law of freedom.

Kant, Introduction to the Science of Right, B

43 The dictum of equity may be put thus: "The strictest right is the greatest wrong."

Kant, Introduction to the Science of Right, F

44 "Do wrong to no one." This formula may be rendered so as to mean: "Do no wrong to any one, even if thou shouldst be under the necessity, in observing this duty, to cease from all connection with others and to avoid all society."

Kant, Division of the Science of Right, A

45 It is not enough to do what is right, but we should practise it solely on the ground of its being right.

Kant, Critique of Aesthetic Judgement, 53

46 Life as the sum of ends has a right against abstract right. If for example it is only by stealing bread that the wolf can be kept from the door, the action is of course an encroachment on someone's property, but it would be wrong to treat this action as an ordinary theft. To refuse to allow a man in jeopardy of his life to take such steps for self-preservation would be to stigmatize him as without rights, and since he would be deprived of his life his freedom would be annulled altogether. Many diverse details have a bearing on the preservation of life, and when we have our eyes on the future we have to engage ourselves in these details. But the only thing that is necessary is to live now, the future is not absolute but ever exposed to accident. Hence it is only the necessity of the immediate present which can justify a wrong action, because not to do the action would in turn be to commit an offence, indeed the most wrong of all offences, namely the complete destruction of the embodiment of freedom.

Hegel, Philosophy of Right Additions, Par. 127

47 Act singly, and what you have already done singly will justify you now. Greatness appeals to the future. If I can be firm enough to-day to do right and scorn eyes, I must have done so much right before as to defend me now. Be it how it will, do right now.

Emerson, Self-Reliance

48 The only freedom I care about is the freedom to do right; the freedom to do wrong I am ready to part with on the cheapest terms to any one who will take it of me.

T. H. Huxley, Descartes' "Discourse on Method"

49 Speaking in a general way, a person is understood to deserve good if he does right, evil if he does wrong; and in a more particular sense, to deserve good from those to whom he does or has done good, and evil from those to whom he does or has done evil. The precept of returning good for evil has never been regarded as a case of the fulfilment of justice, but as one in which the claims of justice are waived, in obedience to other considerations.

Mill, Utilitarianism, V

50 We do not call anything wrong, unless we mean to imply that a person ought to be punished in some way or other for doing it; if not by law, by the opinion of his fellowcreatures; if not by opinion, by the reproaches of his own conscience. This seems the real turning point of the distinction between morality and simple expediency.

Mill, Utilitarianism, V

51 *Prince Andrew*. It is not given to man to know what is right and what is wrong. Men always did and always will err, and in nothing more than in what they consider right and wrong.

Tolstoy, War and Peace, V, 11

52 Thou art indeed just, Lord, if I contend
With thee; but, sir, so what I plead is just.
Why do sinners' ways prosper? and why must

Disappointment all I endeavour end?
Wert thou my enemy, O thou my friend,
How wouldst thou worse, I wonder, than thou dost
Defeat, thwart me? Oh, the sots and thralls of lust
Do in spare hours more thrive than I that spend,
Sir, life upon thy cause. See, banks and brakes
Now, leaved how thick! laced they are again
With fretty chervil, look, and fresh wind shakes
Them; birds build—but not I build; no, but strain,
Time's eunuch, and not breed one work that wakes.
Mine, O thou lord of life, send my roots rain.

G. M, Hopkins, Thou Art Indeed Just, Lord

53 To talk of intrinsic right and intrinsic wrong is absolutely nonsensical; intrinsically, an injury, an oppression, an exploitation, an annihilation can be nothing wrong, inasmuch as life is essentially (that is, in its cardinal functions) something which functions by injuring, oppressing, exploiting, and annihilating, and is absolutely inconceivable without such a character.

Nietzsche, Genealogy of Morals, II, 11

9.8 Happiness

In the discussion of this pivotal notion, concerning which there appear to be many disagreements, several points that have seldom if ever been disputed stand out. One is the fact that the word "happiness" is generally used to name something that is desired for its own sake, not as a means to some end beyond itself. Another is the fact that happiness is not one good among others, which a man might possess and

still desire many other goods; it is rather the complete good, or summation of goods. The reader will find this conception of happiness expressed in Augustine's "Happy is he who has all that he desires, provided that he desire nothing amiss," and in the statement by Boethius that happiness consists in the possession in aggregate of all good things.

The understanding of these two points is profoundly affected by a fundamental difference among the writers quoted here in their use of the word "happiness." Some of them use it in an exclusively ethical sense to denote the quality of a whole human life. When it is thus used, happiness is not something that can be experienced at a particular time, or enjoyed at one time and not at another. Other writers—and most people generally—use the term to denote a psychological state, a feeling of contentment, joy, or satisfaction, which can be experienced at one time and not at another.

Writers who use the word in such totally different senses may appear to disagree with one another in what they say about happiness, but, in view of their equivocal use of the term, they will be only in apparent, not real disagreement. Thus, for example, Kant, who uses the term "happiness" to name a feeling of contentment that results from the satisfaction of whatever desires a person may happen to have, whether or not one's desires are themselves morally sound, may reach the ethical conclusion that persons who obey the moral law do not seek happiness but rather seek to deserve it. That conclusion does not really disagree with the ethical principle enunciated by Aristotle, Augustine, and others that people should seek happiness conceived as a whole life made good by the possession of all the goods that a virtuous person ought to desire.

The reader will find that in most of the quotations from the poets and the historians as well as from the philosophers, the word "happiness" is used mainly or exclusively in the psychological sense in which we tend to use it in daily life when we say that we feel happy or miserable. For other quotations that use "joy" and "sorrow" as synonyms for "happiness" and "misery," the reader is referred to Chapter 4 on Emotion, Section 4.6 on Joy and Sorrow; and for the relation of happiness to pleasure and pain, the reader is referred to Section 4.7 in that chapter.

To avoid misunderstanding certain of the quotations below from philosophers and theologians, the reader must keep the other meaning of happiness clearly in mind, the meaning in which it is not a feeling or emotion, but the ultimate goal that is achieved by a morally virtuous life. In this connection, the reader is referred to Section 9.10 on Virtue and Vice; and is also advised that theologians often use such terms as "beatitude" or "blessedness" interchangeably with "happiness." The other term that appears in discussions of happiness—the term *summum bonum* or supreme good—the reader will find in Section 9.6 on Good and Evil; and will find the conception of eternal happiness, the beatitude of the blessed in heaven, treated in Section 20.14 on Redemption and Salvation and in Section 20.15 on Heaven and Hell.

■ ■ ■

- 1 *Agamemnon*. Call that man only blest who has in sweet tranquillity brought his life to close.

Aeschylus, Agamemnon, 928

2 *Solon*. Oh! Croesus... thou askedst a question concerning the condition of man, of one who knows that the power above us is full of jealousy, and fond of troubling our lot. A long life gives one to witness much, and experience much oneself, that one would not choose. Seventy years I regard as the limit of the life of man. In these seventy years are contained, without reckoning intercalary months, twenty-five thousand and two hundred days. Add an intercalary month to every other year, that the seasons may come round at the right time, and there will be, besides the seventy years, thirty-five such months, making an addition of one thousand and fifty days. The whole number of the days contained in the seventy years will thus be twenty-six thousand two hundred and fifty, whereof not one but will produce events unlike the rest. Hence man is wholly accident. For thyself, oh! Craesus, I see that thou art wonderfully rich, and art the lord of many nations; but with respect to that whereon thou questionest me, I have no answer to give, until I hear that thou hast closed thy life happily. For assuredly he who possesses great store of riches is no nearer happiness than he who has what suffice for his daily needs, unless it so hap that luck attend upon him, and so he continue in the enjoyment of all his good things to the end of life. For many of the wealthiest men have been unfavoured of fortune, and many whose means were moderate have had excellent luck. Men of the former class excel those of the latter but in two respects; these last excel the former in many. The wealthy man is better able to content his desires, and to bear up against a sudden buffet of calamity. The other has less ability to withstand these

evils (from which, however, his good luck keeps him clear), but he enjoys all these following blessings: he is whole of limb, a stranger to disease, free from misfortune, happy in his children, and comely to look upon. If, in addition to all this, he end his life well, he is of a truth the man of whom thou art in search, the man who may rightly be termed happy. Call him, however, until he die, not happy but fortunate. Scarcely, indeed, can any man unite all these advantages:-as there is no country which contains within it all that it needs, but each, while it possesses some things, lacks others, and the best country is that which contains the most; so no single human being is complete in every respect—something is always lacking. He who unites the greatest number of advantages, and retaining them to the day of his death, then dies peaceably, that man alone, sire, is, in my judgment, entitled to bear the name of 'happy.' But in every matter it behoves us to mark well the end: for oftentimes God gives men a gleam of happiness, and then plunges them into ruin,

Herodotus, History, I, 32

- 3 *Chorus*. What man, what man on earth wins more of happiness than a seeming and after that turning away?

Sophocles, Oedipus the King, 1190

- 4 *Chorus*. Count no mortal happy till he has passed the final limit of his life secure from pain.

Sophocles, Oedipus the King, 1529

- 5 *1st Semichorus*. Happy the man who cries Evohe! stretched out full length and making merry,

for whom the wine keeps flowing,
whose arms are open to his friend!
Lucky man, upon whose bed there blows
the soft bloom of a lovely girl
with gleaming hair, sweet with oil!
who cries: "Who'll open me the door?"

Euripides, Cyclops, 495

6 *Chorus*. Excess of happiness—it drives
men's minds awry; in its train
comes on corrupted power.
No man foresees the final stretch of time.
Evil lures him, justice races by,
until he wrecks at last the somber car
that holds his happiness.

Euripides, Heracles, 774

7 *Maiden*. If a man is born and bred in hardships, he fainteth
not under them; but happiness is subject to change, and
to be afflicted after prosperous days is a grievous lot for
mortals.

Euripides, Iphigenia in Tauris, 1119

8 If a person had wealth and all the goods of which we were
just now speaking, and did not use them, would he be
happy because he possessed them?

No indeed, Socrates.

Then, I said, a man who would be happy must not only
have the good things, but he must also use them; there is
no advantage in merely having them?

True.

Well, Cleinias, but if you have the use as well as the possession of good things, is that sufficient to confer happiness?

Yes, in my opinion.

And may a person use them either rightly or wrongly?

He must use them rightly.

That is quite true, I said. And the wrong use of a thing is far worse than the non-use; for the one is an evil, and the other is neither a good nor an evil. You admit that?

He assented.

Now in the working and use of wood, is not that which gives the right use simply the knowledge of the carpenter?

Nothing else, he said.

And surely, in the manufacture of vessels, knowledge is that which gives the right way of making them?

He agreed.

And in the use of the goods of which we spoke at first—wealth and health and beauty, is not knowledge that which directs us to the right use of them, and regulates our practice about them?

He assented.

Then in every possession and every use of a thing, knowledge is that which gives a man not only good-fortune but success?

He again assented.

And tell me, I said, O tell me, what do possessions profit a man, if he have neither good sense nor wisdom? Would a man be better off, having and doing many things without wisdom, or a few things with wisdom? Look at the matter thus: If he did fewer things would he not make fewer mistakes? if he made fewer mistakes would he not

have fewer misfortunes? and if he had fewer misfortunes would he not be less miserable?

Certainly, he said.

And who would do least—a poor man or a rich man?

A poor man.

A weak man or a strong man?

A weak man.

A noble man or a mean man?

A mean man.

And a coward would do less than a courageous and temperate man?

Yes.

And an indolent man less than an active man?

He assented.

And a slow man less than a quick; and one who had dull perceptions of seeing and hearing less than one who had keen ones?

All this was mutually allowed by us.

Then, I said, Cleinias, the sum of the matter appears to be that the goods of which we spoke before are not to be regarded as goods in themselves, but the degree of good and evil in them depends on whether they are or are not under the guidance of knowledge; under the guidance of ignorance, they are greater evils than their opposites, inasmuch as they are more able to minister to the evil principle which rules them; and when under the guidance of wisdom and prudence, they are greater goods: but in themselves they are nothing?

That, he replied, is obvious.

What then is the result of what has been said? Is not this the result—that other things are indifferent, and that wisdom is the only good, and ignorance the only evil?

He assented.

Let us consider a further point, I said: Seeing that all men desire happiness, and happiness, as has been shown, is gained by a use, and a right use, of the things of life, and the right use of them, and good fortune in the use of them, is given by knowledge,—the inference is that everybody ought by all means to try and make himself as wise as he can?

Plato, Euthydemus, 280B

9 *Socrates*. Should we not offer up a prayer first of all to the local deities?

Phaedrus. By all means.

Soc. Beloved Pan, and all ye other gods who haunt this place, give me beauty in the inward soul; and may the outward and inward man be at one. May I reckon the wise to be the wealthy, and may I have such a quantity of gold as a temperate man and he only can bear and carry. — Anything more? The prayer, I think, is enough for me,

Phaedr. Ask the same for me, for friends should have all things in common.

Plato, Phaedrus, 279B

10 We call that which is in itself worthy of pursuit more final than that which is worthy of pursuit for the sake of something else, and that which is never desirable for the sake of something else more final than the things that are desirable both in themselves and for the sake of that other thing, and therefore we call final without qualification that which is always desirable in itself and never for the sake of something else.

Now such a thing happiness, above all else, is held to be; for this we choose always for itself and never for the

sake of something else, but honour, pleasure, reason, and every virtue we choose indeed for themselves (for if nothing resulted from them we should still choose each of them), but we choose them also for the sake of happiness, judging that by means of them we shall be happy. Happiness, on the other hand, no one chooses for the sake of these, nor, in general, for anything other than itself.

Aristotle, Ethics, 1097a30

- 11 The final good is thought to be self-sufficient. Now by self-sufficient we do not mean that which is sufficient for a man by himself, for one who lives a solitary life, but also for parents, children, wife, and in general for his friends and fellow citizens, since man is born for citizenship. But some limit must be set to this; for if we extend our requirement to ancestors and descendants and friends' friends we are in for an infinite series. Let us examine this question, however, on another occasion; the self-sufficient we now define as that which when isolated makes life desirable and lacking in nothing; and such we think happiness to be; and further we think it most desirable of all things, without being counted as one good thing among others—if it were so counted it would clearly be made more desirable by the addition of even the least of goods; for that which is added becomes an excess of goods, and of goods the greater is always more desirable. Happiness, then, is something final and self-sufficient, and is the end of action,

Aristotle, Ethics, 1097b8

12 To say that happiness is the chief good seems a platitude, and a clearer account of what it is is still desired. This might perhaps be given, if we could first ascertain the function of man. For just as for a flute-player, a sculptor, or an artist, and in general, for all things that have a function or activity, the good and the 'well' is thought to reside in the function, so would it seem to be for man, if he has a function. Have the carpenter then, and the tanner certain functions or activities, and has man none? Is he born without a function? Or as eye, hand, foot, and in general each of the parts evidently has a function, may one lay it down that man similarly has a function apart from all these? What then can this be? Life seems to be common even to plants, but we are seeking what is peculiar to man. Let us exclude therefore, the life of nutrition and growth. Next there would be a life of perception, but it also seems to be common even to the horse, the ox, and every animal. There remains, then, an active life of the element that has a rational principle; of this, one part has such a principle in the sense of being obedient to one, the other in the sense of possessing one and exercising thought. And, as 'life of the rational element' also has two meanings, we must state that life in the sense of activity is what we mean; for this seems to be the more proper sense of the term. Now if the function of man is an activity of soul which follows or implies a rational principle, and if we say 'so-and-so' and 'a good so-and-so' have a function which is the same in kind, e.g. a lyre-player and a good lyre-player, and so without qualification in all cases, eminence in respect of goodness being added to the name of the function (for the function of a lyre-player is to play the lyre, and that of a good lyre-player is to do so well): if this is the case,

[and we state the function of man to be a certain kind of life, and this to be an activity or actions of the soul implying a rational principle, and the function of a good man to be the good and noble performance of these, and if any action is well performed when it is performed in accordance with the appropriate excellence: if this is the case,] human good turns out to be activity of soul in accordance with virtue, and if there are more than one virtue, in accordance with the best and most complete.

But we must add 'in a complete life'. For one swallow does not make a summer, nor does one day; and so too one day, or a short time, does not make a man blessed and happy.

Aristotle, Ethics, 1097b22

- 13 Must no one at all, then, be called happy while he lives; must we, as Solon says, see the end? Even if we are to lay down this doctrine, is it also the case that a man is happy when he is dead? Or is not this quite absurd, especially for us who say that happiness is an activity? But if we do not call the dead man happy, and if Solon does not mean this, but that one can then safely call a man blessed as being at last beyond evils and misfortunes, this also affords matter for discussion; for both evil and good are thought to exist for a dead man, as much as for one who is alive but not aware of them; for example, honours and dishonours and the good or bad fortunes of children and in general of descendants. And this also presents a problem; for though a man has lived happily up to old age and has had a death worthy of his life, many reverses may befall his descendants—some of them may be good and attain the life they deserve, while with others the opposite may be the case; and clearly too the degrees of

relationship between them and their ancestors may vary indefinitely. It would be odd, then, if the dead man were to share in these changes and become at one time happy, at another wretched; while it would also be odd if the fortunes of the descendants did not for *some* time have *some* effect on the happiness of their ancestors.

But we must return to our first difficulty; for perhaps by a consideration of it our present problem might be solved. Now if we must see the end and only then call a man happy, not as being happy but as having been so before, surely this is a paradox, that when he is happy the attribute that belongs to him is not to be truly predicated of him because we do not wish to call living men happy, on account of the changes that may befall them, and because we have assumed happiness to be something permanent and by no means easily changed, while a single man may suffer many turns of fortune's wheel. For clearly if we were to keep pace with his fortunes, we should often call the same man happy and again wretched, making the happy man out to be a 'chameleon and insecurely based'. Or is this keeping pace with his fortunes quite wrong? Success or failure in life does not depend on these, but human life, as we said, needs these as mere additions, while virtuous activities or their opposites are what constitute happiness or the reverse.... The attribute in question, then, will belong to the happy man, and he will be happy throughout his life; for always, or by preference to everything else, he will be engaged in virtuous action and contemplation, and he will bear the chances of life most nobly and altogether decorously, if he is 'truly good' and 'foursquare beyond reproach'.

Now many events happen by chance, and events differing in importance; small pieces of good fortune or of

its opposite clearly do not weigh down the scales of life one way or the other, but a multitude of great events if they turn out well will make life happier (for not only are they themselves such as to add beauty to life, but the way a man deals with them may be noble and good), while if they turn out ill they crush and maim happiness; for they both bring pain with them and hinder many activities. Yet even in these nobility shines through, when a man bears with resignation many great misfortunes, not through insensibility to pain but through nobility and greatness of soul.

If activities are, as we said, what gives life its character, no happy man can become miserable; for he will never do the acts that are hateful and mean. For the man who is truly good and wise, we think, bears all the chances of life becomingly and always makes the best of circumstances, as a good general makes the best military use of the army at his command and a good shoemaker makes the best shoes out of the hides that are given him; and so with all other craftsmen. And if this is the case, the happy man can never become miserable; though he will not reach blessedness, if he meet with fortunes like those of Priam.

Nor, again, is he many-coloured and changeable; for neither will he be moved from his happy state easily or by any ordinary misadventures, but only by many great ones, nor, if he has had many great misadventures, will he recover his happiness in a short time, but if at all, only in a long and complete one in which he has attained many splendid successes.

Wiry then should we not say that he is happy who is active in accordance with complete virtue and is sufficiently equipped with external goods, not for some

chance period but throughout a complete life? Or must we add 'and who is destined to live thus and die as befits his life'? Certainly the future is obscure to us, while happiness, we claim, is an end and something in every way final. If so, we shall call happy those among living men in whom these conditions are, and are to be, fulfilled—but happy men.

Aristotle, Ethics, 1100a10

14 If happiness is activity in accordance with virtue, it is reasonable that it should be in accordance with the highest virtue; and this will be that of the best thing in us. Whether it be reason or something else that is this element which is thought to be our natural ruler and guide and to take thought of things noble and divine, whether it be itself also divine or only the most divine element in us, the activity of this in accordance with its proper virtue will be perfect happiness. That this activity is contemplative we have already said.

Now this would seem to be in agreement both with what we said before and with the truth. For, firstly, this activity is the best (since not only is reason the best thing in us, but the objects of reason are the best of knowable objects); and secondly, it is the most continuous, since we can contemplate truth more continuously than we can do anything. And we think happiness has pleasure mingled with it, but the activity of philosophic wisdom is admittedly the pleasantest of virtuous activities; at all events the pursuit of it is thought to offer pleasures marvellous for their purity and their enduringness, and it is to be expected that those who know will pass their time more pleasantly than those who inquire. And the self-sufficiency that is spoken of must belong most to the

contemplative activity. For while a philosopher, as well as a just man or one possessing any other virtue, needs the necessities of life, when they are sufficiently equipped with things of that sort the just man needs people towards whom and with whom he shall act justly, and the temperate man, the brave man, and each of the others is in the same case, but the philosopher, even when by himself, can contemplate truth, and the better the wiser he is; he can perhaps do so better if he has fellow-workers, but still he is the most self-sufficient. And this activity alone would seem to be loved for its own sake; for nothing arises from it apart from the contemplating, while from practical activities we gain more or less apart from the action. And happiness is thought to depend on leisure; for we are busy that we may have leisure, and make war that we may live in peace. Now the activity of the practical virtues is exhibited in political or military affairs, but the actions concerned with these seem to be unleisurely. Warlike actions are completely so (for no one chooses to be at war, or provokes war, for the sake of being at war; any one would seem absolutely murderous if he were to make enemies of his friends in order to bring about battle and slaughter); but the action of the statesman is also unleisurely, and—apart from the political action itself—aims at despotic power and honours, or at all events happiness, for him and his fellow citizens—a happiness different from political action, and evidently sought as being different. So if among virtuous actions political and military actions are distinguished by nobility and greatness, and these are unleisurely and aim at an end and are not desirable for their own sake, but the activity of reason, which is contemplative, seems both to be superior in serious worth and to aim at no end

beyond itself, and to have its pleasure proper to itself (and this augments the activity), and the self-sufficiency, leisureliness, unweariedness (so far as this is possible for man), and all the other attributes ascribed to the supremely happy man are evidently those connected with this activity, it follows that this will be the complete happiness of man, if it be allowed a complete term of life (for none of the attributes of happiness is *incomplete*).

But such a life would be too high for man; for it is not in so far as he is man that he will live so, but in so far as something divine is present in him; and by so much as this is superior to our composite nature is its activity superior to that which is the exercise of the other kind of virtue. If reason is divine, then, in comparison with man, the life according to it is divine in comparison with human life: But we must not follow those who advise us, being men, to think of human things, and, being mortal, of mortal things, but must, so far as we can, make ourselves immortal, and strain every nerve to live in accordance with the best thing in us; for even if it be small in bulk, much more does it in power and worth surpass everything. This would seem, too, to be each man himself, since it is the authoritative and better part of him. It would be strange, then, if he were to choose not the life of his self but that of something else. And what we said before will apply now; that which is proper to each thing is by nature best and most pleasant for each thing; for man, therefore, the life according to reason is best and pleasantest since reason more than anything else is man. This life therefore is also the happiest.

Aristotle, Ethics, 1177a12

15 Certainly no one will dispute the propriety of that partition of goods which separates them into three classes, viz. external goods, goods of the body, and goods of the soul, or deny that the happy man must have all three. For no one would maintain that he is happy who has not in him a particle of courage or temperance or justice or prudence, who is afraid of every insect which flutters past him, and will commit any crime, however great, in order to gratify his lust of meat or drink, who will sacrifice his dearest friend for the sake of half-a-farthing, and is as feeble and false in mind as a child or a madman. These propositions are almost universally acknowledged as soon as they are uttered, but men differ about the degree or relative superiority of this or that good. Some think that a very moderate amount of virtue is enough, but set no limit to their desires of wealth, property, power, reputation, and the like. To whom we reply by an appeal to facts, which easily prove that mankind do not acquire or preserve virtue by the help of external goods, but external goods by the help of virtue, and that happiness, whether consisting in pleasure or virtue, or both, is more often found with those who are most highly cultivated in their mind and in their character, and have only a moderate share of external goods, than among those who possess external goods to a useless extent but are deficient in higher qualities; and this is not only matter of experience, but, if reflected upon, will easily appear to be in accordance with reason. For, whereas external goods have a limit, like any other instrument, and all things useful are of such a nature that where there is too much of them they must either do harm, or at any rate be of no use, to their possessors, every good of the soul, the greater it is, is also of greater use, if the

epithet useful as well as noble is appropriate to such subjects. No proof is required to show that the best state of one thing in relation to another corresponds in degree of excellence to the interval between the natures of which we say that these very states are states: so that, if the soul is more noble than our possessions or our bodies, both absolutely and in relation to us, it must be admitted that the best state of either has a similar ratio to the other. Again, it is for the sake of the soul that goods external and goods of the body are eligible at all, and all wise men ought to choose them for the sake of the soul, and not the soul for the sake of them.

Let us acknowledge then that each one has just so much of happiness as he has of virtue and wisdom, and of virtuous and wise action. God is a witness to us of this truth, for he is happy and blessed, not by reason of any external good, but in himself and by reason of his own nature. And herein of necessity lies the difference between good fortune and happiness; for external goods come of themselves, and chance is the author of them, but no one is just or temperate by or through chance. In like manner, and by a similar train of argument, the happy state may be shown to be that which is best and which acts rightly; and rightly it cannot act without doing right actions, and neither individual nor state can do right actions without virtue and wisdom. Thus the courage, justice, and wisdom of a state have the same form and nature as the qualities which give the individual who possesses them the name of just, wise, or temperate.

Aristotle, Politics, 1323a24

- 16 Because no evil, foolish, or lazy man can enjoy well-being, it follows that the good, courageous, and wise man

cannot live miserably. Nor can anyone whose virtue and character merit praise fail to lead a praiseworthy life. Such a life is not something to be shunned. Yet it would be shunned if it were miserable. Hence, whatever is praiseworthy must also be considered happy, prosperous, and desirable.

Cicero, Paradoxes of the Stoics, II

17 Happy the man, who, studying nature's laws,
Through known effects can trace the secret cause—
His mind possessing in a quiet state.
Fearless of Fortune, and resigned to Fate!
And happy too is he, who decks the bowers
Of sylvans, and adores the rural powers—
Whose mind, unmoved, the bribes of courts can sec,
Their glittering baits, and purple slavery—
Nor hopes the people's praise, nor fears their frown,
Nor, when contending kindred tear the crown,
Will set up one, or pull another down.
Without concern he hears, but hears from far,
Of tumults, and descents, and distant war;
Nor with a superstitious fear is awed,
For what befalls at home, or what abroad.
Nor his own peace disturbs with pity for the poor.
Nor envies he the rich their happy store,
He feeds on fruits, which, of their own accord.
The willing ground and laden trees afford.
From his loved home no lucre him can draw;
The senate's mad decrees he never saw;
Nor heard, at bawling bars, corrupted law.

Virgil, Georgics, II

18 The wealthy man thou could'st not rightly choose
As the supremely happy; rightlier goes

The name to him, who wisely knows
The gifts of Heaven to use;

Knows too to face reverse without a sigh,
Nor death before dishonour fears to take;
Ready for dear companions' sake.
Or native land, to die.

Horace, Odes, IV, 9

19 And seeing the multitudes, he went up into a mountain:
and when he was set, his disciples came unto him:
And he opened his mouth, and taught them, saying,
Blessed are the poor in spirit: for their's is the kingdom
of heaven.

Blessed are they that mourn: for they shall be
comforted.

Blessed are the meek: for they shall inherit the earth.

Blessed are they which do hunger and thirst after
righteousness: for they shall be filled.

Blessed are the merciful: for they shall obtain mercy.

Blessed are the pure in heart: for they shall see God.

Blessed are the peacemakers: for they shall be called
the children of God.

Blessed are they which are persecuted for
righteousness' sake: for their's is the kingdom of heaven.

Blessed are ye, when men shall revile you, and
persecute you, and shall say all manner of evil against
you falsely, for my sake.

Rejoice, and be exceeding glad: for great is your
reward in heaven: for so persecuted they the prophets

which were before you.

Matthew 5:1-12

- 20 It seems the province of some god to lessen that happiness which is too great and inordinate, and so to mingle the affairs of human life that no one should be entirely free and exempt from calamities.... Those should think themselves truly blessed to whom fortune has given an equal share of good and evil.

Plutarch, Aemilius Paulus

- 21 For him that would attain to true happiness, which for the most part is placed in the qualities and disposition of the mind, it is...of no other disadvantage to be of a mean, obscure country, than to be born of a small or plain-looking woman.

Plutarch, Demosthenes

- 22 If we crave for the goal that is worthy and fitting for man, namely, happiness of life—and this is accomplished by philosophy alone and by nothing else, and philosophy, as I said, means for us desire for wisdom, and wisdom the science of the truth in things, and of things some are properly so called, others merely share the name—it is reasonable and most necessary to distinguish and systematize the accidental qualities of things.

Nicomachus, Arithmetic, I, 2

- 23 Good and evil... are not what vulgar opinion accounts them; many who seem to be struggling with adversity are happy; many, amid great affluence, are utterly miserable,

if only the first bear their hard lot with patience, and the latter make a foolish use of their prosperity.

Tacitus, Annals, VI, 22

24 If thou workest at that which is before thee, following right reason seriously, vigorously, calmly, without allowing anything else to distract thee, but keeping thy divine part pure, as if thou shouldst be bound to give it back immediately; if thou boldest to this, expecting nothing, fearing nothing, but satisfied with thy present activity according to nature, and with heroic truth in every word and sound which thou utterest, thou wilt live happy. And there is no man who is able to prevent this.

Marcus Aurelius, Meditations, III, 12

25 To put Happiness in actions is to put it in things that are outside virtue and outside the Soul; for the Soul's expression is not in action but in wisdom, in a contemplative operation within itself; and this, this alone, is Happiness.

Plotinus, First Ennead, V, 10

26 We [cannot] ask to be happy when our actions have not earned us happiness; the good, only, are happy; divine beings are happy only because they are good.

Plotinus, Third Ennead, II, 4

27 Not I alone, or a handful of men besides, but surely all men whatsoever want to be happy. And unless we knew the thing with certain knowledge, we could not will it with so certain a will. Yet notice this: If two men were asked whether they want to go with the army, it might

happen that one of them would say Yes, and the other No: but if they were asked whether they wanted to be happy, each would instantly and without hesitation say Yes—and the one would have no reason for wanting to go with the army nor the other for not wanting to go, save to be happy. May it be that one gets joy from this, one from that? All agree that they desire happiness, just as they would agree, if they were asked, that they desire joy: and indeed they think joy and happiness are the same thing. One man may get it one way, another another, yet all alike are striving to attain this one thing, namely that they may be joyful. It is something that no one can say that he has had no experience of, which is why he finds it in his memory and recognizes it when he hears the word happiness.

Augustine, Confessions, X, 21

28 *Philosophy*. The trouble of the many and various aims of mortal men bring them much care, and herein they go forward by different paths but strive to reach one end, which is happiness. And that good is that, to which if any man attain, he can desire nothing further. It is that highest of all good things, and it embraces in itself all good things: if any good is lacking, it cannot be the highest good, since then there is left outside it something which can be desired. Wherefore happiness is a state which is made perfect by the union of all good things. This end all men seek to reach, as I said, though by different paths. For there is implanted by nature in the minds of men a desire for the true good; but error leads them astray towards false goods by wrong paths.

Boethius, Consolation of Philosophy, III

29 It is impossible for any created good to constitute man's happiness. For happiness is the perfect good, which quiets the appetite altogether since it would not be the last end if something yet remained to be desired. Now the object of the will, that is, of man's appetite, is the universal good, just as the object of the intellect is the universal true. Hence it is evident that nothing can quiet man's will except the universal good. This is to be found not in any creature, but in God alone, because every creature has goodness by participation. Therefore God alone can satisfy the will of man.

Aquinas, Summa Theologica, I-II, 2, 8

30 Final and perfect happiness can consist in nothing else than the vision of the Divine Essence. To make this clear, two points must be observed. First, that man is not perfectly happy, so long as something remains for him to desire and seek; secondly, that the perfection of any power is determined by the nature of its object. Now "the object of the intellect is what a thing is, that is, the essence of a thing," according to the book on the *Soul*. Therefore the intellect attains perfection in so far as it knows the essence of a thing. If therefore an intellect know the essence of some effect in which it is not possible to know the essence of the cause, that is, to know of the cause "what it is," that intellect cannot be said to reach that cause absolutely, although it may be able to gather from the effect the knowledge that the cause is. Consequently, when man knows an effect, and knows that it has a cause, there naturally remains in man the desire to know about that cause, "what it is." And this desire is one of wonder, and causes inquires as is stated in the beginning of (Aristotle's) *Metaphysics*. For

instance, if a man, knowing the eclipse of the sun, consider that it must be due to some cause, and know not what that cause is, he wonders about it, and from wondering proceeds to inquire. Nor does this inquiry cease until he arrive at a knowledge of the essence of the cause.

If therefore the human intellect, knowing the essence of some created effect, knows no more of God than that He is, the perfection of that intellect does not yet reach absolutely the First Cause, but there remains in it the natural desire to seek the cause. And so it is not yet perfectly happy. Consequently, for perfect happiness the intellect needs to reach the very Essence of the First Cause. And thus it will have its perfection through union with God as with that object in which alone man's happiness consists.

Aquinas, Summa Theologica, I-II, 3, 8

- 31 A certain participation of Happiness can be had in this life, but perfect and true Happiness cannot be had in this life.... Since happiness is a perfect and sufficient good, it excludes every evil, and fulfils every desire. But in this life every evil cannot be excluded. For this present life is subject to many unavoidable evils: to ignorance on the part of the intellect, to disordered affection on the part of the appetite, and to many penalties on the part of the body.... Likewise neither can the desire for good be satiated in this life. For man naturally desires the good which he has to be abiding. Now-the goods of the present life pass away, since life itself passes away, which we naturally desire to have, and would wish to hold abidingly, for man naturally shrinks from death. Therefore it is impossible to have true Happiness in this life.

Aquinas, Summa Theologica, I-II, 5, 3

32 This definition of Happiness given by some,— Happy is the man that has all he desires, or, whose every wish is fulfilled, is a good and adequate definition if it be understood in a certain way, but an inadequate definition if understood in another. For if we understand it absolutely of all that man desires by his natural appetite, thus it is true that he who has all that he desires, is happy, since nothing satisfies man's natural desire except the perfect good which is Happiness. But if we understand it of those things that man desires according to the apprehension of the reason, in this way it does not pertain to Happiness to have certain things that man desires; rather does it belong to unhappiness, in so far as the possession of such things hinders man from having all that he desires naturally; just as reason also sometimes accepts as true things that are a hindrance to the knowledge of truth. And it was through taking this into consideration that Augustine added so as to include perfect Happiness,—that "he desires nothing amiss," although the first part suffices if rightly understood, that is to say, that "happy is he who has nil he desires."

Aquinas, Summa Theologica, I-II, 5, 8

33 [The] beatitudes are most suitably enumerated. To make this evident it must be observed that happiness has been held to consist in one of three things: for some have ascribed it to a sensual life, some to an active life, and some to a contemplative life. Now these three kinds of happiness stand in different relations to future Happiness, by hoping for which we are said to be happy. Because sensual happiness, being false and contrary to

reason, is an obstacle to future Happiness, while happiness of the active life is a disposition to future Happiness, and contemplative happiness, if perfect, is the very essence of future Happiness, and, if imperfect, is a beginning of it.

And so Our Lord, in the first place, indicated certain beatitudes as removing the obstacle of sensual happiness. For a life of pleasure consists of two things. First, in the affluence of external goods whether riches or honours. Man is withdrawn from these by a virtue, so that he uses them in moderation; and by a gift, in a more excellent way, so that he despises them altogether. Hence the first beatitude is: *Blessed are the poor in spirit*, which may refer either to the contempt of riches, or to the contempt of honours, which results from humility. Secondly, the sensual life consists in following the bent of one's passions, whether irascible or concupiscible. Man is withdrawn from following the irascible passions by a virtue, so that they are kept within the bounds appointed by the ruling of reason; and by a gift, in a more excellent manner, so that man, according to God's will, is altogether undisturbed by them. Hence the second beatitude is: *Blessed are the meek*. Man is withdrawn from following the concupiscible passions by a virtue so that man uses these passions in moderation; and by a gift, so that, if necessary, he casts them aside altogether; nay more, so that if need be, he makes a deliberate choice of sorrow. Hence the third beatitude is: *Blessed are they that mourn*.

Active life consists chiefly in man's relations with his neighbour, either by way of duty or by way of spontaneous benefit. To the former we are disposed by a virtue, so that we do not refuse to do our duty to our

neighbour, which pertains to justice; and by a gift, so that we do the same much more heartily, by accomplishing works of justice with an ardent desire, even as a hungry and thirsty man eats and drinks with eager appetite. Hence the fourth beatitude is: *Blessed are they that hunger and thirst after justice*. With regard to spontaneous favours we are perfected by a virtue, so that we give where reason dictates we should give, for example to our friends or others united to us, which pertains to the virtue of liberality; and by a gift, so that, through reverence for God, we consider only the needs of those on whom we bestow our gratuitous bounty. Hence it is written: *When thou makest a dinner or supper, call not thy friends nor thy brethren, etc. ... but . . . call the poor, the maimed, etc.*; which, properly is to have mercy. Hence the fifth beatitude is: *Blessed are the merciful*.

Those things which concern the contemplative life are either final Happiness itself, or some beginning of it, and so they are included in the beatitudes not as merits, but as rewards. Yet the effects of the active life, which dispose man for the contemplative life, are included in the beatitudes as merits. Now the effect of the active life as regards those virtues and gifts by which man is perfected in himself is the cleansing of man's heart, so that it is not defiled by the passions. Hence the sixth beatitude is: *Blessed are the clean of heart*. But as regards the virtues and gifts by which man is perfected in relation to his neighbour, the effect of the active life is peace... The work of justice shall be peace. Hence the seventh beatitude is: *Blessed are the peacemakers*.

Aquinas, Summa Theologica, I-II, 69, 3

34 And she [Francesca] to me: "There is no greater pain than to recall a happy time in wretchedness; and this thy teacher knows."

Dante, Inferno, V, 121

35 *Pandar*. Of fickle fortune's sharp adversities,
The very worst misfortune of them all,
Is this, to know and lose all joy and case,
And have but bitter memories to recall.

Chaucer, Troilus and Cressida, III, 233

36 We should have wife, children, goods, and above all health, if we can; but we must not bind ourselves to them so strongly that our happiness depends on them. we must reserve a back shop all our own, entirely free, in which to establish our real liberty and our principal retreat and solitude. Here our ordinary conversation must be between us and ourselves, and so private that no outside association or communication can find a place; here we must talk and laugh as if without wife, without children, without possessions, without retinue and servants, so that, when the time comes to lose them, it will be nothing new to us to do without them. we have a soul that can be turned upon itself; it can keep itself company; it has the means to attack and the means to defend, the means to receive and the means to give; let us not fear that in this solitude we shall stagnate in tedious idleness.

Montaigne, Essays, I, 39, Of Solitude

37 The goods of fortune, even such as they really are still need taste to enjoy them. It is the enjoying not the possessing, that makes us happy.

Montaigne, Essays, I, 42, Of the Inequality

38 Even if I should not follow the straight road because of its straightness, I would follow it because I have found by experience that when all is said and done it is generally the happiest and the most useful.

Montaigne, Essays, II, 16, Of Glory

39 *Orlando*. O, how bitter a thing it is to look into happiness through another man's eyes!

Shakespeare, As You Like It, V, ii, 47

40 *Edgar*. Yet better thus, and known to be contemn'd,
Than still contemn'd and flatter'd. To be worst,
The lowest and most dejected thing of fortune,
Stands still in esperance, lives not in fear.
The lamentable change is from the best;
The worst returns to laughter.

Shakespeare, Lear, IV, i, 1

41 *Edgar*. And worse I may be yet; the worst is not
So long as we can say, "This is the wont."

Shakespeare, Lear, IV, i, 29

42 *Trinculo*. Misery acquaints a man with strange bed-fellows.

Shakespeare, Tempest, II, ii, 42

43 It seems to me right to pause for a while in order to contemplate God Himself, to ponder at leisure His marvellous attributes, to consider, and admire, and adore, the beauty of this light so resplendent, at least as

far as the strength of my mind, which is in some measure dazzled by the sight, will allow me to do so. For just as faith teaches us that the supreme felicity of the other life consists only in this contemplation of the Divine Majesty, so we continue to learn by experience that a similar meditation, though incomparably less perfect, causes us to enjoy the greatest satisfaction of which we are capable in this life.

Descartes, Meditations on First Philosophy, III

- 44 The felicity of this life consisteth not in the repose of a mind satisfied. For there is no such *finis ultimus* (utmost aim) nor *summum bonum* (greatest good) as is spoken of in the books of the old moral philosophers. Nor can a man any more live whose desires are at an end than he whose senses and imaginations are at a stand. Felicity is a continual progress of the desire from one object to another, the attaining of the former being still but the way to the latter. The cause whereof is that the object of man's desire is not to enjoy once only, and for one instant of time, but to assure forever the way of his future desire. And therefore the voluntary actions and inclinations of all men tend not only to the procuring, but also to the assuring of a contented life, and differ only in the way, which ariseth partly from the diversity of passions in diverse men, and partly from the difference of the knowledge or opinion each one has of the causes which produce the effect desired.

Hobbes, Leviathan, I, 11

- 45 In vain we admire the Lustre of any thing seen: that which is truly glorious is invisible. Paradise was but a part

of the Earth, lost not only to our Fruition but our Knowledge. And if, according to old Dictates, no Man can be said to be happy before Death, the happiness of this Life goes for nothing before it be over, and while we think ourselves happy we do but usurp that Name. Certainly true Beatitude groweth not on Earth, nor hath this World in it the Expectations we have of it. He Swims in Oyl, and can hardly avoid sinking, who hath such light Foundations to support him. 'Tis therefore happy that we have two Worlds to hold on. To enjoy true happiness we must travel into a very far Countrey, and even out of our selves; for the Pearl we seek for is not to be found in the Indian, but in the Empyrean Ocean.

Sir Thomas Browne, Christian Morals, III, 11

46 Live happy in the *Elizium* of a virtuously composed Mind, and let Intellectual Contents exceed the Delights wherein mere Pleasurists place their Paradise. Bear not too slack reins upon Pleasure, nor let complexion or contagion betray thee unto the exorbitancy of Delight. Make Pleasure thy Recreation or intermissive Relaxation, not thy Diene, Life and Profession. Voluptuousness is as insatiable as Covetousness. Tranquillity is better than Jollity, and to appease pain than to invent pleasure. Our hard entrance into the world, our miserable going out of it, our sicknesses, disturbances, and sad Rencounters in it, do clamorously tell us we come not into the World to run a Race of Delight, but to perform the sober Acts and serious purposes of Man; which to omit were foully to miscarry in the advantage of humanity, to play away an uniterable Life, and to have lived in vain.

Sir Thomas Browne, Christian Morals, III, 23

47 If our condition were truly happy, we would not need diversion from thinking of it in order to make ourselves happy.

Pascal, Pensées, II, 165

48 Solomon and Job have best known and best spoken of the misery of man; the former the most fortunate, and the latter the most unfortunate of men; the former knowing the vanity of pleasures from experience, the latter the reality of evils.

Pascal, Pensées, II, 174

49 All men seek happiness. This is without exception. Whatever different means they employ, they all tend to this end. The cause of some going to war, and of others avoiding it, is the same desire in both, attended with different views. The will never takes the least step but to this object. This is the motive of every action of every man, even of those who hang themselves.

And yet, after such a great number of years, no one without faith has reached the point to which all continually look. All complain, princes and subjects, noblemen and commoners, old and young, strong and weak, learned and ignorant, healthy and sick, of all countries, all times, all ages, and all conditions.

A trial so long, so continuous, and so uniform, should certainly convince us of our inability' to reach the good by our own efforts. But example teaches us little. No resemblance is ever so perfect that there is not some slight difference; and hence we expect that our hope will not be deceived on this occasion as before. And thus, while the present never satisfies us, experience dupes us

and, from misfortune to misfortune, leads us to death, their eternal crown.

What is it, then, that this desire and this inability proclaim to us, but that there was once in man a true happiness of which there now remain to him only the mark and empty trace, which he in vain tries to fill from all his surroundings, seeking from things absent the help he does not obtain in things present? But these are all inadequate, because the infinite abyss can only be filled by an infinite and immutable object, that is to say, only by God Himself.

Pascal, Pensées, VII, 425

50 It is . . . , most profitable to us in life to make perfect the intellect or reason as far as possible, and in this one thing consists the highest happiness or blessedness of man; for blessedness is nothing but the peace of mind which springs from the intuitive knowledge of God, and to perfect the intellect is nothing but to understand God, together with the attributes and actions of God, which flow from the necessity of His nature. The final aim, therefore, of a man who is guided by reason, that is to say, the chief desire by which he strives to govern all his other desires, is that by which he is led adequately to conceive himself and all things which can be conceived by his intelligence.

Spinoza, Ethics, IV, Appendix IV

51 Blessedness consists in love towards God, which arises from the third kind of knowledge, and this love, therefore, must be related to the mind in so far as it acts. Blessedness, therefore, is virtue itself, which was the first

thing to be proved. Again, the more the mind delights in this divine love or blessedness, the more it understands, that is to say, the greater is the power it has over its affects, and the less it suffers from affects which are evil. Therefore, it is because the mind delights in this divine love or blessedness that it possesses the power of restraining the lusts; and because the power of man to restrain the affects is in the intellect alone, no one, therefore, delights in blessedness because he has restrained his affects, but, on the contrary, the power of restraining his lusts springs from blessedness itself.

Spinoza, Ethics, V, Prop. 42, Demonst.

52 I have finished everything I wished to explain concerning the power of the mind over the affects and concerning its liberty. From what has been said we see what is the strength of the wise man, and how' much he surpasses the ignorant who is driven forward by lust alone. For the ignorant man is not only agitated by external causes in many ways, and never enjoys true peace of soul, but lives also ignorant, as it were, both of God and of things, and as soon as he ceases to suffer ceases also to be. On the other hand, the wise man, in so far as he is considered as such, is scarcely ever moved in his mind, but, being conscious by a certain eternal necessity of himself, of God, and of things, never ceases to be, and always enjoys true peace of soul. If the way which, as I have shown, leads hither seem very difficult, it can nevertheless be found. It must indeed be difficult since it is so seldom discovered; for if salvation lay ready to hand and could be discovered without great labour, how could it be possible that it should be neglected almost by

everybody? But all noble things are as difficult as they are rare.

Spinoza, Ethics, V, Prop, 42, Scholium

53 The love of God enables us to enjoy a foretaste of future felicity. And although this love is disinterested, it constitutes by itself our greatest good and interest, even though we may not seek these in it and though we may consider only the pleasure it gives without regard to the advantage it brings; for it gives us perfect confidence in the goodness of our Author and Master, which produces real tranquillity of mind, not as in the ease of the Stoics, who forcibly school themselves to patience, but through a present content which also assures to us a future happiness. And besides the present pleasure it affords, nothing can be of more advantage for the future than this love of God, for it fulfils our expectations also and leads us in the way of supreme happiness, because in virtue of the perfect order that is established in the universe, everything is done as well as possible both for the general good and also for the greatest individual good of those who believe in it and who are satisfied with the Divine government. And this belief and satisfaction must inevitably be the characteristic of those who have learned to love the Source of all good. It is true that supreme felicity (by whatever *beatific vision*, or knowledge of God, it may be accompanied) can never be complete, because God, being infinite, cannot be entirely known. Thus our happiness will never consist (and it is right that it should not consist) in complete enjoyment, which would leave nothing more to be desired and would make our mind [*esprit*] stupid; but it must consist in a perpetual progress to new pleasures and new perfections.

Leibniz, Principles of Nature and of Grace, 18

54 As . . . the highest perfection of intellectual nature lies in a careful and constant pursuit of true and solid happiness; so the care of ourselves, that we mistake not imaginary for real happiness, is the necessary foundation of our liberty. The stronger ties we have to an unalterable pursuit of happiness in general, which is our greatest good, and which, as such, our desires always follows the more are we free from any necessary determination of our will to any particular action, and from a necessary compliance with our desire, set upon any particular, and then appearing preferable good, till we have duly examined whether it has a tendency to, or be inconsistent with, our real happiness: and therefore, till we are as much informed upon this inquiry as the weight of the matter, and the nature of the case demands, we are, by the necessity of preferring and pursuing true happiness as our greatest good, obliged to suspend the satisfaction of our desires in particular eases.

Locke, Concerning Human Understanding, Bk. 11, XXI,
52

55 Happy the man whose wish and care
A few paternal acres bound,
Content to breathe his native air,
In his own ground.

Whose herds with milk, whose fields with bread,
Whose flocks supply him with attire,
Whose trees in summer yield him shade,
In winter fire.

Blest, who can unconcernedly find
Hours, days, and years slide soft away,
In health of body, peace of mind,
Quiet by day,

Sound sleep by night; study and ease.
Together mixed; sweet recreation;
And innocence, which most does please
With meditation.

Thus let me live, unseen, unknown;
Thus unlamented let me die;
Steal from the world, and not a stone
Tell where I lie.

Pope, Ode on Solitude

56 "Mankind," said he [Jacques], "must have somewhat corrupted their nature; for they were not born wolves, and yet they have become wolves; God has given them neither cannon of twenty-four pounds, nor bayonets; and yet they have made cannon and bayonets to destroy one another, I might throw into the account bankrupts; and the law which seizes on the effects of bankrupts only to bilk the creditors." "All this was indispensable," replied the one-eyed doctor, "and private misfortunes constitute the general good; so that the more private misfortunes there are, the whole is better."

Voltaire, Candide, IV

57 "If you want nothing {said Imlac}, how are you unhappy?"

"That I want nothing," said the prince, "or that I know not what I want, is the cause of my complaint; if I had any known want, I should have a certain wish; that wish would excite endeavor, and I should not then repine to see the sun move so slowly towards the western mountain, or lament when the day breaks, and sleep will no longer hide me from myself. When I see the kids and the lambs chasing one another, I fancy that I should be happy if I had something to pursue. But, possessing all that I can want, I find one day and one hour exactly like another, except that the latter is still more tedious than the former. Let your experience inform me how the day may now seem as short as in my childhood, while nature was yet fresh and every moment showed me what I never had observed before. I have already enjoyed too much; give me something to desire."

The old man was surprised at this new species of affliction and knew not what to reply, yet was unwilling to be silent. "Sir," said he, "if you had seen the miseries of the world you would know how to value your present state." "Now," said the prince, "you have given me something to desire, I shall long to see the miseries of the world, since the sight of them is necessary to happiness."

Johnson, Rasselas, III

58 I mentioned Hume's notion, that all who are happy are equally happy; a little miss with a new gown at a dancing school ball, a general at the head of a victorious army, and an orator, after having made an eloquent speech in a great assembly. *Johnson*. "Sir, that all who are happy, are equally happy, is not true, A peasant and a philosopher may be equally *satisfied*, but not equally *happy*. Happiness consists in the multiplicity of agreeable

consciousness. A peasant has not capacity for having equal happiness with a philosopher."

Boswell, Life of Johnson (Feb. 1766)

59 He [Johnson] asserted that *the present* was never a happy state to any human being; but that, as every part of life, of which we are conscious, was at some point of time a period yet to come, in which felicity was expected, there was some happiness produced by hope. Being pressed upon this subject, and asked if he really was of opinion, that though, in general, happiness was very rare in human life, a man was not sometimes happy in the moment that was present, he answered, "Never, but when he is drunk."

Boswell, Life of Johnson (Apr. 10, 1775)

60 Happiness alone is, in the view of reason, far from being the complete good. Reason does not approve of it (however much inclination may desire it), except as united with desert. On the other hand, morality alone, and with it, mere *desert*, is likewise far from being the complete good. To make it complete, he who conducts himself in a manner not unworthy of happiness, must be able to hope for the possession of happiness. Even reason, unbiased by private ends, or interested considerations, cannot judge otherwise, if it puts itself in the place of a being whose business it is to dispense all happiness to others.

Kant, Critique of Pure Reason, Transcendental Method

61 The notion of happiness is so indefinite that although every man wishes to attain it, yet he never can say

definitely and consistently what it is that he really wishes and wills. The reason of this is that all the elements which belong to the notion of happiness are altogether empirical, i.e., they must be borrowed from experience, and nevertheless the idea of happiness requires an absolute whole, a maximum of welfare in my present and all future circumstances. Now it is impossible that the most clear-sighted and at the same time most powerful being (supposed finite) should frame to himself a definite conception of what he really wills in this. Does he will riches, how much anxiety, envy, and snares might he not thereby draw upon his shoulders? Does he will knowledge and discernment, perhaps it might prove to be only an eye so much the sharper to show him so much the more fearfully the evils that are now concealed from him, and that cannot be avoided, or to impose more wants on his desires, which already give him concern enough. Would he have long life? who guarantees to him that he would not be a long misery? would he at least have health? how often has uneasiness of the body restrained from excesses into which perfect health would have allowed one to fall? and so on. In short, he is unable, on any principle, to determine with certainty what would make him truly happy; because to do so he would need to be omniscient. we cannot therefore act on any definite principles to secure happiness, but only on empirical counsels, e.g. of regimen, frugality, courtesy, reserve, etc., which experience teaches do, on the average, most promote well-being. Hence it follows that the imperatives of prudence do not, strictly speaking, command at all, that is, they cannot present actions objectively as practically *necessary*; that they are rather to be regarded as counsels than precepts of reason, that the problem to

determine certainly and universally what action would promote the happiness of a rational being is completely insoluble, and consequently no imperative respecting it is possible which should, in the strict sense, command to do what makes happy; because happiness is not an ideal of reason but of imagination, resting solely on empirical grounds, and it is vain to expect that these should define an action by which one could attain the totality of a series of consequences which is really endless.

Kant, Fundamental Principles of the Metaphysic of Morals, II

62 Pure practical reason does not require that we should *renounce* all claim to happiness, but only that the moment duty is in question we should take *no account* of happiness. It may even in certain respects be a duty to provide for happiness; partly, because (including skill, wealth, riches) it contains means for the fulfilment of our duty; partly, because the absence of it (e.g., poverty) implies temptations to transgress our duty. But it can never be an immediate duty to promote our happiness, still less can it be the principle of all duty. Now, as all determining principles of the will, except the law of pure practical reason alone (the moral law), are all empirical and, therefore, as such, belong to the principle of happiness, they must all be kept apart from the supreme principle of morality and never be incorporated with it as a condition; since this would be to destroy all moral worth just as much as any empirical admixture with geometrical principles would destroy the certainty of mathematical evidence, which in Plato's opinion is the most excellent thing in mathematics, even surpassing their utility.

63 The conception of the *summum* itself contains an ambiguity which might occasion needless disputes if we did not attend to it. The *summum* may mean either the supreme or the perfect. The former is that condition which is itself unconditioned, i.e., is not subordinate to any other; the second is that whole which is not a part of a greater whole of the same kind. It has been shown in the Analytic that *virtue* (as worthiness to be happy) is the *supreme condition* of all that can appear to us desirable, and consequently of all our pursuit of happiness, and is therefore the *supreme* good. But it does not follow that it is the whole and perfect good as the object of the desires of rational finite beings; for this requires happiness also, and that not merely in the partial eyes of the person who makes himself an end, but even in the judgement of an impartial reason, which regards persons in general as ends in themselves. For to need happiness, to deserve it, and yet at the same time not to participate in it cannot be consistent with the perfect volition of a rational being possessed at the same time of all power, if, for the sake of experiment, we conceive such a being. Now inasmuch as virtue and happiness together constitute the possession of the *summum bonum* in a person, and the distribution of happiness in exact proportion to morality (which is the worth of the person, and his worthiness to be happy) constitutes the *summum bonum* of a possible world; hence this *summum bonum* expresses the whole, the perfect good, in which, however, virtue as the condition is always the supreme good, since it has no condition above it; whereas happiness while it is pleasant to the possessor of it, is not of itself absolutely and in all respects good,

but always presupposes morally right behaviour as its condition.

Kant, Critique of Practical Reason, Pt. I, II, 2

64 *Faust*. If ever I lay me on a bed of sloth in peace,
That instant let for me existence cease!
If ever with lying flattery you can rule me
So that contented with myself I stay,
If with enjoyment you can fool me,
Be that for me the final day!
That bet I offer!

Mephistopheles. Done!

Faust. Another hand-clasp! There!
If to the moment I shall ever say:
"Ah, linger on, thou art so fair!"
Then may you fetters on me lay,
Then will I perish, then and there!
Then may the death-bell toll, recalling
Then from your service you are free;
The clock may stop, the pointer falling.
And time itself be past for me!

Meph. Consider well, we'll not forget it.

Goethe, Faust, I, 1692

65 *Mephistopheles*. To you no goal is set, nor measure.
If you should like to nibble everything,
To snatch up something on the wing,
May all agree with you that gives you pleasure!
Fall to, I say, and don't be coy.

Faust. You hear indeed, I do not speak of joy.
Life's wildering whirl be mine, its painfulest enjoyment,
Enamoured hate, and quickening annoyance.

My bosom, of all thirst for knowledge cured,
Shall close itself henceforth against no woe;
Whatever to all mankind is assured,
I, in my inmost being, will enjoy and know,
Seize with my soul the highest and most deep;
Men's weal and woe upon my bosom heap;
And thus this self of mine to all their selves expanded,
Like them I too at last be stranded.

Goethe, Faust, I, 1760

66 *Faust*. Spirit sublime, thou gav'st me, gav'st me all
For which I prayed. Thou hast not turned in vain
Thy countenance to me in fire and flame.
Thou gav'st me glorious nature as a royal realm,
The power to feel and to enjoy her. Not
Amazed, cold visits only thou allow'st;
Thou grantest me to look in her deep breast
Even as in the bosom of a friend.
Thou leadest past a series of the living
Before me, teaching me to know my brothers
In silent covert and in air and water.
And when the storm roars screeching through the forest.
When giant fir tree plunges, sweeping down
And crushing neighbouring branches, neighbouring
trunks,
And at its fall the hills, dull, hollow, thunder:
Then leadest thou me to the cavern safe,
Show'st me myself, and my own heart becomes
Aware of deep mysterious miracles.
And when before my gaze the stainless moon
Soothing ascends on high: from rocky walls
And from damp covert float and soar about me

The silvery forms of a departed world
And temper contemplation's austere joy.

Oh, that for man naught perfect ever is,
I now do feel. Together with this rapture
That brings me near and nearer to the gods,
Thou gav'st the comrade whom I now no more
Can do without, though, cold and insolent.
He lowers me in my own sight, transforms
With but a word, a breath, thy gifts to nothing.
Within my breast he fans with busy zeal
A savage fire for that fair, lovely form.
Thus from desire I reel on to enjoyment
And in enjoyment languish for desire.

Goethe, Faust, I, 3217

67 Serene will be our days and bright.
And happy will our nature be.
When love is an unerring light.
And joy its own security.

Wordsworth, Ode to Duty

68 It is a flaw
In happiness, to see beyond our bourn.—
It forces us in summer skies to mourn,
It spoils the singing of the Nightingale.

Keats, Epistle to John Hamilton Remolds, 82

69 I have reminded the reader that every state of welfare,
every feeling of satisfaction, is negative in its character;
that is to say, it consists in freedom from pain, which is
the positive clement of existence. It follows, therefore,
that the happiness of any given life is to be measured,

not by its joys and pleasures, but by the extent to which it has been free from suffering—from positive evil. If this IS the true standpoint, the lower animals appear to enjoy a happier destiny than man. Let us examine the matter a little more closely.

However varied the forms that human happiness and misery may take, leading a man to seek the one and shun the other, the material basis of it all is bodily pleasure or bodily pain. This basis is very restricted: it is simply health, food, protection from wet and cold, the satisfaction of the sexual instinct; or else the absence of these things. Consequently, as far as real physical pleasure is concerned, the man is not better off than the brute, except in so far as the higher possibilities of his nervous system make him more sensitive to every kind of pleasure, but also, it must be remembered, to every kind of pain. But then compared with the brute, how much stronger are the passions aroused in him! what an immeasurable difference there is in the depth and vehemence of his emotions!—and yet, in the one case, as in the other, all to produce the same result in the end: namely, health, food, clothing, and so on.

The chief source of all this passion is that thought for what is absent and future, which, with man, exercises such a powerful influence upon all he does. It is this that is the real origin of his cares, his hopes, his fears—emotions which affect him much more deeply than could ever be the case with those present joys and sufferings to which the brute is confined. In his powers of reflection, memory and foresight, man possesses, as it were, a machine for condensing and storing up his pleasures and his sorrows. But the brute has nothing of the kind; whenever it is in pain, it is as though it were suffering for

the first time, even though the same thing should have previously happened to it times out of number. It has no power of summing up its feelings. Hence its careless and placid temper: how much it is to be envied! But in man reflection comes in, with all the emotions to which it gives rise; and taking up the same elements of pleasure and pain which are common to him and the brute, it develops his susceptibility to happiness and misery to such a degree that, at one moment the man is brought in an instant to a state of delight that may even prove fatal, at another to the depths of despair and suicide.

Schopenhauer, Sufferings of the World

70 In a world where all is unstable, and nought can endure, but is swept onwards at once in the hurrying whirlpool of change; where a man, if he is to keep erect at all, must always be advancing and moving, like an acrobat on a rope—in such a world, happiness is inconceivable. How can it dwell where, as Plato says, *continual Becoming and never Being* is the sole form of existence? In the first place, a man never is happy, but spends his whole life in striving after something which he thinks will make him so; he seldom attains his goal, and when he does, it is only to be disappointed; he is mostly shipwrecked in the end, and comes into harbour with masts and rigging gone. And then, it is all one whether he has been happy or miserable; for his life was never anything more than a present moment always vanishing; and now it is over.

Schopenhauer, Vanity of Existence

71 A Book of Verses underneath the Bough,
A Jug of Wine, a Loaf of Bread—and Thou

Beside me singing in the Wilderness—
Oh, Wilderness were Paradise enow!

FitzGerald, Rubaiyat, XII

72 When... it is... positively asserted to be impossible that human life should be happy, the assertion, if not something like a verbal quibble, is at least an exaggeration. If by happiness be meant a continuity of highly pleasurable excitement, it is evident enough that this is impossible. A state of exalted pleasure lasts only moments, or in some cases, and with some intermissions, hours or days, and is the occasional brilliant flash of enjoyment, not its permanent and steady flame. Of this the philosophers who have taught that happiness is the end of life were as fully aware as those who taunt them. The happiness which they meant was not a life of rapture; but moments of such, in an existence made up of few and transitory- pains, many and various pleasures, with a decided predominance of the active over the passive, and having as the foundation of the whole, not to expect more from life than it is capable of bestowing. A life thus composed, to those who have been fortunate enough to obtain it, has always appeared worthy of the name of happiness. And such an existence is even now the lot of many, during some considerable portion of their lives. The present wretched education, and wretched social arrangements, are the only real hindrance to its being attainable by almost all.

Mill, Utilitarianism, II

73 The only proof capable of being given that an object is visible, is that people actually see it. The only proof that a

sound is audible, is that people hear it: and so of the other sources of our experience. In like manner, I apprehend, the sole evidence it is possible to produce that anything is desirable, is that people do actually desire it. If the end which the utilitarian doctrine proposes to itself were not, in theory and in practice, acknowledged to be an end, nothing could ever convince any person that it was so. No reason can be given why the general happiness is desirable, except that each person, so far as he believes it to be attainable, desires his own happiness. This, however, being a fact, we have not only all the proof which the case admits of, but all which it is possible to require, that happiness is a good: that each person's happiness is a good to that person, and the general happiness, therefore, a good to the aggregate of all persons. Happiness has made out its title as one of the ends of conduct, and consequently one of the criteria of morality.

Mill, Utilitarianism, IV

74 *Grand Inquisitor*. But the flock will come together again and will submit once more, and then it will be once for all. Then we shall give them the quiet humble happiness of weak creatures such as they are by nature. Oh, we shall persuade them at last not to be proud, for Thou didst lift them up and thereby taught them to be proud. We shall show them that they are weak, that they are only pitiful children, but that childlike happiness is the sweetest of all. They will become timid and will look to us and huddle close to us in fear, as chicks to the hen. They will marvel at us and will be awestricken before us, and will be proud at our being so powerful and clever that we have been able to subdue such a turbulent flock of thousands of

millions. They will tremble impotently before our wrath, their minds will grow fearful, they will be quick to shed tears like women and children, but they will be just as ready at a sign from us to pass to laughter and rejoicing, to happy mirth and childish song. Yes, we shall set them to work, but in their leisure hours we shall make their life like a child's game, with children's songs and innocent dance. Oh, we shall allow them even sin, they are weak and helpless, and they will love us like children because we allow them to sin. We shall tell them that every sin will be expiated, if it is done with our permission, that we allow them to sin because we love them, and the punishment for these sins we take upon ourselves. And we shall take it upon ourselves, and they will adore us as their saviours who have taken on themselves their sins before God. And they will have no secrets from us. We shall allow or forbid them to live with their wives and mistresses, to have or not to have children—according to whether they have been obedient or disobedient—and they will submit to us gladly and cheerfully. The most painful secrets of their conscience, all, all they- will bring to us, and we shall have an answer for all. And they will be glad to believe our answer, for it will save them from the great anxiety and terrible agony they endure at present in making a free decision for themselves. And all will be happy, all the millions of creatures except the hundred thousand who rule over them. For only we, we who guard the mystery, shall be unhappy. There will be thousands of millions of happy babes, and a hundred thousand sufferers who have taken upon themselves the curse of the knowledge of good and evil. Peacefully they will die, peacefully they will expire in Thy name, and beyond the grave they will find nothing but death. But

we shall keep the secret, and for their happiness we shall allure them with the reward of heaven and eternity. Though if there were anything in the other world, it certainly would not be for such as they.

Dostoevsky, Brothers Karamazov, Pt. II, V, 5

75 My God, a moment of bliss. Why, isn't that enough for a whole lifetime?

Dostoevsky, White Nights

76 While imprisoned in the shed Pierre had learned not with his intellect but with his whole being, by life itself, that man is created for happiness, that happiness is within him, in the satisfaction of simple human needs, and that all unhappiness arises not from privation but from superfluity. And now during these last three weeks of the march he had learned still another new, consolatory truth—that nothing in this world is terrible. He had learned that as there is no condition in which man can be happy and entirely free, so there is no condition in which he need be unhappy and lack freedom. He learned that suffering and freedom have their limits and that those limits are very near together; that the person in a bed of roses with one crumpled petal suffered as keenly as he now, sleeping on the bare damp earth with one side growing chilled while the other was warming; and that when he had put on tight dancing shoes he had suffered just as he did now when he walked with bare feet that were covered with sores—his footgear having long since fallen to pieces. He discovered that when he had married his wife—of his own free will as it had seemed to him—he had been no more free than now when they locked him

up at night in a stable. Of all that he himself subsequently termed his sufferings, but which at the time he scarcely felt, the worst was the state of his bare, raw, and scab-covered feet. (The horseflesh was appetizing and nourishing, the saltpeter flavor of the gunpowder they used instead of salt was even pleasant; there was no great cold, it was always warm walking in the daytime, and at night there were the campfires; the lice that devoured him warmed his body.) The one thing that was at first hard to bear was his feet.

After the second day's march Pierre, having examined his feet by the campfire, thought it would be impossible to walk on them; but when everybody got up he went along, limping, and, when he had warmed up, walked without feeling the pain, though at night his feet were more terrible to look at than before. However, he did not look at them now, but thought of other things.

Only now did Pierre realize the full strength of life in man and the saving power he has of transferring his attention from one thing to another, which is like the safety valve of a boiler that allows superfluous steam to blow off when the pressure exceeds a certain limit.

He did not see and did not hear how they shot the prisoners who lagged behind, though more than a hundred perished in that way. He did not think of Karataev who grew weaker every day and evidently would soon have to share that fate. Still less did Pierre think about himself. The harder his position became and the more terrible the future, the more independent of that position in which he found himself were the joyful and comforting thoughts, memories, and imaginings that came to him.

Tolstoy, War and Peace, XIV, 12

77 For the mediocre it is happiness to be mediocre.

Nietzsche, Antichrist, LVII

78 *Morell*. An honest man feels that he must pay Heaven for every hour of happiness with a good spell of hard unselfish work to make others happy. We have no more right to consume happiness without producing it than to consume wealth without producing it.

Shaw, Candida, I

79 *Octavius*. Oh, Jack, you talk of saving me from my highest happiness.

Tanner. Yes, a lifetime of happiness. If it were only the first half hour's happiness, Tavy, I would buy it for you with my last penny. But a lifetime of happiness! No man alive could bear it: it would be hell on earth.

Shaw, Man and Superman, I

80 Men who are unhappy, like men who sleep badly, are always proud of the fact. Perhaps their pride is like that of the fox who had lost his tail; if so, the way to cure it is to point out to them how they can grow a new tail. Very few men, I believe, will deliberately choose unhappiness if they see a way of being happy, I do not deny that such men exist, but they are not sufficiently numerous to be important.

Russell, Conquest of Happiness, I, 1

81 Happiness is fundamental in morals only because happiness is not something to be sought for, but is

something now attained, even in the midst of pain and trouble, whenever recognition of our ties with nature and with fellow-men releases and informs our action.

Dewey, Human Nature and Conduct, III, 9

9.9 Duty

MORAL OBLIGATION

Not all the authors who acknowledge that man is bound by duty or moral obligation to act or to refrain from acting in certain ways explicitly employ the words "duty" or "obligation" in their ethical treatises or moral discourse.

Some writers who assert that there are certain things that a person ought or ought not to do if one is going to act rightly, or certain things that one ought or ought not to desire if one is going to seek real, not merely apparent goods, make these points in the context of discussing virtue and vice rather than duty or obligation.

The reader is, therefore, referred to Section 9.10 on Virtue and Vice for statements about what ought or ought not to be done or sought, which imply the existence of duties or obligations even though they are not so denominated. In the ancient world, the Roman writers rather than the Greeks stress duties and enumerate or classify them; in the modern world, the same thing is true of the German moralists, such as Kant and Hegel, as contrasted with such English writers as Locke, Hume, and J. S. Mill.

Closely connected with this difference in emphasis is the importance accorded to law—civil, moral, and divine—in the consideration of right and wrong in human conduct. Those who lay great stress on law and obedience to it also tend to

conceive acting rightly as doing one's duty or fulfilling one's obligation; and they also differentiate duties as legal or civil, moral, and religious according to the kind of law that one is under obligation to obey. Because of their concern with the divine law and the natural moral law as well as with eternal salvation or beatitude, Christian moralists and theologians conceive right conduct in terms of duty as well as in terms of virtue and happiness. For the relation of duty to law, the reader is referred to Section 9.3 on Moral Law and Section 12.1 on Law and Lawyers.

■ ■ ■

- 1 Fear God, and keep his commandments: for this is the whole duty of man.

Ecclesiastes 12:13

- 2 What doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?

Micah 6:8

- 3 *Hector*. You [Rhesus] owe us much. You have spurned it and to your friends in distress come with late relief. Yet here are others, who are not our kin by blood, who came long ago, and some of them have fallen and lie buried in their mounds, who greatly kept faith with our city. while others, in their armor, by their chariot teams, have stood whatever cold winds or thirsty heat the god

sends, and still do endure it, without sleeping, as you did, snug beneath the covers.

Euripides, Rhesus, 411

- 4 No aspect of life, public or private, in business or in the home, in personal matters or in dealing with others, is without its moral duty. To discharge such duty fulfills all that is morally right. To neglect it is inherently morally wrong.

Cicero, De Officiis, I, 2

- 5 We are not born for our own sake. Our country claims a share of our lives, and our friends claim a share.

Cicero, De Officiis, I, 7

- 6 If any set of priorities were established to decide where we owe most of our moral duty, country and parents would be listed first. It is they that have laid us under the heaviest obligations. Next in line would be our children and the rest of the family, because they look to us alone for support and do not have any other protection. Lastly we must list our kinsmen. We live with them on good terms and their lot is pretty much cast with ours.

Cicero, De Officiis, I, 17

- 7 We are obligated to respect, defend, and maintain the common bonds of union and fellowship that exist among all members of the human race.

Cicero, De Officiis, I, 41

- 8 Arriving there, he [Mercury] found the Trojan prince New ramparts raising for the town's defense.

A purple scarf, with gold embroider'd o'er,
(Queen Dido's gift,) about his waist he wore;
A sword, with glitt'ring gems diversified.
For ornament, not use, hung idly by his side.

Then thus, with winged words, the god began,
Resuming his own shape: "Degenerate man,
Thou woman's property, what mak'st thou here,
These foreign walls and Tyrian tow'rs to rear.
Forgetful of thy own? All-pow'rful Jove,
Who sways the world below and heav'n above,
Has sent me down with this severe command:
What means thy ling'ring in the Libyan land?
If glory cannot move a mind so mean,
Nor future praise from flitting pleasure wean,
Regard the fortunes of thy rising heir:
The promis'd crown let young Ascanius wear,
To whom th' Ausonian scepter, and the state
Of Rome's imperial name is ow'd by fate."

Virgil, Aeneid, IV

- 9 Remember that you are an actor in a drama of such sort as the Author chooses—if short, then in a short one; if long, then in a long one. If it be his pleasure that you should enact a poor man, or a cripple, or a ruler, or a private citizen, see that you act it well. For this is your business—to act well the given part, but to choose it belongs to another.

Epictetus, Encheiridion, XVII

- 10 I do my duty: other things trouble me not; for they are either things without life, or things without reason, or things that have rambled and know not the way.

Marcus Aurelius, Meditations, VI, 22

- 11 It is thy duty to order thy life well in every single act; and if every act does its duty, as far as is possible, be content; and no one is able to hinder thee so that each act shall not do its duty.—But something external will stand in the way.—Nothing will stand in the way of thy acting justly and soberly and considerately.—But perhaps some other active power will be hindered.—Well, but by acquiescing in the hindrance and by being content to transfer thy efforts to that which is allowed, another opportunity of action is immediately put before thee in place of that which was hindered, and one which will adapt itself to this ordering of which we are speaking.

Marcus Aurelius, Meditations, VIII, 32

- 12 No man has a right to lead such a life of contemplation as to forget in his own ease the service due to his neighbour; nor has any man a right to be so immersed in active life as to neglect the contemplation of God.

Augustine, City of God, XIX, 19

- 13 Since you cannot do good to all, you are to pay special regard to those who, by the accidents of time, or place, or circumstance, are brought into closer connection with you.

Augustine, Christian Doctrine, I, 28

- 14 A precept implies the notion of duty. But it is easy for a man, especially for a believer, to understand that, of necessity, he owes certain duties to God and to his neighbour. But that in matters which regard himself and not another, man has of necessity certain duties to

himself, is not so evident; for, at first glance, it seems that everyone is free in matters that concern himself. And therefore the precepts which prohibit disorders of a man with regard to himself reach the people through the instruction of men who are versed in such matters.

Aquinas, Summa Theologica, I-II, 100, 5

- 15 It is our duty to hate, in the sinner, his being a sinner, and to love in him, his being a man capable of bliss. And this is to love him truly, out of charity, for God's sake.

Aquinas, Summa Theologica, II-II, 25, 6

- 16 We cannot be bound beyond our powers and means. For this reason—that we have no power to effect and accomplish, that there is nothing really in our power but will—all man's rules of duty are necessarily founded and established in our will.

Montaigne, Essays, I, 7, That Intention Is Judge

- 17 The knowledge of his duty should not be left to each man's judgment; it should be prescribed to him, not left to the choice of his reason. Otherwise, judging by the imbecility and infinite variety of our reasons and opinions, we would finally forge for ourselves duties that would set us to eating one another.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

- 18 Those who evade the common duties and that infinite number of thorny and many-faceted rules that bind a man of precise probity in civil life, achieve, in my opinion, a fine saving, whatever point of especial rigor they may impose on themselves. It is in a sense dying to escape

the trouble of living well. They may have some other prize; but the prize of difficulty it has never seemed to me they had, nor do I think there is anything more arduous than keeping oneself straight amid the waves and rush of the world, loyally responding to and satisfying every part of one's charge.

Montaigne, Essays, II, 33, The Story of Spurina

- 19 Human wisdom has never yet come up to the duties that she has prescribed for herself; and if she ever did come up to them, she would prescribe herself others beyond, to which she would ever aim and aspire, so hostile to consistency is our condition.

Montaigne, Essays, III, 9, Of Vanity

- 20 *Orlando*. O good old man, how well in thee appears
The constant service of the antique world.
When service sweat for duty, not for meed!
Thou art not for the fashion of these times,
Where none will sweat but for promotion.
And having that, do choke their service up
Even with the having.

Shakespeare, As You Like It, II, iii, 56

- 21 Duty is subdivided into two parts: the common duty of every man, as a man or member of a state; the other, the respective or special duty of every man, in his profession, vocation, and place.

Bacon, Advancement of Learning, Bk. II, XXI, 7

- 22 When our passion leads us to do something, we forget our duty; for example, we like a book and read it, when

we ought to be doing something else. Now, to remind ourselves of our duty, we must set ourselves a task we dislike; we then plead that we have something else to do and by this means remember our duty.

Pascal, Pensées, II, 104

23 The whole future is doubtless determined; but since we know not what it is, nor what is foreseen or resolved, we must do our duty, according to the reason that God has given us and according to the rules that he has prescribed for us; and thereafter we must have a quiet mind, and leave to God himself the care for the outcome. For he will never fail to do that which shall be the best, not only in general but also in particular, for those who have true confidence in him, that is, a confidence composed of true piety, a lively faith and fervent charity, by virtue of which we will, as far as in us lies, neglect nothing appertaining to our duty and his service. It is true that we cannot 'render service' to him, for he has need of nothing: but it is 'serving him', in our parlance, when we strive to carry out his presumptive will, co-operating in the good as it is known to us, wherever we can contribute thereto. For we must always presume that God is prompted towards the good we know, until the event shows us that he had stronger reasons although perhaps unknown to us, which have made him subordinate this good that we sought to some other greater good of his own designing, which he has not failed or will not fail to effect.

Leibniz, Theodicy, 58

24 The more laws are multiplied, the more they are despised, and all the new officials appointed to supervise them are only so many more people to break them, and either to share the plunder with their predecessors, or to plunder apart on their own. The reward of virtue soon becomes that of robbery; the vilest of men rise to the greatest credit; the greater they are the more despicable they become; their infamy appears even in their dignities, and their very honours dishonour them. If they buy the influence of the leaders or the protection of women, it is only that they may sell justice, duty, and the State in their turn: in the meantime, the people, feeling that its vices are not the first cause of its misfortunes, murmurs and complains that all its misfortunes come solely from those whom it pays to protect it from such things.

It is under these circumstances that the voice of duty no longer speaks in men's hearts, and their rulers are obliged to substitute the cry of terror, or the lure of an apparent interest, of which they subsequently trick their creatures,

Rousseau, Political Economy

25 I have drawn the great moral lesson, perhaps the only one of any practical value, to avoid those situations of life which bring our duties into conflict with our interests, and which show us our own advantage in the misfortunes of others; for it is certain that, in such situations, however sincere our love of virtue, we must, sooner or later, inevitably grow weak without perceiving it, and become unjust and wicked in act, without having ceased to be just and good in our hearts.

Rousseau, Confessions, II

26 Is not a patron... one who looks with unconcern on a man struggling for life in the water, and, when he has reached ground, encumbers him with help? The notice which you [the Earl of Chesterfield] have been pleased to take of my labors, had it been early, had been kind; but it has been delayed till I am indifferent, and cannot enjoy it; till I am solitary, and cannot impart it; till I am known, and do not want it. I hope it is no very cynical asperity not to confess obligations where no benefit has been received, or to be unwilling that the public should consider me as owing that to a patron which Providence has enabled me to do for myself.

Johnson, Letter to the Earl of Chesterfield (Feb. 7, 1755)

27 *Johnson*. It is our first duty to serve society, and, after we have done that, we may attend wholly to the salvation of our own souls.

Boswell, Life of Johnson (Feb. 1766)

28 *Johnson*. "Sir, you must consider that we have perfect and imperfect obligations. Perfect obligations, which are generally not to do something, are clear and positive; as, 'thou shalt not kill.' But charity, for instance, is not definable by limits. It is a duty to give to the poor; but no man can say how much another should give to the poor, or when a man has given too little to save his soul. In the same manner it is a duty to instruct the ignorant, and of consequence to convert infidels to Christianity; but no man in the common course of things is obliged to carry this to such a degree as to incur the danger of

martyrdom, as no man is obliged to strip himself to the shirt in order to give charity."

Boswell, Life of Johnson (May 7, 1773)

29 The discipline of colleges and universities is in general contrived, not for the benefit of the students, but for the interest, or more properly speaking, for the case of the masters. Its object is, in all cases, to maintain the authority of the master, and whether he neglects or performs his duty, to oblige the students in all cases to behave to him as if he performed it with the greatest diligence and ability. It seems to presume perfect wisdom and virtue in the one order, and the greatest weakness and folly in the other. Where the masters, however, really perform their duty, there are no examples, I believe, that the greater part of the students ever neglect theirs.

Adam Smith, Wealth of Nations, V, 1

30 A private citizen may feel his interest repugnant to his duty; but it must be from a deficiency of sense or courage that an absolute monarch can separate his happiness from his glory, or his glory from the public welfare.

Gibbon, Decline and Fall of the Roman Empire, XLVIII

31 If adversity and hopeless sorrow have completely taken away the relish for life; if the unfortunate one, strong in mind, indignant at his fate rather than desponding or dejected, wishes for death, and yet preserves his life without loving it—not from inclination or fear, but from duty—then his maxim has a moral worth.

Kant, Fundamental Principles of the Metaphysic of Morals, I

32 The necessity of acting from pure respect for the practical law is what constitutes duty, to which every other motive must give place, because it is the condition of a will being good in itself and the worth of such a will is above everything.

Kant, Fundamental Principles of the Metaphysic of Morals, I

33 A command to like to do a thing is in itself contradictory, because if we already know of ourselves what we are bound to do, and if further we are conscious of liking to do it, a command would be quite needless; and if we do it not willingly, but only out of respect for the law, a command that makes this respect the motive of our maxim would directly counteract the disposition commanded. That law of all laws, therefore, like all the moral precepts of the Gospel, exhibits the moral disposition in all its perfection, in which, viewed as an ideal of holiness, it is not attainable by any creature, but yet is the pattern which we should strive to approach, and in an uninterrupted but infinite progress become like to. In fact, if a rational creature could ever reach this point, that he thoroughly likes to do all moral laws, this would mean that there does not exist in him even the possibility of a desire that would tempt him to deviate from them; for to overcome such a desire always costs the subject some sacrifice and therefore requires self-compulsion, that is, inward constraint to something that one does not quite like to do; and no creature can ever reach this stage of moral disposition. For, being a creature, and therefore always dependent with respect to what he requires for complete satisfaction, he can never be quite free from desires and inclinations, and as these

rest on physical causes, they can never of themselves coincide with the moral law, the sources of which are quite different; and therefore they make it necessary to found the mental disposition of one's maxims on moral obligation, not on ready inclination, but on respect, which *demand*s obedience to the law, even though one may not like it; not on love, which apprehends no inward reluctance of the will towards the law. Nevertheless, this latter, namely, love to the law (which would then cease to be a *command*, and then morality, which would have passed subjectively into holiness, would cease to be *virtue*) must be the constant though unattainable goal of his endeavours.

Kant, Critique of Practical Reason, Pt. I, I, 3

34 Duty! Thou sublime and mighty name that dost embrace nothing charming or insinuating, but requirest submission, and yet seekest not to move the will by threatening aught that would arouse natural aversion or terror, but merely boldest forth a law which of itself finds entrance into the mind, and yet gains reluctant reverence (though not always obedience), a law before which all inclinations are dumb, even though they secretly counter-work it; what origin is there worthy of thee, and where is to be found the root of thy noble descent which proudly rejects all kindred with the inclinations; a root to be derived from which is the indispensable condition of the only worth which men can give themselves?

Kant, Critique of Practical Reason, Pt. I, I, 3

35 The majesty of duty has nothing to do with enjoyment of life; it has its special law and its special tribunal, and

though the two should be never so well shaken together to be given well mixed, like medicine, to the sick soul, yet they will soon separate of themselves; and if they do not, the former will not act; and although physical life might gain somewhat in force, the moral life would fade away irrecoverably.

Kant, Critique of Practical Reason, Pt. I, I, 3

36 Stern Daughter of the Voice of God!

O Duty! if that name thou love
Who art a light to guide, a rod
To check the erring, and reprove;
Thou, who art victory and law
When empty terrors overawe;
From vain temptations dost set free;
And calm'st the weary strife of frail humanity!

Wordsworth, Ode to Duty

37 In duty the individual finds his liberation; first, liberation from dependence on mere natural impulse and from the depression which as a particular subject he cannot escape in his moral reflections on what ought to be and what might be; secondly, liberation from the indeterminate subjectivity which, never reaching reality or the objective determinacy of action, remains self-enclosed and devoid of actuality. In duty the individual acquires his substantive freedom.

Hegel, Philosophy of Right, 149

38 I have my own stern claims and perfect circle. It denies the name of duty to many offices that are called duties.

Emerson, Self-Reliance

39 *Captain Vere*. But your scruples: do they move as in a dusk? Challenge them. Make them advance and declare themselves. Come now; do they import something like this: If, mindless of palliating circumstances, we are bound to regard the death of the master-at-arms as the prisoner's deed, then does that deed constitute a capital crime whereof the penalty is a mortal one? But in natural justice is nothing but the prisoner's overt act to be considered? How can we adjudge to summary and shameful death a fellow creature innocent before God, and whom we feel to be so?—Does that state it aright? You sign sad assent. Well, I too feel that the full force of that. It is Nature. But do these buttons that we wear attest that our allegiance h to Nature? No, to the King. Though the ocean which is inviolate Nature primeval, though this be the element where we move and have our being as sailors, yet as the King's officers lies our duty in a sphere correspondingly natural? So little is that true, that in receiving our commissions we in the most important regards ceased to be natural free agents. When war is declared are we the commissioned fighters previously consulted? We fight at command. If our judgments approve the war, that is but coincidence. So in other particulars. So now. For suppose condemnation to follow these present proceedings. Would it be so much we ourselves that would condemn as it would be martial law operating through us? For that law and the rigor of it, we are not responsible. Our vowed responsibility is in this: That however pitilessly that law may operate in any instances, we nevertheless adhere to it and administer it.

Melville, Billy Budd

40 Action from principle, the perception and the performance of right, change things and relations; it is essentially revolutionary, and does not consist wholly with anything which was. It not only divides states and churches, it divides families; ay, it divides the individual, separating the diabolical in him from the divine.

Thoreau, Civil Disobedience

41 Man prompted by his conscience, will through long habit acquire such perfect self-command, that his desires and passions will at last yield instantly and without a struggle to his social sympathies and instincts, including his feeling for the judgment of his fellows. The still hungry, or the still revengeful man will not think of stealing food, or of wreaking his vengeance. It is possible, or as we shall hereafter see, even probable, that the habit of self-command may, like other habits, be inherited. Thus at last man comes to feel, through acquired and perhaps inherited habit, that it is best for him to obey his more persistent impulses. The imperious word ought seems merely to imply the consciousness of the existence of a rule of conduct, however it may have originated.

Darwin, Descent of Man, I, 4

42 What are called duties to ourselves are not socially obligatory, unless circumstances render them at the same time duties to others. The term duty to oneself, when it means anything more than prudence, means self-respect or self-development, and for none of these is any one accountable to his fellow creatures, because for none of them is it for the good of mankind that he be held accountable to them.

Mill, On Liberty, IV

43 It is a part of the notion of Duty in everyone of its forms, that a person may rightfully be compelled to fulfil it. Duty is a thing which may be *exacted* from a person, as one exacts a debt. Unless we think that it may be exacted from him, we do not call it his duty. Reasons of prudence, or the interest of other people, may militate against actually exacting it; but the person himself, it is clearly understood, would not be entitled to complain.

Mill, Utilitarianism, V

44 The feeling of "ought," of personal obligation (to take up again the train of our inquiry), has had, as we saw, its origin in the oldest and most original personal relationship that there is, the relationship between buyer and seller, creditor and owner: here it was that individual confronted individual, and that individual *matched himself against* individual. There has not yet been found a grade of civilisation so low, as not to manifest some trace of this relationship.

Nietzsche, Genealogy of Morals, II, 8

45 Each one of us should devise *his own* virtue, *his own* categorical imperative. A people perishes if it mistakes *its own* duty for the concept of duty in general.

Nietzsche, Antichrist, XI

46 When an exceptional human being handles the mediocre more gently than he does himself or his equals, this is not mere politeness of the heart—it is simply his *duty*.

Nietzsche, Antichrist, LVII

47 *Centurion*, [sulkily] I do my duty. That is enough for me.

Apollodorus. Majesty: when a stupid man is doing something he is ashamed of, he always declares that it is his duty.

Shaw, Caesar and Cleopatra, III

48 *Napoleon*. The English are a race apart. No Englishman is too low to have scruples: no Englishman is high enough to be free from their tyranny. But every Englishman is born with a certain miraculous power that makes him master of the world. When he wants a thing, he never tells himself that he wants it. He waits patiently until there comes into his mind, no one knows how, a burning conviction that it is his moral and religious duty to conquer those who possess the thing he wants. Then he becomes irresistible. Like the aristocrat, he does what pleases him and grabs what he covets: like the shopkeeper, he pursues his purpose with the industry and steadfastness that come from strong religious conviction and deep sense of moral responsibility. He is never at a loss for an effective moral attitude. As the great champion of freedom and national independence, he conquers and annexes half the world, and calls it Colonization. When he wants a new market for his adulterated Manchester goods, he sends a missionary to teach the natives the Gospel of Peace. The natives kill the missionary: he flies to arms in defence of Christianity; fights for it; conquers for it; and takes the market as a reward from heaven. In defence of his island shores, he puts a chaplain on board his ship; nails a flag with a cross on it to his top-gallant mast; and sails to the ends of the earth, sinking, burning, and destroying all who dispute the empire of the seas with him. He boasts that a slave is

free the moment his foot touches British soil; and he sells the children of his poor at six years of age to work under the lash in his factories for sixteen hours a day. He makes two revolutions, and then declares war on our one in the name of law and order. There is nothing so bad or so good that you will not find Englishmen doing it; but you will never find an Englishman in the wrong. He does everything on principle. He fights you on patriotic principles; he robs you on business principles; he enslaves you on imperial principles; he bullies you on manly principles; he supports his king on loyal principles and cuts off his king's head on republican principles. His watchword is always Duty; and he never forgets that the nation which lets its duty get on the opposite side to its interest is lost.

Shaw, The Man of Destiny

49 A sense of duty is useful in work, but offensive in personal relations.

Russell, Conquest of Happiness, II, 10

9.10 Virtue and Vice

The main contributions to the theory of virtue and vice come down to us from the ancient Greeks. The Roman moralists borrowed from the Greeks and translated the basic terms into Latin, including the names of the particular virtues and vices. The Christian theologians also borrowed from the Greeks, but they contributed elaborations of their own and added to the list of virtues the three—faith, hope, and charity—which are specifically theological rather than moral virtues. Modern secular writers have placed much less emphasis on virtue and vice in their discussion of moral problems and in their consideration of what is good and bad or right and wrong; and when they have used the terms, their use has seldom reflected the main points in the analysis of virtue and vice given to us by the Greeks.

The reader will find in the quotations from Plato, Aristotle, and other Greek writers an analysis that includes a conception of virtue and vice as habits or habitual dispositions, respectively good and bad; an elaborate classification of particular virtues or aspects of virtue; a division of the virtues into moral and intellectual virtues; an indication of which among all the virtues are cardinal or pivotal in the pursuit of happiness; a consideration of the way in which virtue is acquired, involving a dispute over the question whether virtue (more specifically, moral virtue) can be taught; an examination of the development of good or bad moral character in terms of virtue and vice; an assertion of the indispensability of moral virtue for the achievement of

happiness; and—most difficult and subtle of all—apparently opposite views on the question whether there are many particular virtues, some of which a person may possess and some of which a person may lack, or only many different aspects of virtue, all of which a person must possess in order to be genuinely virtuous.

On all of these points in the theory of virtue and vice, other relevant discussions will be found in Section 8.2 on Habit, Section 9.6 on Good and Evil, Section 9.7 on Right and Wrong, Section 9.8 on Happiness, and Section 9.9 on Duty; Moral Obligation. The treatment of particular virtues or of particular aspects of virtue, both moral and intellectual, will be found in Section 9.11 on Courage and Cowardice, Section 9.12 on Temperance and Intemperance, Section 9.13 on Prudence, Section 9.14 on Honesty, and Section 9.15 on Wisdom and Folly. Though not explicitly mentioned in the title of Section 9.7, justice and injustice are treated there.

In addition, since moral virtue is discussed as involving reason's control over the emotions or its moderation of the passions, the reader is referred to Chapter 4 on Emotion. In that chapter the reader will find, in Sections 4.8 through 4.11, the treatment of such subjects as pity, envy, greed, avarice, jealousy, pride, and humility, which are often regarded as vices or sins.

The quotations below include the presentations by the poets, biographers, historians, and essayists of outstanding examples of human virtue and vice. They also include considerations of the advantages and disadvantages of virtue in the arena of politics, as well as what is involved in being a virtuous ruler and a virtuous citizen. For other discussions of these matters, the reader is referred to Section 10.2 on The Realm of Politics and Section 10.5 on Citizenship.

Finally, the reader's attention must be called to a highly restricted use of the word "virtue" that has come to the fore in modern literature—the use in which it is identified with chastity, sexual purity, or conformity to the sexual *mores* of the tribe. The reader will thus find passages in which that is all that is meant when men or women—and, regrettably, mainly women—are called virtuous.

■ ■ ■

- 1 *Penelope*. The hard man and his cruelties will be cursed behind his back, and mocked in death. But one whose heart and ways are kind—of him strangers will bear report to the wide world, and distant men will praise him.

Homer, Odyssey, XIX, 330

- 2 *Phaedra*. Our lives are worse than the mind's quality would warrant. There are many who know virtue. We know the good, we apprehend it clearly. But we can't bring it to achievement. Some are betrayed by their own laziness, and others value some other pleasure above virtue.

Euripides, Hippolytus, 377

- 3 *Chorus*. Many are the natures of men,
Various their manners of living,
Yet a straight path is always the right one;
And lessons deeply taught
Lead man to paths of righteousness;
Reverence, I say, is wisdom
And by its grace transfigures—

So that we seek virtue
With a right judgment.
From all of this springs honor
Bringing ageless glory into
Man's life. Oh, a mighty quest
Is the hunting out of virtue—
Which for womankind
Must be a love in quietness.
But, for men, infinite are the ways
To order and augment
The state.

Euripides, Iphigenia in Aulis, 558

- 4 *Nicias*. Every man is good in that in which he is wise, and bad in that in which he is unwise.

Plato, Laches, 194B

- 5 *Protagoras*. No one would instruct, no one would rebuke, or be angry with those whose calamities they suppose to be due to nature or chance; they do not try to punish or to prevent them from being what they are; they do but pity them. Who is so foolish as to chastise or instruct the ugly, or the diminutive, or the feeble? And for this reason. Because he knows that good and evil of this kind is the work of nature and of chance; whereas if a man is wanting in those good qualities which are attained by study and exercise and teaching, and has only the contrary evil qualities, other men are angry with him, and punish and reprove him —of these evil qualities one is impiety, another injustice, and they may be described generally as the very opposite of political virtue. In such cases any man will be angry with another, and reprimand

him—clearly because he thinks that by study and learning, the virtue in which the other is deficient may be acquired.

Plato, Protagoras, 323B

6 Then, I [Socrates] said, these, Hippias and Prodicus, are our premisses; and I would beg Protagoras to explain to us how he can be right in what he said at first. I do not mean in what he said quite at first, for his first statement, as you may remember, was that whereas there were five parts of virtue none of them was like any other of them; each of them had a separate function. To this, however, I am not referring, but to the assertion which he afterwards made that of the five virtues four were nearly akin to each other, but that the fifth, which was courage, differed greatly from the others. And of this he gave me the following proof. He said: You will find, Socrates, that some of the most impious, and unrighteous, and intemperate, and ignorant of men are among the most courageous; which proves that courage is very different from the other parts of virtue. I was surprised at his saying this at the time, and I am still more surprised now that I have discussed the matter with you. So I asked him whether by the brave he meant the confident. Yes, he replied, and the impetuous or goers. (You may remember, Protagoras, that this was your answer.)

He (Protagoras] assented.

Well then, I said, tell us against what are the courageous ready to go—against the same dangers as the cowards?

No, he answered.

Then against something different?

Yes, he said.

Then do cowards go where there is safety, and the courageous where there is danger?

Yes, Socrates, so men say.

Very true, I said. But I want to know against what do you say that the courageous are ready to go—against dangers, believing them to be dangers, or not against dangers?

No, said he; the former case has been proved by you in the previous argument to be impossible.

That, again, I replied, is quite true. And if this has been rightly proven, then no one goes to meet what he thinks to be dangers, since the want of self-control, which makes men rush into dangers, has been shown to be ignorance.

He assented.

And yet the courageous man and the coward alike go to meet that about which they are confident; so that, in this point of view, the cowardly and the courageous go to meet the same things.

And yet, Socrates, said Protagoras, that to which the coward goes is the opposite of that to which the courageous goes; the one, for example, is ready to go to battle, and the other is not ready.

And is going to battle honourable or disgraceful? I said.

Honourable, he replied.

And if honourable, then already admitted by us to be good; for all honourable actions we have admitted to be good.

That is true; and to that opinion I shall always adhere.

True, I said. But which of the two are they who, as you say, are unwilling to go to war, which is a good and honourable thing?

The cowards, he replied.

And what is good and honourable, I said, is also pleasant?

It has certainly been acknowledged to be so, he replied.

And do the cowards knowingly refuse to go to the nobler, and pleasanter, and better?

The admission of that, he replied, would belie our former admissions.

But does not the courageous man also go to meet the better, and pleasanter, and nobler?

That must be admitted.

And the courageous man has no base fear or base confidence?

True, he replied.

And if not base, then honourable?

He admitted this.

And if honourable, then good?

Yes.

But the fear and confidence of the coward or foolhardy or madman, on the contrary, are base?

He assented.

And these base fears and confidences originate in ignorance and uninstructedness?

True, he said.

Then, as to the motive from which the cowards act, do you call it cowardice or courage?

I should say cowardice, he replied.

And have they not been shown to be cowards through their ignorance of dangers?

Assuredly, he said.

And because of that ignorance they are cowards?

He assented.

And the reason why they are cowards is admitted by you to be cowardice?

He again assented.

Then the ignorance of what is and is not dangerous is cowardice?

He nodded assent.

But surely courage, I said, is opposed to cowardice?

Yes.

Then the wisdom which knows what are and are not dangers is opposed to the ignorance of them?

To that again he nodded assent.

And the ignorance of them is cowardice?

To that he very reluctantly nodded assent.

And the knowledge of that which is and is not dangerous is courage, and is opposed to the ignorance of these things?

At this point he would no longer nod assent, but was silent.

And why, I said, do you neither assent nor dissent, Protagoras?

Finish the argument by yourself, he said.

I only want to ask one more question, I said, I want to know whether you still think that there are men who are most ignorant and yet most courageous?

You seem to have a great ambition to make me answer, Socrates, and therefore I will gratify you, and say, that this appears to me to be impossible consistently with the argument.

My only object, I said, in continuing the discussion, has been the desire to ascertain the nature and relations of virtue; for if this were clear, I am very sure that the other controversy which has been carried on at great length by both of us— you affirming and I denying that

virtue can be taught—would also become clear. The result of our discussion appears to me to be singular. For if the argument had a human voice, that voice would be heard laughing at us and saying: "Protagoras and Socrates, you are strange beings; there are you, Socrates, who were saying that virtue cannot be taught, contradicting yourself now by your attempt to prove that all things are knowledge, including justice, and temperance, and courage,—which tends to show that virtue can certainly be taught; for if virtue were other than knowledge, as Protagoras attempted to prove, then clearly virtue cannot be taught; but if virtue is entirely knowledge, as you are seeking to show, then I cannot but suppose that virtue is capable of being taught. Protagoras, on the other hand, who started by saying that it might be taught, is now eager to prove it to be anything rather than knowledge; and if this is true, it must be quite incapable of being taught." Now I, Protagoras, perceiving this terrible confusion of our ideas, have a great desire that they should be cleared up. And I should like to carry on the discussion until we ascertain what virtue is, and whether capable of being taught or not.

Plato, Protagoras, 359A

- 7 *Socrates*. Seeing then that men become good and useful to states, not only because they have knowledge, but because they have right opinion, and that neither knowledge nor right opinion is given to man by nature or acquired by him—(do you imagine either of them to be given by nature?

Meno. Not I.)

Soc. Then if they are not given by nature, neither are the good by nature good?

Men. Certainly not.

Soc. And nature being excluded, then came the question whether virtue is acquired by teaching?

Men. Yes.

Soc. If virtue was wisdom [or knowledge], then, as we thought, it was taught?

Men. Yes.

Soc. And if it was taught it was wisdom?

Men. Certainly.

Soc. And if there were teachers, it might be taught; and if there were no teachers, not?

Men. True.

Soc. But surely we acknowledge that there were no teachers of virtue?

Men. Yes.

Soc. Then we acknowledged that it was not taught, and was not wisdom?

Men. Certainly.

Soc. And yet we admitted that it was a good?

Men. Yes.

Soc. And the right guide is useful and good?

Men. Certainly.

Soc. And the only right guides are knowledge and true opinion—these are the guides of man; for things which happen by chance are not under the guidance of man: but the guides of man are true opinion and knowledge.

Men. I think so too.

Soc. But if virtue is not taught, neither is virtue knowledge.

Men. Clearly not.

Soc. Then of two good and useful things, one, which is knowledge, has been set aside, and cannot be supposed to be our guide in political life.

Men. I think not.

Soc. And therefore not by any wisdom, and not because they were wise, did Themistocles and those others of whom Anytus spoke govern states. This was the reason why they were unable to make others like themselves—because their virtue was not grounded on knowledge.

Men. That is probably true, Socrates.

Soc. But if not by knowledge, the only alternative which remains is that statesmen must have guided states by right opinion, which is in politics what divination is in religion; for diviners and also prophets say many things truly, but they know not what they say.

Men. So I believe.

Soc. And may we not, Meno, truly call those men "divine" Who, having no understanding, yet succeed in many a grand deed and word?

Men. Certainly.

Soc. Then we shall also be right in calling divine those whom we were just now speaking of as diviners and prophets, including the whole tribe of poets. Yes, and statesmen above all may be said to be divine and illumined, being inspired and possessed of God, in which condition they say many grand things, not knowing what they say.

Men. Yes.

Soc. And the women too, Meno, call good men divine—do they not? and the Spartans, when they praise a good man, say "that he is a divine man."

Men. And I think, Socrates, that they are right; although very likely our friend Anytus may take offence at the word.

Soc. I do not care; as for Anytus, there will be another opportunity of talking with him. To sum up our enquiry—the result seems to be, if we are at all right in our view, that virtue is neither natural nor acquired, but an instinct given by God to the virtuous. Nor is the instinct accompanied by reason, unless there may be supposed to be among statesmen some one who is capable of educating statesmen. And if there be such an one, he may be said to be among the living what Homer says that Tiresias was among the dead, "he alone has understanding; but the rest are flitting shades"; and he and his virtue in like manner will be a reality among shadows.

Men. That is excellent, Socrates.

Soc. Then, Meno, the conclusion is that virtue comes to the virtuous by the gift of God. But we shall never know the certain truth until, before asking how virtue is given, we enquire into the actual nature of virtue.

Plato, Meno, 98B

- 8 *Socrates.* Daily to discourse about virtue ... is the greatest good of man, and... the unexamined life is not worth living.

Plato, Apology, 38A

- 9 *Socrates.* Virtue is one, but . . . , the forms of vice are innumerable.

Plato, Republic, IV, 445B

- 10 Virtue is free, and as a man honours or dishonours her he will have more or less of her; the responsibility is with the chooser.

Plato, Republic, X, 617B

- 11 Some of the virtues are intellectual and others moral, philosophic wisdom and understanding and practical wisdom being intellectual, liberality and temperance moral. For in speaking about a man's character we do not say that he is wise or has understanding but that he is good-tempered or temperate; yet we praise the wise man also with respect to his state of mind; and of states of mind we call those which merit praise virtues.

Aristotle, Ethics, 1103a4

- 12 The question might be asked, what we mean by saying that we must become just by doing just acts, and temperate by doing temperate acts; for if men do just and temperate acts, they are already just and temperate, exactly as, if they do what is in accordance with the laws of grammar and of music, they are grammarians and musicians.

Or is this not true even of the arts? It is possible to do something that is in accordance with the laws of grammar, either by chance or at the suggestion of another. A man will be a grammarian, then, only when he has both done something grammatical and done it grammatically; and this means doing it in accordance with the grammatical knowledge in himself.

Again, the case of the arts and that of the virtues are not similar; for the products of the arts have their goodness in themselves, so that it is enough that they

should have a certain character, but if the acts that are in accordance with the virtues have themselves a certain character it does not follow that they are done justly or temperately. The agent also must be in a certain condition when he does them; in the first place he must have knowledge, secondly he must choose the acts, and choose them for their own sakes, and thirdly his action must proceed from a firm and unchangeable character. These are not reckoned in as conditions of the possession of the arts, except the bare knowledge; but as a condition of the possession of the virtues knowledge has little or no weight, while the other conditions count not for a little but for everything, i.e. the very conditions which result from often doing just and temperate acts.

Actions, then, are called just and temperate when they are such as the just or the temperate man would do; but it is not the man who does these that is just and temperate, but the man who also does them as just and temperate men do them. It is well said, then, that it is by doing just acts that the just man is produced, and by doing temperate acts the temperate man; without doing these no one would have even a prospect of becoming good.

Aristotle, 1105a17

- 13 Virtue... is a state of character concerned with choice, lying in a mean, i.e. the mean relative to us, this being determined by a rational principle, and by that principle hv which the man of practical wisdom would determine it. Now it is a mean between two vices, that which depends on excess and that which depends on defect; and again it is a mean because the vices respectively fall short of or exceed what is right in both passions and actions, while

virtue both finds and chooses that which is intermediate. Hence in respect of its substance and the definition which states its essence virtue is a mean, with regard to what is best and right an extreme.

Aristotle Ethics, 1106b36

- 14 There are three kinds of disposition ... two of them vices, involving excess and deficiency respectively, and one a virtue, viz, the mean, and all are in a sense opposed to all; for the extreme states are contrary both to the intermediate state and to each other, and the intermediate to the extremes; as the equal is greater relatively to the less, less relatively to the greater, so the middle states are excessive relatively to the deficiencies, deficient relatively to the excesses, both in passions and in actions. For the brave man appears rash relatively to the coward, and cowardly relatively to the rash man; and similarly the temperate man appears self-indulgent relatively to the insensible man, insensible relatively to the self-indulgent, and the liberal man prodigal relatively to the mean man, mean relatively to the prodigal. Hence also the people at the extremes push the intermediate man each over to the other, and the brave man is called rash by the coward, cowardly by the rash man, and correspondingly in the other cases.

Aristotle, Ethics, 1108b11

- 15 With regard to the virtues in general we have stated their genus in outline, viz. that they are means and that they are states of character, and that they tend, and by their own nature, to the doing of the acts by which they are produced, and that they are in our power and voluntary,

and act as the right rule prescribes. But actions and states of character are not voluntary in the same way; for we are masters of our actions from the beginning right to the end, if we know the particular facts, but though we control the beginning of our states of character the gradual progress is not obvious any more than it is in illnesses; because it was in our power, however, to act in this way or not in this way, therefore the states are voluntary.

Aristotle, Ethics, 1114b26

16 We said... that it [happiness] is not a disposition; for if it were it might belong to some one who was asleep throughout his life, living the life of a plant, or, again, to some one who was suffering the greatest misfortunes. If these implications are unacceptable, and we must rather class happiness as an activity, as we have said before, and if some activities are necessary, and desirable for the sake of something else, while others are so in themselves, evidently happiness must be placed among those desirable in themselves, not among those desirable for the sake of something else; for happiness does not lack anything, but is self-sufficient. Now those activities are desirable in themselves from which nothing is sought beyond the activity. And of this nature virtuous actions are thought to be; for to do noble and good deeds is a thing desirable for its own sake.

Pleasant amusements also are thought to be of this nature; we choose them not for the sake of other things; for we are injured rather than benefited by them, since we are led to neglect our bodies and our property. But most of the people who are deemed happy take refuge in such pastimes, which is the reason why those who are

ready-witted at them are highly esteemed at the courts of tyrants; they make themselves pleasant companions in the tyrants' favourite pursuits, and that is the sort of man they want. Now these things are thought to be of the nature of happiness because people in despotic positions spend their leisure in them, but perhaps such people prove nothing; for virtue and reason, from which good activities flow, do not depend on despotic position; nor, if these people, who have never tasted pure and generous pleasure, take refuge in the bodily pleasures, should these for that reason be thought more desirable; for boys, too, think the things that are valued among themselves are the best. It is to be expected, then, that, as different things seem valuable to boys and to men, so they should to bad men and to good. Now... those things are both valuable and pleasant which are such to the good man; and to each man the activity in accordance with his own disposition is most desirable, and, therefore, to the good man that which is in accordance with virtue. Happiness, therefore, does not lie in amusement; it would, indeed, be strange if the end were amusement, and one were to take trouble and suffer hardship all one's life in order to amuse oneself. For, in a word, everything that we choose we choose for the sake of something else—except happiness, which is an end. Now to exert oneself and work for the sake of amusement seems silly and utterly childish. But to amuse oneself in order that one may exert oneself, as Anacharsis puts it, seems right; for amusement is a sort of relaxation, and we need relaxation because we cannot work continuously. Relaxation, then, is not an end; for it is taken for the sake of activity.

The happy life is thought to be virtuous; now a virtuous life requires exertion, and does not consist in

amusement. And we say that serious things are better than laughable things and those connected with amusement, and that the activity of the better of any two things—whether it be two elements of our being or two men—is the more serious; but the activity of the better is *ipso facto* superior and more of the nature of happiness. And any chance person—even a slave—can enjoy the bodily pleasures no less than the best man; but no one assigns to a slave a share in happiness—unless he assigns to him also a share in human life. For happiness does not lie in such occupations, but,... in virtuous activities.

Aristotle, Ethics, 1176a33

- 17 The forms of Virtue are justice, courage, temperance, magnificence, magnanimity, liberality, gentleness, prudence, wisdom. If virtue is a faculty of beneficence, the highest kinds of it must be those which are most useful to others, and for this reason men honour most the just and the courageous, since courage is useful to others in war, justice both in war and in peace. Next comes liberality; liberal people let their money go instead of fighting for it, whereas other people care more for money than for anything else. Justice is the virtue through which everybody enjoys his own possessions in accordance with the law; its opposite is injustice, through which men enjoy the possessions of others in defiance of the law. Courage is the virtue that disposes men to do noble deeds in situations of danger, in accordance with the law and in obedience to its commands; cowardice is the opposite. Temperance is the virtue that disposes us to obey the law where physical pleasures are concerned; incontinence is the opposite. Liberality disposes us to

spend money for others' good; illiberality is the opposite. Magnanimity is the virtue that disposes us to do good to others on a large scale; [its opposite is meanness of spirit]. Magnificence is a virtue productive of greatness in matters involving the spending of money. The opposites of these two are smallness of spirit and meanness respectively. Prudence is that virtue of the understanding which enables men to come to wise decisions about the relation to happiness of the goods and evils that have been previously mentioned.

Aristotle, Rhetoric, 1366a39

- 18 *Laelius*. If we wish to avoid anxiety we must avoid virtue itself, which necessarily involves some anxious thoughts in showing its loathing and abhorrence for the qualities which are opposite to itself—as kindness for ill nature, self-control for licentiousness, courage for cowardice. Thus you may notice that it is the just who are most pained at injustice, the brave at cowardly actions, the temperate at depravity. It is then characteristic of a rightly ordered mind to be pleased at what is good and grieved at the reverse.

Cicero, Friendship, XIII

- 19 Anyone who separates the supreme good from virtue and measures it only in terms of self-interest— if he is always consistent and never over-ruled by his better nature— could find no value in friendship, justice, or generosity. No one can be brave who considers pain the supreme evil. Nor could anyone be temperate who regards pleasure as the highest good.

Cicero, De Officiis, I, 2

20 It is virtue, to fly vice; and the highest wisdom to have lived free from folly.

Horace, Epistles, I, 1

21 Nature does not give a man virtue: the process of becoming a good man is an art.

Seneca, Letters to Lucilius, 90

22 All vices are at odds with nature, all abandon the proper order of things.

Seneca, Letters to Lucilius, 122

23 A man must cast virtue out from his heart if he is to admit anger, because vices and virtues do not mix well together. One can no more be angry and kind at the same time than he can be sick and well.

Seneca, On Anger, II, 12

24 Vice quickly creeps in; virtue is difficult to find; she requires ruler and guide. But vice can be acquired even without a tutor.

Seneca, Quaestiones Naturales, III, 30

25 Either make the tree good, and his fruit good; or else make the tree corrupt, and his fruit corrupt: for the tree is known by his fruit.

Matthew 12:33

26 Whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are

of good report; if there be any virtue, and if there be any praise, think on these things,

Philippians 4:8

27 Vice, the opposite of virtue, shows us more clearly what virtue is. Justice becomes more obvious when we have injustice to compare it to. Many such things are proved by their contraries,

Quintilian, Institutio Oratoria, XII, 1

28 Real excellence... is most recognised when most openly looked into; and in really good men, nothing which meets the eyes of external observers so truly deserves their admiration, as their daily common life does that of their nearer friends.

Plutarch, Pericles

29 The most glorious exploits do not always furnish us with the clearest discoveries of virtue or vice in men; sometimes a matter of less moment, an expression or a jest, informs us better of their characters and inclinations, than the most famous sieges, the greatest armaments, or the bloodiest battles whatsoever.

Plutarch, Alexander

30 The true love of virtue is in all men produced by the love and respect they bear to him that teaches it; and those who praise good men, yet do not love them, may respect their reputation, but do not really admire, and will never imitate their virtue.

Plutarch, Cato the Younger

31 There is ... a method very exact and necessary for all discussion of the nature of the universe which very clearly and indisputably presents to us the fact that that which is fair and limited, and which subjects itself to knowledge, is naturally prior to the unlimited, incomprehensible, and ugly, and furthermore that the parts and varieties of the infinite and unlimited are given shape and boundaries by the former, and through it attain to their fitting order and sequence, and like objects brought beneath some seal or measure, all gain a share of likeness to it and similarity of name when they fall under its influence. For thus it is reasonable that the rational part of the soul will be the agent which puts in order the irrational part, and passion and appetite, which find their places in the two forms of inequality, will be regulated by the reasoning faculty as though by a kind of equality and sameness. And from this equalizing process there will properly result for us the so-called ethical virtues, sobriety, courage, gentleness, self-control, fortitude, and the like.

Nicomachus, Arithmetic, 1, 23

32 Modest actions preserve the modest man, and immodest actions destroy him: and actions of fidelity preserve the faithful man, and the contrary' actions destroy him. And on the other hand contrary actions strengthen contrary characters: shamelessness strengthens the shameless man, faithlessness the faithless man, abusive words the abusive man, anger the man of an angry temper, and unequal receiving and giving make the avaricious man more avaricious.

For this reason philosophers admonish us not to be satisfied with learning only, but also to add study, and

then practice.

Epictetus, Discourses, II, 9

33 If thou findest in human life anything better than justice, truth, temperance, fortitude, and, in a word, anything better than thy own mind's self-satisfaction in the things which it enables thee to do according to right reason, and in the condition that is assigned to thee without thy own choice; if, I say, thou seest anything better than this, turn to it with all thy soul, and enjoy that which thou hast found to be the best. ... If thou findest everything else smaller and of less value than this, give place to nothing else, for if thou dost once diverge and incline to it, thou wilt no longer without distraction be able to give the preference to that good thing which is thy proper possession and thy own; for it is not right that anything of any other kind, such as praise from the many, or power, or enjoyment of pleasure, should come into competition with that which is rationally and politically or practically good.

Marcus Aurelius, Meditations, III, 6

34 When thou wishest to delight thyself, think of the virtues of those who live with thee; for instance, the activity of one, and the modesty of another, and the liberality of a third, and some other good quality of a fourth. For nothing delights so much as the examples of the virtues, when they are exhibited in the morals of those who live with us and present themselves in abundance, as far as is possible. Wherefore we must keep them before us.

Marcus Aurelius, Meditations, VI, 48

35 The perfection of moral character consists in this, in passing every day as the last, and in being neither violently excited nor torpid nor playing the hypocrite.

Marcus Aurelius, Meditations, VII, 69

36 For most or even all forms of evil serve the Universe—much as the poisonous snake has its use— though in most cases their function is unknown. Vice itself has many useful sides: it brings about much that is beautiful, in artistic creations for example, and it stirs us to thoughtful living, not allowing us to drowse in security.

Plotinus, Second Ennead, III, 18

37 Nothing is utterly condemnable save vice.

Augustine, Confessions, II, 3

38 No one without true piety—that is, true worship of the true God—can have true virtue.

Augustine, City of God, V, 19

39 In Scripture they are called God's enemies who oppose His rule, not by nature, but by vice; having no power to hurt Him, but only themselves. For they are His enemies, not through their power to hurt, but by their will to oppose Him. For God is unchangeable, and wholly proof against injury. Therefore the vice which makes those who are called His enemies resist Him, is an evil not to God, but to themselves. And to them it is an evil, solely because it corrupts the good of their nature. It is not nature, therefore, but vice, which is contrary to God. For that which is evil is contrary to the good. And who will deny that God is the supreme good? Vice, therefore, is

contrary to God, as evil to good. Further, the nature it vitiates is a good, and therefore to this good also it is contrary. But while it is contrary to God only as evil to good, it is contrary to the nature it vitiates, both as evil and as hurtful. For to God no evils are hurtful; but only to natures mutable and corruptible, though, by the testimony of the vices themselves, originally good. For were they not good, vices could not hurt them. For how do they hurt them but by depriving them of integrity, beauty, welfare, virtue, and, in short, whatever natural good vice is wont to diminish or destroy? But if there be no good to take away, then no injury can be done, and consequently there can be no vice. For it is impossible that there should be a harmless vice. Whence we gather, that though vice cannot injure the unchangeable good, it can injure nothing but good; because it does not exist where it does not injure.

Augustine, City of God, XII, 3

- 40 If the Creator is truly loved, that is, if He Himself is loved and not another thing in His stead. He cannot be evilly loved; for love itself is to be ordinally loved, because we do well to love that which, when we love it, makes us live well and virtuously. So that it seems to me that it is a brief but true definition of virtue to say, it is the order of love.

Augustine, City of God, XV, 22

- 41 Though the soul may seem to rule the body admirably, and the reason the vices, if the soul and reason do not themselves obey God, as God has commanded them to serve Him, they have no proper authority over the body

and the vices. For what kind of mistress of the body and the vices can that mind be which is ignorant of the true God, and which, instead of being subject to His authority, is prostituted to the corrupting influences of the most vicious demons? It is for this reason that the virtues which it seems to itself to possess, and by which it restrains the body and the vices that it may obtain and keep what it desires, are rather vices than virtues so long as there is no reference to God in the matter.

Augustine, City of God, XIX, 25

- 42 Man is judged to be good or bad chiefly according to the pleasure of the human will; for that man is good and virtuous who takes pleasure in the works of virtue, and that man evil who takes pleasure in evil works.

Aquinas, Summa Theologica, I-II, 34, 4

- 43 One can make bad use of a virtue taken as an object, for instance, by having evil thoughts about a virtue, that is, by hating it, or by being proud of it; but one cannot make bad use of virtue as principle of action, so that an act of virtue be evil.

Aquinas, Summa Theologica, I-II, 55, 4

- 44 Human virtue is a habit perfecting man in view of his doing good deeds. Now, in man there are but two principles of human actions, namely, the intellect or reason and the appetite; for these are the two principles of movement in man as stated in [Aristotle's] book on the *Soul*, Consequently every human virtue must be a perfection of one of these principles. Accordingly if it perfects man's speculative or practical intellect in order

that his deed may be good, it will be an intellectual virtue, but if it perfects his appetite, it will be a moral virtue. It follows therefore that every human virtue is either intellectual or moral.

Aquinas, Summa Theologica, I-II, 58, 3

45 Moral virtue can be without some of the intellectual virtues, namely, wisdom, science, and art, but not without understanding and prudence. Moral virtue cannot be without prudence, because moral virtue is a habit of choosing, that is, making us choose well. Now in order that a choice be good, two things are required. First, that the intention be directed to a due end; and this is done by moral virtue, which inclines the appetitive power to the good that is in accord with reason, which is a due end. Secondly, that man take rightly those things which have reference to the end, and he cannot do this unless his reason counsel, judge and command rightly, which is the function of prudence and the virtues joined to it.

Aquinas, Summa Theologica, I-II, 58, 4

46 Things may be numbered either in respect of their formal principles, or according to their subjects, and in either way we find that there are four cardinal virtues.

For the formal principle of the virtue of which we speak now is the good of reason, which good can be considered in two ways. First, as consisting in the consideration itself of reason; and thus we have one principal virtue, called Prudence.—Secondly, according as the reason puts its order into something else; either into operations, and then we have Justice; or into

passions, and then there must be two virtues. For the need of putting the order of reason into the passions is due to their going against reason, and this occurs in two ways. First, by the passions inciting to something against reason, and then the passions need a curb, which we call Temperance. Secondly, by the passions withdrawing us from following the dictate of reason, for instance, through fear of danger or toil, and then man needs to be strengthened for that which reason dictates, lest he turn back; and to this end there is Fortitude.

Aquinas, Summa Theologica, I-II, 61, 2

47 Virtues are understood differently by various writers. For some take them as signifying certain general conditions of the human soul, to be found in all the virtues, so that, namely, prudence is merely a certain rectitude of discernment in any actions or matters whatever; justice, a certain rectitude of the soul by which man does what he ought in any matters; temperance, a disposition of the soul moderating any passions or operations, so as to keep them within bounds; and fortitude, a disposition by which the soul is strengthened for that which is in accord with reason, against any assaults of the passions, or the toil involved by any operations. To distinguish these four virtues in this way does not imply that justice, temperance and fortitude are distinct virtuous habits. For it pertains to every moral virtue, from the fact That it is a habit, that it should be accompanied by a certain firmness so as not to be moved by its contrary, and this, we have said, belongs to fortitude. Moreover, since it is a virtue, it is directed to good which involves the notion of right and due, and this, we have said, belongs to justice. Again, owing to the (act that it is a moral virtue

partaking of reason, it observes the mode of reason in all things, and does not exceed its bounds, which has been stated to belong to temperance. It is only in the point of having discernment which we ascribed to prudence, that there seems to be a distinction from the other three, since discernment belongs essentially to reason; but the other three imply a certain participation of reason by way of a kind of application (of reason) to passions or operations. According to the above explanation, then, prudence would be distinct from the other three virtues but these would not be distinct from one another; for it is evident that one and the same virtue is both habit, and virtue, and moral virtue.

Others, however, with better reason, take these four virtues, according as they have their special determinate matter, each its own matter, in which special praise is given to that general condition from which the virtue's name is taken.... In this way it is clear that the aforesaid virtues are distinct habits, differentiated in respect of their diverse objects.

Aquinas, Summa Theologica, I-II, 61, 4

48 Speaking absolutely, the intellectual virtues, which perfect the reason, are more excellent than the moral virtues, which perfect the appetite.

But if we consider virtue in its relation to act, then moral virtue, which perfects the appetite, whose function it is to move the other powers to act ... is more excellent. And since virtue is called so from its being a principle of action, for it is the perfection of a power, it follows again that the nature of virtue agrees more with moral than with intellectual virtue.

Aquinas, Summa Theologica, I-II, 66, 3

49 Men who are well disposed are led willingly to virtue by being admonished better than by coercion; but men who are evilly disposed are not led to virtue unless they are compelled.

Aquinas, Summa Theologica, I-II, 95, 1

50 Virtue is praised because of the will, not because of the ability: and therefore if a man fall short of equality which is the mean of justice, through lack of ability, his virtue deserves no less praise, provided there be no failing on the part of his will.

Aquinas, Summa Theologica, II-II, 81, 6

51 *Cressida*. In everything there should be moderation,
For though one might forbid all drunkenness,
One could not say that men through all creation
Should never drink—'twere folly, nothing less.

Chaucer, Troilus and Cressida, II, 103

52 That servant and that nurse unto the vices
Which men do call in English Idleness,
Portress at Pleasure's gate, by all advices
We should avoid, and by her foe express,
That is to say, by lawful busyness.
We ought to live with resolute intent,
Lest by the Fiend through sloth we should be rent.

For he, that with his thousand cords and sly
Continually awaits us all to trap,
When he a man in idleness may spy
He easily the hidden snare will snap.

And till the man has met the foul mishap,
He's not aware the Fiend has him in hand;
We ought to work and idleness withstand.

And though men never dreaded they must die,
Yet men see well, by reason, idleness
Is nothing more than rotten sluggardry,
Whereof comes never good one may possess;
And see sloth hold her in a leash, no less,
Only to sleep and eat and always drink
And to absorb all gain of others' swink.

Chaucer, Canterbury Tales: Second Nun's Prologue

- 53 A man who wishes to act entirely up to his professions of virtue soon meets with what destroys him among so much that is evil.

Hence it is necessary for a prince wishing to hold his own to know how to do wrong, and to make use of it or not according to necessity.... He need not make himself uneasy at incurring a reproach for those vices without which the state can only be saved with difficulty, for if everything is considered carefully, it will be found that something which looks like virtue, if followed, would be his ruin; whilst something else, which looks like vice, yet followed brings him security and prosperity.

Machiavelli, Prince, XV

- 54 As if our touch were infectious, we by our handling corrupt things that of themselves are beautiful and good. We can grasp virtue in such a way that it will become vicious, if we embrace it with too sharp and violent a desire. Those who say that there is never any excess in

virtue, inasmuch as it is no longer virtue if there is excess in it, are playing with words.

Montaigne, Essays, I, 30, Of Moderation

55 It seems to me that virtue is something other and nobler than the inclinations toward goodness that are born in us. Souls naturally regulated and well-born follow the same path, and show the same countenance in their actions, as virtuous ones. But virtue means something greater and more active than letting oneself, by a happy disposition, be led gently and peacefully in the footsteps of reason. He who through a natural mildness and easygoingness should despise injuries received would do a very fine and praiseworthy thing; but he who, outraged and stung to the quick by an injury, should arm himself with the arms of reason against this furious appetite for vengeance, and after a great conflict should finally master it, would without doubt do much more. The former would do well, and the other virtuously; one action might be called goodness, the other virtue. For it seems that the name of virtue presupposes difficulty and contrast, and that it cannot be exercised without opposition. Perhaps this is why we call God good, strong, liberal, and just, but we do not call him virtuous: his operations are wholly natural and effortless.

Montaigne, Essays, II, 11, Of Cruelty

56 Virtue refuses facility for her companion; and... the easy, gentle, and sloping path that guides the footsteps of a good natural disposition is not the path of true virtue. It demands a rough and thorny road; it wants to have either external difficulties to struggle with ... by means of which

fortune takes pleasure in breaking up the unwaveringness of a man's career; or internal difficulties created by the disordered appetites and imperfections of our nature.

Montaigne, Essays, II, 11, Of Cruelty

57 When I confess myself religiously to myself, I find that the best goodness I have has some tincture of vice.

Montaigne, Essays, II, 20, We Taste Nothing Pure

58 The acknowledgment of virtue carries no less weight in the mouth of the man who hates it, inasmuch as truth wrests it from him by force, and if he will not receive it within, at least he covers himself with it as an ornament.

Montaigne, Essays, III, 1, Of the Useful and the Honorable

59 There is no vice truly a vice which is not offensive, and which a sound judgment does not condemn; for its ugliness and painfulness is so apparent that perhaps the people are right who say it is chiefly produced by stupidity and ignorance. So hard it is to imagine anyone knowing it without hating it.

Montaigne, Essays, III, 2, Of Repentance

60 *Portia*. How far that little candle throws his beams!
So shines a good deed in a naughty world.

Shakespeare, Merchant of Venice, V, i, 90

61 *Clown*. Any thing that's mended is but patched: virtue that transgresses is but patched with sin; and sin that amends is but patched with virtue.

Shakespeare, Twelfth Night, I, v, 52

62 *Sir Toby*. Dost thou think, because thou art virtuous,
there shall be no more cakes and ale?

Shakespeare, Twelfth Night, II, iii, 123

63 *Laertes*. Fear it, Ophelia, fear it, my dear sister.
And keep you in the rear of your affection,
Out of the shot and danger of desire.
The chariest maid is prodigal enough,
If she unmask her beauty to the moon:
Virtue itself 'scapes not calumnious strokes:
The canker galls the infants of the spring.
Too oft before their buttons be disclosed.
And in the morn and liquid dew of youth
Contagious blastments are most imminent.
Be wary then; best safety lies in fear:
Youth to itself rebels, though none else near.

Ophelia. I shall the effect of this good lesson keep,
As watchman to my heart. But, good my brother,
Do not, as some ungracious pastors do,
Show me the steep and thorny way to heaven;
Whiles, like a puff'd and reckless libertine,
Himself the primrose path of dalliance treads,
And recks not his own rede.

Shakespeare, Hamlet, I, iii, 33

64 *1st Lord*. Our virtues would be proud, if our faults
whipped them not; and our crimes would despair, if they
were not cherished by our virtues.

Shakespeare, All's Well That Ends Well, IV, iii, 82

65 *Duke*. Heaven doth with us as we with torches do,
Not light them for themselves; for if our virtues
Did not go forth of us, 'twere all alike
As if we had them not. Spirits are not finely touch'd
But to fine issues, nor Nature never lends
The smallest scruple of her excellence
But, like a thrifty goddess, she determines
Herself the glory of a creditor.
Both thanks and use.

Shakespeare, Measure for Measure, I, i, 33

66 *Iago*. Virtue! a fig! 'tis in ourselves that we are thus or
thus. Our bodies are our gardens, to the which our wills
are gardeners; so that if we will plant nettles, or sow
lettuce, set hyssop and weed up thyme, supply it with
one gender of herbs, or distract it with many, either to
have it sterile with idleness or manured with industry,
why, the power and corrigible authority of this lies in our
wills. If the balance of our lives had not one scale of
reason to poise another of sensuality, the blood and
baseness of our natures would conduct us to most
preposterous conclusions; but we have reason to cool our
raging motions, our carnal stings, our unbitted lusts;
whereof I take this that you call love to be a sect or scion.

Shakespeare, Othello, I, iii, 322

67 *Edgar*. The gods are just, and of our pleasant vices
Make instruments to plague us.

Shakespeare, Lear, V, iii, 170

68 *Griffith*. Noble madam.
Men's evil manners live in brass; their virtues

We write in water.

Shakespeare, Henry VIII, IV, ii, 45

69 'Tis better to be vile than vile esteem'd,
When not to be receives reproach of being.
And the just pleasure lost, which is so deem'd
Not by our feeling but by others' seeing.

Shakespeare, Sonnet CXXI

70 I am a Knight, and a Knight will I die, if so it please
Omnipotence. Some chuse the high Road of haughty
Ambition; others the low Ways of base servile Flattery; a
Third sort take the crooked Path of deceitful Hypocrisy;
and a few, very few, that of true Religion. I for my own
Part, guided by my Stars, follow the narrow Track of
Knight-Errantry; and for the Exercise of it, I despise
Riches, but not Honour. I have redress'd Grievances, and
righted the Injur'd, chastis'd the Insolent, vanquish'd
Giants, and trod Elves and Hobgoblins under my Feet! I
am in Love, but no more than the Profession of Knight-
Errantry obliges me to be; yet I am none of this Age's
vicious Lovers, but a chaste Platonick. My Intentions are
all directed to vertuous Ends, and to do no Man Wrong,
but Good to all the World. And now let your Graces judge,
most excellent Duke and Dutchess, whether a Person who
makes it his only Study to practise all this, deserves to be
upbraided for a Fool.

Cervantes, Don Quixote, II, 32

71 Men abandoned to vice do not so much corrupt manners,
as those that are half good and half evil.

Bacon, Advancement of Learning, Bk. I, VI, 9

72 The arts which flourish in times while virtue is in growth, are military; and while virtue is in state, are liberal; and while virtue is in declination, are voluptuary.

Bacon, Advancement of Learning, Bk. II, X, 13

73 Virtue is like precious odours, most fragrant when they are incensed or crushed; for prosperity doth best discover vice, but adversity doth best discover virtue.

Bacon, Of Adversity

74 Virtue is like a rich stone, best plain set; and surely virtue is best in a body that is comely, though not of delicate features; and that hath rather dignity of presence, than beauty of aspect.

Bacon, Of Beauty

75 We do not believe ourselves to be exactly sharing in the vices of the vulgar when we see that we are sharing in those of great men; and yet we do not observe that in these matters they are ordinary men.

Pascal, Pensees, II, 103

76 The strength of a man's virtue must not be measured by his efforts, but by his ordinary life.

Pascal, Pensees, VI, 352

77 When we would pursue virtues to their extremes on either side, vices present themselves, which insinuate themselves insensibly there, in their insensible journey towards the infinitely little; and vices present themselves in a crowd towards the infinitely great, so that we lose

ourselves in them and no longer see virtues. We find fault with perfection itself.

Pascal, Pensées, VI, 357

78 we do not sustain ourselves in virtue by our own strength, but by the balancing of two opposed vices, just as we remain upright amidst two contrary gales. Remove one of the vices, and we fall into the other.

Pascal, Pensees, VI, 359

79 *Attendant Spirit.* Before the starry threshold of *Joves* Court

My mansion is, where those immortal shapes
Of bright aerial Spirits live inspheard
In Regions milde of calm and serene Ayr,
Above the smoak and stirr of this dim spot,
Which men call Earth, and with low-thoughted care
Confin'd, and pester'd in this pin-fold here,
Strive to keep up a frail, and Feaverish being
Unmindfull of the crown that Vertue gives
After this mortal change, to her true Servants
Amongst the enthron'd gods on Sainted seats.
Yet som there be that by due steps aspire
To lay their just hands on that Golden Key
That ope's the Palace of Eternity:
To such my errand is, and but for such,
I would not soil these pure Ambrosial weeds,
With the rank vapours of this Sin-worn mould.

Milton, Comus, 1

80 *Elder Brother.* Som say no evil thing that walks by night
In fog, or fire, by lake, or moorish fen.

Blew meager Hag, or stubborn unlaid ghost,
That breaks his magick chains at *curfeu* time,
No goblin, or swart faery of the mine,
Hath hurtfull power o're true virginity.
Do ye beleeve me yet, or shall I call
Antiquity from the old Schools of Greece
To testifie the arms of Chastity?
Hence had the huntress *Dian* her dred bow
Fair silver-shafted Queen for ever chaste,
Wherwith she tam'd the brinded lioness
And spotted mountain pard, but set at nought
The frivolous bolt of *Cupid*, gods and men
Fear'd her stern frown, and she was queen oth' Woods.
What was that snaky-headed *Gorgon* sheild
That wise *Minerva* wore, unconquer'd Virgin,
Whenvith she freez'd her foes to congeal'd stone?
But rigid looks of Chast austerity,
And noble grace that dash't brute violence
With sudden adoration, and blank aw.
So dear to Heav'n is Saintly chastity,
That when a soul is found sincerely so,
A thousand liveried Angels lacky her.
Driving far off each thing of sin and guilt,
And in deer dream, and solemn vision
Tell her of things that no gross ear can hear,
Till oft convers with heav'nly habitants
Begin to cast a beam on th'outward shape.
The unpolluted temple of the mind.
And turns it by degrees to the souls essence.
Till all be made immortal.

Milton, Comus, 432

81 *Elder Brother*. This I hold firm,
Vertue may be assail'd, but never hurt.
Surpriz'd by unjust force, but not enthrall'd.
Yea even that which mischief meant most harm,
Shall in the happy trial prove most glory.
But evil on it self shall back recoyl,
And mix no more with goodness, when at last
Gather'd like scum, and setl'd to it self
It shall be in eternal restless change
Self-fed, and self-consum'd, if this fail.
The pillar'd firmament is rott'nness.
And earths base built on stubble.

Milton, Comus, 588

82 I cannot praise a fugitive and cloistered virtue,
unexercised and unbreathed, that never sallies out and
sees her adversary, but slinks out of the race, where that
immortal garland is to be run for, not without dust and
heat. Assuredly we bring not innocence into the world, we
bring impurity much rather; that which purifies us is trial,
and trial is by what is contrary. That virtue therefore
which is but a youngling in the contemplation of evil, and
knows not the utmost that vice promises to her followers,
and rejects it, is but a blank virtue, not a pure; her
whiteness is but an excremental whiteness.

Milton, Areopagitica

83 *Philinte*. If everyone were clothed with integrity, if every
heart were just, frank, kindly, the other virtues would be
well-nigh useless, since their chief purpose is to make us
bear with patience the injustice of our fellows.

Moliere, Le Misanthrope, IV, i

84 By virtue and power, I understand the same thing; that is to say, virtue, in so far as it is related to man, is the essence itself or nature of the man in so far as it has the power of affecting certain things which can be understood through the laws of its nature alone.

Spinoza, Ethics, IV, Definition 8

85 The more each person strives and is able to seek his own profit, that is to say, to preserve his being, the more virtue does he possess; on the other hand, in so far as each person neglects his own profit, that is to say, neglects to preserve his own being, is he impotent.

Spinoza, Ethics, IV, Prop. 20

86 There is no single thing in nature which is more profitable to man than a man who lives according to the guidance of reason. For that is most profitable to man which most agrees with his own nature, that is to say, man.... But a man acts absolutely from the laws of his own nature when he lives according to the guidance of reason, and so far only does he always necessarily agree with the nature of another man; therefore there is no single thing more profitable to man than man.

When each man seeks most that which is profitable to himself, then are men most profitable to one another; for the more each man seeks his own profit and endeavours to preserve himself, the more virtue does he possess, or, in other words, the more power does he possess to act according to the laws of his own nature, that is to say, to live according to the guidance of reason. But men most agree in nature when they live according to the guidance of reason, therefore . . . men will be most profitable to one

another when each man seeks most what is profitable to himself.

Spinoza, Ethics, IV, Prop. 35, Corols. 1-2

87 Though that passes for vice in one country which is counted a virtue, or at least not vice, in another, yet everywhere virtue and praise, vice and blame, go together. Virtue is everywhere, that which is thought praiseworthy; and nothing else but that which has the allowance of public esteem is called virtue.

*Locke, Concerning Human Understanding, Bk. II, XXVIII,
11*

88 Virtue is harder to be got than a knowledge of the world.

Locke, Some Thoughts Concerning Education, 70

89 [Lemuel Gulliver lists the negative blessings of living among the Houyhnhnms] I did not feel the treachery or inconstancy of a friend, nor the injuries of a secret or open enemy. I had no occasion of bribing, flattering or pimping, to procure the favour of any great man, or of his minion. I wanted no fence against fraud or oppression: here was neither physician to destroy my body, nor lawyer to ruin my fortune: no informer to watch my words and actions, or forge accusations against me for hire: here were no gibbers, censurers, backbiters, pickpockets, highwaymen, house-breakers, attorneys, bawds, buffoons, gamesters, politicians, wits, spleneticks, tedious talkers, controvertists, ravishers, murderers, robbers, virtuosoos; no leaders or followers of party and faction; no encouragers to vice, by seducement or examples: no dungeon, axes, gibbets, whipping-posts, or

pillories: no cheating shop-keepers or mechanicks: no pride, vanity or affectation: no fops, bullies, drunkards, strolling whores, or poxes: no ranting, lewd expensive wives: no stupid, proud pedants: no importunate, overbearing, quarrelsome, noisy, roaring, empty, conceited, swearing companions: no scoundrels raised from the dust upon the merit of their vices; or nobility thrown into it, on account of their virtues: no lords, fiddlers, judges, or dancing-masters.

Swift, Gulliver's Travels, IV, 10

90 As fruits ungrateful to the planter's care
On savage stocks inserted learn to bear;
The surest Virtues thus from Passions shoot,
Wild Nature's vigor working at the root.
What crops of wit and honesty appear
From spleen, from obstinacy, hate, or fear!
Sec anger, zeal and fortitude supply;
Ev'n av'rice, prudence; sloth, philosophy;
Lust, thro' some certain strainers well refin'd,
Is gentle love, and charms all womankind:
Envy, to which th'ignoble mind's a slave.
Is emulation in the learn'd or brave:
Nor Virtue, male or female, can we name,
But what will grow on Pride, or grow on Shame.

Pope, Essay on Man, Epistle II, 181

91 Vice is a monster of so frightful mien.
As, to be hated, needs but to be seen;
Yet seen too oft, familiar with her face,
We first endure, then pity, then embrace.

Pope, Essay on Man, Epistle II, 217

92 Virtuous and vicious ev'ry Man must be.
Few in th'extreme, but all in the degree.

Pope, Essay on Man, Epistle II, 231

93 This gentleman [Mr. Square the philosopher] and Mr. Thwackum scarce ever met without a disputation; for their tenets were indeed diametrically opposite to each other. Square held human nature to be the perfection of all virtue, and that vice was a deviation from our nature, in the same manner as deformity of body is. Thwackum, on the contrary, maintained that the human mind, since the fall, was nothing but a sink of iniquity, till purified and redeemed by grace. In one point only they agreed, which was, in all their discourses on morality never to mention the word goodness. The favourite phrase of the former, was the natural beauty of virtue; that of the latter, was the divine power of grace. The former measured all actions by the unalterable rule of right, and the eternal fitness of things; the latter decided all matters by authority; but in doing this, he always used the scriptures and their commentators, as the lawyer doth his Coke upon Lyttleton, where the comment is of equal authority with the text.

Fielding, Tom Jones, III, 3

94 The foibles and vices of men, in whom there is great mixture of good, become more glaring objects from the virtues which contrast them and shew their deformity; and when we find such vices attended with their evil consequence to our favourite characters, we are not only taught to shun them for our own sake, but to hate them

for the mischiefs they have already brought on those we love.

Fielding, Tom Jones, X, 1

95 There are a set of religious, or rather moral writers, who teach that virtue is the certain road to happiness, and vice to misery, in this world. A very wholesome and comfortable doctrine, and to which we have but one objection, namely, that it is not true.

Fielding, Tom Jones, XV, 1

96 The human mind feels such an exquisite pleasure in the exercise of power; even those who are lovers of virtue are so excessively fond of themselves that there is no man so happy as not still to have reason to mistrust his honest intentions; and, indeed, our actions depend on so many things that it is infinitely easier to do good, than to do it well.

Montesquieu, Spirit of Laws, XXVIII, 41

97 In the present order of things, virtue is attended with more peace of mind than vice, and meets with a more favourable reception from the world.

Hume, Concerning Human Understanding, XI, 108

98 Whatever may be the consequence of such a miraculous transformation of mankind as would endow them with every species of virtue, and free them from every species of vice, this concerns not the magistrate, who aims only at possibilities. He cannot cure every vice by substituting a virtue in its place. Very often he can only cure one vice

by another; and in that case, he ought to prefer what is least pernicious to society.

Hume, Of Refinement in the Arts

99 What is virtue? Beneficence towards the fellow-creature. Can I call virtue things other than those which do me good? I am needy, you are generous. I am in danger, you help me. I am deceived, you tell me the truth. I am neglected, you console me. I am ignorant, you teach me. Without difficulty I shall call you virtuous. But what will become of the cardinal and divine virtues? Some of them will remain in the schools.

Voltaire, Philosophical Dictionary: Virtue

100 The most depraved of men always pay some sort of homage to public faith; and even robbers, who are the enemies of virtue in the great society, pay some respect to the shadow of it in their secret caves.

Rousseau, Political Economy

101 The noblest virtues are negative, they are also the most difficult, for they make little show, and do not even make room for that pleasure so dear to the heart of man, the thought that some one is pleased with us. If there be a man who does no harm to his neighbours, what good must he have accomplished! What a bold heart, what a strong character it needs! It is not in talking about this maxim, but in trying to practise it, that we discover both its greatness and its difficulty.

Rousseau, Emile, II

102 Virtue presented singly to the imagination or the reason is so well recommended by its own graces and so strongly supported by arguments, that a good man wonders how any can be bad.

Johnson, Rambler No. 175

103 Neither our virtues nor vices are all our own. If there were no cowardice there would be little insolence. Pride cannot rise to any great degree but by the concurrence of blandishment or the sufferance of tameness.

Johnson, Rambler No. 180

104 Those who labor in the earth are the chosen people of God, if ever He had a chosen people, whose breasts He has made His peculiar deposit for substantial and genuine virtue. It is the focus in which he keeps alive that sacred fire, which otherwise might escape from the face of the earth. Corruption of morals in the mass of cultivators is a phenomenon of which no age nor nation has furnished an example. It is the mark set on those, who, not looking up to heaven, to their own soil and industry, as does the husbandman, for their subsistence, depend for it on casualties and caprice of customers. Dependence begets subservience and venality, suffocates the germ of virtue, and prepares fit tools for the designs of ambition. This, the natural progress and consequence of the arts, has sometimes perhaps been retarded by accidental circumstances; but, generally speaking, the proportion which the aggregate of the other classes of citizens bears in any State to that of its husbandmen, is the proportion of its unsound to its

healthy parts, and is a good enough barometer whereby to measure its degree of corruption.

Jefferson, Notes on Virginia, XIX

105 It is always easy, as well as agreeable, for the inferior ranks of mankind to claim a merit from the contempt of that pomp and pleasure which fortune has placed beyond their reach. The virtue of the primitive Christians, like that of the first Romans, was very frequently guarded by poverty and ignorance.

Gibbon, Decline and Fall of the Roman Empire, XV

106 We may learn from the example of Cato that a character of pure and inflexible virtue is the most apt to be misled by prejudice, to be heated by enthusiasm, and to confound private enmities with public Justice.

Gibbon, Decline and Fall of the Roman Empire, XXXIX

107 There are very few of those virtues which are not capable of being imitated, and even outdone in many of their most striking effects, by the worst of vices.

Burke, Speech on Economical Reform (Feb. 11, 1780)

108 When the thinking man has conquered the temptations to vice, and is conscious of having done his (often hard) duty, he finds himself in a state of peace and satisfaction which may well be called happiness, in which virtue is her own reward.

Kant, Preface to the Metaphysical Elements of Ethics

109 Virtue signifies a moral strength of will. But this does not exhaust the notion; for such strength might also

belong to a *holy* (super-human) being, in whom no opposing impulse counteracts the law of his rational will; who therefore willingly does everything in accordance with the law. Virtue then is the moral strength of a *man's* will in his obedience to *duty*; and this is a moral *necessitation* by his own law giving reason, inasmuch as this constitutes itself a power *executing* the law. It is not itself a duty, nor is it a duty to possess it (otherwise we should be in duty bound to have a duty), but it commands, and accompanies its command with a moral constraint (one possible by laws of internal freedom). But since this should be irresistible, strength is requisite, and the degree of this strength can be estimated only by the magnitude of the hindrances which man creates for himself, by his inclinations. Vices, the brood of unlawful dispositions, are the monsters that he has to combat; wherefore this moral strength as *fortitude* constitutes the greatest and only true martial glory of man; it is also called the true *wisdom*, namely, the practical, because it makes the *ultimate end* of the existence of man on earth its own end. Its possession alone makes man free, healthy, rich, a king, etc., nor can either chance or fate deprive him of this, since he possesses himself, and the virtuous cannot lose his virtue.

*Kant, Introduction to the Metaphysical Elements of
Ethics, XIV*

110 That best portion of a good man's life.
His little, nameless, unremembered, acts
Of kindness and of love.

Wordsworth, Tintern Abbey, 33

111 The principle of self-interest rightly understood is not a lofty one, but it is clear and sure. It does not aim at mighty objects, but it attains without excessive exertion all those at which it aims. As it lies within the reach of all capacities, everyone can without difficulty learn and retain it. By its admirable conformity to human weaknesses it easily obtains great dominion; nor is that dominion precarious, since the principle checks one personal interest by another, and uses, to direct the passions, the very same instrument that excites them.

The principle of self-interest rightly understood produces no great acts of self-sacrifice, but it suggests daily small acts of self-denial. By itself it cannot suffice to make a man virtuous; but it disciplines a number of persons in habits of regularity, temperance, moderation, foresight, self-command; and if it does not lead men straight to virtue by the will, it gradually draws them in that direction by their habits. If the principle of interest rightly understood were to sway the whole moral world, extraordinary virtues would doubtless be more rare; but I think that gross depravity would then also be less common. The principle of interest rightly understood perhaps prevents men from rising far above the level of mankind, but a great number of other men, who were falling far below it, are caught and restrained by it. Observe some few individuals, they are lowered by it; survey mankind, they are raised.

Tocqueville, Democracy in America, Vol. II, II, 8

112 Virtues are, in the popular estimate, rather the exception than the rule. There is the man and his virtues. Men do what is called a good action, as some piece of courage or charity, much as they would pay a fine in

expiation of daily non-appearance on parade. Their works are done as an apology or extenuation of their living in the world—as invalids and the insane pay a high board. Their virtues are penances.

Emerson, Self-Reliance

113 My strength is as the strength of ten,
Because my heart is pure.

Tennyson, Sir Galahad

114 You who govern public affairs, what need have you to employ punishments? Love virtue, and the people will be virtuous. The virtues of a superior man are like the wind; the virtues of a common man are like the grass; the grass, when the wind passes over it, bends.

Thoreau, Walden: The Village

115 Our whole life is startlingly moral. There is never an instant's truce between virtue and vice. Goodness is the only investment that never fails.

Thoreau, Walden: Higher Laws

116 The first element of good government... being the virtue and intelligence of the human beings composing the community, the most important point of excellence which any form of government can possess is to promote the virtue and intelligence of the people themselves.

Mill, Representative Government, II

117 Bulstrode shrank from a direct lie with an intensity disproportionate to the number of his more indirect misdeeds. But many of these misdeeds were like the

subtle muscular movements which are not taken account of in the consciousness, though they bring about the end that we fix our mind on and desire. And it is only what we are vividly conscious of that we can vividly imagine to be seen by Omniscience.

George Eliot, Middlemarch, VII, 68

118 It seems not to be true that there is a power in the universe, which watches over the well-being of every individual with parental care and brings all his concerns to a happy ending. On the contrary, the destinies of man are incompatible with a universal principle of benevolence or with—what is to some degree contradictory—a universal principle of justice. Earthquakes, floods, and fires do not differentiate between the good and devout man, and the sinner and unbeliever. And, even if we leave inanimate nature out of account and consider the destinies of individual men in so far as they depend on their relations with others of their own kind, it is by no means the rule that virtue is rewarded and wickedness punished, but it happens often enough that the violent, the crafty, and the unprincipled seize the desirable goods of the earth for themselves, while the pious go empty away. Dark, unfeeling, and unloving powers determine human destiny; the system of rewards and punishments, which, according to religion, governs the world, seems to have no existence.

Freud, New Introductory Lectures on Psycho-Analysis, XXXV

9.11 Courage and Cowardice

Of all the virtues, the one most frequently extolled by the poets is courage. Many of the memorable characters of the great epics and tragedies of antiquity, of the plays of Shakespeare, and of modern fiction are depicted as lionhearted men, men who have the fortitude to withstand the onslaughts of misfortune, or the valor to attempt what the timid or craven would never dare. The historians and the biographers, too, give us portraits of bold and daring leaders, of men whose strength of character enables them to remain steady on their course, overcoming what appear to be insuperable obstacles. Courage is the stuff out of which heroes are made and the heroic temper is moulded. Relevant, therefore, to the consideration of courage are quotations that will be found in Section 1.6 on Human Greatness: The Hero.

The reader will have noted the vocabulary of epithets applicable to this virtue and its associated vice: for courageous, brave, bold, daring, valorous, fearless; for cowardly, timid, craven, pusillanimous, effeminate. The name given the virtue itself is frequently fortitude rather than courage, the one word in its etymology implying strength—strength of moral character, not of physique; the other suggesting robustness of spirit.

The analysis given by the philosophers instructs us that courage is not fearlessness. He who, by reason of a certain inborn temperamental disposition, lacks fear is not a courageous man and will never become one. Rather it is he who, suffering the impulses of fear or the disinclination to suffer pain, overcomes them for the sake of a good deed to be done or a right objective to be gained. Furthermore, the courageous man is not one who appears to act courageously or even does so in one circumstance or two, but rather the man who has the firmly established habitual disposition to

suffer pains and overcome fears for a good purpose. When the threatening pains are bodily and the fears recoil from bodily attack that may cause death or injury, the virtue is often called “physical courage,” to distinguish it from the moral fortitude exhibited by the man who risks disapprobation, contumely, or even dishonor for a good cause. However, in both cases, the strength lies in the man’s moral character, not in his physique.

Cowardice is not the only vice that philosophers have opposed to courage. If the coward is one who gives in too readily to his fears, fears the wrong things, or fails to overcome his fears when he ought to, the foolhardy man at the other extreme is one who dismisses his fears too readily, and lacks sufficient respect for the dangers involved. In between these two extremes, the courageous man is seen as one who exercises a reasonable or prudent judgment concerning how to manage his fears, how to moderate or control them. Hence some of the writers about courage introduce the notion of prudence or of sound judgment into their discussion. For the consideration of this related virtue, the reader is referred to Section 9.13 on Prudence; and for treatment of the emotion that is chiefly involved in courage and cowardice, the reader is referred to Section 4.2 on Fear.

■ ■ ■

1 If thou faint in the day of adversity, thy strength is small.

Proverbs 24:10

2 *Idomeneus*. The skin of the coward changes colour one way and another,

and the heart inside him has no control to make him
sit steady,
but he shifts his weight from one foot to another, then
settles firmly
on both feet, and the heart inside his chest pounds
violent
as he thinks of the death spirits, and his teeth chatter
together:
but the brave man's skin will not change colour, nor is
he too much
frightened, once he has taken his place in the hidden
position,
but his prayer is to close as soon as may be in bitter
division.

Homer, Iliad, XIII, 279

- 3 *Artabanus*. It is best for men, when they take counsel, to be timorous, and imagine all possible calamities, but when the time for action comes, then to deal boldly.

Herodotus, History, VII, 49

- 4 *Pericles*. The palm of courage will surely be adjudged most justly to those, who best know the difference between hardship and pleasure and yet are never tempted to shrink from danger.

Thucydides, Peloponnesian War, II, 40

- 5 *Pericles*. They whose minds are least sensitive to calamity, and whose hands are most quick to meet it, are the greatest men and the greatest communities.

Thucydides, Peloponnesian War, II, 64

6 *Socrates*. Is not courage, Simmias, a quality which is specially characteristic of the philosopher?

Simmias. Certainly.

There is temperance again, which even by the vulgar is supposed to consist in the control and regulation of the passions, and in the sense of superiority to them—is not temperance a virtue belonging to those only who despise the body, and who pass their lives in philosophy?

Most assuredly.

For the courage and temperance of other men,' if you will consider them, are really a contradiction.

How so?

Well, he said, you are aware that death is regarded by men in general as a great evil.

Very true, he said.

And do not courageous men face death because they are afraid of yet greater evils?

That is quite true.

Then all but the philosophers are courageous only from fear, and because they are afraid; and yet that a man should be courageous from fear, and because he is a coward, is surely a strange thing.

Plato, Phaedo, 68A

7 With what sort of terrible things ... is the brave man concerned? Surely with the greatest; for no one is more likely than he to stand his ground against what is awe-inspiring. Now death is the most terrible of all things; for it is the end, and nothing is thought to be any longer either good or bad for the dead. But the brave man would not seem to be concerned even with death in all circumstances, e.g. at sea or in disease. In what circumstances, then? Surely in the noblest. Now such

deaths are those in battle; for these take place in the greatest and noblest danger.... Properly, then, he will be called brave who is fearless in face of a noble death, and of all emergencies that involve death; and the emergencies of war are in the highest degree of this kind.

Aristotle, Ethics, 1115a24

8 What is terrible is not the same for all men; but we say there are things terrible even beyond human strength. These, then, are terrible to every one—at least to every sensible man; but the terrible things that are *not* beyond human strength differ in magnitude and degree, and so too do the things that inspire confidence. Now the brave man is as dauntless as man may be. Therefore, while he will fear even the things that are not beyond human strength, he will face them as he ought and as the rule directs, for honour's sake; for this is the end of virtue. But it is possible to fear these more, or less, and again to fear things that are not terrible as if they were. Of the faults that are committed one consists in fearing what one should not, another in fearing as we should not, another in fearing when we should not, and so on; and so too with respect to the things that inspire confidence. The man, then, who faces and who fears the right things and from the right motive, in the right way and at the right time, and who feels confidence under the corresponding conditions, is brave; for the brave man feels and acts according to the merits of the case and in whatever way the rule directs.

Aristotle, Ethics, 1115b7

9 Of those who go to excess he who exceeds in fearlessness has no name... but he would be a sort of madman or insensible person if he feared nothing, neither earthquakes nor the waves, as they say the Celts do not; while the man who exceeds in confidence about what really is terrible is rash. The rash man, however, is also thought to be boastful and only a pretender to courage; at all events, as the brave man is with regard to what is terrible, so the rash man wishes to *appear*; and so he imitates him in situations where he can. Hence also most of them are a mixture of rashness and cowardice; for, while in these situations they display confidence, they do not hold their ground against what is really terrible. The man who exceeds in fear is a coward; for he fears both what he ought not and as he ought not, and all the similar characterizations attach to him. He is lacking also in confidence; but he is more conspicuous for his excess of fear in painful situations. The coward... is a despairing sort of person; for he fears everything. The brave man, on the other hand, has the opposite disposition; for confidence is the mark of a hopeful disposition. The coward, the rash man, and the brave man, then, are concerned with the same objects but are differently disposed towards them; for the first two exceed and fall short, while the third holds the middle, which is the right, position; and rash men are precipitate, and wish for dangers beforehand but draw back when they are in them, while brave men are keen in the moment of action, but quiet beforehand.

As we have said, then, courage is a mean with respect to things that inspire confidence or fear.

Aristotle, Ethics, 1115b24

10 Experience with regard to particular facts is... thought to be courage; this is indeed the reason why Socrates thought courage was knowledge. Other people exhibit this quality in other dangers, and professional soldiers exhibit it in the dangers of war; for there seem to be many empty alarms in war, of which these have had the most comprehensive experience; therefore they seem brave, because the others do not know the nature of the facts. Again, their experience makes them most capable in attack and in defence, since they can use their arms and have the kind that are likely to be best both for attack and for defence; therefore they fight like armed men against unarmed or like trained athletes against amateurs; for in such contests too it is not the bravest men that fight best, but those who are strongest and have their bodies in the best condition. Professional soldiers turn cowards, however, when the danger puts too great a strain on them and they are inferior in numbers and equipment; for they are the first to fly, while citizen-forces die at their posts, as in fact happened at the temple of Hermes. For to the latter flight is disgraceful and death is preferable to safety on those terms; while the former from the very beginning faced the danger on the assumption that they were stronger, and when they know the facts they fly, fearing death more than disgrace; but the brave man is not that sort of person.

Aristotle, Ethics, 1116b3

11 Though courage is concerned with feelings of confidence and of fear, it is not concerned with both alike, but more with the things that inspire fear; for he who is undisturbed in face of these and bears himself as he should towards these is more truly brave than the man

who does so towards the things that inspire confidence. It is for facing what is painful, then... that men are called brave. Hence also courage involves pain, and is justly praised; for it is harder to face what is painful than to abstain from what is pleasant.

Aristotle, Ethics, 1117a29

- 12 It is generally agreed by the learned and the untaught alike that men who are brave, high-spirited, patient, and superior to human vicissitudes, will endure pain with patience. Nor would anyone disagree that a man who so suffers merits praise. When such endurance is both expected of brave men and praised when it is found, is it not ignoble to shy away from the onset of pain or be unable to bear it? But perhaps, even if all right-minded states are called virtuous, the term may not cover all virtues. All may have received the name from the one single virtue that was considered as outshining all the others, because the word "virtue" comes from the word for man. And man's special virtue is courage. Of courage there are two principle types, the scorn of death and the scorn of pain.

Cicero, Disputations, II, 18

- 13 *Turnus*. Fortune befriends the bold.

Virgil, Aeneid, X

- 14 Then with a dose embrace he [Aeneas] strain'd his son,
And, kissing thro' his helmet, thus begun:
"My son, from my example learn the war,
In camps to suffer, and in fields to dare;
But happier chance than mine attend thy care!

This day my hand thy tender age shall shield.
And crown with honors of the conquer'd field:
Thou, when thy riper years shall send thee forth
To toils of war, be mindful of my worth;
Assert thy birthright, and in arms be known,
For Hector's nephew, and AEneas' son."

Virgil, Aeneid, XII

- 15 It is truly very commendable to abhor and shun the doing any base action; but to stand in fear of every kind of censure or disrepute may argue a gentle and openhearted, but not an heroic temper.

Plutarch, Aemilius Paulus and Timoleon Compared

- 16 Cato Major, hearing some commend one that was rash, and inconsiderately daring in a battle, said, There is a difference between a man's prizing valour at a great rate, and valuing life at little.

Plutarch, Pelopidas

- 17 To do a wrong thing is base, and to do well where there is no danger, common; the good man's characteristic is to do so where there is danger.

Plutarch, Cains Marius

- 18 The ancients, I think, did not imagine bravery to be plain fearlessness, but a cautious fear of blame and disgrace.

Plutarch, Cleomenes

- 19 Be like the promontory against which the waves continually break, but it stands firm and tames the fury of the water around it.

Unhappy am I, because this has happened to me.—Not so, but happy am I, though this has happened to me, because I continue free from pain, neither crushed by the present nor fearing the future. For such a thing as this might have happened to every man; but every man would not have continued free from pain on such an occasion. Why then is that rather a misfortune than this a good fortune? And dost thou in all cases call that a man's misfortune, which is not a deviation from man's nature? And does a thing seem to thee to be a deviation from man's nature, when it is not contrary to the will of man's nature? Well, thou knowest the will of nature. Will then this which has happened prevent thee from being just, magnanimous, temperate, prudent, secure against inconsiderate opinions and falsehood; will it prevent thee from having modesty, freedom, and everything else, by the presence of which man's nature obtains all that is its own? Remember too on every occasion which leads thee to vexation to apply this principle; not that this is a misfortune, but that to bear it nobly is good fortune.

Marcus Aurelius, Meditations, IV, 49

20 Here sighs, complaints, and deep wailings resounded through the starless air: it made me weep at first.

Strange tongues, horrible outcries, words of pain, tones of anger, voices deep and hoarse, and sounds of hands amongst them,

made a tumult, which turns itself unceasing in that air for ever dyed, as sand when [it eddies in a whirlwind].

And I, my head begirt with horror, said; "Master, what is this that I hear? and who are these that seem so overcome with pain?"

And he to me: "This miserable mode the dreary souls of those sustain, who lived without blame, and without praise.

They are mixed with the caitiff choir of the angels, who were not rebellious, nor were faithful to God; but were for themselves.

Heaven chased them forth to keep its beauty from impair; and the deep Hell receives them not, for the wicked would have some glory over them."

And I: "Master what is so grievous to them, that makes them lament thus bitterly?" He answered: "I will tell it to thee very briefly.

These have no hope of death; and their blind life is so mean, that they are envious of every other lot.

Report of them the world permits not to exist; Mercy and [Justice] disdains them: let us not speak of them; but look, and pass."

And I, who looked, saw an ensign, which whirling ran so quickly that it seemed to scorn all pause; and behind it came so long a train of people, that I should never have believed death had undone so many.

After I had recognised some amongst them, I [saw and knew] the shadow of him who from cowardice made the great refusal.

Forthwith I understood and felt assured, that this was the crew of caitiffs, hateful to God and to his enemies.

Dante, Inferno, III, 22

21 *Pandar*. Remember, too, it is no idle boast
That fortune helps the brave in his emprise,
But from the coward wretch she ever flies.

Chaucer, Troilus and Cressida, IV, 86

- 22 The precepts of resoluteness and constancy do not state that we must not protect ourselves as much as it lies in our power from the evils and troubles that threaten us; nor consequently that we should not fear being taken by surprise. On the contrary, all honorable means of safeguarding ourselves from evils are not only permitted but laudable. And constancy's part is played principally in bearing troubles patiently where there is no remedy.

Montaigne, Essays, I, 12, Of Constancy

- 23 Valor has its limits like the other virtues, and these limits once transgressed, we find ourselves on the path of vice; so that we may pass through valor to temerity, obstinacy, and madness, unless we know its limits well—and they are truly hard to discern near the borderlines.

Montaigne, Essays, I, 15, One Is Punished

- 24 The worth and value of a man is in his heart and his will; there lies his real honor. Valor is the strength, not of legs and arms, but of heart and soul; it consists not in the worth of our horse or our weapons, but in our own. . . . He who relaxes none of his assurance, no matter how great the danger of imminent death; who, giving up his soul, still looks firmly and scornfully at his enemy—he is beaten not by us, but by fortune; he is killed, not conquered.

Montaigne, Essays, I, 31, Of Cannibals

- 25 Cowardice is the mother of cruelty.

Montaigne, Essays, II, 27, Cowardice, Mother of Cruelty

26 *Hotspur*. Out of this nettle, danger, we pluck this flower,
safety.

Shakespeare, I Henry IV, II, Hi, 10

27 *Falstaff*. To die, is to be a counterfeit; for he is but the
counterfeit of a man who hath not the life of a man: but
to counterfeit dying, when a man thereby liveth, is to be
no counterfeit, but the true and perfect image of life
indeed. The better part of valour is discretion.

Shakespeare, I Henry IV, V, iv, 116

28 *Benedick*. In a false quarrel there is no true valour.

Shakespeare, Much Ado About Nothing, V, i, 120

29 *Caesar*. Cowards die many times before their deaths;
The valiant never taste of death but once.

Shakespeare, Caesar, II, ii, 32

30 *King*. That we would do.

We should do when we would; for this "would" changes
And hath abatements and delays as many
As there are tongues, are hands, are accidents;
And then this "should" is like a spendthrift sigh,
That hurts by easing.

Shakespeare, Hamlet, IV, vii, 119

31 *Nestor*. The sea being smooth,
How many shallow bauble boats dare sail
Upon her patient breast, making their way
With those of nobler bulk!
But let the ruffian Boreas once enrage
The gentle Thetis, and anon behold

The strong-ribb'd bark through liquid mountains cut,
Bounding between the two moist elements,
Like Perseus' horse; where's then the saucy boat
Whose weak untimber'd sides but even now
Co-rivall'd greatness? Either to harbour fled,
Or made a toast for Neptune. Even so
Doth valour's show and valour's worth divide
In storms of fortune; for in her ray and brightness
The herd hath more annoyance by the breese
Than by the tiger; but when the splitting wind
Makes flexible the knees of knotted oaks.
And flies fled under shade, why, then the thing of
courage
As roused with rage, with rage doth sympathize.
And with an accent tuned in selfsame key
Retorts to chiding fortune.

Shakespeare, Troilus and Cressida, I, iii, 34

- 32 *Troilus*. Manhood and honour
Should have hare-hearts, would they but fat their
thoughts
With this cramm'd reason, Reason and respect
Make livers pale and lustihood deject.

Shakespeare, Troilus and Cressida, II, ii, 47

- 33 *Lucio*. Our doubts are traitors
And make us lose the good we oft might win
By fearing to attempt.

Shakespeare, Measure for Measure, I, iv, 77

- 34 *Kent*. None of these rogues and cowards
But Ajax is their fool.

Shakespeare, Lear, II, ii, 132

35 *Lady Macbeth.* Art thou afeard
To be the same in thine own act and valour
As thou art in desire? Wouldst thou have that
Which thou esteem'st the ornament of life.
And live a coward in thine own esteem,
Letting "I dare not" wait upon "I would,"
Like the poor cat i' the adage?

Shakespeare, Macbeth, I, vii, 39

36 *Lady Macbeth.* I have given suck, and know
How tender 'tis to love the babe that milks me;
I would, while it was smiling in my face,
Have pluck'd my nipple from his boneless gums
And dash'd the brains out, had I so sworn as you
Have done to this.

Macbeth. If we should fail?

Lady M. We fail!

But screw your courage to the sticking-place.
And we'll not fail.

Shakespeare, Macbeth, I, vii, 54

37 After they had gone a pretty way under a pleasing Covert
of Chestnut-Trees, they came into a Meadow adjoining to
certain Rocks, from whose Top there was a great Fall of
Waters. At the Foot of those Rocks they discover'd certain
old illcontriv'd Buildings, that rather look'd like Ruins
than inhabited Houses; and they perceiv'd that the
terrifying Noise of the Blows, which yet continued, issu'd
out of that Place. When they came nearer, even patient
Rozinante himself started at the dreadful Sound; but
being hearten'd and pacify'd by his Master, he was at last

prevail'd with to draw nearer and nearer with wary Steps; the Knight recommending himself all the way most devoutly to his *Dulcinea*, and now and then also to Heaven, in short Ejaculations. As for *Sancho*, he stuck close to his Master, peeping all the way through *Rozinante's* Legs, to see if he could perceive what he dreaded to find out. When a little farther, at the doubling of the Point of a Rock, they plainly discover'd (kind Reader, do not take it amiss) Six huge Fulling-Mill Hammers, which interchangeably thumping several Pieces of Cloth, made the terrible Noise that caus'd all Don *Quixote's* Anxieties and *Sancho's* Tribulation that Night.

Don *Quixote* was struck dumb at this unexpected Sight, and was ready to drop from his Horse with Shame and Confusion. *Sancho* star'd upon him, and saw him down his Head, with a desponding dejected Countenance, like a Man quite dispirited with this cursed Disappointment. At the same Time he look'd upon *Sancho*, and seeing by his Eyes, and his Cheeks swell'd with Laughter, that he was ready to burst, he could not forbear laughing himself in spite of all his Vexation; so that *Sancho* seeing his Master begin, immediately gave a Loose to his Mirth, and broke out into such a Fit of Laughing, that he was forc'd to hold his Sides with both his Knuckles, for fear of bursting his aking Paunch. Four times he ceas'd, and four times renew'd his obstreperous Laughing; which Sauciness Don *Quixote* began to resent with great Indignation; and the more when *Sancho*, in a jeering Tone, presum'd to ridicule him with his own Words, repeating part of the vain Speech he made when first they heard the Noise; *Know, Sancho, I was born in this Iron Age to restore the Age of Gold. I am the Mart for*

whom Heaven has reserved the most dangerous and glorious Adventures, &c. Thus he went on, till his Master, dreadfully intrag'd at his Insolence, hit him two such Blows on the Shoulders with his Lance, that had they fallen upon his Head they had sav'd Don *Quixote* the trouble of paying him his Wages, whatever he must have done to his Heirs. Thereupon *Sancho*, finding his Jest turn'd to Earnest, begg'd Pardon with all Submission: Mercy, good your Worship, cry'd he, spare my Bones I beseech you! I meant no harm, I did but joke a little. And because You joke, I do not, cry'd Don *Quixote*. Come hither, good Mr Jester, you who pretend to rally, tell me, had this been a dangerous Adventure, as well as it proves only a false Alarm, have I not shewn Resolution enough to undertake and finish it? Am I, who am a Knight, bound to know the Meaning of every Mechanick Noise, and distinguish between Sound and Sound? Besides, it might happen, as really it is, that I had never seen a Fulling-Mill before, tho' thou, like a base Scoundrel as thou art, wert born and brought up among such mean Implements of Drudgery. But let the six Fulling-Hammers be transform'd into so many Giants, and then set them at me one by one, or all together; and if I do not lay 'em at my Feet with their Heels upwards, then I'll give thee Leave to exercise thy ill-bred Railery as much as thou pleasest.

Cervantes, Don Quixote, I, 20

- 38 The Keeper observing the Posture Don *Quixote* had put himself in, and that it was not possible for him to prevent letting out the Lions, without incurring the Resentment of the desperate Knight, set the Door of the foremast Cage wide open; where, as I have said, the Male Lion lay, who appeared of a monstrous Bigness, and of a hideous

frightful Aspect. The first thing he did was to roll and turn himself round in his Cage; in the next Place he stretch'd out one of his Paws, put forth his Claws, and rous'd himself. After that he gap'd and yawn'd for a good while, and shew'd his dreadful Fangs, and then thrust out half a Yard of Broad Tongue, and with it lick'd the Dust out of his Eyes and Face. Having done this, he thrust his Head quite out of the Cage, and star'd about with his Eyes that look'd like two live Coals of Fire; a Sight and Motion, enough to have struck Terror into Temerity itself. But Don *Quixote* only regarded it with Attention, wishing his grim Adversary would leap out of his Hold, and come within his reach, that he might exercise his Valour, and cut the Monster piece-meal. To his Height of Extravagance had his Folly transported him; but the generous Lion, more gentle than arrogant, taking no notice of his Vapouring and Bravadoes, after he had look'd about him a while, turn'd his Tail, and having shew'd Don *Quixote* his Posteriors, very contentedly lay down again in his Apartment. Don Quixote seeing this, commanded the Keeper to rouse him with his Pole, and force him out whether he would or no. Not I, indeed. Sir, answer'd the Keeper; I dare not do it for my Life; for if I provoke him, I'm sure to be the first he'll tear to Pieces. Let me advise you. Sir, to be satisfy'd with your Day's Work. 'Tis as much as the bravest He that wears a Head can pretend to do. Then pray go no farther, I beseech you: The Door stands open, the Lion is at his Choice, whether he will come out or no. You have waited for him, you see he does not care to look you in the Face, and since he did not come out at the first, I dare engage he will not stir out this Day. You have shewn enough the Greatness of your Courage. No man is obliged to do more than challenge his

Enemy, and wait for him in the Field. If he comes not, that's his own Fault, and the Scandal is his, as the Honour the Challenger's. 'Tis true, reply'd Don *Quixote*. Come, shut the Cage-Door, Honest Friend, and give me a Certificate under thy Hand in the amplest Form thou can'st devise, of what thou hast seen me perform; how thou did'st open the Cage for the Lion; how I expected his coming, and he did not come out. How, upon his not coming out then, I stay'd his own Time, and instead of meeting me, he turned Tail and lay down. I am oblig'd to do no more. So, Inchantments avant; and Heaven prosper Truth, Justice, and Knight-Errantry! Shut the Door, as I bid thee, while I make Signs to those that ran away from us, and get 'em to come back, that they may have an Account of this Exploit from thy own Mouth.

Cervantes, Don Quixote, II, 17

39 Every Knight has his particular Employment. Let the Courtier wait on the Ladies; let him with splendid Equipage adorn his Prince's Court, and with a magnificent Table support poor Gentlemen. Let him give Birth to Feasts and Tournaments, and shew his Grandeur, Liberality, and Munificence, and especially his Piety; in all these things he fulfils the Duties of his Station. But as for the Knight-Errant, let him search into all the Corners of the World, enter into the most intricate Labyrinths, and every Hour be ready to attempt Impossibility itself. Let him in desolate Wilds baffle the Rigor of the Weather, the scorching Heat of the Sun's fiercest Beams, and the Inclemency of Winds and Snow: Let Lions never fright him. Dragons daunt him, not evil Spirits deter him. To go in Quest of these, to meet, to dare, to conflict, and to overcome 'em all, is his principal and proper Office. Since

then my Stars have decreed me to be one of those Adventurous Knights, I think my self obliged to attempt every thing that seems to come within the Verge of my Profession. This, Sir, engag'd me to encounter those Lions just now, judging it to be my immediate Business, tho' I was sensible of the extreme Rashness of the Undertaking. For well I know, that Valour is a Virtue situate between the two vicious Extremes of Cowardice and Temerity. But certainly 'tis not so ill for a Valiant Man to rise to a Degree of Rashness, as 'tis to fall short and border upon Cowardice. For as 'tis easier for a Prodigal to become Liberal, than a Miser; so 'tis easier for the hardy and rash Person to be reduced to true Bravery, than for the Coward ever to rise to that Virtue: And therefore in thus attempting Adventures, believe me, Signor Don *Diego*, 'tis better to exceed the Bounds a little, and over-do, rather than underdo the thing; because it sounds better in People's Ears to hear it said, how that such a Knight is Rash and Hardy, than such a Knight is Dastardly and Timorous.

Cervantes, Don Quixote, II, 17

40 *Courage* (by which I mean the contempt of wounds and violent death) inclineth men to private revenges, and sometimes to endeavour the unsettling of the public peace: and *timorousness* many times disposeth to the desertion of the public defence, Both these, they say, cannot stand together in the same person.

Hobbes, Leviathan, IV, Review and Conclusion

41 *Satan*. What though the field be lost?
All is not lost; the unconquerable Will,

And study of revenge, immortal hate,
And courage never to submit or yield.

Milton, Paradise Lost, I, 105

42 *Raphael*. Servant of God, well done, well hast thou fought
The better fight, who single hast maintaind
Against revolted multitudes the Cause
Of Truth, in word mightier then they in Armes;
And for the testimonie of Truth hast born
Universal reproach, far worse to beare
Then violence.

Milton, Paradise Lost, VI, 29

43 *Raphael*. No thought of flight.
None of retreat, no unbecoming deed
That argu'd fear; each on himself reli'd,
As onely in his arm the moment lay
Of victoric.

Milton, Paradise Lost, VI, 236

44 Flight at the proper time, just as well as fighting, is to be reckoned, therefore, as showing strength of mind in a man who is free; that is to say, a free man chooses flight by the same strength or presence of mind as that by which he chooses battle.

Spinoza, Ethics, IV, Prop, 69, Corol.

45 None but the brave deserves the fair.

Alexander's Feast, 15

46 Fortitude is the guard and support of the other virtues;
and without courage a man will scarce keep steady to his

duty, and fill up the character of a truly worthy man.

Locke, Some Thoughts Concerning Education, 115

47 'Tis unwise to punish Cowards with Ignominy; for if they had regarded that, they would not have been Cowards: Death is their proper Punishment, because they fear it most.

Swift, Thoughts on Various Subjects

48 We have already observed that great heat enervates the strength and courage of men, and that in cold climates they have a certain vigour of body and mind, which renders them patient and intrepid, and qualifies them for arduous enterprises. This remark holds good, not only between different nations, but even in the different parts of the same country. In the north of China people are more courageous than those in the south; and those in the south of Korea have less bravery than those in the north.

We ought not, then, to be astonished that the effeminacy of the people in hot climates has almost always rendered them slaves; and that the bravery of those in cold climates has enabled them to maintain their liberties. This is an effect which springs from a natural cause.

This has also been found true in America; the despotic empires of Mexico and Peru were near the Line, and almost all the little free nations were, and are still, near the Poles.

Montesquieu, Spirit of Laws, XVII, 2

49 In a military nation, cowardice supposes other vices; it is an argument of a person's having deviated from the principles of his education, of his being insensible of honour, and of having refused to be directed by those maxims which govern other men; it shows that he neither fears their contempt, nor sets any value upon their esteem. Men of any tolerable extraction seldom want either the dexterity requisite to co-operate with strength, or the strength necessary to concur with courage; for as they set a value upon honour, they are practised in matters without which this honour cannot be obtained. Beside, in a military nation, where strength, courage and prowess are esteemed, crimes really odious are those which arise from fraud, artifice, and cunning, that is, from cowardice.

Montesquieu, Spirit of Laws, XXVIII, 17

50 *Johnson*. Courage is a quality so necessary for maintaining virtue, that it is always respected, even when it is associated with vice.

Boswell, Life of Johnson (June 11, 1784)

51 A coward, a man incapable either of defending or of revenging himself, evidently wants one of the most essential parts of the character of a man. He is as much mutilated and deformed in his mind as another is in his body, who is either deprived of some of its most essential members, or has lost the use of them. He is evidently the more wretched and miserable of the two; because happiness and misery, which reside altogether in the mind, must necessarily depend more upon the healthful or unhealthful, the mutilated or entire state of the mind,

than upon that of the body. Even though the martial spirit of the people were of no use towards the defence of the society, yet to prevent that sort of mental mutilation, deformity, and wretchedness, which cowardice necessarily involves in it, from spreading themselves through the great body of the people, would still deserve the most serious attention of government, in the same manner as it would deserve its most serious attention to prevent a leprosy or any other loathsome and offensive disease, though neither mortal nor dangerous, from spreading itself among them, though perhaps no other public good might result from such attention besides the prevention of so great a public evil.

Adam Smith, Wealth of Nations, V, 1

- 52 Female courage, however it may be raised by fanaticism, or confirmed by habit, can be only a faint and imperfect imitation of the manly valour that distinguishes the age or country in which it may be found.

Gibbon, Decline and Fall of the Roman Empire, IX

- 53 Experience has proved the distinction of active and passive courage; the fanatic who endures without a groan the torture of the rack or the stake, would tremble and fly before the face of an armed enemy.

Gibbon, Decline and Fall of the Roman Empire, XLVII

- 54 The weak in courage is strong in cunning.

Blake, Marriage of Heaven and Hell, 9

- 55 The intrinsic worth of courage as a disposition of mind is to be found in the genuine, absolute, final end, the

sovereignty of the state. The work of courage is to actualize this final end, and the means to this end is the sacrifice of personal actuality. This form of experience thus contains the harshness of extreme contradictions: a self-sacrifice which yet is the real existence of one's freedom; the maximum self-subsistence of individuality, yet only as a cog playing its part in the mechanism of an external organization; absolute obedience, renunciation of personal opinions and reasonings, in fact complete *absence* of mind, coupled with the most intense and comprehensive *presence* of mind and decision in the moment of acting; the most hostile and so most personal action against individuals, coupled with an attitude of complete indifference or even liking towards them as individuals.

Hegel, Philosophy of Right, 328

56 To risk one's life is better than merely fearing death, but is still purely negative and so indeterminate and without value in itself. It is the positive aspect, the end and content, which first gives significance to this spiritedness. Robbers and murderers bent on crime as their end, adventurers pursuing ends planned to suit their own whims, etc., these too have spirit enough to risk their lives.

The principle of the modern world—thought and the universal—has given courage a higher form, because its display now seems to be more mechanical, the act not of this particular person, but of a member of a whole. Moreover, it seems to be turned not against single persons, but against a hostile group, and hence personal bravery appears impersonal. It is for this reason that thought has invented the gun, and the invention of this

weapon, which has changed the purely personal form of bravery into a more abstract one, is no accident.

Hegel, Philosophy of Right, 328

57 Personal courage is really a very subordinate virtue,—merely the distinguishing mark of a subaltern, a virtue, indeed, in which we are surpassed by the lower animals; or else you would not hear people say, as *brave as a lion*.

Schopenhauer, Position, IV

58 An utterly fearless man is a far more dangerous comrade than a coward.

Melville, Moby Dick, XXVI

59 Few men's courage is proof against protracted meditation unrelieved by action.

Melville, Moby Dick, XLVI

60 I am less affected by their heroism who stood up for half an hour in the front line at Buena Vista, than by the steady and cheerful valor of the men who inhabit the snowplow for their winter quarters; who have not merely the three-o'clock-in-the-morning courage, which Bonaparte thought was the rarest, but whose courage does not go to rest so early, who go to sleep only when the storm sleeps or the sinews of their iron steed are frozen.

Thoreau, Walden: Sounds

61 It is... impossible to decide in many cases whether certain social instincts have been acquired through natural selection, or are the indirect result of other instincts and

faculties, such as sympathy, reason, experience, and a tendency to imitation; or again, whether they are simply the result of long-continued habit. So remarkable an instinct as the placing sentinels to warn the community of danger, can hardly have been the indirect result of any of these faculties; it must, therefore, have been directly acquired. On the other hand, the habit followed by the males of some social animals of defending the community, and of attacking their enemies or their prey in concert, may perhaps have originated from mutual sympathy; but courage, and in most cases strength, must have been previously acquired, probably through natural selection,

Darwin, Descent of Man, I, 4

62 *Dolokhov*. If you are going to fight a duel, and you make a will and write affectionate letters to your parents, and if you think you may be killed, you are a fool and are lost for certain. But go with the firm intention of killing your man as quickly and surely as possible, and then all will be right.... Everyone fears a bear... but when you see one your fear's all gone, and your only thought is not to let him get away!

Tolstoy, War and Peace, IV, 4

63 At the approach of danger there are always two voices that speak with equal power in the human soul: one very reasonably tells a man to consider the nature of the danger and the means of escaping it; the other, still more reasonably, says that it is too depressing and painful to think of the danger, since it is not in man's power to foresee everything and avert the general course of

events, and it is therefore better to disregard what is painful till it comes, and to think about what is pleasant.

Tolstoy, War and Peace, X, 17

64 Courage is resistance to fear, mastery of fear—not absence of fear. Except a creature be part coward it is not a compliment to say it is brave; it is merely a loose misapplication of the word. Consider the flea!—incomparably the bravest of all the creatures of God, if ignorance of fear were courage. Whether you are asleep or awake he will attack you, caring nothing for the fact that in bulk and strength you are to him as are the massed armies of the earth to a sucking child; he lives both day and night and all days and nights in the very lap of peril and the immediate presence of death, and yet is no more afraid than is the man who walks the streets of a city that was threatened by an earthquake ten centuries before. When we speak of Clive, Nelson, and Putnam as men who ‘didn’t know what fear was’, we ought always to add the flea—and put him at the head of the procession.

Mark Twain, Pudd'nhead Wilson's Calendar, XII

65 There are several good protections against temptations, but the surest is cowardice.

Mark Twain, Pudd'nhead Wilson's New Calendar, XXXVI

66 Now all the truth is out,
Be secret and take defeat
From any brazen throat,
For how can you compete,
Being honor bred, with one

Who, were it proved he lies
Were neither shamed in his own
Nor in his neighbors' eyes?
Bred to a harder thing
Than Triumph, turn away
And like a laughing string
Whereon mad fingers play
Amid a place of stone,
Be secret and exult,
Because of all things known
That is most difficult.

Yeats, To a Friend Whose Work Has Come to Nothing

67 If people throw up to us our works of fiction in which we write about people who are soft, weak, cowardly, and sometimes even downright bad, it's not because these people are soft, weak, cowardly, or bad; because if we were to say, as Zola did, that they are that way because of heredity, the workings of environment, society, because of biological or psychological determinism, people would be reassured. They would say, "Well, that's what we're like, no one can do anything about it." But when the existentialist writes about a coward, he says that this coward is responsible for his cowardice. He's not like that because he has a cowardly heart or lung or brain; he's not like that on account of his physiological makeup; but he's like that because he has made himself a coward by his acts. There's no such thing as a cowardly constitution; there are nervous constitutions; there is poor blood, as the common people say, or strong constitutions. But the man whose blood is poor is not a coward on that account, for what makes cowardice is the act of renouncing or yielding. A constitution is not an act;

the coward is defined on the basis of the acts he performs. People feel, in a vague sort of way, that this coward we're talking about is guilty of being a coward, and the thought frightens them. What people would like is that a coward or a hero be born that way.

Sartre, Existentialism

9.12 Temperance and Intemperance

The quality of moderation that is sometimes identified with virtue itself is more often identified with one particular virtue or one aspect of virtue—temperance. When the latter is the case, the moderation involved represents a control over the desires or appetites. The maxim of temperance "Nothing overmuch" calls not for total abstinence, but rather an avoidance of excess.

In the case of courage, as the reader will find in Section 9.11, the obvious examples of fortitude exhibit the overcoming of excessive fear of physical pain or injury. Here the obvious examples of temperance exhibit the overcoming of cravings for bodily pleasures, especially the pleasures of food, drink, and sex. The intemperate characters portrayed by the poets or reported by the biographers and historians are epitomes of gluttony, inebriation, and lust. The reader will also find in Section 9.11 on Courage and Cowardice that the poets and historians tend to give us portrayals of courage rather than cowardice, for brave men are the heroes of history and fiction. Here, however, the poets and historians more frequently dwell on the exploits and depravities of the intemperate; the person of temperate

character or of moderate desires seldom attracts attention or dominates the scene.

Temperance and intemperance are seldom if ever attributed to a single act. The temperate person is one who is disposed by habit to restrain the appetites and keep them within the bounds of reason in order to prevent them from distracting from the pursuit of objectives worthier than the gratification of desires. The intemperate person is one who habitually indulges himself without rein, preferring the pleasures of the moment to the achievement of goals that require the exercise of restraint here and now. Because the intemperate person manifests great self-indulgence, this person is sometimes described as being childish in character, on the supposition that an excess that is natural in the very young should be corrected by the development of temperance with maturity.

Since temperance and intemperance are for the most part concerned with the moderation or indulgence of desires and with a reasonable or prudent enjoyment of pleasures, the reader is referred, for relevant materials, to Section on Desire, Section 4.7 on Pleasure and Pain, and Section 9.13 on Prudence.

■ ■ ■

1 Neither repletion, nor fasting, nor anything else, is good when more than natural.

Hippocrates, Aphorisms, 11, 4

2 *Socrates*. Every man is his own ruler; but perhaps you think that there is no necessity for him to rule himself; he

is only required to rule others?

Callicles. What do you mean by his "ruling over himself?"

Soc. A simple thing enough; just what is commonly said, that a man should be temperate and master of himself, and ruler of his own pleasures and passions.

Cal. What innocence! you mean those fools— the temperate?

Soc. Certainly—any one may know that to be my meaning.

Cal. Quite so, Socrates; and they are really fools, for how can a man be happy who is the servant of anything? On the contrary, I plainly assert, that he who would truly live ought to allow his desires to wax to the uttermost, and not to chastise them; but when they have grown to their greatest he should have courage and intelligence to minister to them and to satisfy all his longings. And this I affirm to be natural justice and nobility. To this however the many cannot attain; and they blame the strong man because they are ashamed of their own weakness, which they desire to conceal, and hence they say that intemperance is base. As I have remarked already, they enslave the nobler natures, and being unable to satisfy their pleasures, they praise temperance and justice out of their own cowardice. For if a man had been originally the son of a king, or had a nature capable of acquiring an empire or a tyranny or sovereignty, what could be more truly base or evil than temperance—to a man like him, I say, who might freely be enjoying every good, and has no one to stand in his way, and yet has admitted custom and reason and the opinion of other men to be lords over him?—must not he be in a miserable plight whom the reputation of justice and temperance hinders from giving

more to his friends than to his enemies, even though he be a ruler in his city? Nay, Socrates, for you profess to be a votary of the truth, and the truth is this: that luxury and intemperance and licence, if they be provided with means, are virtue and happiness— all the rest is a mere bauble, agreements contrary to nature, foolish talk of men, nothing worth.

Soc. There is a noble freedom, Callicles, in your way of approaching the argument; for what you say is what the rest of the world think, but do not like to say. And I must beg of you to persevere, that the true rule of human life may become manifest. Tell me, then:—you say, do you not, that in the rightly-developed man the passions ought not to be controlled, but that we should let them grow to the utmost and somehow or other satisfy them, and that this is virtue?

Cal. Yes; I do.

Soc. Then those who want nothing are not truly said to be happy?

Cal. No indeed, for then stones and dead men would be the happiest of all.

Soc. But surely life according to your view is an awful thing. ... I would fain prove to you that you should change your mind, and, instead of the intemperate and insatiate life, choose that which is orderly and sufficient and has a due provision for daily needs. Do I make any impression on you, and are you coming over to the opinion that the orderly are happier than the intemperate? Or do I fail to persuade you, and, however many tales I rehearse to you, do you continue of the same opinion still?

Cal. The latter, Socrates, is more like the truth.

Plato, Gorgias, 491B

3 *Socrates*. Listen to me, then, while I recapitulate the argument:—Is the pleasant the same as the good? Not the same. Callicles and I are agreed about that. And is the pleasant to be pursued for the sake of the good? or the good for the sake of the pleasant? The pleasant is to be pursued for the sake of the good. And that is pleasant at the presence of which we are pleased, and that is good at the presence of which we are good? To be sure. And we are good, and all good things whatever are good when some virtue is present in us or them? That, Callicles, is my conviction. But the virtue of each thing, whether body or soul, instrument or creature, when given to them in the best way comes to them not by chance but as the result of the order and truth and art which are imparted to them: Am I not right? I maintain that I am. And is not the virtue of each thing dependent on order or arrangement? Yes, I say. And that which makes a thing good is the proper order inhering in each thing? Such is my view. And is not the soul which has an order of her own better than that which has no order? Certainly. And the soul which has order is orderly? Of course. And that which is orderly is temperate? Assuredly. And the temperate soul is good? No other answer can I give, Callicles dear; have you any?

Callicles. Go on, my good fellow.

Soc. Then I shall proceed to add, that if the temperate soul is the good soul, the soul which is in the opposite condition, that is, the foolish and intemperate, is the bad soul. Very true.

And will not the temperate man do what is proper, both in relation to the gods and to men;— for he would not be temperate if he did not? Certainly he will do what is proper. In his relation to other men he will do what is just; and in his relation to the gods he will do what is

holy; and he who does what is just and holy must be just and holy? Very true. And must he not be courageous? for the duty of a temperate man is not to follow or to avoid what he ought not, but what he ought, whether things or men or pleasures or pains, and patiently to endure when he ought; and therefore, Callicles, the temperate man, being, as we have described, also just and courageous and holy, cannot be other than a perfectly good man, nor can the good man do otherwise than well and perfectly whatever he does; and he who does well must of necessity be happy and blessed, and the evil man who does evil, miserable: now this latter is he whom you were applauding—the intemperate who is the opposite of the temperate. Such is my position, and these things I affirm to be true. And if they are true, then I further affirm that he who desires to be happy must pursue and practise temperance and run away from intemperance as fast as his legs will carry him: he had better order his life so as not to need punishment; but if either he or any of his friends, whether private individual or city, are in need of punishment, then justice must be done and he must suffer punishment, if he would be happy. This appears to me to be the aim which a man ought to have, and towards which he ought to direct all the energies both of himself and of the state, acting so that he may have temperance and justice present with him and be happy, not suffering his lusts to be unrestrained, and in the never-ending desire to satisfy them leading a robber's life. Such a one is the friend neither of God nor man, for he is incapable of communion, and he who is incapable of communion is also incapable of friendship. And philosophers tell us, Callicles, that communion and friendship and orderliness and temperance and justice

bind together heaven and earth and gods and men, and that this universe is therefore called Cosmos or order, not disorder or misrule, my friend.

Plato, Gorgias, 506B

- 4 *Protarchus*. The temperate are restrained by the wise man's aphorism of "Never too much," which is their rule, but excess of pleasure possessing the minds of fools and wantons becomes madness and makes them shout with delight.

Plato, Philebus, 45B

- 5 *Athenian Stranger*. He who knows the temperate life will describe it as in all things gentle, having gentle pains and gentle pleasures, and placid desires and loves not insane; whereas the intemperate life is impetuous in all things, and has violent pains and pleasures, and vehement and stinging desires, and loves utterly insane; and in the temperate life the pleasures exceed the pains, but in the intemperate life the pains exceed the pleasures in greatness and number and frequency. Hence one of the two lives is naturally and necessarily more pleasant and the other more painful, and he who would live pleasantly cannot possibly choose to live intemperately. And if this is true, the inference clearly is that no man is voluntarily intemperate; but that the whole multitude of men lack temperance in their lives, either from ignorance, or from want of self-control, or both.

Plato, Laws, V, 733B

6 I came to Italy and Sicily on my first visit. My first impressions on arrival were those of strong disapproval—disapproval of the kind of life which was there called the life of happiness, stuffed full as it was with the banquets of the Italian Greeks and Syracusans, who ate to repletion twice every day, and were never without a partner for the night; and disapproval of the habits which this manner of life produces. For with these habits formed early in life, no man under heaven could possibly attain to wisdom—human nature is not capable of such an extraordinary combination. Temperance also is out of the question for such a man; and the same applies to virtue generally. No city could remain in a state of tranquillity under any laws whatsoever, when men think it right to squander all their property in extravagant excesses, and consider it a duty to be idle in everything else except eating and drinking and the laborious prosecution of debauchery.

Plato, Seventh Letter

7 Temperance and self-indulgence... are concerned with the kind of pleasures that the other animals share in, which therefore appear slavish and brutish; these are touch and taste. But even of taste they appear to make little or no use; for the business of taste is the discriminating of flavours, which is done by winetasters and people who season dishes; but they hardly take pleasure in making these discriminations, or at least self-indulgent people do not, but in the actual enjoyment, which in all cases comes through touch, both in the case of food and in that of drink and in that of sexual intercourse. This is why a certain gourmand prayed that his throat might become longer than a crane's, implying that it was the contact that he took pleasure in. Thus the sense with which self-

indulgence is connected is the most widely shared of the senses; and self-indulgence would seem to be justly a matter of reproach, because it attaches to us not as men but as animals. To delight in such things, then, and to love them above all others, is brutish.

Aristotle, 1118a24

- 8 The temperate man , . . neither enjoys the things that the self-indulgent man enjoys most—but rather dislikes them—nor in general the things that he should not, nor anything of this sort to excess, nor does he feel pain or craving when they are absent, or does so only to a moderate degree, and not more than he should, nor when he should not, and so on; but the things that, being pleasant, make for health or for good condition, he will desire moderately and as he should, and also other pleasant things if they are not hindrances to these ends, or contrary to what is noble, or beyond his means. For he who neglects these conditions loves such pleasures more than they are worth, but the temperate man is not that sort of person, but the sort of person that the right rule prescribes.

Aristotle, Ethics, 1119a11

- 9 All our disorders result from intemperance. It is the revolt from all common sense and right reason. It is so completely foreign to reason that such lust of the soul cannot be curbed. Just as temperance allays the cravings and makes them obey reason, thus keeping the mind well balanced; so the enemy, intemperance, utterly disrupts the normal condition of the mind. Hence one is beset with anxiety, fears, and all other disorders.

Cicero, Disputations, IV, 9

- 10 The appetites must be made subject to the control of reason, and not allowed to run ahead of it or to lag behind because of indolence or listlessness. Everyone should enjoy a quiet soul and be free from every type of passion. Then will strength of character and self-control shine through in all their brilliance. But when appetites are unleashed to run wild, either in desire or aversion, and are not reined in by reason, they exceed all restraint and measure. They throw off obedience and leave it behind. They refuse to obey the rule of reason to which they ought to be subject by the law of nature. Both the mind and the body can be well put in disarray by the appetites.

Cicero, De Officiis, I, 29

- 11 There is a mean in things; finally, there are certain boundaries, on either side of which moral rectitude cannot exist.

Horace, Satires, I, 1

- 12 Safer thou'lt sail life's voyage, if thou steer
Neither right out to sea, nor yet, when rise
The threat'ning tempests, hug the shore too near.
Unwisely wise.

What man soe'er the golden mean doth choose.
Prudent will shun the hovel's foul decay;
But with like sense, a palace will refuse
And vain display.

Horace, Odes, II, 10

- 13 Drunkenness inflames and lays bare every vice, removing the reserve that acts as a check on impulses to wrong behaviour. For people abstain from forbidden things far more often through feelings of inhibition when it comes to doing what is wrong than through any will to good.

Seneca, Letters to Lucilius, 83

- 14 To want to know more than is sufficient is a form of intemperance.

Seneca, Letters to Lucilius, 88

- 15 In the constitution of the rational animal I see no virtue which is opposed to justice; but I see a virtue which is opposed to love of pleasure, and that is temperance.

Marcus Aurelius, Meditations, VIII, 39

- 16 I strive daily against greediness in eating and drinking. For this is not the kind of thing I can resolve once and for all to cut off and touch no more, as I could with fornication. For the reins of the throat are to be held somewhere between too lightly and too tightly.

Augustine, Confessions, X, 31

- 17 Nature inclines everything to whatever is becoming to it. Wherefore man naturally desires pleasures that are becoming to him. Since, however, man as such is a rational being, it follows that those pleasures are becoming to man which are in accordance with reason. From such pleasures temperance does not withdraw him, but from those which are contrary to reason. Wherefore it is clear that temperance is not contrary to the inclination of human nature, but is in accord with it.

Aquinas, Summa Theologica, II-II, 141, 1

18 Temperance is about desires and pleasures in the same way as fortitude is about fear and daring. Now fortitude is about fear and daring with respect to the greatest evils whereby nature itself is dissolved; and such are dangers of death. Wherefore in like manner temperance must needs be about desires for the greatest pleasures. And since pleasure results from a natural operation, it is so much the greater according as it results from a more natural operation. Now to animals the most natural operations are those which preserve the nature of the individual by means of meat and drink, and the nature of the species by the union of the sexes. Hence temperance is properly about pleasures of meat and drink and sexual pleasures. Now these pleasures result from the sense of touch. Wherefore it follows that temperance is about pleasures of touch.

Aquinas, Summa Theologica, II-II, 141, 4

19 Sins of intemperance are said to be childish. For the sin of intemperance is one of unchecked concupiscence, which is likened to a child in three ways. First, as regards that which they both desire, for like a child concupiscence desires something disgraceful. This is because in human affairs a thing is beautiful according as it harmonizes with reason.... Now a child does not attend to the order of reason; and in like manner *concupiscence does not listen to reason*.... Secondly, they are alike as to the result. For a child, if left to his own will, becomes more self-willed: hence it is written; *A horse not broken becometh stubborn, and a child left to himself will become headstrong*. So, too, concupiscence, if indulged,

gathers strength: wherefore Augustine says: *Lust served became a custom, and custom not resisted became necessity*. Thirdly, as to the remedy which is applied to both. For a child is corrected by being restrained; hence it is written: *Withhold not correction from a child. . . Thou shall beat him with a rod, and deliver his soul from Hell*. In like manner by resisting concupiscence we moderate it according to the demands of virtue. Augustine indicates this when he says that if the mind be lifted up to spiritual things, and remain fixed *thereon, the impulse of custom, i.e, carnal concupiscence, is broken, and being suppressed is gradually weakened: for it was stronger when we followed it, and though not wholly destroyed, it is certainly less strong when we curb it*. Hence the Philosopher [Aristotle] says that *as a child ought to live according to the direction of his tutor so ought the concupiscible to accord with reason*.

Aquinas, Summa Theologica, II-II, 142, 2

20 I discern new torments, and new tormented souls, whithersoever I move, and turn, and gaze.

I am in the Third Circle, that of the eternal, accursed, cold, and heavy rain; its [law] and quality is never new.

Large hail, and turbid water, and snow, [pour down] through the darksome air; the ground, on which it falls, emits a putrid smell.

Cerberus, a monster fierce and strange, with three throats, barks dog-like over those that are immersed in it.

His eyes are red, his beard [greasy] and black, his belly wide, and clawed his hands; he clutches the spirits, flays, and piecemeal rends them.

The rain makes them howl like dogs; with one side they screen the other; they often turn themselves, the

impious wretches.

When Cerberus, the great Worm, perceived us, he opened his mouths and shewed his tusks: no limb of him kept still.

My Guide, spreading his palms, took up earth; and, with full fists, cast it into his ravening gullets.

As the dog, that barking craves, and grows quiet when he bites his food, for he strains and battles only to devour it:

so did those squalid visages of Cerberus the Demon, who thunders on the spirits so, that they would fain be deaf.

We passed over the shadows whom the heavy rain subdues; and placed our soles upon their emptiness, which seems a body.

They all were lying on the ground save one, who sat up forthwith when he saw us pass before him.

"O thou, who through this Hell art led," he said to me, "recognise me if thou mayest; thou wast made before I was unmade."

And I to him: "The anguish which thou hast, perhaps withdraws thee from my memory, so that it seems not as if I ever saw thee.

But tell me who art thou, that art put in such a doleful place, and in such punishment; that, though other may be greater, none is so displeasing."

And he to me: "Thy city, which is so full of envy that the sack already overflows, contained me in the clear life.

You, citizens, called me Ciacco: for the baneful crime of Gluttony, as thou seest, I languish in the rain;

and I, wretched spirit, am not alone, since all these for like crime are in like punishment"; and more he said not.

Dante, Inferno, VI, 4

21 O gluttony, full of all wickedness,
O first cause of confusion to us all,
Beginning of damnation and our fall,
Till Christ redeemed us with His blood again!
Behold how dearly, to be brief and plain.
Was purchased this accursed villainy;
Corrupt v/as all this world with gluttony!
Adam our father, and his wife also,
From Paradise to labour and to woe
Were driven for that vice, no doubt; indeed
The while that Adam fasted, as I read,
He was in Paradise; but then when he
Ate of the fruit forbidden of the tree,
Anon he was cast out to woe and pain
O gluttony, of you we may complain!

Chaucer, Canterbury Tales: Pardoner's Tale

22 Drink until misfortune overtakes you! People like you
won't reach old age, for the best part of mankind perishes
from too much drink.

Luther, Table Talk, 3468

23 *Grangousier and his neighbors*. Which was first, thirst or
drinking? Thirst, for who in the time of innocence would
have drunk without being athirst? Nay, sir, it was
drinking; for *privatio praesupponit habitum*. I am learned,
you see: *Faecundi calices quem non fecere disertum?* We
poor innocents drink but too much without thirst. Not I
truly, who am a sinner, for I never drink without thirst,
either present or future. To prevent it, as you know, I
drink for the thirst to come. I drink eternally. This is to me

an eternity of drinking, and drinking of eternity. Let us sing, let us drink, and tune up our roundlays. Where is my funnel? What, it seems I do not drink but by an attorney? Do you wet yourselves to dry, or do you dry to wet you? Pish, I understand not the rhetoric (theoric I should say), but I help myself somewhat by the practice. Beast, enough! I sup, I wet, I humect, I moisten my gullet, I drink, and all for fear of dying. Drink always and you shall never die. If I drink not, I am a ground dry, gravelled and spent. I am stark dead without drink, and my soul ready to fly into some marsh amongst frogs: the soul never dwells in a dry place, drought kills it. O you butlers, creators of new forms, make me of no drinker a drinker, perenity and everlastingness of sprinkling, and bedewing me through these my parched and sinewy bowels. He drinks in vain, that feels not the pleasure of it.

Rabelais, Gargantua and Pantagruel, I, 5

- 24 *Grangousier*. I have a remedy against thirst, quite contrary to that which is good against the biting of a mad dog. Keep running after a dog, and he will never bite you; drink always before the thirst, and it will never come upon you.

Rabelais, Gargantua and Pantagruel, I, 5

- 25 Is it still temperance and frugality to avoid expenses and pleasures whose use and knowledge are imperceptible to us? An easy way to reform and a cheap one!

Montaigne, Essays, I, 3, Our Feelings Reach Out

- 26 Virtue's tool is moderation, not strength.

Montaigne, Essays, I, 26, Education of Children

27 Enough for the sage to curb and moderate his inclinations; for to do away with them is not in him,

Montaigne, Essays, II, 2, Of Drunkenness

28 It is perhaps easier to do without the whole sex than to behave rightly in every respect in association with our wives; and a man may live more carefree in poverty than in justly dispensed abundance. Enjoyment conducted according to reason is more arduous than abstinence. Moderation is a virtue that gives more trouble than suffering does.

Montaigne, Essays, II, 33, The Story of Spurina

29 *Salisbury*. To guard a title that was rich before,
To gild refined gold, to paint the lily.
To throw a perfume on the violet.
To smooth the ice, or add another hue
Unto the rainbow, or with taper-light

To seek the beauteous eye of heaven to garnish.
Is wasteful and ridiculous excess.

Shakespeare, King John, IV, ii, 10

30 *Nerissa*. They are as sick that surfeit with too much as they that starve with nothing. It is no mean happiness therefore, to be seated in the mean: superfluity comes sooner by white hairs, but competency lives longer.

Shakespeare, Merchant of Venice, I, ii, 5

31 *Falstaff* Now, Hal, what time of day is it, lad?

Prince of Wales. Thou art so fat-witted, with drinking of old sack and unbuttoning thee after supper and sleeping

upon benches after noon, that thou hast forgotten to demand that truly which thou wouldst truly know. What a devil hast thou to do with the time of the day? Unless hours were cups of sack and minutes capons and clocks the tongues of bawds and dials the signs of leaping-houses and the blessed sun himself a fair hot wench in flame-coloured taffeta, I see no reason why thou shouldst be so superfluous to demand the time of the day.

Shakespeare, I Henry IV, I, ii, 1

32 *Worcester*. Hear you, cousin; a word.

Hotspur. All studies here I solemnly defy,
Save how to gall and pinch this Bolingbroke:
And that same sword-and-buckler Prince of Wales,
But that I think his father loves him not
And would be glad he met with some mischance,
I would have him poison'd with a pot of ale.

Wor. Farewell, kinsman: I'll talk to you When you are better temper'd to attend.

Northumberland. Why, what a wasp-stung and impatient fool
Art thou to break into this woman's mood,
Tying thine ear to no tongue but thine own!

Hot. Why, look you, I am whipp'd and scourged with rods,
Nettled and stung with pismires, when I hear
Of this vile politician, Bolingbroke.
In Richard's time—what do you call the place?—
A plague upon it, it is in Gloucestershire;
'Twas where the madcap duke his uncle kept,
His uncle York; where I first bow'd my knee
Unto this king of smiles, this Bolingbroke—

'Sblood!—

When you and he came back from Ravenspurgh.

North. At Berkley castle.

Hot. You say true:

Why, what a candy deal of courtesy

This fawning greyhound then did proffer me!

Look, "When his infant fortune came to age,"

And "gentle Harry Percy," and "kind cousin";

O, the devil take such cozeners! God forgive me!

Good uncle, tell your tale; I have done.

Wor. Nay, if you have not, to it again;

We will stay your leisure.

Hot. I have done, i' faith.

Shakespeare, I Henry IV, I, iii, 227

33 *Rosalind.* Why then, can one desire too much of a good thing?

Shakespeare, As You Like It, IV, i, 123

34 *Lucio.* Why, how now, Claudio! whence comes this restraint?

Claudio. From too much liberty, my Lucio, liberty.

As surfeit is the father of much fast,

So every scope by the immoderate use

Turns to restraint. Our natures do pursue.

Like rats that ravin down their proper bane,

A thirsty evil; and when we drink we die.

Shakespeare, Measure for Measure, I, ii, 128

35 *Cassio.* I remember a mass of things, but nothing distinctly; a quarrel, but nothing wherefore. O God, that men should put an enemy in their mouths to steal away

their brains! that we should, with joy, pleasance, revel,
and applause, transform ourselves into beasts!

Shakespeare, Othello, II, iii, 289

36 *Iago*. Come, come, good wine is a good familiar creature,
if it be well used; exclaim no more against it.

Shakespeare, Othello, II, iii, 312

37 *Porter*. Drink, sir, is a great provoker of three things.

Macduff. What three things does drink especially
provoke?

Port. Marry, sir, nose-painting, sleep, and urine.
Lechery, sir, it provokes, and unprovokes; it provokes the
desire but it takes away the performance; therefore,
much drink may be said to be an equivocator with
lechery'; it makes him, and it mars him; it sets him on,
and it takes him off; it persuades him, and disheartens
him; makes him stand to, and not stand to; in conclusion,
equivocates him in a sleep, and, giving him the lie,
leaves him.

Shakespeare, Macbeth, II, iii, 29

38 *Macduff*. Boundless intemperance
In nature is a tyranny; it hath been
The untimely emptying of the happy throne
And fall of many kings.

Shakespeare, Macbeth, IV, iii, 67

39 There is, said *Michael*, if thou well observe
The rule of not too much, by temperance taught
In what thou eatst and drinkst, seeking from thence
Due nourishment, not gluttonous delight.

Milton, Paradise Lost, XI, 527

40 Blessedness is not the reward of \nrtue, but is virtue itself; nor do we delight in blessedness because we restrain our lusts; but, on the contrary, because we delight in it, therefore are we able to restrain them.

Spinoza, Ethics, V, Prop. 42

41 To say truth, nothing is more erroneous than the common observation, that men who are ill-natured and quarrelsome when they are drunk, are very worthy persons when they are sober: for drink, in reality, doth not reverse nature, or create passions in men which did not exist in them before. It takes away the guard of reason, and consequently forces us to produce those symptoms, which many, when sober, have art enough to conceal. It heightens and inflames our passions (generally indeed that passion which is uppermost in our mind), so that the angry temper, the amorous, the generous, the good-humoured, the avaricious, and all other dispositions of men, are in their cups heightened and exposed.

Fielding, Tom Jones, V, 9

42 *Johnson*. To temperance, every' day is bright; and every' hour is propitious to diligence.

Boswell, Life of Johnson (1758)

43 Moderation in the affections and passions, self-control, and calm deliberation are not only good in many respects, but even seem to constitute pan of the intrinsic worth of the person; but they are far from deserving to be called good without qualification, although they have

been so unconditionally praised by the ancients. For without the principles of a good will, they may become extremely bad, and the coolness of a villain not only makes him far more dangerous, but also directly makes him more abominable in our eyes than he would have been without it.

*Kant, Fundamental Principles of the Metaphysic of
Morals, I*

44 The road of excess leads to the palace of wisdom.

Blake, Marriage of Heaven and Hell, 7

45 *Faust*. Fear not! This league with you I shall not break!

The aim and goal of all my energy
Is to fulfil the promise I now make,
I've puffed myself too high, I see;
Only within your ranks do I deserve to be.
The Mighty Spirit spurned me with a scoff.
And Nature turns herself away from me.
The thread of thought is broken off,
To me all learning's long been nauseous.
In depths of sensuality
Let us our glowing passions still!
In magic's veils impervious
Prepared at once be every marvel's thrill!
Come, let us plunge into Time's rushing dance,
Into the roll of Circumstance!
There may then pain and joyance,
Successes and annoyance,
Alternately follow as they can,
Only restlessly active is a man!

Goethe, Faust, 1, 1741

46 Every excess causes a defect; every defect an excess. Every sweet hath its sour; every evil its good. Every faculty which is a receiver of pleasure has an equal penalty put on its abuse. It is to answer for its moderation with its life.

Emerson, Compensation

47 He who distinguishes the true savor of his food can never be a glutton; he who does not cannot be otherwise. A puritan may go to his brown-bread crust with as gross an appetite as ever an alderman to his turtle.

Thoreau, Walden: Higher Laws

48 All sensuality is one, though it takes many forms; all purity is one. It is the same whether a man eat, or drink, or cohabit, or sleep sensually. They are but one appetite, and we only need to see a person do any one of these things to know how great a sensualist he is. The impure can neither stand nor sit with purity. When the reptile is attacked at one mouth of his burrow, he shows himself at another. If you would be chaste, you must be temperate. What is chastity? How shall a man know if he is chaste? He shall not know it. We have heard of this virtue, but we know not what it is. We speak conformably to the rumor which we have heard. From exertion come wisdom and purity; from sloth ignorance and sensuality. In the student sensuality is a sluggish habit of mind. An unclean person is universally a slothful one, one who sits by a stove, whom the sun shines on prostrate, who reposes without being fatigued. If you would avoid uncleanness, and all the sins, work earnestly, though it be at cleaning a stable.

Thoreau, Walden: Higher Laws

49 A person who shows rashness, obstinacy, self-conceit—who cannot live within moderate means—who cannot restrain himself from hurtful indulgences—who pursues animal pleasures at the expense of those of feeling and intellect—must expect to be lowered in the opinion of others, and to have a less share of their favourable sentiments; but of this he has no right to complain, unless he has merited their favour by special excellence in his social relations, and has thus established a title to their good offices, which is not affected by his demerits towards himself.

Mill, On Liberty, IV

9.13 Prudence

Whereas courage and temperance, as virtues, are traits of character, the virtue of prudence is a quality of mind. That is why it is sometimes called an "intellectual virtue" along with science, art, and wisdom. But it also differs from these other intellectual virtues in that it is not concerned with knowledge, or understanding, or even with know-how or skill in making things, but with action. Another name for prudence, the reader will find in the quotations below, is "practical wisdom"—wisdom in the choice of means to achieve the goals of life. Hence of all the intellectual virtues, prudence or practical wisdom is the one most integrally related to the moral virtues of courage, temperance, and justice. The reader will find the treatment of speculative or philosophical wisdom in Section 9.15 on Wisdom and Folly.

As certain quotations below expressly indicate, the crucial question is whether it is possible to be wise (i.e., practically wise or prudent) without being good (i.e., morally virtuous), or good without being wise. If the answer to that question affirms the inseparability of prudence and moral virtue, then, as another quotation points out, cleverness in the choice of means to achieve morally reprehensible ends—for example, the cunning of the thief—is not genuine prudence, but a counterfeit of it.

The prudent man, we are told, is one who has the habitual disposition to take counsel or advice and then to weigh the advantages and disadvantages in a process of deliberation before coming to a decision about what ought

to be done in the particular case under consideration. The prudent man is a man of sound judgment, not about things in general, nor about the principles or rules of morality, but about the circumstances of particular cases in which decisions have to be made for or against particular courses of action. Lack of prudence manifests itself in the making of rash or impetuous decisions, on the one hand, or in prolonged indecision, on the other.

■ ■ ■

- 1 Themistocles was a man who exhibited the most indubitable signs of genius; indeed, in this particular he has a claim on our admiration quite extraordinary and unparalleled. By his own native capacity, alike unformed and unsupplemented by study, he was at once the best judge in those sudden crises which admit of little or of no deliberation, and the best prophet of the future, even to its most distant possibilities. An able theoretical expositor of all that came within the sphere of his practice, he was not without the power of passing an adequate judgment in matters in which he had no experience. He could also excellently divine the good and evil which lay hid in the unseen future. In fine, whether we consider the extent of his natural powers, or the slightness of his application, this extraordinary man must be allowed to have surpassed all others in the faculty of intuitively meeting an emergency.

Thucydides, Peloponnesian War, I, 138

2 *Socrates*. Let us consider the goods of the soul: they are temperance, justice, courage, quickness of apprehension, memory, magnanimity, and the like?

Meno. Surely.

Soc. And such of these as are not knowledge, but of another sort, are sometimes profitable and sometimes hurtful; as, for example, courage wanting prudence, which is only a sort of confidence? When a man has no sense he is harmed by courage, but when he has sense he is profited?

Men. True,

Soc. And the same may be said of temperance and quickness of apprehension; whatever things are learned or done with sense are profitable, but when done without sense they are hurtful?

Men. Very true.

Soc. And in general, all that the soul attempts or endures, when under the guidance of wisdom, ends in happiness; but when she is under the guidance of folly, in the opposite?

Men. That appears to be true.

Soc. If then virtue is a quality of the soul, and is admitted to be profitable, it must be wisdom or prudence, since none of the things of the soul are either profitable or hurtful in themselves, but they are all made profitable or hurtful by the addition of wisdom or of folly; and therefore if virtue is profitable, virtue must be a sort of wisdom or prudence?

Men. I quite agree.

Soc. And the other goods, such as wealth and the like, of which we were just now saying that they are sometimes good and sometimes evil, do not they also become profitable or hurtful, accordingly as the soul

guides and uses them rightly or wrongly; just as the things of the soul herself are benefited when under the guidance of wisdom and harmed by folly?

Men. True.

Soc. And the wise soul guides them rightly, and the foolish soul wrongly.

Men. Yes.

Soc. And is not this universally true of human nature? All other things hang upon the soul, and the things of the soul herself hang upon wisdom, if they are to be good; and so wisdom is inferred to be that which profits—and virtue, as we say, is profitable?

Men. Certainly.

Soc. And thus we arrive at the conclusion that virtue is either wholly or partly wisdom?

Men. I think that what you are saying, Socrates, is very true.

Plato, Meno, 88A

- 3 Regarding *practical wisdom* we shall get at the truth by considering who are the persons we credit with it. Now it is thought to be the mark of a man of practical wisdom to be able to deliberate well about what is good and expedient for himself, not in some particular respect... but about what sorts of thing conduce to the good life in general. This is shown by the fact that we credit men with practical wisdom in some particular respect when they have calculated well with a view to some good end which is one of those that are not the object of any art. It follows that in the general sense also the man who is capable of deliberating has practical wisdom. Now no one deliberates about things that are invariable, nor about things that it is impossible for him to do. Therefore, since

scientific knowledge involves demonstration, but there is no demonstration of things whose first principles are variable (for all such things might actually be otherwise), and since it is impossible to deliberate about things that are of necessity, practical wisdom cannot be scientific knowledge nor art; not science because that which can be done is capable of being otherwise, not art because action and making are different kinds of thing. The remaining alternative, then, is that it is a true and reasoned state of capacity to act with regard to the things that are good or bad for man. For while making has an end other than itself, action cannot; for good action itself is its end. It is for this reason that we think Pericles and men like him have practical wisdom, viz. because they can see what is good for themselves and what is good for men in general; we consider that those can do this who are good at managing households or states, (This is why we call temperance by this name; we imply that it preserves one's practical wisdom. Now what it preserves is a judgement of the kind we have described. For it is not any and every judgment that pleasant and painful objects destroy and pervert, e.g, the judgement that the triangle has or has not its angles equal to two right angles, but only judgements about what is to be done. For the originating causes of the things that are done consist in the end at which they are aimed; but the man who has been ruined by pleasure or pain forthwith fails to see any such originating cause—to see that for the sake of this or because of this he ought to choose and do whatever he chooses and does; for vice is destructive of the originating cause of action.) Practical wisdom, then, must be a reasoned and true state of capacity to act with regard to human goods. But further,

while there is such a thing as excellence in art, there is no such thing as excellence in practical wisdom; and in art he who errs willingly is preferable, but in practical wisdom, as in the virtues, he is the reverse. Plainly, then, practical wisdom is a virtue and not an art. There being two parts of the soul that can follow a course of reasoning, it must be the virtue of one of the two, i.e. of that part which forms opinions; for opinion is about the variable and so is practical wisdom. But yet it is not only a reasoned state; this is shown by the fact that a state of that sort may be forgotten but practical wisdom cannot.

Aristotle, Ethics, 1140a24

- 4 Practical wisdom ... is concerned with things human and things about which it is possible to deliberate; for we say this is above all the work of the man of practical wisdom, to deliberate well, but no one deliberates about things invariable, nor about things which have not an end, and that a good that can be brought about by action. The man who is without qualification good at deliberating is the man who is capable of aiming in accordance with calculation at the best for man of things attainable by action. Nor is practical wisdom concerned with universals only—it must also recognize the particulars; for it is practical, and practice is concerned with particulars. This is why some who do not know, and especially those who have experience, are more practical than others who know.

Aristotle, Ethics, 1141b7

- 5 Understanding, also, and goodness of understanding, in virtue of which men are said to be men of understanding

or of good understanding, are neither entirely the same as opinion or scientific knowledge (for at that rate all men would have been men of understanding), nor are they one of the particular sciences, such as medicine, the science of things connected with health, or geometry, the science of spatial magnitudes. For understanding is neither about things that are always and are unchangeable, nor about any and every one of the things that come into being, but about things which may become subjects of questioning and deliberation. Hence it is about the same objects as practical wisdom; but understanding and practical wisdom are not the same. For practical wisdom issues commands, since its end is what ought to be done or not to be done; but understanding only judges. (Understanding is identical with goodness of understanding, men of understanding with men of good understanding.) Now understanding is neither the having nor the acquiring of practical wisdom; but as learning is called understanding when it means the exercise of the faculty of knowledge, so 'understanding' is applicable to the exercise of the faculty of opinion for the purpose of judging of what some one else says about matters with which practical wisdom is concerned—and of judging soundly; for 'well' and 'soundly' are the same thing. And from this has come the use of the name 'understanding' in virtue of which men are said to be 'of good understanding', viz. from the application of the word to the grasping of scientific truth; for we often call such grasping understanding.

What is called judgement, in virtue of which men are said to 'be sympathetic judges' and to 'have judgement', is the right discrimination of the equitable. This is shown by the fact that we say the equitable man is above all

others a man of sympathetic judgement, and identify equity with sympathetic judgement about certain facts. And sympathetic judgement is judgement which discriminates what is equitable and does so correctly; and correct judgement is that which judges what is true.

Now all the states we have considered converge, as might be expected, to the same point; for when we speak of judgement and understanding and practical wisdom and intuitive reason we credit the same people with possessing judgement and having reached years of reason and with having practical wisdom and understanding. For all these faculties deal with ultimates, i.e, with particulars; and being a man of understanding and of good or sympathetic judgement consists in being able to judge about the things with which practical wisdom is concerned; for the equities are common to all good men in relation to other men.

Aristotle, Ethics, 1142b34

- 6 As in the part of us which forms opinions there are two types, cleverness and practical wisdom, so too in the moral part there are two types, natural virtue and virtue in the strict sense, and of these the latter involves practical wisdom. This is why some say that all the virtues are forms of practical wisdom, and why Socrates in one respect was on the right track while in another he went astray; in thinking that all the virtues were forms of practical wisdom he was wrong, but in saying they implied practical wisdom he was right. This is confirmed by the fact that even now all men, when they define virtue, after naming the state of character and its objects add 'that (state) which is in accordance with the right rule'; now the right rule is that which is in accordance

with practical wisdom. All men, then, seem somehow' to divine that this kind of state is virtue, viz. that which is in accordance with practical wisdom. But we must go a little further. For it is not merely the state in accordance with the right rule, but the state that implies the *presence* of the right rule, that is virtue; and practical wisdom is a right rule about such matters. Socrates, then, thought the virtues were rules or rational principles (for he thought they were, all of them, forms of scientific knowledge), while we think they *involve* a rational principle.

It is clear, then, from what has been said, that it is not possible to be good in the strict sense without practical wisdom, nor practically wise without moral virtue. But in this way we may also refute the dialectical argument whereby it might be contended that the virtues exist in separation from each other; the same man, it might be said, is not best equipped by nature for all the virtues, so that he will have already acquired one when he has not yet acquired another. This is possible in respect of the natural virtues, but not in respect of those in respect of which a man is called without qualification good; for with the presence of the one quality, practical wisdom, will be given all the virtues. And it is plain that, even if it were of no practical value, we should have needed it because it is the virtue of the part of us in question; plain too that the choice will not be right without practical wisdom any more than without virtue; for the one determines the end and the other makes us do the things that lead to the end.

Aristotle, Ethics, 1144b14

7 The beginning and the greatest good is prudence.

Wherefore prudence is a more precious thing even than

philosophy; for from prudence are sprung all the other virtues, and it teaches us that it is not possible to live pleasantly without living prudently and honourably and justly, nor, again, to live a life of prudence, honour, and justice without living pleasantly. For the virtues are by nature bound up with the pleasant life, and the pleasant life is inseparable from them.

Epicurus, Letter to Menoeceus

8 Then the father [Phoebus] rubbed his son's [Phaethon's] face with a divine ointment, to enable him to endure the searing flames. On his head he placed his own rays, and, sighing deeply from his troubled heart—for he foresaw the grief that was in store for him—he said: 'At least obey your father's instructions, my son, if you can. Use the goad sparingly, and hold in the reins with all your strength. The horses set a fast pace of their own accord: the difficulty is to check their keenness. And do not try to drive straight across the five zones of heaven—there is a track that slants in a broad curve, confined within the boundaries of three zones, which avoids the Southern Pole, and also the North with its chilling winds. Travel by this road, where you will see clear marks of wheels. To allow earth and heaven to share equally in your warmth, do not go too low, nor yet force your way into the upper air: if you drive too high, you will set the dome of heaven on fire, and if you are too low you will scorch the earth. The middle way is safest. Nor must you swerve to the right, towards the coiling Serpent, nor to the left, where the low-lying Altar shines. Hold your course between them both.'

Ovid, Metamorphoses, II

9 What shall I say of that virtue which is called prudence? Is not all its vigilance spent in the discernment of good from evil things, so that no mistake may be admitted about what we should desire and what avoid? And thus it is itself a proof that we are in the midst of evils, or that evils are in us; for it teaches us that it is an evil to consent to sin, and a good to refuse this consent.

Augustine, City of God, XIX, 4

10 It is requisite for prudence, which is right reason about things to be done, that man be well disposed with regard to the ends, and this depends on the rectitude of his appetite. Therefore, for prudence there is need of a moral virtue, which rectifies the appetite. On the other hand, the good of things made by art is not the good of man's appetite, but the good of those artificial things themselves, and therefore art does not presuppose rectitude of the appetite. The consequence is that more praise is given to a craftsman who is at fault willingly, than to one who is unwillingly; but it is more contrary to prudence to sin willingly than unwillingly, since rectitude of the will is essential to prudence, but not to art. Accordingly it is evident that prudence is a virtue distinct from art.

Aquinas, Summa Theologica, I-II, 57, 4

11 Prudence is of good counsel about matters regarding man's entire life, and the end of human life. But in some arts there is counsel about matters concerning the ends proper to those arts. Hence some men, in so far as they are good counsellors in matters of warfare, or government, are said to be prudent officers or rulers, but

not prudent absolutely; only those are prudent absolutely who give good counsel about all the concerns of life.

Aquinas, Summa Theologica, I-II, 57, 4

12 Prudence is the principal of all the virtues absolutely.

Aquinas, Summa Theologica, I-II, 61, 2

13 No moral virtue can be without prudence, for the reason that it is proper to moral virtue to make a right choice, since it is an elective habit. Now right choice requires not only the inclination to a due end, which inclination is the direct outcome of moral virtue, but also the right choice of means, which choice is made by prudence, that counsels, judges, and commands in those things that are directed to the end. In like manner one cannot have prudence unless one has the moral virtues, since prudence is right reason about things to be done, and the starting-point of reason is the end of the thing to be done, to which end man is rightly disposed by moral virtue. Hence, just as we cannot have speculative science unless we have the understanding of the principles, so neither can we have prudence without the moral virtues.

Aquinas, Summa Theologica, I-II, 65, 1

14 Prudence has no business with supreme matters which are the object of wisdom, but its command covers things ordered to wisdom, namely, how men are to obtain wisdom. Therefore prudence, or political science, is, in this way, the servant of wisdom, for it leads to wisdom, preparing the way for her, as the porter for the king.

Aquinas, Summa Theologica, I-II, 66, 5

15 Prudence considers the means of acquiring happiness, but wisdom considers the very object of happiness.

Aquinas, Summa Theologica, I—II, 66, 5

16 Prudence is threefold. There is a false prudence, which takes its name from its likeness to true prudence. For since a prudent man is one who disposes well of the things that have to be done for a good end, whoever disposes well of such things as are fitting for an evil end, has false prudence, in so far as that which he takes for an end, is good, not in truth but in appearance. Thus a man is called a *good robber*, and in this way we may speak of a *prudent robber*, by way of similarity, because he devises fitting ways of committing robbery. This is the prudence of which the Apostle says: *The prudence of the flesh is death*, because, to wit, it places its ultimate end in the pleasures of the flesh.

The second prudence is indeed true prudence, because it devises fitting ways of obtaining a good end; and yet it is imperfect, from a twofold source. First, because the good which it takes for an end, is not the common end of all human life, but of some particular affair; thus when a man devises fitting ways of conducting business or of sailing a ship, he is called a prudent business-man, or a prudent sailor:—secondly, because he fails in the chief act of prudence, as when a man takes counsel aright, and forms a good judgment, even about things concerning life as a whole, but fails to make an effective command.

The third prudence is both true and perfect, for it takes counsel, judges and commands aright in respect of the good end of man's whole life: and this alone is prudence simply so-called, and cannot be in sinners,

whereas the first prudence is in sinners alone, while imperfect prudence is common to good and wicked men, especially that which is imperfect through being directed to a particular end, since that which is imperfect on account of a failing in the chief act, is only in the wicked.

Aquinas, Summa Theologica, II-II, 47, 13

- 17 For any man who hath a house to found,
Runs not at once the labor to begin
With reckless hand, but first will look around,
And send his heart's line outward from within.
To see how best of all his end to win.

Chaucer, Troilus and Cressida, I, 153

- 18 The virtue assigned to the affairs of the world is a virtue with many bends, angles, and elbows, so as to join and adapt itself to human weakness; mixed and artificial, not straight, clean, constant, or purely innocent.... He who walks in the crowd must step aside, keep his elbows in, step back or advance, even leave the straight way, according to what he encounters. He must live not so much according to himself as according to others, not according to what he proposes to himself but according to what others propose to him, according to the time, according to the men, according to the business.

Montaigne, Essays, III, 9, Of Vanity

- 19 *Fool*. Mark it, nuncle:
"Have more than thou showest,
Speak less than thou knowest,
Lend less than thou owest.
Ride more than thou goest.

Learn more than thou trowest.
Set less than thou throwest.
Leave thy drink and thy whore.
And keep in-a-door.
And thou shall have more
Than two tens to a score."

Kent. This is nothing, fool.

Shakespeare, Lear, I, iv, 130

20 *Apemantus.* Immortal gods, I crave no pelf;
I pray for no man but myself.
Grant I may never prove so fond,
To trust man on his oath or bond;
Or a harlot, for her weeping;
Or a dog, that seems a-sleeping;
Or a keeper with my freedom;
Or my friends, if I should need 'em.
Amen.

Shakespeare, Timon of Athens, I, ii, 63

21 There is no great concurrence between learning and wisdom. For of the three wisdoms which we have set down to pertain to civil life, for wisdom of behaviour, it is by learned men for the most part despised, as an inferior to virtue and an enemy to meditation; for wisdom of government, they acquit themselves well when they are called to it, but that happeneth to few; but for the wisdom of business, wherein man's life is most conversant, there be no books of it, except some few scattered advertisements, that have no proportion to the magnitude of this subject. For if books were written of this as the other, I doubt not but learned men with mean

experience, would far excel men of long experience without learning, and outshoot them in their own bow.

Bacon, Advancement of Learning, Bk. II, XXIII, 4

- 22 Prudence is a *presumption* of the future, contracted from the experience of time past: so there is a presumption of things past taken from other things, not future, but past also. For he that hath seen by what courses and degrees a flourishing state hath first come into civil war, and then to ruin; upon the sight of the ruins of any other state will guess the like war and the like courses have been there also. But this conjecture has the same uncertainty almost with the conjecture of the future, both being grounded only upon experience.

Hobbes, Leviathan, I, 3

- 23 When the thoughts of a man that has a design in hand, running over a multitude of things, observes how they conduce to that design, or what design they may conduce unto; if his observations be such as are not easy, or usual, this wit of his is called *prudence*, and dependeth on much experience, and memory of the like things and their consequences heretofore.,

Hobbes, Leviathan, I, 8

- 24 A man that doth his business by the help of many and prudent counsellors, with every one consulting apart in his proper element, does it best; as he that useth able seconds at tennis play, placed in their proper stations. He does next best that useth his own judgement only; as he that has no second at all. But he that is carried up and down to his business in a framed counsel, which cannot

move but by the plurality of consenting opinions, the execution whereof is commonly, out of envy or interest, retarded by the part dissenting, does it worst of all. and like one that is carried to the ball, though by good players, yet in a wheelbarrow, or other frame, heavy of itself, and retarded also by the inconcurrent judgements and endeavours of them that drive it; and so much the more, as they be more that set their hands to it; and most of all, when there is one or more amongst them that desire to have him lose. And though it be true that many c>'cs see more than one, yet it is not to be understood of many counsellors, but then only when the final resolution is in one man.

Hobbes, Leviathan, 11, 25

- 25 Nothing more unqualifies a Man to act with Prudence, than a Misfortune that is attended with Shame and Guilt.

Swift, Thoughts on Various Subjects

- 26 Prudence and circumspection are necessary even to the best of men. They are indeed, as it were, a guard to Virtue, without which she can never be safe. It is not enough that your designs, nay, that your actions, are intrinsically good; you must take care they shall appear so. If your inside be never so beautiful, you must preserve a fair outside also.

Fielding, Tom Jones, III, 7

- 27 Where prudence is made too much of, not enough is made of fortune; opportunity is let slip, and deliberation results in the loss of its object.

Rousseau, Social Contract, III, 2

28 Prudence! Prudence which is ever bidding us look forward into the future, a future which in many cases we shall never reach; here is the real source of all our troubles! How mad it is for so short-lived a creature as man to look forward into a future to which he rarely attains, while he neglects the present which is his? this madness is all the more fatal since it increases with years, and the old, always timid, prudent, and miserly, prefer to do without necessities to-day that they may have luxuries at a hundred.

Rousseau, Emile, II

29 If we could always be prudent, we should rarely need to be virtuous.

Rousseau, Confessions, II

30 The principle of *private happiness* . . . , is... most objectionable, not merely because it is false, and experience contradicts the supposition that prosperity is always proportioned to good conduct, nor yet merely because it contributes nothing to the establishment of morality—since it is quite a different thing to make a prosperous man and a good man, or to make one prudent and sharp-sighted for his own interests and to make him virtuous—but because the springs it provides for morality are such as rather undermine it and destroy its sublimity, since they put the motives to virtue and to vice in the same class and only teach us to make a better calculation, the specific difference between virtue and vice being entirely extinguished.

*Kant, Fundamental Principles of the Metaphysic of
Morals, II*

31 Prudence reproaches; conscience accuses. If a man has acted unwisely and reproaches himself for his imprudence no longer than is necessary for him to learn his lesson, he is observing a rule of prudence and it must be accounted to him for honour, for it is a sign of strength of character. But the accusation of conscience cannot be so readily dismissed, neither should it be.

Kant, Lectures on Ethics, Conscience

32 Prudence is a rich, ugly old maid courted by Incapacity.

Blake, Marriage of Heaven and Hell, 7

9.14 Honesty

A wide diversity of moral traits are treated here under the heading of honesty. As the quotations indicate, the word has been applied to truthfulness of statement, to fairness in dealing with others, to keeping one's promises, to trustworthiness, to repaying one's debts, and to a general rectitude of intention and action. Such things as lying, deceiving, cheating, bearing false witness, stealing, and defrauding are—obviously— instances of dishonesty.

It would appear, at first glance, as if "honesty" were another name for justice, since the examples given above of honest and dishonest actions are also examples of just and unjust conduct. However, there are some unjust actions—for example, murdering another man or enslaving him—that would not be called dishonest. Honesty seems to be confined to that area of conduct in which truthfulness or fairness in dealing with others is called for as a matter of justice. For the treatment of justice as a moral virtue, the

reader is referred to Section 9.7 on Right and Wrong. The reader will also find some quotations concerned with truthfulness and lying in Section 6.3 on Truth.

All of us know and most of us repeat the oft-quoted maxim "Honesty is the best policy," thinking it to be morally sound. But, according to Kant, it is the maxim of a dishonest man—one who refrains from dishonesty only because it is expedient, not because it is just to do so. The maxim about honesty, Kant suggests, should be "Honesty is better than all policy."

■ ■ ■

1 Thou shalt not raise a false report: put not thine hand with the wicked to be an unrighteous witness.

Exodus 23:1

2 Keep thee far from a false matter; and the innocent and righteous slay thou not: for I will not justify the wicked.

Exodus 23:7

3 If a soul sin, and commit a trespass against the Lord, and lie unto his neighbour in that which was delivered him to keep, or in fellowship, or in a thing taken away by violence, or hath deceived his neighbour;

Or have found that which was lost, and lieth concerning it, and sweareth falsely; in any of all these that a man doeth, sinning therein:

Then it shall be, because he hath sinned, and is guilty, that he shall restore that which he took violently away, or the thing which he hath deceitfully gotten, or that which

was delivered him to keep, or the lost thing which he found.

Or all that about which he hath sworn falsely; he shall even restore it in the principal, and shall add the fifth part more thereto, and give it unto him to whom it appertaineth, in the day of his trespass offering.

And he shall bring his trespass offering unto the Lord, a ram without blemish out of the flock, with thy estimation, for a trespass offering, unto the priest:

And the priest shall make an atonement for him before the Lord: and it shall be forgiven him for any thing of all that he hath done in trespassing therein,

Leviticus 6:2-7

4 Who shall ascend into the hill of the Lord? or who shall stand in his holy place?

He that hath clean hands, and a pure heart; who hath not lifted up his soul unto vanity, nor sworn deceitfully.

Psalms 24:3—4

5 A false balance is abomination to the Lord: but a just weight is his delight.

Proverbs 11:1

6 *Odysseus*. Take it to heart, and pass the word along: fair dealing brings more profit in the end.

Homer, Odyssey, XXII, 374

7 *Darius*. Whether men lie, or say true, it is with one and the same object. Men lie, because they think to gain by deceiving others; and speak the truth, because they expect to get something by their true speaking, and to be

trusted afterwards in more important matters. Thus, though their conduct is so opposite, the end of both is alike.

Herodotus, History, III, 72

8 Of on. Time is the only test of honest men, one day is space enough to know a rogue.

Sophocles, Oedipus the King, 614

9 *Envoys of the Mitylenians.* There can never be any solid friendship between individuals, or union between communities that is worth the name, unless the parties be persuaded of each other's honesty.

Thucydides, Peloponnesian War, III, 10

10 He who claims more than he has with no ulterior object is a contemptible sort of fellow (otherwise he would not have delighted in falsehood), but seems futile rather than bad; but if he does it for an object, he who does it for the sake of reputation or honour is (for a boaster) not very much to be blamed, but he who does it for money, or the things that lead to money, is an uglier character (it is not the capacity that makes the boaster, but the purpose; for it is in virtue of his state of character and by being a man of a certain kind that he is a boaster); as one man is a liar because he enjoys the lie itself, and another because he desires reputation or gain. Now those who boast for the sake of reputation claim such qualities as win praise or congratulation, but those whose object is gain claim qualities which are of value to one's neighbours and one's lack of which is not easily detected, e.g. the powers of a seer, a sage, or a physician. For this reason it is such

things as these that most people claim and boast about; for in them the above-mentioned qualities are found.

Mock-modest people, who understate things, seem more attractive in character; for they are thought to speak not for gain but to avoid parade; and here too it is qualities which bring reputation that they disclaim, as Socrates used to do. Those who disclaim trifling and obvious qualities are called humbugs and are more contemptible; and sometimes this seems to be boastfulness, like the Spartan dress; for both excess and great deficiency are boastful. But those who use understatement with moderation and understate about matters that do not very much force themselves on our notice seem attractive. And it is the boaster that seems to be opposed to the truthful man; for he is the worse character.

Aristotle, Ethics, 1127b9

- 11 No type of injustice is more glaring than that of the hypocrite who, in the very instant of being most false, makes the pretence of appearing virtuous.

Cicero, De Officiis, I, 13

- 12 Let your communication be. Yea, yea; Nay, nay: for whatsoever is more than these cometh of evil.

Matthew 5:37

- 13 A certain man named An-a-ni-as, with Sapphira his wife, sold a possession,

And kept back part of the price, his wife also being privy to it, and brought a certain part, and laid it at the apostles' feet.

But Peter said, An-a-ni-as, why hath Satan filled thine heart to lie to the Holy Ghost, and to keep back part of the price of the land?

Whiles it remained, was it not thine own? and after it was sold, was it not in thine own power? why has thou conceived this thing in thine heart? thou hast not lied unto men, but unto God.

And An-a-ni-as hearing these words fell down, and gave up the ghost: and great fear came on all them that heard these things.

And the young men arose, wound him up, and carried him out, and buried him.

And it was about the space of three hours after, when his wife, not knowing what was done, came in.

And Peter answered unto her. Tell me whether ye sold the land for so much? And she said, Yea, for so much.

Then Peter said unto her. How is it that ye have agreed together to tempt the Spirit of the Lord? behold, the feet of them which have buried thy husband are at the door, and shall carry thee out.

Then fell she down straightway at his feet, and yielded up the ghost: and the young men came in, and found her dead, and, carrying her forth, buried her by her husband.

Acts 5:1-10

14 *Solon*. Men keep their promises when neither side can get anything by the breaking of them.

Plutarch, Solon

15 If you want to be Somebody, these days, Have the nerve to commit an act that rates jailing or exile:

Probity merits praise—and has to starve on the highways.

Juvenal, Satire I

- 16 Never value anything as profitable to thyself which shall compel thee to break thy promise, to lose thy self-respect, to hate any man, to suspect, to curse, to act the hypocrite, to desire anything which needs walls and curtains.

Marcus Aurelius, Meditations, III, 7

- 17 External conduct has the character of honesty, in so far as it reflects internal rectitude. For this reason honesty consists radically in the internal choice, but its expression lies in the external conduct.

Aquinas, Summa Theologica, II-II, 145, 1

- 18 Because fraud is a vice peculiar to man, it more displeases God.

Dante, Inferno, XI, 25

- 19 Anyone who does not feel sufficiently strong in memory should not meddle with lying.

Montaigne, Essays, I, 9, Of Liars

- 20 In truth lying is an accursed vice. We are men, and hold together, only by our word. If we recognized the horror and the gravity of lying, we would persecute it with fire more justly than other crimes. I find that people ordinarily fool around chastising harmless faults in children very inappropriately, and torment them for thoughtless actions that leave neither imprint nor consequences.

Only lying, and a little below it obstinacy', seem to me to be the actions whose birth and progress one should combat insistently. They grow with the child. And once the tongue has been put on this wrong track, it cannot be called back without amazing difficulty.

Montaigne, Essays, I, 9, Of Liars

- 21 Lying is an ugly vice, which an ancient paints in most shameful colors when he says that it is giving evidence of contempt for God, and at the same time of fear of men. It is not possible to represent more vividly the horror, the vileness, and the profligacy of it. For what can you imagine uglier than being a coward toward men and bold toward God? Since mutual understanding is brought about solely by way of words, he who breaks his word betrays human society. It is the only instrument by means of which our wills and thoughts communicate, it is the interpreter of our soul. If it fails us, we have no more hold on each other, no more knowledge of each other. If it deceives us, it breaks up all our relations and dissolves all the bonds of our society.

Montaigne, Essays, II, 18, Of Giving the Lie

- 22 There are rules both false and lax in philosophy. The example that is proposed to us for making private utility prevail over our pledged word does not receive enough weight from the circumstance that they introduce into it. Robbers have seized you; they have set you free again after extracting from you an oath to pay a certain sum. People are wrong to say that an honest man will be quit of his word without paying, once he is out of their hands. Nothing of the sort. What fear has once made me will, I

am bound still to will when without fear. And even if it has forced only my tongue without my will, I am still bound to make good my word to the last penny. As for me, when my tongue has sometimes thoughtlessly run ahead of my thoughts, I have scrupled to disavow it for all that Otherwise we shall come by degrees to overthrow all the rights that a third person obtains from our promises and oaths. ... In this alone does private interest have the right to excuse us for failing our promise, if we have promised something wicked and unjust in itself; for the rights of virtue must prevail over the rights of our obligation.

Montaigne, Essays, III, 1, The Useful and the Honorable

23 *Falstaff*. Lord, Lord, how this world is given to lying!

Shakespeare, I Henry IV, V, iv, 148

24 *Verges*. I thank God I am as honest as any man living that is an old man and no honester than I.

Shakespeare, Much Ado About Nothing, III, V, 15

25 *Nym*. You'll pay me the eight shillings I won of you at betting?

Pistol. Base is the slave that pays.

Shakespeare, Henry V, II, i, 99

26 King Henry. A good leg will fall; a straight back will stoop; a black beard will turn white; a curled pate will grow bald; a fair face will wither; a full eye will wax hollow: but a good heart... is the sun and the moon; or rather the sun and not the moon; for it shines bright and never changes, but keeps his course truly.

Shakespeare, Henry V, V, ii, 168

27 *Touchstone*. Honesty coupled to beauty is to have honey
a sauce to sugar.

Shakespeare, As You Like It, III, iii, 30

28 *Hamlet*. To be honest, as this world goes, is to be one
man picked out of ten thousand.

Shakespeare, Hamlet, II, ii, 178

29 *Iago*. The Moor is of a free and open nature
That thinks men honest that but seem to be so.
And will as tenderly be led by the nose
As asses are.

Shakespeare, Othello, I, iii, 405

30 *Cornwall*. This is some fellow,
Who, having been praised for bluntness, doth affect
A saucy roughness, and constrains the garb
Quite from his nature. He cannot flatter, he,
Ail honest mind and plain, he must speak truth!
An they will take it, so; if not, he's plain.
These kind of knaves I know, which in this plainness
Harbour more craft and more corrupter ends
Than twenty silly ducking observants
That stretch their duties nicely.

Shakespeare, Lear, II, ii, 102

31 *Duncan*. There's no art
To find the mind's construction in the face.
He was a gentleman on whom I built
An absolute trust.

Shakespeare, Macbeth, I, iv, 12

- 32 *Menenius*. His nature is too noble for the world.
He would not flatter Neptune for his trident.
Or Jove for's power to thunder. His heart's his mouth.
What his breast forges, that his tongue must vent;
And, being angry, does forget that ever
He heard the name of death.

Shakespeare, Coriolanus, III, i, 255

- 33 *Autolycus*. Ha, ha! what a fool Honesty is! and Trust, his
sworn brother, a very simple gentleman!

Shakespeare, Winter's Tale, IV, iv, 605

- 34 *Autolycus*. Though I am not naturally honest, I am so
sometimes by chance.

Shakespeare, Winter's Tale, IV, iv, 731

- 35 It will be acknowledged, even by those that practise it
not, that clear and round dealing is the honour of man's
nature; and that mixture of falsehood is like allay in coin
of gold and silver; which may make the metal work the
better, but it embaseth it.

Bacon, Of Truth

- 36 Winding and crooked courses are the goings of the
serpent; which goeth basely upon the belly, and not upon
the feet. There is no vice that doth so cover a man with
shame as to be found false and perfidious.

Bacon, Of Truth

37 He who counterfeiteth, acts a part; and is as it were out of himself: which, if long, proves so irksome, that Men are glad to pull off their Vizards, and resume themselves again; no practice being able to naturalize such unnaturals, or make a Man rest content not to be himself. And therefore since Sincerity is thy Temper, let veracity be thy Virtue in Words, Manners, and Actions.

Sir Thomas Browne, Christian Morals, III, 20

38 To tell the truth is useful to those to whom it is spoken, but disadvantageous to those who tell it, because it makes them disliked.

Pascal, Pensées, II, 100

39 Although people may have no interest in what they are saying, we must not absolutely conclude from this that they are not lying; for there are some people who lie for the mere sake of lying.

Pascal, Pensees, II, 108

40 On th' other side up rose
Belial, in act more graceful and humane;
A fairer person lost not Heav'n; he seemd
For dignity compos'd and high exploit:
But all was false and hollow; though his Tongue
Dropt Manna, and could make the worse appear
The better reason, to perplex and dash
Maturest Counsels: for his thoughts were low;
To vice industrious, but to Nobler deeds
Timorous and slothful: yet he pleas'd the eare.

Milton, Paradise Lost, II, 108

41 Lying is so ready and cheap a cover for any miscarriage, and so much in fashion among all sorts of people, that a child can hardly avoid observing the use is made of it on all occasions, and so can scarce be kept without great care from getting into it. But it is so ill a quality, and the mother of so many ill ones that spawn from it and take shelter under it, that a child should be brought up in the greatest abhorrence of it imaginable.

Locke, Some Thoughts Concerning Education, 131

42 *Scandal*. He that first cries out stop Thief, is often he that has stol'n the Treasure.

Congreve, Love for Love, III, iv

43 Honesty hath no fence against superior cunning.

Swift, Gulliver's Travels, I, 6

44 As universal a Practice as Lying is, and as easy a one as it seems, I do not remember to have heard three good Lyes in all my Conversation, even from those who were most celebrated in that Faculty.

Swift, Thoughts on Various Subjects

45 A Wit's a feather, and a Chief a rod;
An honest Man's the noblest work of God.

Pope, Essay on Man, Epistle IV, 247

46 Sometimes, in his wild way of talking, he [Yorick] would say, that Gravity was an errant scoundrel, and he would add,—of the most dangerous kind too,—because a sly one; and that he verily believed, more honest, well-meaning people were bubbled out of their goods and

money by it in one twelve-month, than by pocket-picking and shoplifting in seven. In the naked temper which a merry heart discovered, he would say there was no danger,—but to itself:—whereas the very essence of gravity was design, and consequently deceit;— 'twas a taught trick to gain credit of the world for more sense and knowledge than a man was worth; and that, with all its pretensions,—it was no better, but often worse, than what a French wit had long ago defined it,—viz. "A mysterious carriage of the body to cover the defects of the mind";— which definition of gravity, Yorick, with great imprudence, would say, deserved to be wrote in letters of gold.

Sterne, Trisitram Shandy, I, II

- 47 It is impossible to see the long scrolls in which every contract is included, with all their appendages of seals and attestation, without wondering at the depravity of those beings who must be restrained from violation of promise by such formal and public evidences, and precluded from equivocation and subterfuge by such punctilious minuteness.

Johnson, Rambler No, 131

- 48 *Johnson.* Why, Sir, if the fellow does not think as he speaks, he is lying; and I see not what honour he can propose to himself from having the character of a liar. But if he does really think that there is no distinction between virtue and vice, why, Sir, when he leaves our houses let us count our spoons.

Boswell, Life of Johnson (July 1763)

49 I asked him whether, as a moralist, he did not think that the practice of the law, in some degree, hurt the nice feeling of honesty. *Johnson*. "Why no, Sir, if you act properly. You are not to deceive your clients with false representations of your opinion: you are not to tell lies to a judge." *Boswell*. "But what do you think of supporting a cause which you know to be bad?" *Johnson*, "Sir, you do not know it to be good or bad till the Judge determines it. I have said that you are to state facts fairly; so that your thinking, or what you call knowing, a cause to be bad, must be from reasoning, must be from your supposing your arguments to be weak and inconclusive. But, Sir, that is not enough. An argument which does not convince yourself, may convince the Judge to whom you urge it: and if it does convince him, why, then, Sir, you are wrong, and he is right. It is his business to judge; and you are not to be confident in your own opinion that a cause is bad, but to say all you can for your client, and then hear the Judge's opinion." *Boswell*, "But, Sir, does not affecting a warmth when you have no warmth, and appearing to be clearly of one opinion when you are in reality of another opinion, does not such dissimulation impair one's honesty? Is there not some danger that a lawyer may put on the same mask in common life, in the intercourse with his friends?" *Johnson*. "Why no, Sir. Everybody knows you are paid for affecting warmth for your client; and it is, therefore, properly no dissimulation: the moment you come from the bar you resume your usual behaviour. Sir, a man will no more carry the artifice of the bar into the common intercourse of society, than a man who is paid for tumbling upon his hands will continue to tumble upon his hands when he should walk on his feet."

Boswell, Lift of Johnson (1766)

50 *Johnson*. It must be considered, that a man who only does what every one of the society to which he belongs would do, is not a dishonest man.

Boswell, Life of Johnson (April 6, 1772)

51 While we were at breakfast, Johnson gave a very earnest recommendation of what he himself practised with the utmost conscientiousness: I mean a strict attention to truth, even in the most minute particulars. "Accustom your children (said he,) constantly to this; if a thing happened at one window, and they, when relating it, say that it happened at another, do not let it pass, but instantly check them; you do not know where deviation from truth will end." *Boswell*. "It may come to the door: and when once an account is at all varied in one circumstance, it may by degrees be varied so as to be totally different from what really happened." Our lively hostess, whose fancy was impatient of the rein, fidgeted at this, and ventured to say, "Nay, this is too much. If Mr. Johnson should forbid me to drink tea, I would comply, as I should feel the restraint only twice a day; but little variations in narrative must happen a thousand times a day, if one is not perpetually watching." *Johnson*. "Well, Madam, and you ought to be perpetually watching. It is more from carelessness about truth than from intentional lying, that there is so much falsehood in the world."

In his review of Dr. Warton's *Essay on the Writings and Genius of Pope*, Johnson has given the following salutary caution upon this subject:

"Nothing but experience could evince the frequency of false information, or enable any man to conceive that so

many groundless reports should be propagated, as every man of eminence may hear of himself. Some men relate what they think, as what they know; some men of confused memories and habitual inaccuracy, ascribe to one man what belongs to another; and some talk on, without thought or care. A few men are sufficient to broach falsehoods, which are afterwards innocently diffused by successive relaters."

Had he lived to read what Sir John Hawkins and Mrs, Piozzi have related concerning himself, how much would he have found his observation illustrated. He was indeed so much impressed with the prevalence of falsehood, voluntary or unintentional, that I never knew any person who upon hearing an extraordinary circumstance told, discovered more of the *incredulus odi*. He would say, with a significant look and decisive tone, "It is not so. Do not tell this again." He inculcated upon all his friends the importance of perpetual vigilance against the slightest degrees of falsehood; the effect of which, as Sir Joshua Reynolds observed to me, has been, that all who were of his *school* are distinguished for a love of truth and accuracy, which they would not have possessed in the same degree, if they had not been acquainted with Johnson.

Boswell. Life of Johnson (March 31, 1778)

- 52 We talked of the casuistical question, Whether it was allowable at any times to depart from *Truth? Johanson*. "The general rule is, that Truth should never be violated, because it is of the utmost importance to the comfort of life, that we should have a full security by mutual faith; and occasional inconveniences should be willingly suffered that we may preserve it. There must, however,

be some exceptions. If, for instance, a murderer should ask you which way a man is gone, you may tell him what is not true, because you are under a previous obligation not to betray a man to a murderer."

Boswell. Life of Johnson, (June 13, 1784)

53 The honest man, though e'er sae poor.
Is king o' men for a' that!

Burns, A Man's a Man for a' That

54 (A man) finds himself forced by necessity to borrow money. He knows that he will not be able to repay it, but sees also that nothing will be lent to him unless he promises stoutly to repay it in a definite time. He desires to make this promise, but he has still so much conscience as to ask himself: "Is it not unlawful and inconsistent with duty to get out of a difficulty in this way?" Suppose however that he resolves to do so: then the maxim of his action would be expressed thus: "When I think myself in want of money, I will borrow money and promise to repay it, although I know that I never can do so." Now this principle of self-love or of one's own advantage may perhaps be consistent with my whole future welfare; but the question now is, "Is it right?" I change then the suggestion of self-love into a universal law, and state the question thus: "How would it be if my maxim were a universal law?" Then I see at once that it could never hold as a universal law of nature, but would necessarily contradict itself. For supposing it to be a universal law that everyone when he thinks himself in a difficulty should be able to promise whatever he pleases, with the purpose of not keeping his promise, the promise itself

would become impossible, as well as the end that one might have in view in it, since no one would consider that anything was promised to him, but would ridicule all such statements as vain pretences.

Kant, Fundamental Principles of the Metaphysic of Morals, II

55 He who is thinking of making a lying promise to others will see at once that he would be using another man *merely as a mean*, without the latter containing at the same time the end in himself. For he whom I propose by such a promise to use for my own purposes cannot possibly assent to my mode of acting towards him and, therefore, cannot himself contain the end of this action.

Kant, Fundamental Principles of the Metaphysic of Morals, II

56 Though this proposition, "*honesty is the best policy*," announces a theory, too frequently, alas! contradicted by experience; yet no objection will ever overthrow this: honesty is better than all policy, and is even an essential condition of it.

Kant, Perpetual Peace, Appendix, 1

57 In this kingdom of illusions we grope eagerly for stays and foundations. There is none but a strict and faithful dealing at home and a severe barring out of all duplicity or illusion there. Whatever games are played with us, we must play no games with ourselves, but deal in our privacy with the last honesty and truth. I look upon the simple and childish virtues of veracity and honesty as the root of all that is sublime in character. Speak as you

think, be what you are, pay your debts of all kinds. I prefer to be owned as sound and solvent, and my word as good as my bond, and to be what cannot be skipped, or dissipated, or undermined, to all the *ec/lat* in the universe. This reality is the foundation of friendship, religion, poetry, and art. At the top or at the bottom of all illusions, I set the cheat which still leads us to work and live for appearances; in spite of our conviction, in all sane hours, that it is what we really are that avails, with friends, with strangers, and with fate or fortune.

Emerson, Illusions

- 58 Absolutely speaking, Do unto others as you would that they should do unto you is by no means a golden rule, but the best of current silver. An honest man would have but little occasion for it. It is golden not to have any rule at all in such a case.

Thoreau, The Christian Fable

- 59 Speaking truth is like writing fair, and comes only by practice; it is less a matter of will than of habit, and I doubt if any occasion can be trivial which permits the practice and formation of such a habit, To speak and act truth with constancy and precision is nearly as difficult, and perhaps as meritorious, as to speak it under intimidation or penalty; and it is a strange thought how many men there are, as I trust, who would hold to it at the cost of fortune or life, for one who would hold to it at the cost of a little daily trouble. And seeing that of all sin there is, perhaps, no one more flatly opposite to the Almighty, no one more "wanting the good of virtue and of being," than this of lying, it is surely a strange insolence

to fall into the foulness of it on light or on no temptation, and surely becoming an honourable man to resolve, that, whatever semblances or fallacies the necessary course of his life may impel him to bear or to believe, none shall disturb the serenity of his voluntary actions, nor diminish the reality of his chosen delights.

Ruskin, Seven Lamps of Architecture, II, 1

60 *Father Zossima*. The man who lies to himself and listens to his own lie comes to such a pass that he cannot distinguish the truth within him, or around him, and so loses all respect for himself and for others. And having no respect he ceases to love, and in order to occupy and distract himself without love he gives way to passions and coarse pleasures, and sinks to bestiality in his vices, all from continual lying to other men and to himself. The man who lies to himself can be more easily offended than anyone. You know it is sometimes very pleasant to take offence, isn't it? A man may know that nobody has insulted him, but that he has invented the insult for himself, has lied and exaggerated to make it picturesque, has caught at a word and made a mountain out of a molehill— he knows that himself, yet he will be the first to take offence, and will revel in his resentment till he feels great pleasure in it, and so pass to genuine vindictiveness.

Dostoevsky, Brothers Karamazov, Pt. I, II, 2

9.15 Wisdom and Folly

Of all the qualities of mind or character that are called virtues, excellences, or perfections, wisdom is, perhaps, the one most universally admired, as it is also, perhaps, the one that is generally thought most difficult to achieve. Socrates is famous for his unwillingness to accept the oracle's judgment of himself as the wisest man in Greece, declaring that only God is wise and that men show some semblance of wisdom only if they realize how little they know. According to Socrates, the philosopher must not be thought of as a wise man, but rather as a lover of or seeker after wisdom.

Some of the quotations below define philosophical or speculative wisdom as the highest form of attainable knowledge, consisting in an understanding of first principles or ultimate causes. The greatest praise that has been given to philosophy is accorded to it by those who identify it with wisdom. For other quotations that express this view or quotations questioning it, the reader is referred to Section 17.1 on Philosophy and Philosophers.

Wisdom and folly are often thought of by the poets and the historians, as in books of the Old and the New Testament, not as consisting in profound knowledge and abysmal ignorance; rather the wise man is one who knows how to manage all the affairs of life well, while the fool stumbles and blunders and goes astray. This treatment of wisdom overlaps the discussion of prudence or practical wisdom, which the reader will find in Section 9.13. It also touches on the same fundamental question that is raised there— whether or not it is possible to be a wise man without being a man of good moral character.

The quotations below include not only the praise of wisdom, but also the praise of folly, especially the kinds of folly that, upon examination, emerge as wisdom in disguise. They give us examples of fools who speak wisely about

matters concerning which pretenders to wisdom fall into folly. They distinguish true wisdom from the counterfeit of wisdom that is exemplified in the cunning of the Serpent. And they place the beginning of wisdom in wonder or in the fear of the Lord.

■ ■ ■

1 In Gibeon the Lord appeared to Solomon in a dream by night: and God said, Ask what I shall give thee.

And Solomon said, Thou hast shewed unto thy servant David my father great mercy, according as he walked before thee in truth, and in righteousness, and in uprightness of heart with thee; and thou hast kept for him this great kindness, that thou hast given him a son to sit on his throne, as it is this day.

And now, O Lord my God, thou hast made thy servant king instead of David my father: and I am but a little child: I know not how to go out or come in.

And thy servant is in the midst of thy people which thou hast chosen, a great people, that cannot be numbered nor counted for multitude.

Give therefore thy servant an understanding heart to judge thy people, that I may discern between good and bad: for who is able to judge this thy so great a people?

And the speech pleased the Lord, that Solomon had asked this thing.

And God said unto him, Because thou hast asked this thing, and hast not asked for thyself long life; neither hast asked riches for thyself, nor hast asked the life of

thine enemies; but hast asked for thyself understanding to discern judgment;

Behold, I have done according to thy words: lo, I have given thee a wise and an understanding heart; so that there was none like thee before thee, neither after thee shall any arise like unto thee.

And I have also given thee that which thou hast not asked, both riches, and honour: so that there shall not be any among the kings like unto thee all thy days.

1 Kings 3:5-13

2 The price of wisdom is above rubies.

Job 28:18

3 The fear of the Lord is the beginning of wisdom.

Psalms 111:10

4 A reproof entereth more into a wise man than an hundred stripes into a fool.

Proverbs 17:10

5 Speak not in the ears of a fool: for he will despise the wisdom of thy words.

Proverbs 23:9

6 Answer a fool according to his folly, lest he be wise in his own conceit.

Proverbs 26:5

7 I gave my heart to know wisdom, and to know madness and folly: I perceived that this also is vexation of spirit.

For in much wisdom is much grief: and he that increaseth knowledge increaseth sorrow.

Ecclesiastes 1:17-18

8 I saw that wisdom excelleth folly, as far as light excelleth darkness.

The wise man's eyes are in his head; but the fool walketh in darkness: and I myself perceived also that one event happeneth to them all.

Then said I in my heart. As it happeneth to the fool, so it happeneth even to me; and why was I then more wise? Then I said in my heart, that this also is vanity.

For there is no remembrance of the wise more than of the fool forever; seeing that which now is in the days to come shall all be forgotten. And how dieth the wise man? as the fool.

Ecclesiastes 2:13-16

9 Wisdom is better than strength: nevertheless the poor man's wisdom is despised, and his words are not heard.

Ecclesiastes 9:16

10 *Chorus.* Zeus, who guided men to think, who has laid it down that wisdom comes alone through suffering.

Aeschylus, Agamemnon, 176

11 *Oceanos.* It is a profitable thing, if one is wise, to seem foolish.

Aeschylus, Prometheus Bound, 386

12 *Haemon.* A man, though wise, should never be ashamed of learning more, and must unbend his mind.

Sophocles, Antigone, 710

- 13 They amongst men who pretend to wisdom and expend deep thought on words do incur a serious charge of folly.

Euripides, Medea, 1225

- 14 *Theseus*. What fools men are! You work and work for nothing, you teach ten thousand tasks to one another, invent, discover everything. One thing only you do not know: one thing you never hunt for— a way to teach fools wisdom.

Euripides, Hippolytus, 916

- 15 *Chorus*. A tongue without reins,
defiance, unwisdom—
their end is disaster.
But the life of quiet good,
the wisdom that accepts—
these abide unshaken,
preserving, sustaining
the houses of men.
Far in the air of heaven,
the sons of heaven live.
But they watch the lives of men.
And what passes for wisdom is not;
unwise are those who aspire,
who outrange the limits of man.
Briefly, we live. Briefly,
then die. Wherefore, I say,
he who hunts a glory, he who tracks
some boundless, superhuman dream,
may lose his harvest here and now

and garner death. Such men are mad,
their counsels evil.

Euripides, Bacchae, 387

- 16 *Socrates*. If you are wise, all men will be your friends and kindred, for you will be useful and good; but if you are not wise, neither father, nor mother, nor kindred; nor any one else, will be your friends.

Plato, Lysis, 210B

- 17 *Socrates*. God only is wise; and... the wisdom of men is worth little or nothing.... He ... is the wisest, who, like Socrates, knows that his wisdom is in truth worth nothing.

Plato, Apology, 23A

- 18 *Socrates*. First among the virtues found in the State, wisdom comes into view, and in this I detect a certain peculiarity.

Glaucon. What is that?

The State which we have been describing is said to be wise as being good in counsel?

Very true.

And good counsel is clearly a kind of knowledge, for not by ignorance, but by knowledge, do men counsel well?

Clearly.

And the kinds of knowledge in a State are many and diverse?

Of course.

There is the knowledge of the carpenter; but is that the sort of knowledge which gives a city the title of wise

and good in counsel?

Certainly not; that would only give a city the reputation of skill in carpentering.

Then a city is not to be called wise because possessing a knowledge which counsels for the best about wooden implements?

Certainly not.

Nor by reason of a knowledge which advises about brazen pots, I said, nor as possessing any other similar knowledge?

Not by reason of any of them, he said.

Nor yet by reason of knowledge which cultivates the earth; that would give the city the name of agricultural?

Yes.

Well, I said, and is there any knowledge in our recently-founded State among any of the citizens which advises, not about any particular thing in the State, but about the whole, and considers how a State can best deal with itself and with other States?

There certainly is.

And what is this knowledge, and among whom is it found? I asked.

It is the knowledge of the guardians, he replied, and is found among those whom we were just now describing as perfect guardians.

And what is the name which the city derives from the possession of this sort of knowledge?

The name of good in counsel and truly wise.

And will there be in our city more of these true guardians or more smiths?

The smiths, he replied, will be far more numerous.

Will not the guardians be the smallest of all the classes who receive a name from the profession of some

kind of knowledge?

Much the smallest.

And so by reason of the smallest part or class, and of the knowledge which resides in this presiding and ruling part of itself, the whole State, being thus constituted according to nature, will be wise; and this, which has the only knowledge worthy to be called wisdom, has been ordained by nature to be of all classes the least.

Plato, Republic, IV, 428A

- 19 *Socrates*. God is never in any way unrighteous—he is perfect righteousness; and he of us who is the most righteous is most like him. . . . To know this is true wisdom and virtue, and ignorance of this is manifest folly and vice. All other kinds of wisdom or cleverness, which seem only, such as the wisdom of politicians, or the wisdom of the arts, are coarse and vulgar.

Plato, Theaetetus, 176A

- 20 *Socrates*. And of all the virtues, is not wisdom the one which the mass of mankind are always claiming, and which most arouses in them a spirit of contention and lying conceit of wisdom?

Protarchus. Certainly.

Soc. And may not all this be truly called an evil condition?

Pro. Very evil.

Plato, Philebus, 49A

- 21 All men suppose what is called Wisdom to deal with the first causes and the principles of things; so that. . . the man of experience is thought to be wiser than the

possessors of any sense-perception whatever, the artist wiser than the men of experience, the master-worker than the mechanic, and the theoretical kinds of knowledge to be more of the nature of Wisdom than the productive. Clearly then Wisdom is knowledge about certain principles and causes.

Aristotle, Metaphysics, 981b28

- 22 We must inquire of what kind are the causes and the principles, the knowledge of which is Wisdom. If one were to take the notions we have about the wise man, this might perhaps make the answer more evident. We suppose first, then, that the wise man knows all things, as far as possible, although he has not knowledge of each of them in detail; secondly, that he who can learn things that are difficult, and not easy for man to know, is %wise (sense-perception is common to all, and therefore easy and no mark of Wisdom); again, that he who is more exact and more capable of teaching the causes is wiser, in every branch of knowledge; and that of the sciences, also, that which is desirable on its own account and for the sake of knowing it is more of the nature of Wisdom than that which is desirable on account of its results, and the superior science is more of the nature of Wisdom than the ancillary; for the wise man must not be ordered but must order, and he must not obey another, but the less wise must obey *him*.

Aristotle, Metaphysics, 982a5

- 23 *Wisdom* (1) in the arts we ascribe to their most finished exponents, e.g. to Phidias as a sculptor and to Polyclitus as a maker of portrait-statues, and here we mean nothing

by wisdom except excellence in art; but (2) we think that some people are wise in general, not in some particular field or in any other limited respect,... Therefore wisdom must plainly be the most finished of the forms of knowledge. It follows that the wise man must not only know what follows from the first principles, but must also possess truth about the first principles. Therefore wisdom must be intuitive reason combined with scientific knowledge— scientific knowledge of the highest objects which has received as it were its proper completion. Of the highest objects, we say; for it would be strange to think that the art of politics, or practical wisdom, is the best knowledge, since man is not the best thing in the world.

Aristotle, 1141a9

24 It is evident. . . that philosophic wisdom and the art of politics cannot be the same; for if the state of mind concerned with a man's own interests is to be called philosophic wisdom, there will be many philosophic wisdoms; there will not be one concerned with the good of all animals (any more than there is one art of medicine for all existing things), but a different philosophic wisdom about the good of each species.

But if the argument be that man is the best of the animals, this makes no difference; for there are other things much more divine in their nature even than man, e.g., most conspicuously, the bodies of which the heavens are framed. From what has been said it is plain, then, that philosophic wisdom is scientific knowledge, combined with intuitive reason, of the things that are highest by nature.

Aristotle, Ethics, 1141a28

25 Fools admire and like all things the more which they perceive to be concealed under involved language, and determine things to be true which can prettily tickle the ears and are varnished over with finely sounding phrase.

Lucretius, Nature of Things, I

26 Because law ought to reform vice and promote virtue, the guiding principles of life can be inferred from it. Wisdom is the mother of all good things, and philosophy has taken its name from the Greek expression that means "love of wisdom." Of all the gifts of the gods to the human race, philosophy is the richest, most bountiful, and most exalted. Besides all its other wisdom, philosophy has informed us that the most difficult thing in the world is to know ourselves. This adage is so decisive for us that credit for it is given not to some person, but to the god at Delphi. The man who knows himself will acknowledge that he has a divine spark within him. He will regard his own nature as a consecrated reflection of God, Therefore what he does and thinks will be worthy of this great gift of the gods. When he has examined and tried himself, he will understand how nobly equipped by nature he entered into life. He will realize how various are the ways for attaining wisdom. At first his mind contained only vague concepts, but these were later illuminated by the help of wisdom. He learns how to be a good man and consequently a happy man.

Cicero, Laws, I, 22

27 Think, while there's time, how soon Death's pyre may blaze;

And some brief folly mix with prudent ways:
At the fit hour 'tis sweet to unbend.

Horace, Odes, IV, 12

28 Only the wise man is content with what is his. All foolishness suffers the burden of dissatisfaction with itself.

Seneca, Letters to Lucilius, 9

29 Let no man deceive himself. If any man among you seemeth to be wise in this world, let him become a fool, that he may be wise.

For the wisdom of this world is foolishness with God. For it is written, He taketh the wise in their own craftiness.

I Corinthians 3:18-19

30 For ye suffer fools gladly, seeing ye yourselves are wise.

II Corinthians 11:19

31 [Cato] used to assert... that wise men profited more by fools, than fools by wise men; for that wise men avoided the faults of fools, but that fools would not imitate the good examples of wise men.

Plutarch, Marcus Cato

32 All that comes to be, work of nature or of craft, some wisdom has made: everywhere a wisdom presides at a making.

No doubt the wisdom of the artist may be the guide of the work; it is sufficient explanation of the wisdom exhibited in the arts; but the artist himself goes back,

after all, to that wisdom in Nature which is embodied in himself; and this is not a wisdom built up of theorems but one totality, not a wisdom consisting of manifold detail co-ordinated into a unity but rather a unity working out into detail.

Plotinus, Fifth Ennead, VIII, 5

- 33 Wisdom insinuates itself into holy souls, and makes them the friends of God and His prophets, and noiselessly informs them of His works.

Augustine, City of God, XI, 4

- 34 We were ensnared by the wisdom of the serpent: we are set free by the foolishness of God. Moreover, just as the former was called wisdom, but was in reality the folly of those who despised God, so the latter is called foolishness, but is true wisdom in those who overcome the devil.

Augustine, Christian Doctrine, I, 14

- 35 If wisdom in the knowledge of the created world is lovely, how lovely is the wisdom which has created all things from nothing!

Anselm of Canterbury, Proslogium, XXIV

- 36 Whatever is divided and multiplied in creatures exists in God simply and unitedly. Now man has different kinds of knowledge, according to the different objects of His knowledge. He has *intelligence* as regards the knowledge of principles; he has *science* as regards knowledge of conclusions; he has *wisdom*, according as he knows the highest cause; he has *counsel* or *prudence*, according as

he knows what is to be done. But God knows all these by one simple act of knowledge... Hence the simple knowledge of God can be named by all these names; in such a way, however, that there must be removed from each of them, so far as they enter into the divine predication, everything that savors of imperfection; and everything that expresses perfection is to be retained in them. Hence it is said, With Him is wisdom and strength. He hath counsel and understanding.

Aquinas, Summa Theologica, I, 14, 1

- 37 Wisdom is a kind of science in so far as it has that which is common to all the sciences, namely, to demonstrate conclusions from principles. But since it has something proper to itself above the other sciences, in so far, that is, as it judges of them all, not only as to their conclusions, but also as to their first principles, therefore it is a more perfect virtue than science.

Aquinas, Summa Theologica, I-II, 57, 2

- 38 Since the word knowledge implies certitude of judgment... if this certitude of the judgment is derived from the highest cause, the knowledge has a special name, which is wisdom. For a wise man in any branch of knowledge is one who knows the highest cause of that kind of knowledge, and is able to judge of all matters by that cause; and a wise man absolutely, is one who knows the cause which is absolutely highest, namely God. Hence the knowledge of Divine things is called wisdom, while the knowledge of human things is called knowledge, this being the common name denoting certitude of judgment, and appropriated to the judgment

which is formed through second causes. Accordingly, if we take knowledge in this way, it is a distinct gift from the gift of wisdom, so that the gift of knowledge is only about human or created things.

Aquinas, Summa Theologica, II-II, 9, 2

39 Since wisdom is the knowledge of Divine things ... it is considered by us in one way, and in another way by philosophers. For, seeing that our life is ordered to the enjoyment of God, and is directed to this according to a participation of the Divine Nature, conferred on us through grace, wisdom, as we look at it, is considered not only as making us know God, as it is with the philosophers, but also as directing human conduct; since this is directed not only by the human law, but also by the Divine law,...

Accordingly the beginning of wisdom as to its essence consists in the first principles of wisdom, which are the articles of faith, and in this sense faith is said to be the beginning of wisdom. But as regards the effect, the beginning of wisdom is the point where wisdom begins to work, and in this way fear is the beginning of wisdom, yet servile fear in one way, and filial fear, in another. For servile fear is like a principle disposing a man to wisdom from without, in so far as he refrains from sin through fear of punishment, and is thus fashioned for the effect of wisdom.... On the other hand, chaste or filial fear is the beginning of wisdom, as being the first effect of wisdom. For since the regulation of human conduct by the Divine law belongs to wisdom, in order to make a beginning, man must first of all fear God and submit himself to Him; thus the result will be that in all things he will be ruled by God.

Aquinas, Summa Theologica, II-II, 19, 7

40 Wisdom denotes a certain rectitude of judgment according to the Eternal Law. Now rectitude of judgment is twofold: first, on account of perfect use of reason, secondly, on account of a certain connaturality with the matter about which one has to judge in a given instance. Thus, about matters of chastity, a man after inquiring with his reason forms a right judgment if he has learnt the science of morals, while he who has the habit of chastity judges rightly of such matters by a kind of connaturality.

Accordingly it pertains to the wisdom that is an intellectual virtue to pronounce right judgment about Divine things after reason has made its inquiry, but it pertains to wisdom as a gift of the Holy Ghost to judge rightly about them on account of a certain connaturality with them.... Now this sympathy or connaturality for Divine things is the result of charity, which unites us to God: *He who is joined to the Lord, is one spirit.* Consequently wisdom which is a gift, has its cause in the will, which cause is charity, but it has its essence in the intellect, whose act is to judge rightly.

Aquinas, Summa Theologica, II-II, 45, 2

41 Folly is fittingly opposed to wisdom. For *sapiens* (wise) as Isidore says "is so named from *sapor* (savour), because just as the taste is quick to distinguish between savours of meats, so is a wise man in discerning things and causes." Therefore it is manifest that folly is opposed to wisdom as its contrary, while fatuity is opposed to it as a pure negation, for the fatuous man lacks the sense of

judgment; the fool has the sense, though dulled, and the wise man has the sense acute and penetrating.

Aquinas, Summa Theologica, II-II, 46, 1

42 It is part of folly that a man should have a distaste for God and His gifts.

Aquinas, Summa Theologica, II-II, 46, 3

43 [Pantagruel] took all things in good part, and interpreted every action to the best sense. He never vexed nor disquieted himself with the least pretence of dislike to anything, because he knew that he must have most grossly abandoned the divine mansion of reason, if he had permitted his mind to be never so little grieved, afflicted, or altered at any occasion whatsoever. For all the goods that the heaven covereth, and that the earth containeth, in all their dimensions of height, depth, breath, and length, are not of so much worth, as that we should for them disturb or disorder our affections, trouble or perplex our senses or spirits.

Rabelais, Gargantua and Pantagruel, III, 2

44 *Pantagruel*. As he who narrowly takes heed to what concerns the dexterous management of his private affairs, domestic businesses, and those adoes which are confined within the strait-laced compass of one family,—who is attentive, vigilant, and active in the economic rule of his own house,—whose frugal spirit never strays from home,—who loseth no occasion whereby he may purchase to himself more riches, and build up new heaps of treasure on his former wealth,—and who knows warily how to prevent the inconveniences of poverty, is called a

worldly wise man, though perhaps in the second judgment of the intelligences which are above, he be esteemed a fool,—so, on the contrary is he most like, even in the thoughts of celestial spirits, to be not only sage, but to presage events to come by divine inspiration, who laying quite aside those cares which are conducive to his body, or his fortunes, and, as it were departing from himself, rids all his senses of terrene affections, and clears his fancies of those plodding studies which harbour in the minds of thriving men. All which neglects of sublunary things are vulgarly imputed folly.

Rabelais, Gargantua and Pantagruel, III, 37

45 It seems to me that all peculiar and out-of-the-way fashions come rather from folly and ambitious affectation than from true reason, and that the wise man should withdraw his soul within, out of the crowd, and keep it in freedom and power to judge things freely; but as for externals, he should wholly follow the accepted fashions and forms. Society in general can do without our thoughts; but the rest—our actions, our work, our fortunes, and our very life—we must lend and abandon to its service and to the common opinions, just as the great and good Socrates refused to save his life by disobedience to the magistrate, even to a very unjust and very iniquitous magistrate. For it is the rule of rules, and the universal law of laws, that each man should observe those of the place he is in.

Montaigne, Essays, I, 23, Of Custom

46 Stupidity and wisdom meet at the same point of feeling and of resolving to endure human accidents. The wise curb and control the evil; the others are not aware of it. The latter are, so to speak, on this side of accidents, the former beyond them; for the wise man, after having well weighed and considered their qualities and measured and judged them for what they are, springs above them by the power of a vigorous courage. He disdains them and tramples them underfoot, having a strong and solid soul, against which the arrows of fortune, when they come to strike, must necessarily bounce off and be blunted, meeting a body on which they can make no impression. The ordinary and middle condition of men lodges between these two extremes; which is that of those who perceive evils, feel them, and cannot endure them.

Montaigne, Essays, I, 54, Of Vain Subtleties

47 What does truth preach to us, when she exhorts us to flee worldly philosophy, when she so often inculcates in us that our wisdom is but folly before God; that of all vanities the vainest is man; that the man who is presumptuous of his knowledge does not yet know what knowledge is; and that man, who is nothing, if he thinks he is something, seduces and deceives himself? These statements of the Holy Spirit express so clearly and so vividly what I wish to maintain, that no other proof would be needed against men who would surrender with all submission and obedience to its authority. But these men insist on being whipped to their own cost and will not allow us to combat their reason except by itself.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

4B The wisest man that ever was, when they asked him what he knew, answered that he knew this much, that he knew nothing. He was verifying what they say, that the greatest part of what we know is the least of those parts that we do not know; that is to say that the very thing we think we know is a part, and a very small part, of our ignorance.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

49 Anyone who has once been very foolish will never at any other time be very wise.

Montaigne, Essays, III, 6, Of Coaches

50 *Gratiano*. There are a sort of men whose visages
Do cream and mantle like a standing pond.
And do a wilful stillness entertain.
With purpose to be dressed in an opinion
Of wisdom, gravity, profound conceit,
As who should say, "I am Sir Oracle,
And when I ope my lips let no dog bark!"
O my Antonio, I do know of these
That therefore only are reputed wise
For saying nothing, when, I am very sure,
If they should speak, would almost damn those ears
Which, hearing them, would call their brothers fools.

Shakespeare, Merchant of Venice, I, i, 88

51 *Portia*. If to do were as easy as to know what were good to do, chapels had been churches and poor men's cottages princes' palaces.

Shakespeare, Merchant of Venice, I, ii, 13

52 *Dogberry*. I am a wise fellow, and, which is more, an officer, and, which is more, a householder, and, which is more, as pretty a piece of flesh as any is in Messina, and one that knows the law, go to; and a rich fellow enough, go to; and a fellow that hath had losses, and one that hath two gowns and everything handsome about him.

Shakespeare, Much Ado About Nothing, IV, ii, 82

53 *Celia*. Always the dulness of the fool is the whetstone of the wits.

Shakespeare, As You Like It, I, ii, 58

54 *Jaques*. O noble fool!
A worthy fool! Motley's the only wear,

Shakespeare, As You Like It, II, vii, 33

55 *Jaques*. Invest me in my motley; give me leave
To speak my mind, and I will through and through
Cleanse the foul body of the infected world,
If they will patiently receive my medicine.

Shakespeare, As You Like It, II, vii, 58

56 *Touchstone*. The fool doth think he is wise, but the wise man knows himself to be a fool.

Shakespeare, As You Like It, V, i, 34

57 *Viola*. This fellow is wise enough to play the fool;
And to do that well craves a kind of wit.

Shakespeare, Twelfth Night, III, i, 66

58 *Lear*. Dost thou call me fool, boy?

Fool. All thy other titles thou hast given away; that thou wast born with.

Kent. This is not altogether fool, my Lord.

Shakespeare, Lear, I, iv, 162

59 *Fool.* Prithee, nuncle, keep a schoolmaster that can teach thy Fool to lie. I would fain learn to lie.

Lear. An you lie, sirrah, we'll have you whipped.

Fool. I marvel what kin thou and thy daughters are. They'll have me whipped for speaking true, thou'lt have me whipped for lying; and sometimes I am whipped for holding my peace. I had rather be any kind o' thing than a Fool; and yet I would not be thee, nuncle; thou hast pared thy wit o' both sides, and left nothing i' the middle.

Shakespeare, Lear, I, iv, 195

60 *Fool.* If thou wert my fool, nuncle, I'd have thee beaten for being old before thy time.

Lear. How's that?

Fool. Thou shouldst not have been old till thou hadst been wise.

Shakespeare, Lear, I, v, 44

61 *Kent.* Why, fool?

Fool. We'll set thee to school to an ant, to teach thee there's no labouring i' the winter. All that follow their noses are led by their eyes but blind men; and there's not a nose among twenty but can smell him that's stinking. Let go thy hold when a great wheel runs down a hill, lest it break thy neck with following it; but the great one that goes up the hill, let him draw thee after. When a wise man gives thee better counsel, give me mine again. I

would have none but knaves follow it, since a fool gives it.

Shakespeare, Lear, II, iv, 67

62 *Fool*. He's mad that trusts in the tameness of a wolf, a horse's health, a boy's love, or a whore's oath.

Shakespeare, Lear, III, vi, 19

63 They that have power to hurt and will do none,
That do not do the thing they most do show,
Who, moving others, are themselves as stone,
Unmoved, cold, and to temptation slow,
They rightly do inherit heaven's graces
And husband nature's riches from expense:
They are the lords and owners of their faces,
Others but stewards of their excellence.

Shakespeare, Sonnet XCIV

64 Oh! Sir [Batchclor], reply'd Don *Antonio*, what have you to answer for, in robbing the World of the most diverting Folly, that ever was expos'd among Mankind?

Cervantes, Den Quixote, 11, 65

65 Silence is the virtue of a fool.

Bacon, Advancement of Learning, Bk, VI, III, 31

66 There is in human nature generally more of the fool than of the wise; and therefore those faculties by which the foolish part of men's minds is taken are most potent.

Bacon, Of Boldness

67 The folly of one man is the fortune of another. For no man prospers so suddenly as by others' errors.

Bacon, Of Fortune

68 The sciences taken all together are identical with human wisdom.

Descartes, Rules for Direction of the Mind, I

69 I cannot justifie that contemptible Proverb, *That fools only are Fortunate*; or that insolent Paradox, *That a wise man is out of the reach of Fortune*. ... 'Tis, I confess, the common fate of men of singular gifts of mind to be destitute of those of Fortune, which doth not any way deject the Spirit of wiser judgments, who thoroughly understand the justice of this proceeding; and being enrich'd with higher donatives, cast a more careless eye on these vulgar parts of felicity.

Sir Thomas Browne, Religio Medici, I, 18

70 Let Providence provide for Fools: 'tis not partiality, but equity in God, who deals with us but as our natural Parents; those that are able of Body and Mind, he leaves to their deserts; to those of weaker merits he imparts a larger portion, and pieces out the defect of one, by the access of the other.

Sir Thomas Browne, Religio Medici, I, 18

71 The world is a good judge of things, for it is in natural ignorance, which is man's true state. The sciences have two extremes which meet. the first is the pure natural ignorance in which all men find themselves at birth. The other extreme is that reached by great intellects, who,

having run through all that men can know, find they know nothing, and come back again to that same ignorance from which they set out; but this is a learned ignorance which is conscious of itself. Those between the two, who have departed from natural ignorance and not been able to reach the other, have some smattering of this vain knowledge and pretend to be wise. These trouble the world and are bad judges of everything. The people and the wise constitute the world; these despise it, and are despised. They judge badly of everything, and the world judges rightly of them.

Pascal, Pensées, V, 327

72 *Adam*. Apte the Mind or Fancie is to roave
Unchcekt, and of her roaving is no end;
Till warn'd, or by experience taught, she learn
That not to know at large of things remote
From use, obscure and suttile, but to know
That which before us lies in daily life,
Is the prime Wisdom, what is more, is fume.
Or emptiness, or fond impertinence.

Milton, Paradise Lost, VIII, 188

73 *Samson*. What is strength without a double share
Of wisdom, vast, unwieldy, burdensom.
Proudly secure, yet liable to fall
By weakest suttleties, not made to rule.
But to subserve where wisdom bears command.

Milton, Samson Agonistes, 53

74 *God*. He who receives
Light from above, from the fountain of light.

No other doctrine needs, though granted true;
But these are false, or little else but dreams,
Conjectures, fancies, built on nothing firm.
the first and wisest of them all profess'd
To know this only, that he nothing knew;
The next to fabling fell and smooth conceits,
A third son doubled all things, though plain sence;
Others in vertue plac'd felicity,
But vertue joyn'd with riches and long life.
In corporal pleasure he, and careless ease,
The Stoic last in Philosophic pride,
By him call'd vertue; and his vertuous man,
Wise, perfect in himself, and all possessing
Equal to God, oft shames not to prefer,
As fearing God nor man, contemning all
Wealth, pleasure, pain or torment, death and life,
Which when he lists, he leaves, or boasts he can,
For all his tedious talk is but vain boast.
Or subtle shifts conviction to evade.
Alas what can they teach, and not mislead;
Ignorant of themselves, of God much more.
And how the world began, and how man fell
Degraded by himself, on grace depending?
Much of the Soul they talk, but all awrie,
And in themselves seek vertue, and to themselves
All glory arrogate, to God give none,
Rather accuse him under usual names,
Fortune and Fate, as one regardless quite
Of mortal things. Who therefore seeks in these
True wisdom, finds her not, or by delusion
Far worse, her false resemblance only meets,
An empty cloud.

Milton, Paradise Regained, IV, 288

75 No God and no human being, except an envious one, is delighted by my impotence or my trouble, or esteems as any virtue in us tears, sighs, fears, and other things of this kind, which are signs of mental impotence; on the contrary, the greater the joy with which we are affected, the greater the perfection to which we pass thereby, that is to say, the more do we necessarily partake of the divine nature. To make use of things, therefore, and to delight in them as much as possible (provided we do not disgust ourselves with them, which is not delighting in them), is the part of a wise man. It is the part of a wise man, I say, to refresh and invigorate himself with moderate and pleasant eating and drinking, with sweet scents and the beauty of green plants, with ornament, with music, with sports, with the theatre, and with all things of this kind which one man can enjoy without hurting another. For the human body is composed of a great number of parts of diverse nature, which constantly need new and varied nourishment, in order that the whole of the body may be equally fit for everything which can follow from its nature, and consequently that the mind may be equally fit to understand many things at once. This mode of living best of all agrees both with our principles and with common practice; therefore this mode of living is the best of all, and is to be universally commended,

Spinoza, Ethics, IV, Prop, 45, Schol,

76 The ignorant man is not only agitated by external causes in many ways, and never enjoys true peace of soul, but lives also ignorant, as it were, both of God and of things,

and as soon as he ceases to suffer ceases also to be. On the other hand, the wise man, in so far as he is considered as such, is scarcely ever moved in his mind, but, being conscious by a certain eternal necessity of himself, of God, and of things, never ceases to be, and always enjoys true peace of soul. If the way which, as I have shown, leads hither seem very difficult, it can nevertheless be found. It must indeed be difficult since it is so seldom discovered.

Spinoza, Ethics, V, Prop. 42, Schol.

77 The latter Part of a wise man's Life is taken up in curing the Follies, Prejudices, and false Opinions he had contracted in the former.

Swift, Thoughts on Various Subjects

78 The learn'd is happy nature to explore,
The fool is happy that he knows no more.

Pope, Essay on Man, Epistle II, 263

79 No place so sacred from such fops is barred,
Nor is Paul's church more safe than Paul's churchyard;
Nay, fly to Altars; there they'll talk you dead:
For Fools rush in where Angels fear to tread.
Distrustful sense with modest caution speaks,
It still looks home, and short excursions makes;
But rattling nonsense in full volleys breaks,
And never shocked, and never turned aside,
Bursts out, resistless, with a thund'ring tide.

Pope, Essay on Criticism, III, 622

80 [Johnson's] superiority over other learned men consisted chiefly in what may be called the art of thinking, the art of using his mind; a certain continual power of seizing the useful substance of all that he knew, and exhibiting it in a clear and forcible manner; so that knowledge, which we often see to be no better than lumber in men of dull understanding, was, in him, true, evident, and actual wisdom.

Boswell, Life of Johnson (1784)

81 The greybeard, old Wisdom, may boast of his treasures,—
Give me with gay Folly to live;
I grant him calm-blooded, time-settled pleasures,
But Folly has raptures to give.

*Burns, Written on a Window of the "Globe Tavern,"
Dumfries*

82 The hours of folly are measur'd by the clock; but of
wisdom, no clock can measure.

Blake, Marriage of Heaven and Hell, 7

83 If the fool would persist in his folly he would become
wise.

Blake, Marriage of Heaven and Hell, 7

84 *Faust*. Through the world I have but flown.
Whatever I craved, I seized it by the hair,
Whatever sufficed not, I let fare.
Whatever escaped, I let it go.
I've but desired and but achieved, each hour,
And then again have wished, and so with power
Stormed through my life; at first with power and

greatness;
But now life moves with cautious, wise sedateness.
Well do I know the sphere of earth and men.
The view beyond is barred to mortal ken;
A fool! who thither turns his blinking eyes
And dreams he'll find his like above the skies.
Let him stand fast and look around on earth;
Not mute is this world to a man of worth.
Why need he range through all eternity?
Here he can seize all that he knows to be.
Thus let him wander down his earthly day;
When spirits spook, let him pursue his way;
Let him find pain and bliss as on he stride.
He! every moment still unsatisfied.

Goethe, Faust, 11, 5, 11433

85 *Faust*. Yes, to this thought I hold unswerving,
To wisdom's final fruit, profoundly true;
Of freedom and of life he only is deserving
Who every day must conquer them anew.
Thus here, by danger girt, the active day
Of childhood, manhood, age will pass away.
Aye! such a throng I fain would see,
Stand on free soil among a people free.
Then might I say, that moment seeing;
"Ah, linger on, thou art so fair!"
The traces of my earthly being
Can perish not in aeons—they are there!
That lofty moment I now feel in this:
I now enjoy the highest moment's bliss.

Goethe, Faust, II, 5, 11573

86 Wisdom is oft-times nearer when we stoop
Than when we soar.

Wordsworth, The Excursion, III, 231

87 Wisdom attempts nothing enormous and disproportioned
to its powers, nothing which it cannot perform or nearly
perform.

Emerson, The Conservative

88 The wise through excess of wisdom is made a fool.

Emerson, Experience

89 It is a characteristic of wisdom not to do desperate
things.

Thoreau, Walden: Economy

90 Wisdom is of the soul, is not susceptible of proof, is its
own proof,

Applies to all stages and objects and qualities and is
content,

Is the certainty of the reality and immortality of things,
and the excellence of things;

Something there is in the float of the sight of things
that provokes it out of the soul.

Whitman, Song of the Open Road, VI

91 The only medicine for suffering, crime, and all the other
woes of mankind, is wisdom. Teach a man to read and
write, and you have put into his hands the great keys of
the wisdom box. But it is quite another matter whether he
ever opens the box or not.

T. H. Huxley, A Liberal Education

92 There is a limit to human knowledge, and both sacred and profane writers witness that overwisdom is folly.

Newman, Essay on the Development of Christian Doctrine, Pt. II, V, 6

93 *Pierre*. All we can know is that we know nothing. And that's the height of human wisdom.

Tolstoy, War and Peace, V, 1

94 *The Mason* The highest wisdom is not founded on reason alone, not on those worldly sciences of physics, history, chemistry, and the like, into which intellectual knowledge is divided. The highest wisdom is one. The highest wisdom has but one science—the science of the whole—the science explaining the whole creation and man's place in it. To receive that science it is necessary to purify and renew one's inner self, and so before one can know, it is necessary to believe and to perfect one's self. And to attain this end, we have the light called conscience that God has implanted in our souls.

Tolstoy, War and Peace, V, 2

95 The king says.... Hain't we got all the fools in town on our side? And ain't that a big enough majority in any town?

Mark Twain, Huckleberry Finn, XXVI

96 Behold, the fool saith, 'Put not all thine eggs in the one basket'—which is but a manner of saying, 'Scatter your money and your attention;' but the wise man saith, 'Put all your eggs in the one basket and— WATCH THAT BASKET.'

Mark Twain, Pudd'nhead Wilson's Calendar, XV

Chapter 10

POLITICS

Chapter 10 is divided into nine sections: 10.1 Society and the State, 10.2 The Realm of Politics, 10.3 Government: Its Nature, Necessity, and Forms, 10.4 Government of and by the People: Republic and Democracy, 10.5 Citizenship, 10.6 Despotism and Tyranny, 10.7 Slavery, 10.8 Classes and Class Conflict, and 10.9 Revolution.

For the most part, the term "politics" is used here to cover the range of questions or issues that have been discussed in political philosophy or political theory, though the quotations often go afield to touch on related topics in the wider domain of social thought. The opening section, for example, is concerned with human association in all its forms—with different types of societies or communities, not just civil society, the political community, or state; and Section 10.2 not only includes passages that discuss politics as a discipline or branch of practical philosophy, but also passages that offer counsel or guidance to the statesman or politician and try to formulate the rules of statecraft or the policies to adopt for success in the struggle for power. Similarly, Sections 10.7, 10.8, and 10.9, in dealing with slavery, class conflict, and revolution, introduce economic and sociological considerations in addition to the more narrowly political ones.

The central sections in this chapter are devoted to the problems of government, especially the government of the

political community or state. Section 10.3 prepares the way for the sections to follow by assembling quotations concerning the nature of government, its necessity, and the various forms it takes or can take. Section 10.4 deals with constitutional government or a government of laws, as contrasted with absolute or unlimited government, which is treated in Section 10.6 under the head of despotism and tyranny. Since citizenship, in a strict sense, comes into existence only with the creation of republics and the question of who shall be admitted to citizenship is mainly raised in connection with democracy, Section 10.5, Citizenship, follows directly after the section in which republics and democracies are discussed. Similarly, since slavery or subjection is the condition of those who are governed tyrannically or despotically, Section 10.7, Slavery, follows directly after the section in which despotism and tyranny are discussed. The last two sections of the chapter are also closely related to one another; for, as the reader will find, one of the main points made in both Sections 10.8 and 10.9 is that class conflict breeds revolution.

Four other chapters deal with subjects and problems that either fall within the domain of politics or are closely related to it. They are Chapter 11 on Economics, Chapter 12 on Law and Justice, Chapter 13 on Liberty and Equality, and Chapter 14 on War and Peace. The reader is advised to consult these chapters for matters that are not fully treated here, or for the discussion of matters that throw light on what is treated here.

■ ■ ■

10.1 Society and the State

Man, it is said, is both a social and a political animal. Of these two ascriptions, "social" has the broader connotation. Like other animals, man is gregarious rather than solitary. His gregariousness is manifested in various forms of human association: the family is one of these; the tribe or village, another; and a third is the state. It is only in virtue of this last form of association that man is called a "political" animal; and among gregarious or social animals, man alone is political.

The political community or civil society may be a city-state or a nation-state, and it might, at some future date, even be a world-state. In any of these embodiments, the state differs in a number of respects from all other forms of society, among which the most distinctive, perhaps, is that it may include within its domain other societies, such as families or tribes, but while it remains an independent or autonomous state, it is itself included in no larger community.

The reader will find that ancient and modern writers offer different characterizations of the state, as well as different accounts of its nature and origin. However, careful reading will discover that, although the moderns employ the fiction of a social contract as the original constitution of the state, there is underlying agreement that the state is both natural and conventional—natural in the sense that man is by nature political and needs the state for the perfection of human life, and conventional in the sense that the state comes into existence through human institutions, intelligently devised and voluntarily adopted.

The foregoing considerations affect the answers given to such questions as whether man is made for the state or the state for man; whether man is a part of the state and subordinate to it as an organic part is subordinate to the body of which it is a member; whether the end that the state serves is the happiness of its constituent beings; whether the state can exist without law or government; and whether, as contrasted with the state of nature and the state of war, civil society is identical with civil peace. The reader will find that these questions are also discussed in other contexts—in Section 9.8 on Happiness; in Section 10.3 on Government: Its Nature, Necessity, and Forms; in Section 12.1 on Law and Lawyers; in Section 14.3 on The Conditions of Peace.

■ ■ ■

- 1 *Socrates*. Mankind at first lived dispersed, and there were no cities. But the consequence was that they were destroyed by the wild beasts, for they were utterly weak in comparison of them, and their art was only sufficient to provide them with the means of life, and did not enable them to carry on war against the animals: food they had, but not as yet the art of government, of which the art of war is a part. After a while the desire of self-preservation gathered them into cities; but when they were gathered together, having no art of government, they evil intreated one another, and were again in process of dispersion and destruction. Zeus feared that the entire race would be exterminated, and so he sent Hermes to them, bearing reverence and justice to be the ordering

principles of cities and the bonds of friendship and conciliation.

Plato, Protagoras, 322A

- 2 *Socrates*. A State... arises, as I conceive, out of the needs of mankind; no one is self-sufficing, but all of us have many wants. Can any other origin of a State be imagined?

Adeimantus. There can be no other.

Then as we have many wants, and many persons are needed to supply them, one takes a helper for one purpose and another for another; and when these partners and helpers are gathered together in one habitation the body of inhabitants is termed a State.

True, he said.

And they exchange with one another, and one gives, and another receives, under the idea that the exchange will be for their good.

Very true.

Then, I said, let us begin and create in idea a State; and yet the true creator is necessity, who is the mother of our invention.

Plato, Republic, II, 369A

- 3 *Socrates*. Can there be any greater evil than discord and distraction and plurality where unity ought to reign? or any greater good than the bond of unity?

Glaucon. There cannot.

And there is unity where there is community of pleasures and pains—where all the citizens are glad or grieved on the same occasions of joy and sorrow?

No doubt.

Yes; and where there is no common but only private feeling a State is disorganized—when you have one half of the world triumphing and the other plunged in grief at the same events happening to the city or the citizens?

Certainly.

Such differences commonly originate in a disagreement about the use of the terms "mine" and "not mine," "his" and "not his,"

Exactly so.

And is not that the best-ordered State in which the greatest number of persons apply the terms "mine" and "not mine" in the same way to the same thing?

Quite true.

Or that again which most nearly approaches to the condition of the individual—as in the body, when but a finger of one of us is hurt, the whole frame, drawn towards the soul as a centre and forming one kingdom under the ruling power therein, feels the hurt and sympathizes all together with the part affected, and we say that the man has a pain in his finger; and the same expression is used about any other part of the body, which has a sensation of pain at suffering or of pleasure at the alleviation of suffering.

Very true, he replied; and I agree with you that in the best-ordered State there is the nearest approach to this common feeling which you describe.

Then when any one of the citizens experiences any good or evil, the whole State will make his case their own, and will either rejoice or sorrow with him?

Yes, he said, that is what will happen in a well-ordered State.

Plato, Republic, V, 462A

- 4 Man is a political creature and one whose nature is to live with others.

Aristotle, Ethics, 1169a18

- 5 Every state is a community of some kind, and every community is established with a view to some good; for mankind always act in order to obtain that which they think good. But, if all communities aim at some good, the state or political community, which is the highest of all, and which embraces all the rest, aims at good in a greater degree than any other, and at the highest good.

Aristotle, Politics, 1252a1

- 6 When several villages are united in a single complete community, large enough to be nearly or quite self-sufficing, the state comes into existence, originating in the bare needs of life, and continuing in existence for the sake of a good life. And therefore, if the earlier forms of society are natural, so is the state, for it is the end of them, and the nature of a thing is its end. For what each thing is when fully developed, we call its nature, whether we are speaking of a man, a horse, or a family. Besides, the final cause and end of a thing is the best, and to be self-sufficing is the end and the best.

Hence it is evident that the state is a creation of nature, and that man is by nature a political animal. And he who by nature and not by mere accident is without a state, is either a bad man or above humanity...

Further, the state is by nature clearly prior to the family and to the individual, since the whole is of necessity prior to the part; for example, if the whole body be destroyed, there will be no foot or hand, except in an

equivocal sense, as we might speak of a stone hand; for when destroyed the hand will be no better than that. But things are defined by their working and power; and we ought not to say that they are the same when they no longer have their proper quality, but only that they have the same name. The proof that the state is a creation of nature and prior to the individual is that the individual, when isolated, is not self-sufficing; and therefore he is like a part in relation to the whole. But he who is unable to live in society, or who has no need because he is sufficient for himself, must be either a beast or a god: he is no part of a state. A social instinct is implanted in all men by nature, and yet he who first founded the state was the greatest of benefactors.

Aristotle, Politics, 1252b28

- 7 As a means to the end which he [Plato] ascribes to the state, the scheme, taken literally, is impracticable, and how we are to interpret it is nowhere precisely stated, I am speaking of the premiss from which the argument of Socrates proceeds, 'that the greater the unity of the state the better'. Is it not obvious that a state may at length attain such a degree of unity as to be no longer a state?—since the nature of a state is to be a plurality.

Aristotle, Politics, 1261a13

- 8 A state exists for the sake of a good life, and not for the sake of life only: if life only were the object, slaves and brute animals might form a state, but they cannot, for they have no share in happiness or in a life of free choice. Nor does a state exist for the sake of alliance and security from injustice, nor yet for the sake of exchange and

mutual intercourse.... Virtue must be the care of a state which is truly so called, and not merely enjoys the name: for without this end the community becomes a mere alliance which differs only in place from alliances of which the members live apart; and law is only a convention, 'a surety to one another of justice', as the sophist Lycophron says, and has no real power to make the citizens good and just. ... It is clear then that a state is not a mere society, having a common place, established for the prevention of mutual crime and for the sake of exchange. These are conditions without which a state cannot exist; but all of them together do not constitute a state, which is a community of families and aggregation of families in well-being, for the sake of a perfect and self-sufficing life. Such a community can only be established among those who live in the same place and intermarry. Hence arise in cities family connexions, brotherhoods, common sacrifices, amusements which draw men together. But these are created by friendship, for the will to live together is friendship. The end of the state is the good life, and these are the means towards it. And the state is the union of families and villages in a perfect and self-sufficing life, by which we mean a happy and honourable life.

Our conclusion, then, is that political society exists for the sake of noble actions, and not of mere companionship. Hence they who contribute most to such a society have a greater share in it than those who have the same or a greater freedom or nobility of birth but are inferior to them in political virtue; or than those who exceed them in wealth but are surpassed by them in virtue.

Aristotle, Politics, 1280a32

9 A state... only begins to exist when it has attained a population sufficient for a good life in the political community: it may indeed, if it somewhat exceed this number, be a greater state. But... there must be a limit. What should be the limit will be easily ascertained by experience. For both governors and governed have duties to perform; the special functions of a governor are to command and to judge. But if the citizens of a state are to judge and to distribute offices according to merit, then they must know each other's characters; where they do not possess this knowledge, both the election to offices and the decision of lawsuits will go wrong. When the population is very large they are manifestly settled at haphazard, which clearly ought not to be.... Clearly then the best limit of the population of a state is the largest number which suffices for the purposes of life, and can be taken in at a single view.

Aristotle, Politics, 1326b8

10 States require property, but property, even though living beings are included in it, is no part of a state; for a state is not a community of living beings only, but a community of equals, aiming at the best life possible. Now, whereas happiness is the highest good, being a realization and perfect practice of virtue, which some can attain, while others have little or none of it, the various qualities of men are clearly the reason why there are various kinds of states and many forms of government; for different men seek after happiness in different ways and by different means, and so make for themselves different modes of life and forms of government.

Aristotle, Politics, 1328a35

11 Let us , . . enumerate the functions of a state, and we shall easily elicit what we want:

First, there must be food; secondly, arts, for life requires many instruments; thirdly, there must be arms, for the members of a community have need of them, and in their own hands, too, in order to maintain authority both against disobedient subjects and against external assailants; fourthly, there must be a certain amount of revenue, both for internal needs, and for the purposes of war; fifthly, or rather first, there must be a care of religion, which is commonly called worship; sixthly, and most necessary of all, there must be a power of deciding what is for the public interest, and what is just in men's dealings with one another.

These are the services which every state may be said to need. For a state is not a mere aggregate of persons, but a union of them sufficing for the purposes of life; and if any of these things be wanting, it is as we maintain impossible that the community can be absolutely self-sufficing. A state then should be framed with a view to the fulfilment of these functions. There must be husbandmen to procure food, and artisans, and a warlike and a wealthy class, and priests, and judges to decide what is necessary and expedient.

Aristotle, Politics, 1328b4

12 The principles of fellowship and society that nature has established among men must be traced back to their origins. The first principle subsists among all members of the human race. It is that connecting link of reason and speech by which the several processes of teaching,

learning, communicating, discussing, and debating associate men together and unite them in a kind of brotherhood. In no other particular are we more distinct from the animals. We may grant them courage (for example, horses and lions). But we do not credit them with justice, equity, and goodness, because they are not endowed with reason or speech.

Cicero, De Officiis, I, 16

- 13 As a foot is no longer a foot if it is detached from the body, so you are no longer a man if you are separated from other men. For what is a man? A part of a state, of that first which consists of Gods and of men; then of that which is called next to it, which is a small image of the universal state.

Epictetus, Discourses, II, 5

- 14 If we... say that a people is an assemblage of reasonable beings bound together by a common agreement as to the objects of their love, then, in order to discover the character of any people, we have only to observe what they love. Yet whatever it loves, if only it is an assemblage of reasonable beings and not of beasts, and is bound together by an agreement as to the objects of love, it is reasonably called a people; and it will be a superior people in proportion as it is bound together by higher interests, inferior in proportion as it is bound together by lower.

Augustine, City of God, XIX, 24

- 15 The light of reason is placed by nature in every man, to guide him in his acts towards his end. Wherefore, if man

were intended to live alone, as many animals do, he would require no other guide to his end. Each man would be a king unto himself, under God, the highest King, inasmuch as he would direct himself in his acts by the light of reason given him from on high. Yet it is natural for man, more than for any other animal, to be a social and political animal, to live in a group.

Aquinas, On Kingship, I, 1

- 16 The preservation of states is a thing that probably surpasses our understanding.

Montaigne, Essays, III, 9, Of Vanity

- 17 *Archbishop of Canterbury*. Therefore doth heaven divide
The state of man in divers functions,
Setting endeavour in continual motion;
To which is fixed, as an aim or butt,
Obedience; for so work the honey-bees.
Creatures that by a rule in nature teach
The act of order to a peopled kingdom.
They have a king and officers of sorts;
Where some, like magistrates, correct at home,
Others, like merchants, venture trade abroad,
Others, like soldiers, armed in their stings,
Make boot upon the summer's velvet buds,
Which pillage they with merry march bring home
To the tent-royal of their emperor;
Who, busied in his majesty, surveys
The singing masons building roofs of gold.
The civil citizens kneading up the honey,
The poor mechanic porters crowding in
Their heavy burdens at his narrow gate,

The sad-eyed justice, with his surly hum,
Delivering o'er to executors pale
The lazy yawning drone.

Shakespeare, Henry V, I, ii, 183

- 18 *Ulysses*. The providence that's in a watchful state
Knows almost every grain of Plutus' gold,
Finds bottom in the uncomprehensive deeps,
Keeps place with thought and almost, like the gods,
Does thoughts unveil in their dumb cradles.
There is a mystery—with whom relation
Durst never meddle—in the soul of state;
Which hath an operation more divine
Than breath or pen can give expressure to.

Shakespeare, Troilus and Cressida, III, iii, 196

- 19 In the youth of a state, arms do flourish: in the middle
age of a state, learning; and then both of them together
for a time: in the declining age of a state, mechanical arts
and merchandize.

Bacon, Of Vicissitude of Things

- 20 A state is a perfect body of free men, united together in
order to enjoy common rights and advantages.

Grotius, Rights of War and Peaces Bk. I, I, 14

- 21 Nature (the art whereby God hath made and governs the
world) is by the art of man, as in many other things, so in
this also imitated, that it can make an artificial animal.
For seeing life is but a motion of limbs, the beginning
whereof is in some principal part within, why may we not
say that all automata (engines that move themselves by

springs and wheels as doth a watch) have an artificial life? For what is the heart, but a spring; and the nerves, but so many strings; and the joints, but so many wheels, giving motion to the whole body, such as was intended by the Artificer? Art goes yet further, imitating that rational and most excellent work of Nature, *man*. For by art is created that great Leviathan called a Commonwealth, or State, which is but an artificial man, though of greater stature and strength than the natural, for whose protection and defence it was intended; and in which the sovereignty is an artificial soul, as giving life and motion to the whole body; the magistrates and other officers of judicature and execution, artificial joints; reward and punishment (by which fastened to the seat of the sovereignty, every joint and member is moved to perform his duty) are the nerves, that do the same in the body natural; the wealth and riches of all the particular members are the strength; the people's safety its business; counsellors, by whom all things needful for it to know are suggested unto it, are the memory; equity and laws, an artificial reason and will; concord, health; sedition, sickness; and civil war, death. Lastly, the pacts and covenants, by which the parts of this body politic were at first made, set together, and united, resemble that *fiat*, or the *Let us make men*, pronounced by God, in the Creation.

Hobbes, Leviathan, Intro.

- 22 The final cause, end, or design of men (who naturally love liberty, and dominion over others) in the introduction of that restraint upon themselves, in which we see them live in Commonwealths, is the foresight of their own preservation, and of a more contented life

thereby; that is to say, of getting themselves out from that miserable condition of war which is necessarily consequent... to the natural passions of men when there is no visible power to keep them in awe, and tie them by fear of punishment to the performance of their covenants.

Hobbes, Leviathan, II, 17

23 Irrational creatures cannot distinguish between injury and damage; and therefore as long as they be at ease, they are not offended with their fellows: whereas man is then most troublesome when he is most at ease; for then it is that he loves to show his wisdom, and control the actions of them that govern the Commonwealth....

The agreement of [irrational] creatures is natural; that of men is by covenant only, which is artificial: and therefore it is no wonder if there be somewhat else required, besides covenant, to make their agreement constant and lasting; which is a common power to keep them in awe and to direct their actions to the common benefit.

The only way to erect such a common power, as may be able to defend them from the invasion of foreigners, and the injuries of one another, and thereby to secure them in such sort as that by their own industry and by the fruits of the earth they may nourish themselves and live contentedly, is to confer all their power and strength upon one man, or upon one assembly of men, that may reduce all their wills, by plurality of voices, unto one will: which is as much as to say, to appoint one man, or assembly of men, to bear their person; and everyone to own and acknowledge himself to be author of whatsoever he that so beareth their person shall act, or cause to be acted, in those things which concern the common peace

and safety; and therein to submit their wills, every one to his will, and their judgements to his judgement. This is more than consent, or concord; it is a real unity of them all in one and the same person, made by covenant of every man with every man, in such manner as if every man should say to every man: *I authorise and give up my right of governing myself to this man, or to this assembly of men, on this condition; that thou give up thy right to him, and authorise all his actions in like manner.* This done, the multitude so united in one person is called a Commonwealth. ... This is the generation of that great Leviathan, or rather, to speak more reverently, of that mortal god to which we owe, under the immortal God, our peace and defence.

Hobbes, Leviathan, II, 17

24 Though nothing can be immortal which mortals make; yet, if men had the use of reason they pretend to, their Commonwealths might be secured, at least, from perishing by internal diseases. For by the nature of their institution, they are designed to live as long as mankind, or as the laws of nature, or as justice itself, which gives them life. Therefore when they come to be dissolved, not by external violence, but intestine disorder, the fault is not in men as they are the *matter*, but as they are the makers and orderers of them.

Hobbes, Leviathan, II, 29

25 It is by the highest right of nature that each person exists, and consequently it is by the highest right of nature that each person does those things which follow from the necessity of his nature; and therefore it is by the

highest right of nature that each person judges what is good and what is evil, consults his own advantage as he thinks best, avenges himself, and endeavours to preserve what he loves and to destroy what he hates. If men lived according to the guidance of reason, every one would enjoy this right without injuring any one else. But because men are subject to affects which far surpass human power or virtue, they are often drawn in different directions and are contrary to one another, although they need one another's help.

In order, then, that men may be able to live in harmony and be a help to one another, it is necessary for them to cede their natural right, and beget confidence one in the other that they will do nothing by which one can injure the other.... By this law, therefore, can society be strengthened, if only it claims for itself the right which every individual possesses of avenging himself and deciding what is good and what is evil, and provided, therefore, that it possess the power of prescribing a common rule of life, of promulgating laws and supporting them, not by reason, which cannot restrain the affects, but by penalties.

This society, firmly established by law and with a power of self-preservation, is called a State, and those who are protected by its right are called Citizens. We can now easily see that in the natural state there is nothing which by universal consent is good or evil, since every one in a natural state consults only his own profit; deciding according to his own way of thinking what is good and what is evil with reference only to his own profit, and is not bound by any law to obey any one but himself. Hence in a natural state sin cannot be conceived, but only in a civil state, where it is decided by universal

consent what is good and what is evil, and where every one is bound to obey the State. Sin, therefore, is nothing but disobedience, which is punished by the law of the State alone; obedience, on the other hand, being regarded as a merit in a citizen, because on account of it he is considered worthy to enjoy the privileges of the State. Again, in a natural state no one by common consent is the owner of anything, nor is there anything in nature which can be said to be the rightful property of this and not of that man, but all things belong to all, so that in a natural state it is impossible to conceive a desire of rendering to each man his own or taking from another that which is his; that is to say, in a natural state there is nothing which can be called just or unjust, but only in a civil state, in which it is decided by universal consent what is one person's and what is another's. Justice and injustice, therefore, sin and merit, are external notions, and not attributes, which manifest the nature of the mind.

Spinoza, Ethics, IV, Prop. 37, Schol. 2

- 26 If all the members of a state wish to disregard the law, by that very fact they dissolve the state and destroy the commonwealth.

Spinoza, Theologico-Political Treatise, 111

- 27 The commonwealth seems to me to be a society of men constituted only for the procuring, preserving, and advancing their own civil interests.

Civil interests I call life, liberty, health, and indolency of body; and the possession of outward things, such as money, lands, houses, furniture, and the like.

Locke, Letter Concerning Toleration

28 The political society is instituted for no other end, but only to secure every man's possession of the things of this life. The care of each man's soul and of the things of heaven, which neither does belong to the commonwealth nor can be subjected to it, is left entirely to every man's self,

Locke, Letter Concerning Toleration

29 Man being born... with a title to perfect freedom and an uncontrolled enjoyment of all the rights and privileges of the law of Nature, equally with any other man, or number of men in the world, hath by nature a power not only to preserve his property—that is, his life, liberty, and estate, against the injuries and attempts of other men, but to judge of and punish the breaches of that law in others, as he is persuaded the offence deserves, even with death itself, in crimes where the heinousness of the fact, in his opinion, requires it. But because no political society can be, nor subsist, without having in itself the power to preserve the property, and in order thereunto punish the offences of all those of that society, there, and there only, is political society where every one of the members hath quitted this natural power, resigned it up into the hands of the community in all cases that exclude him not from appealing for protection to the law established by it. . . . Wherever, therefore, any number of men so unite into one society as to quit every one his executive power of the law of Nature, and to resign it to the public, there and there only is a political or civil society,

Locke, II Civil Government, VII, 87-89

30 Mankind, notwithstanding all the privileges of the state of Nature, being but in an ill condition while they remain in it are quickly driven into society. Hence it comes to pass, that we seldom find any number of men live any time together in this state. The inconveniencies that they are therein exposed to by the irregular and uncertain exercise of the power every man has of punishing the transgressions of others, make them take sanctuary under the established laws of government, and therein seek the preservation of their property. It is this makes them so willingly give up every one his single power of punishing to be exercised by such alone as shall be appointed to it amongst them, and by such rules as the community, or those authorised by them to that purpose, shall agree on. And in this we have the original right and rise of both the legislative and executive power as well as of the governments and societies themselves.

For in the state of Nature to omit the liberty he has of innocent delights, a man has two powers. The first is to do whatsoever he thinks fit for the preservation of himself and others within the permission of the law of Nature; by which law, common to them all, he and all the rest of mankind are one community, make up one society distinct from all other creatures, and were it not for the corruption and viciousness of degenerate men, there would be no need of any other, no necessity that men should separate from this great and natural community, and associate into lesser combinations. The other power a man has in the state of Nature is the power to punish the crimes committed against that law. Both these he gives up when he joins in a private, if I may so call it, or particular political society, and incorporates into any commonwealth separate from the rest of m-an-kind.

The first power—viz., of doing whatsoever he thought fit for the preservation of himself and the rest of mankind, he gives up to be regulated by laws made by the society, so far forth as the preservation of himself and the rest of that society shall require; which laws of the society in many things confine the liberty he had by the law of Nature.

Secondly, the power of punishing he wholly gives up, and engages his natural force, which he might before employ in the execution of the law' of Nature, by his own single authority, as he thought fit, to assist the executive power of the society as the law thereof shall require. For being now in a new state, wherein he is to enjoy many conveniencies from the labour, assistance, and society of others in the same community, as well as protection from its whole strength, he is to part also with as much of his natural liberty, in providing for himself, as the good, prosperity, and safety of the society shall require, which is not only necessary but just, since the other members of the society do the like.

Locke, II Civil Government, IX, 127-130

- 31 In the state of nature ... all men are born equal, but they cannot continue in this equality. Society makes them lose it, and they recover it only by the protection of the laws.

Montesquieu, Spirit of Laws, VI11, 3

- 32 I suppose men to have reached the point at which the obstacles in the way of their preservation in the state of nature show their power of resistance to be greater than the resources at the disposal of each individual for his maintenance in that state. That primitive condition can

then subsist no longer; and the human race would perish unless it changed its manner of existence.

But, as men cannot engender new forces, but only unite and direct existing ones, they have no other means of preserving themselves than the formation, by aggregation, of a sum of forces great enough to overcome the resistance. These they have to bring into play by means of a single motive power, and cause to act in concert.

This sum of forces can arise only where several persons come together: but, as the force and liberty of each man are the chief instruments of his self-preservation, how can he pledge them without harming his own interests, and neglecting the care he owes to himself? This difficulty, in its bearing on my present subject, may be stated in the following terms:

"The problem is to find a form of association which will defend and protect with the whole common force the person and goods of each associate, and in which each, while uniting himself with all, may still obey himself alone, and remain as free as before." This is the fundamental problem of which the *Social Contract* provides the solution.

The clauses of this contract are so determined by the nature of the act that the slightest modification would make them vain and ineffective; so that, although they have perhaps never been formally set forth, they are everywhere the same and everywhere tacitly admitted and recognised, until, on the violation of the social compact, each regains his original rights and resumes his natural liberty, while losing the conventional liberty in favour of which he renounced it.

These clauses, properly understood, may be reduced to one—the total alienation of each associate, together with all his rights, to the whole community; for, in the first place, as each gives himself absolutely, the conditions are the same for all; and, this being so, no one has any interest in making them burdensome to others.

Moreover, the alienation being without reserve, the union is as perfect as it can be, and no associate has anything more to demand: for, if the individuals retained certain rights, as there would be no common superior to decide between them and the public, each, being on one point his own judge, would ask to be so on all; the state of nature would thus continue, and the association would necessarily become inoperative or tyrannical.

Finally, each man, in giving himself to all, gives himself to nobody; and as there is no associate over whom he does not acquire the same right as he yields others over himself, he gains an equivalent for everything he loses, and an increase of force for the preservation of what he has.

Rousseau, Social Contract, I, 6

- 33 The passage from the state of nature to the civil state produces a very remarkable change in man, by substituting justice for instinct in his conduct, and giving his actions the morality they had formerly lacked. Then only, when the voice of duty takes the place of physical impulses and right of appetite, does man, who so far had considered only himself, find that he is forced to act on different principles, and to consult his reason before listening to his inclinations. Although, in this state, he deprives himself of some advantages which he got from nature, he gains in return others so great, his faculties are

so stimulated and developed, his ideas so extended, his feelings so ennobled, and his whole soul so uplifted, that, did not the abuses of this new condition often degrade him below that which he left, he would be bound to bless continually the happy moment which took him from it for ever, and, instead of a stupid and unimaginative animal, made him an intelligent being and a man.

Rousseau, Social Contract, I, 8

34 The social compact sets up among the citizens an equality of such a kind, that they all bind themselves to observe the same conditions and should therefore all enjoy the same rights. Thus, from the very nature of the compact, every act of Sovereignty, that is, every authentic act of the general will, binds or favours all the citizens equally; so that the Sovereign recognises only the body of the nation, and draws no distinctions between those of whom it is made up. What, then, strictly speaking, is an act of Sovereignty? It is not a convention between a superior and an inferior, but a convention between the body and each of its members. It is legitimate, because based on the social contract, and equitable, because common to all; useful, because it can have no other object than the general good, and stable, because guaranteed by the public force and the supreme power. So long as the subjects have to submit only to conventions of this sort, they obey no-one but their own will; and to ask how far the respective rights of the Sovereign and the citizens extend, is to ask up to what point the latter can enter into undertakings with themselves, each with all, and all with each.

Rousseau, Social Contract, II, 4

35 What is the end of political association? The preservation and prosperity of its members. And what is the surest mark of their preservation and prosperity? Their numbers and population. Seek then nowhere else this mark that is in dispute. The rest being equal, the government under which, without external aids, without naturalisation or colonies, the citizens increase and multiply most, is beyond question the best.

Rousseau, Social Contract, III, 9

36 The opposite of the state of nature is the civil state as the condition of a society standing under a distributive justice. In the state of nature, there may even be juridical forms of society—such as marriage, parental authority, the household, and such like. For none of these, however, does any law *a priori* lay it down as an incumbent obligation: "Thou *shall* enter into this state." But it may be said of the *juridical* state that: "All men who *may* even involuntarily come into relations of right with one another *ought* to enter into this state."

The natural or non-juridical social state may be viewed as the sphere of private right, and the civil state may be specially regarded as the sphere of public right. The latter state contains no more and no other duties of men towards each other than what may be conceived in connection with the former state; the matter of private right is, in short, the very same in both. The laws of the civil state, therefore, only turn upon the juridical form of the coexistence of men under a common constitution; and, in this respect, these laws must necessarily be regarded and conceived as public laws.

Kant, Science of Right, 41

37 Before a legal state of society can be publicly established, individual men, nations, and states, can never be safe against violence from each other; and this is evident from the consideration that every one of his own will naturally does *what seems good and right in his own eyes*, entirely independent of the opinion of others. Hence, unless the institution of right is to be renounced, the first thing incumbent on men is to accept the principle that it is necessary to leave the state of nature, in which every one follows his own inclinations, and to form a union of all those who cannot avoid coming into reciprocal communication, and thus subject themselves in common to the external restraint of public compulsory laws. Men thus enter into a civil union, in which every one has it determined by law what shall be recognized as his; and this is secured to him by a competent external power distinct from his own individuality. Such is the primary obligation, on the part of all men, to enter into the relations of a civil state of society.

Kant, Science of Right, 44

38 The state is the actuality of the ethical Idea. It is ethical mind *qua* the substantial will manifest and revealed to itself, knowing and thinking itself, accomplishing what it knows and in so far as it knows it. The state exists immediately in custom, mediately in individual self-consciousness, knowledge, and activity, while self-consciousness in virtue of its sentiment towards the state finds in the state, as its essence and the end and product of its activity, its substantive freedom.. . .

The state is absolutely rational inasmuch as it is the actuality of the substantial will which it possesses in the particular self-consciousness once that consciousness has

been raised to consciousness of its universality. This substantial unity is an absolute unmoved end in itself, in which freedom comes into its supreme right. On the other hand this final end has supreme right against the individual, whose supreme duty is to be a member of the state.

If the state is confused with civil society, and if its specific end is laid down as the security and protection of property and personal freedom, then the interest of the individuals as such becomes the ultimate end of their association, and it follows that membership of the state is something optional. But the state's relation to the individual is quite different from this. Since the state is mind objectified, it is only as one of its members that the individual himself has objectivity, genuine individuality, and an ethical life.

Hegel, Philosophy of Right, 257-258

39 A nation does not begin by being a state. the transition from a family, a horde, a clan, a multitude, etc., to political conditions is the realization of the Idea in the form of that nation. Without this form, a nation, as an ethical substance— which is what it is implicitly, lacks the objectivity of possessing in its own eyes and in the eyes of others, a universal and universally valid embodiment in laws, that is, in determinate thoughts, and as a result it fails to secure recognition from others. So long as it lacks objective law and an explicitly established rational constitution, its autonomy is formal only and is not sovereignty....

It is the absolute right of the Idea to step into existence in clear-cut laws and objective institutions, beginning with marriage and agriculture,... whether this

right be actualized in the form of divine legislation and favour, or in the form of force and wrong. This right is the right of heroes to found states.

Hegel, Philosophy of Right, 349-350

- 40 The rational end of man is life in the state, and if there is no state there, reason at once demands that one be founded. Permission to enter a state or leave it must be given by the state; this then is not a matter which depends on an individual's arbitrary will and therefore the state does not rest on contract, for contract presupposes arbitrariness. It is false to maintain that the foundation of the state is something at the option of all its members. It is nearer the truth to say that it is absolutely necessary for every individual to be a citizen.

Hegel, Philosophy of Right, Additions, Par. 75

- 41 When we walk the streets at night in safety, it does not strike us that this might be otherwise. This habit of feeling safe has become second nature, and we do not reflect on just how this is due solely to the working of special institutions. Commonplace thinking often has the impression that force holds the state together, but in fact its only bond is the fundamental sense of order which everybody possesses.

Hegel, Philosophy of Right, Additions, Par. 268

- 42 we should desire to have in the state nothing except what is an expression of rationality. The state is the world which mind has made for itself; its march, therefore, is on lines that are fixed and absolute. How often we talk of the wisdom of God in nature! But we are not to assume for

that reason that the physical world of nature is a loftier thing than the world of mind. As high as mind stands above nature, so high does the state stand above physical life. Man must therefore venerate the state as a secular deity, and observe that if it is difficult to comprehend nature, it is infinitely harder to understand the state.

Hegel, Philosophy of Right, Additions, Par. 272

43 The state of nature is . . . predominantly that of injustice and violence, of untamed natural impulses, of inhuman deeds and feelings. Limitation is certainly produced by society and the state, but it is a limitation of the mere brute emotions and blind instincts; as also, in a more advanced stage of culture, of the premeditated self-will of caprice and passion. This kind of constraint is part of the instrumentality by which only, the consciousness of freedom and the desire for its attainment. In its true—that is, rational and ideal form—can be obtained.... Society and the state are the very conditions in which freedom is realized.

Hegel, Philosophy of History, Introduction, 3

44 In dealing with the State we ought to remember that its institutions are not aboriginal, though they existed before we were born; that they are not superior to the citizen; that every one of them was once the act of a single man; every law and usage was a man's expedient to meet a particular case; that they all are imitable, all alterable; we may make as good, we may make better.

Emerson, Politics

45 The power of love, as the basis of a State, has never been tried.

Emerson, Politics

46 the highest conceivable form of human society is that in which the desire to do what is best for the whole, dominates and limits the action of every member of that society.

T. H. Huxley, Science and Christian Tradition, Prologue

47 the proletariat seizes the state power, and transforms the means of production in the first instance into state property. But in doing this, it puts an end to itself as the proletariat, it puts an end to all class differences and class antagonisms, it puts an end also to the state as the state. Former society, moving in class antagonisms, had need of the state, that is, an organisation of the exploiting class at each period for the maintenance of its external conditions of production; that is, therefore, for the forcible holding down of the exploited class in the conditions of oppression (slavery, villeinage or serfdom, wage labour) determined by the existing mode of production. The state was the official representative of society as a whole, its embodiment in a visible corporation; but it was this only in so far as it was the state of that class which itself, in its epoch, represented society as a whole; in ancient times, the state of the slave-owning citizens; in the Middle Ages, of the feudal nobility; in our epoch, of the bourgeoisie. When ultimately it becomes really representative of society as a whole, it makes itself superfluous. As soon as there is no longer any class of society to be held in subjection; as

soon as, along with class domination and the struggle for individual existence based on the former anarchy of production, the collisions and excesses arising from these have also been abolished, there is nothing more to be repressed which would make a special repressive force, a state, necessary. The first act in which the state really comes forward as the representative of society as a whole—the taking possession of the means of production in the name of society—is at the same time its last independent act as a state. The interference of the state power in social relations becomes superfluous in one sphere after another, and then ceases of itself. The government of persons is replaced by the administration of things and the direction of the processes of production. The state is not "abolished," *it withers away*.

Engels, Anti-Duhring, III, 2

- 48 Though society is not founded on a contract, and though no good purpose is answered by inventing a contract in order to deduce social obligations from it, every one who receives the protection of society owes a return for the benefit, and the fact of living in society renders it indispensable that each should be bound to observe a certain line of conduct towards the rest.

Mill, On Liberty, IV

- 49 I used the word "State": my meaning is self-evident, namely, a herd of blonde beasts of prey, a race of conquerors and masters, which with all its warlike organisation and all its organising power pounces with its terrible claws on a population, in numbers possibly tremendously superior, but as yet formless, as yet nomad.

Such is the origin of the "State." That fantastic theory that makes it begin with a contract is, I think, disposed of. He who commands, he who is a master by "nature," he who comes on the scene forceful in deed and gesture—what has he to do with contracts? Such beings defy calculation, they come like fate, without cause, reason, notice, excuse, they are there like the lightning is there, too terrible, too sudden, too convincing, too "different," to be personally even hated. Their work is an instinctive creating and impressing of forms, they are the most involuntary, unconscious artists that there are:—their appearance produces instantaneously a scheme of sovereignty which is live, in which the functions are partitioned and apportioned, in which above all no part is received or finds a place, until pregnant with a "meaning" in regard to the whole.

Nietzsche, Genealogy of Morals, II, 17

50 The truth is that the social order is fixed by laws of nature precisely analogous to those of the physical order. The most that man can do is by ignorance and self-conceit to mar the operation of social laws. The evils of society are to a great extent the result of the dogmatism and self-interest of statesmen, philosophers, and ecclesiastics who in past time have done just what the socialists now want to do. Instead of studying the natural laws of the social order, they assumed that they could organize society as they chose; they made up their minds what kind of a society they wanted to make; and they planned their little measures for the ends they had resolved upon. It will take centuries of scientific study of the facts of nature to eliminate from human society the mischievous

institutions and traditions which the said statesmen, philosophers, and ecclesiastics have introduced into it.

W. G. Sumner, Socialism

51 The teaching of Marx and Engels regarding the inevitability of a violent revolution refers to the bourgeois state. It cannot be replaced by the proletarian state (the dictatorship of the proletariat) through "withering away," but, as a general rule, only through a violent revolution....

The replacement of the bourgeois by the proletarian state is impossible without a violent revolution. The abolition of the proletarian state, i.e. of all states, is only possible through "withering away/"

Lenin, State and Revolution, I, 4

10.2 The Realm of Politics

The word "politics" is frequently used to designate a sphere of action in which men engage, vying with one another for power or position, scheming or planning to achieve certain objectives either in concert with their fellow's or through control or domination of them. But the word is also used to name a learned discipline, a department of human thought or inquiry', an art or science. In the latter meaning, "politics" is short for political philosophy, political theory, political science, or the art of politics. The quotations collected here are concerned with the realm of politics in both senses of the term.

Those dealing with politics as a learned discipline or a department of thought and inquiry offer different answers to the question whether politics is a science or an art; and if a

science, what type of science, appealing to what sort of principles, and offering what kind of evidence or arguments for its conclusions. Similar questions are asked about ethics or moral philosophy, as the reader will see by turning to Section 9.1; and by putting together quotations in that section and in this one, the reader will be reminded of some of the views that have been held about the relation of ethics and politics to one another. The main point at issue is whether politics is a normative discipline, one concerned with standards of justice, with such goods as liberty and equality, with what ought to be the ends and means of political action, not merely with what has been or can be done. Considerations relevant to this issue will be found in Section 11.1 on Property, Section 11.2 on Wealth and Poverty, Section 12.2 on Justice and In-Justice, Section 13.1 on Freedom in Society, and Section 13.3 on Equality.

The quotations dealing with politics as a sphere of action tend to concentrate on the maxims, rules, or policies that the individual should put into practice if the individual wishes to succeed in attaining one's objectives, whatever they may be, good or bad. How far the person should be restrained by moral scruples, to what extent the person should let one's striving for success justify the employment of any means that promise to achieve it, what compromises with honesty the person must make—these and similar questions run through or lie behind the advice offered by such men of practical experience as Machiavelli and Francis Bacon, as well as by such philosophers as Plato and Aristotle. Outstanding examples of political sagacity and political ineptitude, of genuine statesmanship and of successful chicanery, are provided by the historians and the poets.

The favorable and unfavorable connotations that are often attached to the terms "statesman" and "politician" derive from different evaluations placed on political virtue, skill, or technique. Antipolitical writers, such as Thoreau, tend to regard the realm of politics as one from which virtue, honesty, and conscience are totally excluded.

■ ■ ■

- 1 *Menelaus*. As with sailing, so with politics: make your cloth too taut, and your ship will dip and keel, but slacken off and trim your sails, and things head up again. The gods, you know, resent being importuned too much; in the same way the people dislike being pushed or hustled. Too much zeal offends where indirection works,

Euripides, Orestes, 706

- 2 *Praxagora*. Ye are to blame for this, Athenian people,
Ye draw your wages from the public purse,
Yet each man seeks his private gain alone.
So the State reels, like any Aesimus.
Still, if ye trust me, ye shall yet be saved.
I move that now the womankind be asked
To rule the State. In our own homes, ye know,
They are the managers and rule the house.

1st Woman. O good, good, good! speak on, speak on,
dear man!

Aristophanes, Ecclesiazusae, 205

- 3 *Cleon*. Ordinary men usually manage public affairs better than their more gifted fellows. The latter are always

wanting to appear wiser than the laws, and to overrule every proposition brought forward, thinking that they cannot show their wit in more important matters, and by such behaviour too often ruin their country; while those who mistrust their own cleverness are content to be less learned than the laws, and less able to pick holes in the speech of a good speaker; and being fair judges rather than rival athletes, generally conduct affairs successfully.

Thucydides, Peloponnesian War, III, 37

- 4 *Socrates*. Do I understand you,... and is your meaning that you teach the art of politics, and that you promise to make men good citizens?

Protagoras. That, *Socrates*, is exactly the profession which I make.

Then, I said, you do indeed possess a noble art, if there is no mistake about this; for I will freely confess to you, *Protagoras*, that I have a doubt whether this art is capable of being taught, and yet I know not how to disbelieve your assertion. And I ought to tell you why I am of opinion that this art cannot be taught or communicated by man to man. I say that the Athenians are an understanding people, and indeed they are esteemed to be such by the other Hellenes. Now I observe that when we are met together in the assembly, and the matter in hand relates to building, the builders are summoned as advisers; when the question is one of shipbuilding, then the shipwrights; and the like of other arts which they think capable of being taught and learned. And if some person offers to give them advice who is not supposed by them to have any skill in the art, even though he be good-looking, and rich, and noble, they will not listen to him, but laugh and hoot at him,

until either he is clamoured down and retires of himself; or if he persist, he is dragged away or put out by the constables at the command of the prytanes. This is their way of behaving about professors of the arts. But when the question is an affair of state, then everybody is free to have a say—carpenter, tinker, cobbler, sailor, passenger; rich and poor, high and low— any one who likes gets up, and no one reproaches him, as in the former case, with not having learned, and having no teacher, and yet giving advice; evidently because they are under the impression that this sort of knowledge cannot be taught. And not only is this true of the state, but of individuals; the best and wisest of our citizens are unable to impart their political wisdom to others: as for example, Pericles, the father of these young men, who gave them excellent instruction in all that could be learned from masters, in his own department of politics neither taught them, nor gave them teachers; but they were allowed to wander at their own free will in a sort of hope that they would light upon virtue of their own accord.

Plato, Protagoras, 319A

- 5 *Socrates*. Some one may wonder why I go about in private giving advice and busying myself with the concerns of others, but do not venture to come forward in public and advise the state. I will tell you why. ... I am certain, O men of Athens, that if I had engaged in politics, I should have perished long ago, and done no good either to you or to myself. And do not be offended at my telling you the truth: for the truth is, that no man who goes to war with you or any other multitude, honestly striving against the many lawless and unrighteous deeds which are done in a state, will save his life; he who will fight for the right, if he

would live even for a brief space, must have a private station and not a public one.

Plato, Apology, 31B

6 *Socrates*. Good men do not wish to be openly demanding payment for governing and so to get the name of hirelings, nor by secretly helping themselves out of the public revenues to get the name of thieves. And not being ambitious they do not care about honour. Wherefore necessity must be laid upon them, and they must be induced to serve from the fear of punishment. And this, as I imagine, is the reason why the forwardness to take office, instead of waiting to be compelled, has been deemed dishonourable. Now the worst part of the punishment is that he who refuses to rule is liable to be ruled by one who is worse than himself. And the fear of this, as I conceive, induces the good to take office, not because they would, but because they cannot help—not under the idea that they are going to have any benefit or enjoyment themselves, but as a necessity, and because they are not able to commit the task of ruling to any one who is better than themselves, or indeed as good. For there is reason to think that if a city were composed entirely of good men, then to avoid office would be as much an object of contention as to obtain office is at present; then we should have plain proof that the true ruler is not meant by nature to regard his own interest, but that of his subjects; and every one who knew this would choose rather to receive a benefit from another than to have the trouble of conferring one.

Plato, Republic, I, 347A

7 *Eleatic Stranger*. Then the true and natural art of statesmanship will never allow any State to be formed by a combination of good and bad men, if this can be avoided; but will begin by testing human natures in play, and after testing them, will entrust them to proper teachers who are the ministers of her purposes—she will herself give orders, and maintain authority; just as the art of weaving continually gives orders and maintains authority over the carders and all the others who prepare the material for the work, commanding the subsidiary arts to execute the works which she deems necessary for making the web.

Socrates. Quite true.

Str. In like manner, the royal science appears to me to be the mistress of all lawful educators and instructors, and having this queenly power, will not permit them to train men in what will produce characters unsuited to the political constitution which she desires to create, but only in what will produce such as are suitable. Those which have no share of manliness and temperance, or any other virtuous inclination, and, from the necessity of an evil nature, are violently carried away to godlessness and insolence and injustice, she gets rid of by death and exile, and punishes them with the greatest of disgraces.

Y. Soc. That is commonly said.

Str. But those w'ho are w-allowing in ignorance and baseness she bows under the yoke of slavery.

Y. Soc. Quite right.

Str. The rest of the citizens, out of whom, if they have education, something noble may be made, and who are capable of being united by the Statesman, the kingly art blends and weaves together; taking on the one hand those whose natures tend rather to courage, which is the

stronger element and may be regarded as the warp, and on the other hand those which incline to order and gentleness, and which are represented in the figure as spun thick and soft, after the manner of the woof—these, which are naturally opposed, she seeks to bind and weave together,... This then we declare to be the completion of the web of political action, which is created by a direct inter-texture of the brave and temperate natures, whenever the royal science has drawn the two minds into communion with one another by unanimity and friendship, and having perfected the noblest and best of all the webs which political life admits, and enfolding therein all other inhabitants of cities, whether slaves or freemen, binds them in one fabric and governs and presides over them, and, in so far as to be happy is vouchsafed to a city, in no particular fails to secure their happiness.

Plato, Statesman, 308B

- 8 *Athenian Stranger*. There is a difficulty in apprehending that the true art of politics is concerned, not with private but with public good (for public good binds together states, but private only distracts them); and that both the public and private good well of individuals as of states is greater when the state and not the individual is first considered. In the second place, although a person knows in the abstract that this is true, yet if he be possessed of absolute and irresponsible power, he will never remain firm in his principles or persist in regarding the public good as primary in the state, and the private good as secondary. Human nature will be always drawing him into avarice and selfishness, avoiding pain and pursuing pleasure without any reason, and will bring these to the

front, obscuring the juster and better; and so working darkness in his soul will at last fill with evils both him and the whole city.

Plato, Laws, IX, 875A

9 Every art and every inquiry, and similarly every action and pursuit, is thought to aim at some good; and for this reason the good has rightly been declared to be that at which all things aim....

If . . . , there is some end of the things we do, which we desire for its own sake (everything else being desired for the sake of this), and if we do not choose everything for the sake of something else (for at that rate the process would go on to infinity, so that our desire would be empty and vain), clearly this must be the good and the chief good. Will not the knowledge of it, then, have a great influence on life? Shall we not, like archers who have a mark to aim at, be more likely to hit upon what is right? If so, we must try', in outline at least, to determine what it is, and of which of the sciences or capacities it is the object. It would seem to belong to the most authoritative art and that which is most truly the master art. And politics appears to be of this nature; for it is this that ordains which of the sciences should be studied in a state, and which each class of citizens should learn and up to what point they should learn them; and we see even the most highly esteemed of capacities to fall under this, for example, strategy, economics, rhetoric; now, since politics uses the rest of the sciences, and since, again, it legislates as to what we are to do and what we are to abstain from, the end of this science must include those of the others, so that this end must be the good for man. For even if the end is the same for a single man and

for a state, that of the state seems at all events something greater and more complete whether to attain or to preserve; though it is worthwhile to attain the end merely for one man, it is finer and more godlike to attain it for a nation or for city-states.

Aristotle, Ethics, 1094a1

- 10 Political science does not make men, but takes them from nature and uses them.

Aristotle, Politics, 1258a21

- 11 It is obvious that government too is the subject of a single science, which has to consider what government is best and of what sort it must be, to be most in accordance with our aspirations, if there were no external impediment, and also what kind of government is adapted to particular states. For the best is often unattainable, and therefore the true legislator and statesman ought to be acquainted, not only with (1) that which is best in the abstract, but also with (2) that which is best relatively to circumstances. We should be able further to say how a state may be constituted under any given conditions (3); both how it is originally formed and, when formed, how it may be longest preserved; the supposed state being so far from having the best constitution that it is unprovided even with the conditions necessary for the best; neither is it the best under the circumstances, but of an inferior type.

He ought, moreover, to know (4) the form of government which is best suited to states in general; for political writers, although they have excellent ideas, are often unpractical. We should consider, not only what form

of government is best, but also what is possible and what is easily attainable by all.

Aristotle, Politics, 1288b21

12 Above all every state should be so administered and so regulated by law that its magistrates cannot possibly make money.... For the people do not take any great offence at being kept out of the government—indeed they are rather pleased than otherwise at having leisure for their private business—but what irritates them is to think that their rulers are stealing the public money; then they are doubly annoyed; for they lose both honour and profit. If office brought no profit, then and then only could democracy" and aristocracy be combined; for both notables and people might have their wishes gratified. All would be able to hold office, which is the aim of democracy, and the notables would be magistrates, which is the aim of aristocracy. And this result may be accomplished when there is no possibility of making money out of the offices; for the poor will not want to have them when there is nothing to be gained from them—they would rather be attending to their own concerns; and the rich, who do not want money from the public treasury, will be able to take them; and so the poor will keep to their work and grow rich, and the notables will not be governed by the lower class.

Aristotle, Politics, 1308b31

13 Let us now address those who, while they agree that the life of virtue is the most eligible, differ about the manner of practising it. For some renounce political power, and think that the life of the freeman is different from the life

of the statesman and the best of all; but others think the life of the statesman best. The argument of the latter is that he who does nothing cannot do well, and that virtuous activity is identical with happiness. To both we say: 'you are partly right and partly wrong.' The first class are right in affirming that the life of the freeman is better than the life of the despot; for there is nothing grand or noble in having the use of a slave, in so far as he is a slave; or in issuing commands about necessary things. But it is an error to suppose that every sort of rule is despotic like that of a master over slaves, for there is as great a difference between the rule over freemen and the rule over slaves as there is between slavery by nature and freedom by nature, about which I have said enough at the commencement of this treatise. And it is equally a mistake to place inactivity above action, for happiness is activity, and the actions of the Just and wise are the realization of much that is noble.

But perhaps some one, accepting these premisses, may still maintain that supreme power is the best of all things, because the possessors of it are able to perform the greatest number of noble actions. If so, the man who is able to rule, instead of giving up anything to his neighbour, ought rather to take away his power; and the father should make no account of his son, nor the son of his father, nor friend of friend; they should not bestow a thought on one another in comparison with this higher object, for the best is the most eligible and 'doing well' is the best. There might be some truth in such a view if we assume that robbers and plunderers attain the chief good. But this can never be; their hypothesis is false. For the actions of a ruler cannot really be honourable, unless he is as much superior to other men as a husband is to a

wife, or a father to his children, or a master to his slaves. And therefore he who violates the law can never recover by any success, however great, what he has already lost in departing from virtue. For equals the honourable and the just consist in sharing alike, as is just and equal. But that the unequal should be given to equals, and the unlike to those who are like, is contrary to nature, and nothing which is contrary to nature is good. If, therefore, there is any one superior in virtue and in the power of performing the best actions, him we ought to follow and obey, but he must have the capacity for action as well as virtue.

Aristotle, Politics, 1325a16

- 14 Far better it is to obey in peace and quiet than to wish to rule with power supreme and be the master of kingdoms.

Lucretius, Nature of Things, V

- 15 People who have a natural ability for administering public affairs should not hesitate to run for public office and take part in directing the government. In no other way can a government be run or greatness of spirit be demonstrated. Statesmen no less than philosophers (perhaps more so) should embody that quality of nobility and an indifference toward outward circumstances that I refer to so often. They also need a peaceful spirit and freedom from care, if they are to be rid of worries and lead a life of constancy. This is easier for philosophers to do» because their lives are less exposed to the exigencies of fortune. They also have fewer wants, so if misfortune does befall them, the blow is not so calamitous. With good reason, therefore, are stronger emotions aroused in

those who deal in public affairs than in those who live in quietude. Greater too is the ambition of the former to succeed. So much more, then, do they require greatness of spirit and freedom from wearying cares.

Cicero, De Officiis, I, 21

- 16 The magistrate ought definitely to bear in mind that he represents the state. It is his duty to uphold its honor and dignity, to enforce its laws, to dispense to everyone his constitutional rights, and to remember that all this has been committed to him as a sacred trust.

Cicero, De Officiis, I, 34

- 17 They [the chief priests] send unto him certain of the Pharisees and of the Herodians, to catch him in his words.

And when they were come, they say unto him. Master, we know that thou art true, and carest for no man: for thou regardest not the person of men, but teachest the way of God in truth: Is it lawful to give tribute to Caesar. or not?

Shall we give, or shall we not give? But he, knowing their hypocrisy, said unto them, Why tempt ye me? bring me a penny, that I may see it.

And they brought it. And he saith unto them, Whose is this image and superscription? And they said unto him, Caesar's

And Jesus answering said unto them, Render to Caesar the things that are Caesar's, and to God the things that are God's. And they marvelled at him.

Mark 12:13-17

18 A ruler's first aim is to maintain his office, which is done no less by avoiding what is unfit than by observing what is suitable. Whoever is either too remiss or too strict is no more a king or a governor, but either a demagogue or a despot, and so becomes either odious or contemptible to his subjects.... the one seems to be the fault of easiness and good-nature, the other of pride and severity.

Plutarch, Romulus and Theseus Compared

19 People do not obey, unless rulers know how to command; obedience is a lesson taught by commanders. A true leader himself creates the obedience of his own followers; as it is the last attainment in the art of riding to make a horse gentle and tractable, so is it of the science of government, to inspire men with a willingness to obey.

Plutarch, Lycurgus

20 The conduct of a wise politician is ever suited to the present posture of affairs; often by foregoing a part he saves the whole, and by yielding in a small matter secures a greater.

Plutarch, Poplicola and Solon Compared

21 *Fabius*. It is no inglorious thing to have fear for the safety of our country, but to be turned from one's course by men's opinions, by blame, and by misrepresentation, shows a man unfit to hold an office such as this, which, by such conduct, he makes the slave of those whose errors it is his business to control.

Plutarch, Fabius

22 If the motions of rulers be constantly opposite and cross to the tempers and inclinations of the people, they will be resented as arbitrary and harsh; as, on the other side, too much deference, or encouragement, as too often it has been, to popular faults and errors, is full of danger and ruinous consequences.

Plutarch. Phocion

23 Ambitious men, whose minds, doling on glory, which is a mere image of virtue, produce nothing that is genuine or uniform, but only, as might be expected of such a conjunction, misshapen and unnatural actions,...

For this is indeed the true condition of men in public life, who, to gain the vain title of being the people's leaders and governors, are content to make themselves the slaves and followers of all the people's humours and caprices. For as the lookout men at the ship's prow, though they see what is ahead before the men at the helm, yet constantly look back to the pilots there, and obey the orders they give; so these men, steered, as I may say, by popular applause, though they bear the name of governors, are in reality the mere underlings of the multitude.

Plutarch, Agis

2'1 Fear and force... are not... the adamantine chains which secure... power, but the love, zeal, and affection inspired by clemency and justice, which, though they seem more pliant than the stiff and hard bonds of severity, are nevertheless the strongest and most durable lies to sustain a lasting government.

Plutarch, Dion

25 Take care that thou art not made into a Caesar, that thou art not dyed with this dye; for such things happen. Keep thyself then simple, good, pure, serious, free from affectation, a friend of justice, a worshipper of the gods, kind, affectionate, strenuous in all proper acts. Strive to continue to be such as philosophy wished to make thee. Reverence the gods, and help men. Short is life. There is only one fruit of this terrene life, a pious disposition and social acts. Do everything as a disciple of Antoninus. Remember his constancy in every act which was conformable to reason, and his evenness in all things, and his piety, and the serenity of his countenance, and his sweetness, and his disregard of empty fame, and his efforts to understand things; and how he would never let anything pass without having first most carefully examined it and clearly understood it; and how he bore with those who blamed him unjustly without blaming them in return; how he did nothing in a hurry; and how he listened not to calumnies, and how exact an examiner of manners and actions he was; and not given to reproach people, nor timid, nor suspicious, nor sophist; and with how little he was satisfied, such as lodging, bed, dress, food, servants; and how laborious and patient; and how he was able on account of his sparing diet to hold out to the evening, not even requiring to relieve himself by any evacuations except at the usual hour; and his firmness and uniformity in his friendships; and how he tolerated freedom of speech in those who opposed his opinions; and the pleasure that he had when any man showed him anything better; and how religious he was without superstition. Imitate all this that thou mayest have as good a conscience, when thy last hour comes, as he had.

Marcus Aurelius, Meditations, VI, 30

26 Mastership has a twofold meaning. First, as opposed to slavery, in which sense a master means one to whom another is subject as a slave. In another sense mastership is referred in a general sense to any kind of subject, and in this sense even he who has the office of governing and directing free men can be called a master. In the state of innocence man could have been a master of men, not in the former but in the latter sense.

Aquinas, Summa Theologica, I, 96, 4

27 If ... a multitude of free men is ordered by the ruler towards the common good of the multitude, that rulership will be right and just, as is suitable to free men. If, on the other hand, a rulership aims, not at the common good of the multitude, but at the private good of the ruler, it will be an unjust and perverted rulership.

Aquinas, On Kingships I, 1

28 He who is the cause of another becoming powerful is ruined; because that predominancy has been brought about either by astuteness or else by force, and both are distrusted by him who has been raised to power.

Machiavelli, Prince, III

29 In seizing a state, the usurper ought to examine closely into all those injuries which it is necessary for him to inflict, and to do them all at one stroke so as not to have to repeat them daily; and thus by not unsettling men he will be able to reassure them, and win them to himself by benefits. He who does otherwise, either from timidity or evil advice, is always compelled to keep the knife in his

hand; neither can he rely on his subjects, nor can they attach themselves to him, owing to their continued and repeated wrongs.

Machiavelli, Prince, VIII

- 30 A prince who does not understand the art of war... cannot be respected by his soldiers, nor can he rely on them. He ought never, therefore, to have out of his thoughts this subject of war, and in peace he should addict himself more to its exercise than in war; this he can do in two ways, the one by action, the other by study.

Machiavelli, Prince, XIV

- 31 It would be well to be reputed liberal. Nevertheless, liberality exercised in a way that does not bring you the reputation for it, injures you; for if one exercises it honestly and as it should be exercised, it may not become known, and you will not avoid the reproach of its opposite. Therefore, any one wishing to maintain among men the name of liberal is obliged to avoid no attribute of magnificence; so that a prince thus inclined will consume in such acts all his property, and will be compelled in the end, if he wish to maintain the name of liberal, to unduly weigh down his people, and tax them, and do everything he can to get money. This will soon make him odious to his subjects, and becoming poor he will be little valued by any one; thus, with his liberality, having offended many and rewarded few, he is affected by the very first trouble and imperilled by whatever may be the first danger; recognizing this himself, and wishing to draw back from it, he runs at once into the reproach of being miserly.

Therefore, a prince, not being able to exercise this virtue of liberality in such a way that it is recognized, except to his cost, if he is wise he ought not to fear the reputation of being mean, for in time he will come to be more considered than if liberal, seeing that with his economy his revenues are enough, that he can defend himself against all attacks, and is able to engage in enterprises without burdening his people; thus it comes to pass that he exercises liberality towards all from whom he does not take, who are numberless, and meanness towards those to whom he does not give, who are few.

Machiavelli, Prince, XVI

- 32 A prince ought to inspire fear in such a way that, if he does not win love, he avoids hatred; because he can endure very well being feared whilst he is not hated, which will always be as long as he abstains from the property of his citizens and subjects and from their women. But when it is necessary' for him to proceed against the life of someone, he must do it on proper Justification and for manifest cause, but above all things he must keep his hands off the property of others, because men more quickly forget the death of their father than the loss of their patrimony.

Machiavelli, Prince, XVII

- 33 Everyone admits how praiseworthy it is in a prince to keep faith, and to live with integrity and not with craft Nevertheless our experience has been that those princes who have done great things have held good faith of little account, and have known how to circumvent the intellect of men by craft, and in the end have overcome those who

have relied on their word. ... A prince, therefore, being compelled knowingly to adopt the beast, ought to choose the fox and the lion; because the lion cannot defend himself against snares and the fox cannot defend himself against wolves. Therefore, it is necessary to be a fox to discover the snares and a lion to terrify the wolves. Those who rely simply on the lion do not understand what they are about. Therefore a wise lord cannot, nor ought he to, keep faith when such observance may be turned against him, and when the reasons that caused him to pledge it exist no longer. If men were entirely good this precept would not hold, but because they are bad, and will not keep faith with you, you too are not bound to observe it with them. Nor will there ever be wanting to a prince legitimate reasons to excuse this nonobservance. Of this endless modern examples could be given, showing how many treaties and engagements have been made void and of no effect through the faithlessness of princes; and he who has known best how to employ the fox has succeeded best.

But it is necessary to know well how to disguise this characteristic, and to be a great pretender and dissembler; and men are so simple, and so subject to present necessities, that he who seeks to deceive will always find someone who will allow himself to be deceived. One recent example I cannot pass over in silence. Alexander VI did nothing else but deceive men, nor ever thought of doing otherwise, and he always found victims; for there never was a man who had greater power in asserting, or who with greater oaths would affirm a thing, yet would observe it less; nevertheless his deceits always succeeded according to his wishes, because he well understood this side of mankind.

Therefore it is unnecessary for a prince to have all the good qualities I have enumerated, but it is very necessary to appear to have them. And I shall dare to say this also, that to have them and always to observe them is injurious, and that to appear to have them is useful; to appear merciful, faithful, humane, religious, upright, and to be so, but with a mind so framed that should you require not to be so, you may be able and know how to change to the opposite,

Machiavelli, Prince, XVIII

- 34 The prince who has more to fear from the people than from foreigners ought to build fortresses, but he who has more to fear from foreigners than from the people ought to leave them alone.... For this reason the best possible fortress is—not to be hated by the people, because, although you may hold the fortresses, yet they will not save you if the people hate you, for there will never be wanting foreigners to assist a people who have taken arms against you.

Machiavelli, Prince, XX

- 35 The choice of servants is of no little importance to a prince, and they are good or not according to the discrimination of the prince. And the first opinion which one forms of a prince, and of his understanding, is by observing the men he has around him; and when they are capable and faithful he may always be considered wise, because he has known how to recognize the capable and to keep them faithful. But when they are otherwise one cannot form a good opinion of him, for the prime error which he made was in choosing them.

Machiavelli, Prince, XXII

- 36 A prince... ought always to take counsel, but only when he wishes and not when others wish; he ought rather to discourage every one from offering advice unless he asks it; but, however, he ought to be a constant inquirer, and afterwards a patient listener concerning the things of which he inquired; also, on learning that any one, on any consideration, has not told him the truth, he should let his anger be felt.

Machiavelli, Prince, XXIII

- 37 If there are some who think that a prince who conveys an impression of his wisdom is not so through his own ability, but through the good advisers that he has around him, beyond doubt they are deceived, because this is an axiom which never fails: that a prince who is not wise himself will never take good advice, unless by chance he has yielded his affairs entirely to one person who happens to be a very prudent man. In this case indeed he may be well governed, but it would not be for long, because such a governor would in a short time take away his state from him.

But if a prince who is not experienced should take counsel from more than one he will never get united counsels, nor will he know how to unite them. Each of the counsellors will think of his own interests, and the prince will not know how to control them or to see through them. And they are not to be found otherwise, because men will always prove untrue to you unless they are kept honest by constraint. Therefore it must be inferred that good counsels, whencesoever they come, are born of the

wisdom of the prince, and not the wisdom of the prince from good counsels.

Machiavelli, Prince, XXIII

- 38 Government consists mainly in so keeping your subjects that they shall be neither able nor disposed to injure you; and this is done by depriving them of all means of injuring you, or by bestowing such benefits upon them that it would not be reasonable for them to desire any change of fortune.

Machiavelli, Discourses, 11, 23

- 39 We owe subjection and obedience equally to all kings, for that concerns their office; but we do not owe esteem, any more than affection, except to their virtue. Let us make this concession to the political order; to suffer them patiently if they are unworthy, to conceal their vices, to abet them by commending their indifferent actions if their authority' needs our support. But, our dealings over, it is not right to deny to justice and to our liberty the expression of our true feelings, and especially to deny good subjects the glory of having reverently and faithfully served a master whose imperfections were so well known to them, and thus to deprive posterity of such a useful example.

Montaigne, Essays, I, 3, Our Feelings Reach Out

- 40 Truly it is no small thing to have to rule others, since in ruling ourselves so many difficulties occur. As for commanding, which seems to be so sweet: considering the imbecility of human judgment and the difficulty of choice in new and doubtful things, I am strongly of this

opinion, that it is much easier and pleasanter to follow than to guide, and that it is a great rest for the mind to have only to hold to a mapped-out path and to be answerable only for oneself.

Montaigne, Essays, I, 42, Of the Inequality

- 41 It may be said, on the one hand, that to give factions a loose rein to entertain their own opinions is to scatter and sow division; it is almost lending a hand to augment it, there being no barrier or coercion of the laws to check or hinder its course. But on the other hand, one could also say that to give factions a loose rein to entertain their own opinions is to soften and relax them through facility and ease, and to dull the point, which is sharpened by rarity, novelty, and difficulty. And yet I prefer to think, for the reputation of our kings' piety, that having been unable to do what they would, they have pretended to will what they could.

Montaigne, Essays, II, 19, Of Freedom of Conscience

- 42 Liberality itself is not in its proper light in the hands of a sovereign; private people have more right to exercise it. For, to be precise about it, a king has nothing that is properly his own; he owes his very self to others.

The authority to judge is not given for the sake of the judge, but for the sake of the person judged. A superior is never appointed for his own benefit, but for the benefit of the inferior, and a doctor for the sick, not for himself. All authority, like all art, has its end outside of itself, . . .

Wherefore the tutors of young princes who make it a point to impress on them this virtue of liberality and preach to them not to know how to refuse anything, and

to think nothing so well spent as what they give away (a lesson that I have seen in great favor in my time), either look more to their own profit than to their master's, or do not well understand to whom they speak. It is all too easy to impress liberality on a man who has the means to practice it all he wants at the expense of others. And since its value is reckoned not by the measure of the gift, but by the measure of the giver's means, it amounts to nothing in such powerful hands. They find themselves prodigal before they are liberal. Therefore liberality is little to be commended compared with other royal virtues, and it is the only one, as the tyrant Dionysius said, that goes with tyranny itself.

Montaigne, Essays, III, 6, Of Coaches

43 *King Henry*. Ah, what a life were this! how sweet! how lovely!

Gives not the hawthorn-bush a sweeter shade
To shepherds looking on their silly sheep
Than doth a rich embroider'd canopy
To kings that fear their subjects' treachery?
O, yes it doth; a thousand-fold it doth.
And to conclude, the shepherd's homely curds,
His cold thin drink out of his leather bottle,
His wonted sleep under a fresh tree's shade.
All which secure and sweetly he enjoys.
Is far beyond a prince's delicates.
His viands sparkling in a golden cup,
His body couched in a curious bed,
When care, mistrust, and treason waits on him.

Shakespeare, III Henry VI, II, v, 41

44 *Ulysses*. O, when degree is shaken,
Which is the ladder to all high designs,
The enterprise is sick! How could communities,
Degrees in schools and brotherhoods in cities.
Peaceful commerce from dividable shores,
The primogenitive and due of birth,
Prerogative of age, crowns, sceptres, laurels,
But by degree, stand in authentic place?
Take but degree away, untune that string,
And, hark, what discord follows! Each thing meets
In mere oppugnancy. The bounded waters
Should lift their bosoms higher than the shores
And make a sop of all this solid globe.
Strength should be lord of imbecility,
And the rude son should strike his father dead.
Force should be right; or rather, right and wrong,
Between whose endless jar justice resides,
Should lose their names, and so should justice too.
Then everything includes itself in power,
Power into will, will into appetite;
And appetite, an universal wolf,
So doubly seconded with will and power,
Must make perforce an universal prey.
And last cat up himself. Great Agamemnon,
This chaos, when degree is suffocate,
Follows the choking.
And this neglect of degree it is
That by a pace goes backward, with a purpose
It hath to climb. The general's disdain'd
By him one step below, he by the next,
That next by him beneath; so every step,
Exampled by the first pace that is sick

Of his superior, grows to an envious fever
Of pale and bloodless emulation.

Shakespeare, Troilus and Cressida, I, iii, 101

45 *1st Officer.* Come, come, they are almost here. How many stand for consulships?

2nd Officer. Three, they say; but 'tis thought of carry one Coriolanus will carry it.

1st Off. That's a brave fellow; but he's vengeance proud, and loves not the common people.

2nd Off. Faith, there have been many great men that have flattered the people, who ne'er loved them; and there be many that they have loved, they know not wherefore; so that, if they love they know not why, they hate upon no better a ground; therefore, for Coriolanus neither to care whether they love or hate him manifests the true knowledge he has in their disposition.

Shakespeare, Coriolanus, II, ii, 1

46 Well then, quoth *Sancho*, let me have this Island, and I'll do my best to be such a Governor, that, in spite of Rogues, I shan't want a small Nook in Heaven one Day or other. 'Tis not out of Covetousness neither, that I'd leave my little Cott, and set up for somebody, but meerly to know what Kind of Thing it is to be a Governor. Oh! *Sancho*, said the Duke, when once you've had a Taste of it, you'll never leave licking your Fingers, 'tis so sweet and bewitching a Thing to command and be obey'd. I am confident, when your Master comes to be an Emperor (as he cannot fail to be, according to the Course of his Affairs) he will never by any Consideration be persuaded

to Abdicate; his only Grief will be, that he was one no sooner.

Troth, Sir, reply'd *Sancho*, I am of your Mind; 'tis a dainty Thing to command, though 'twere but a Flock of Sheep. Oh! *Sancho*, cry'd the Duke, let me live and die with thee; for thou hast an Insight into every Thing. I hope thou'lt prove as good a Governor as thy Wisdom bespeaks thee. But no more at this Time,—to Morrow, without further Delay, you set forward to your Island, and shall be furnish'd this Afternoon with Equipage and Dress answerable to your Post, and all other Necessaries for your Journey.

Let 'em dress me as they will, quoth *Sancho*, I shall be the same *Sancho Panza* still.

Cervantes, Don Quixote, II, 42

47 Being come to himself, he [*Sancho*] ask'd what 'twas a Clock? They answer'd, 'twas now break of Day. He said nothing, but, without any Words, began to put on his Clothes. While this was doing, and he continu'd seriously silent, all the Eyes of the Company were fix'd upon him, wondring what could be the meaning of his being in such haste to put on his Clothes. At last he made an End of dressing himself, and creeping along softly, (for he was too much bruis'd to go along very fast) he got to the Stable, follow'd by all the Company, and coming to Dapple, he embrac'd the quiet Animal, gave him a loving Kiss on the Forehead, and, with Tears in his Eyes, Come hither, said he, my Friend, thou faithful Companion, and Fellow-sharer in my Travels and Miseries; when thee and I consorted together, and all my Cares were but to mend thy Furniture, and feed thy little Carcase, then happy were my Days, my Months, and Years. But since I forsook

Thee, and clamber'd up the Towers of Ambition and Pride, a thousand Woes, a thousand Torments, and four thousand Tribulations have haunted and worry'd my Soul. While he was talking thus, he fitted on his Pack-Saddle, no Body offering to say any thing to him. This done, with a great deal of Difficulty he mounted his Ass, and then addressing himself to the Steward, the Secretary, the Gentleman-waiter, and Doctor *Pedro Rezio*, and many others that stood by; Make Way, Gentlemen, said he, and let me return to my former Liberty'. Let me go that I may seek my old Course of Life, and rise again from that Death that buries me here alive. I was not born to be a Governor, nor to defend Islands nor Cities from Enemies that break in upon 'em. I know better what belongs to Ploughing, Delving, Pruning and Planting of Vineyards, than how to make Laws, and defend Countries and Kingdoms. St *Peter* is very well at *Rome*: Which is as much as to say, let every one stick to the Calling he was born to. A Spade does better in My Hand than a Governor's Truncheon; and I had rather fill my Belly with a Mess of plain Porridge, than lie at the Mercy of a Coxcomby Physick-monger that starves me to Death. I had rather solace my self under the Shade of an Oak in Summer, and wrap my Corps up in a double Sheep-skin in the Winter at my Liberty, than lay me down with the Slavery of a Government in fine Holland Sheets, and case my Hide in Furs and richest Sables. Heaven be with you, Gentlefolks, and pray tell without, but hath made it one of the great names of his blessed Son; *The Counsellor*.

Bacon, Of Counsel

55 A king, when he presides in counsel, let him beware how he opens his own inclination too much in that which he

propoundeth; for else counsellors will but take the wind of him, and instead of giving free counsel, sing him a song of *placebo*.

Bacon, Of Counsel

56 He that is to govern a whole nation must read in himself, not this or that particular man; but mankind.

Hobbes, Leviathan, Intro.

57 The power of a man, to take it universally, is his present means to obtain some future apparent good.... The greatest of human powers is that which is compounded of the powers of most men, united by consent, in one person, natural or civil, that has the use of all their powers depending on his will; such as is the power of a Commonwealth: or depending on the wills of each particular; such as is the power of a faction, or of diverse factions leagued. Therefore to have servants is power; to have friends is power: for they are strengths united.

Hobbes, Leviathan, I, 10

58 If the essential rights of sovereignty ... be taken away, the Commonwealth is thereby dissolved, and every man returneth into the condition and calamity of a war with every other man, which is the greatest evil that can happen in this life; it is the office of the sovereign to maintain those rights entire, and consequently against his duty, first, to transfer to another or to lay from himself any of them. For he that deserteth the means deserteth the ends; and he deserteth the means that, being the sovereign, acknowledgeth himself subject to the civil laws, and renounceth the power of supreme judicature; or

of making war or peace by his own authority; or of judging of the necessities of the Commonwealth; or of levying money and soldiers when and as much as in his own conscience he shall judge necessary; or of making officers and ministers both of war and peace; or of appointing teachers, and examining what doctrines are conformable or contrary to the defence, peace, and good of the people.

Hobbes, Leviathan, II, 30

- 59 He that is minded to obey all the commonwealth's orders, whether through fear of its power or through love of quiet, certainly consults after his own heart his own safety and interest.

Spinoza, Political Treatise, III, 3

- 60 It is easy to understand to what end the legislative power ought to be directed and by what measures regulated; and that is the temporal good and outward prosperity of the society; which is the sole reason of men's entering into society, and the only thing they seek and aim at in it. And it is also evident what liberty remains to men in reference to their eternal salvation, and that is that every one should do what he in his conscience is persuaded to be acceptable to the Almighty, on whose good pleasure and acceptance depends their eternal happiness. For obedience is due, in the first place, to God and, afterwards to the laws.

But some may ask: "What if the magistrate should enjoin anything by his authority that appears unlawful to the conscience of a private person?" I answer that, if government be faithfully administered and the counsels

of the magistrates be indeed directed to the public good, this will seldom happen. But if, perhaps, it do so fall out, I say, that such a private person is to abstain from the action that he judges unlawful, and he is to undergo the punishment which it is not unlawful for him to bear. For the private judgement of any person concerning a law enacted in political matters, for the public good, does not take away the obligation of that law, nor deserve a dispensation. But if the law, indeed, be concerning things that lie not within the verge of the magistrate's authority (as, for example, that the people, or any party amongst them, should be compelled to embrace a strange religion, and join in the worship and ceremonies of another Church), men are not in these cases obliged by that law, against their consciences. For the political society is instituted for no other end, but only to secure every man's possession of the things of this life. The care of each man's soul and of the things of heaven, which neither does belong to the commonwealth nor can be subjected to it, is left entirely to every man's self.

Locke, Letter Concerning Toleration

61 I think it may not be amiss to set down what I take to be political power. That the power of a magistrate over a subject may be distinguished from that of a father over his children, a master over his servant, a husband over his wife, and a lord over his slave. All which distinct powers happening sometimes together in the same man, if he be considered under these different relations, it may help us to distinguish these powers one from another, and show the difference betwixt a ruler of a commonwealth, a father of a family, and a captain of a galley.

Political power, then, I take to be a right of making laws, with penalties of death, and consequently all less penalties for the regulating and preserving of property, and of employing the force of the community in the execution of such laws, and in the defence of the commonwealth from foreign injury, and all this only for the public good.

Locke, II Civil Government, I, 2-3

62 But these two powers, political and paternal, are so perfectly distinct and separate, and built upon so different foundations, and given to so different ends, that every subject that is a father has as much a paternal power over his children as the prince has over his. And every prince that has parents owes them as much filial duty and obedience as the meanest of his subjects do to theirs, and can therefore contain not any part or degree of that kind of dominion which a prince or magistrate has over his subject.

Locke, II Civil Government, VI, 71

63 Since a rational creature cannot be supposed, when free, to put himself into subjection to another for his own harm... prerogative can be nothing but the people's permitting their rulers to do several things of their own free choice where the law was silent, and sometimes too against the direct letter of the law, for the public good and their acquiescing in it when so done. For as a good prince, who is mindful of the trust put into his hands and careful of the good of his people, cannot have too much prerogative—that is, power to do good, so a weak and ill prince, who would claim that power his predecessors

exercised, without the direction of the law, as a prerogative belonging to him by right of his office, which he may exercise at his pleasure to make or promote an interest distinct from that of the public, gives the people an occasion to claim their right and limit that power, which, whilst it was exercised for their good, they were content should be tacitly allowed.

Locke, II Civil Government, XIV, 164

64 In chusing persons for all employments, they [the Lilliputians] have more regard to good morals than to great abilities; for, since government is necessary' to mankind, they believe that the common size of human understandings, is fitted to some station or other; and that Providence never intended to make the management of publick affairs a mystery, to be comprehended only by a few persons of sublime genius, of which there seldom are three born in an age: but, they suppose truth, justice, temperance, and the like, to be in every man's power; the practice of which virtues, assisted by experience and a good intention, would qualify any man for the service of his country, except where a course of study is required. But they thought the want of moral virtues was so far from being supplied by superior endowments of the mind, that employments could never be put into such dangerous hands as those of persons so qualified; and at least, that the mistakes committed by ignorance in a virtuous disposition, would never be of such fatal consequence to the publick weal, as the practices of a man whose inclinations led him to be corrupt, and had great abilities to manage, to multiply, and defend his corruptions.

Swift, Gulliver's Travels, I, 6

65 The king [of Brobdingnag) was struck with horror at the description I had given of those terrible engines, and the proposal I had made [to shmv him how to make gun powder and cannon). He was amazed how so impotent and grovelling an insect as I (these were his expressions) could entertain such inhuman ideas, and in so familiar a manner as to appear wholly unmoved at all the scenes of blood and desolation, which I had painted as the common effects of those destructive machines; whereof he said, some evil genius, enemy to mankind, must have been the first contriver. As for himself, he protested, that although few things delighted him so much as new discoveries in an or in nature; yet he would rather lose half his kingdom, than be privy to such a secret; which he commanded me, as I valued my life, never to mention any more.

A strange effect of *narrow principles* and *short views!* that a prince possessed of every quality which procures veneration, love and esteem; of strong parts, great wisdom and profound learning; endued with admirable talents for government, and almost adored by his subjects; should from a nice *unnecessary scruple*, whereof in Europe we can have no conception, let slip an opportunity put into his hands, that would have made him absolute master of the lives, the liberties, and the fortunes of his people.

Swift, Gulliver's Travels, II, 7

66 I lake this defect among them [the Brobdingnagians] to have risen from their ignorance; by not having hitherto reduced *politicks* into a *science*, as the more acute wits of

Europe have done. For, I remember very well, in a discourse one day with the king, when I happened to say, there were several thousand books among us, written upon the *art of government*, it gave him (directly contrary to my intention) a very mean opinion of our understandings. He professed both to abominate and despise all *mystery, refinement, and intrigue*, either in a prince or a minister. He could not tell what I meant by *secrets of State*, where an enemy or some rival nation were not in the ease. He confined the knowledge of governing within very *narrow bounds*; to common sense and reason, to justice and lenity, to the speedy determination of civil and criminal causes; with some other obvious topicks which are not worth considering. And, he gave it for his opinion, that whoever could make two ears of corn, or two blades of grass to grow upon a spot of ground where only one grew before, would deserve better of mankind, and do more essential service to his country, than the whole race of politicians put together.

Swift, Gulliver's Travels, II, 7

67 Politicks, as the Word is commonly understood, are nothing but Corruptions, and consequently of no Use to a good King, or a good Ministry, for which Reason Courts are so over-run with Politicks.

Swift, Thoughts on Various Subjects

68 So many are the advantages which monarchs gain by clemency, so greatly does it raise their fame, and endear them to their subjects, that it is generally happy for them to have an opportunity of displaying it.

Montesquieu, Spirit of Laws, VI, 21

69 Constant experience shows us that every man invested with power is apt to abuse it, and to carry his authority as far as it will go.... To prevent this abuse, it is necessary from the very nature of things that power should be a check to power.

Montesquieu, Spirit of Laws, XI, 4

70 The manners of a prince contribute as much as the laws themselves to liberty; like these he may transform men into brutes, and brutes into men. If he prefers free and generous spirits, he will have subjects; if he likes base, dastardly souls, he will have slaves. Would he know the great art of ruling, let him call honour and virtue to attend his person; and let him encourage personal merit. He may even sometimes cast an eye on talents and abilities. Let him not be afraid of those rivals who are called men of merit; he is their equal when once he loves them. Let him gain the hearts of his people, without subduing their spirits. Let him render himself popular; he ought to be pleased with the affections of the lowest of his subjects, for they too are men. The common people require so very little condescension, that it is fit they should be humoured; The infinite distance between the sovereign and them will surely prevent them from giving him any uneasiness. Let him be exorable to supplication, and resolute against demands; let him be sensible, in fine, that his people have his refusals, while his courtiers enjoy his favours.

Montesquieu, Spirit of Laws, XII, 27

71 Politics is a smooth file, which cuts gradually, and attains its end by a slow progression.

Montesquieu, Spirit of Laws, XIV, 13

72 The only precaution necessary for the father of a family is to guard himself against depravity, and prevent his natural inclinations from being corrupted; whereas it is these themselves which corrupt The Magistrate. In order to act aright, the first has only to consult his heart; the other becomes a traitor The moment he listens to his. Even his own reason should be suspect to him, nor should he follow any rule other than the public reason, which is The law. Thus nature has made a multitude of good fathers of families; but it is doubtful whether, from The very beginning of The world, human wisdom has made ten men capable of governing their peers.

Rousseau, Political Economy

73 The most pressing interest of the ruler, and even his most indispensable duty ... is to watch over the observation of the laws of which he is the minister, and on which his whole authority is founded. At The same time, if he exacts the observance of them from others, he is the more strongly bound to observe them himself, since he enjoys all their favour. For his example is of such force, that even if the people were willing to permit him to release himself from the yoke of the law, he ought to be cautious in availing himself of so dangerous a prerogative, which others might soon claim to usurp in their turn, and often use to his prejudice. At bottom, as all social engagements are mutual in nature, it is impossible

for any one to set himself above the law, without renouncing its advantages.

Rousseau, Political Economy

74 A fool, if he be obeyed, may punish crimes as well as another: but the true statesman is he who knows how to prevent them.

Rousseau, Political Economy

75 That government which confines itself to mere obedience will find difficulty in getting itself obeyed. If it is good to know how to deal with men as they are, it is much better to make them what there is need that they should be. The most absolute authority is that which penetrates into a man's inmost being, and concerns itself no less with his will than with his actions. It is certain that all peoples become in the long run what the government makes them; warriors, citizens, men, when it so pleases: or merely populace and rabble, when it chooses to make them so. Hence every prince who despises his subjects, dishonours himself, in confessing that he does not know how to make them worthy of respect. Make men, therefore, if you would command men: if you would have them obedient to the laws, make them love the laws, and then they will need only to know what is their duty to do it.

Rousseau, Political Economy

76 A careful and well-intentioned government, vigilant incessantly to maintain or restore patriotism and morality among the people, provides beforehand against the evils which sooner or later result from the indifference of the

citizens to the fate of the Republic, keeping within narrow bounds that personal interest which so isolates the individual that the State is enfeebled by his power, and has nothing to hope from his good-will. Wherever men love their country, respect the laws, and live simply, little remains to be done in order to make them happy; and in public administration, where chance has less influence than in the lot of individuals, wisdom is so nearly allied to happiness, that the two objects are confounded.

Rousseau, Political Economy

77 It is not enough to have citizens and to protect them, it is also necessary to consider their subsistence. Provision for the public wants is an obvious inference from the general will, and the third essential duty of government. This duty is not, we should feel, to fill the granaries of individuals and thereby to grant them a dispensation from labour, but to keep plenty so within their reach that labour is always necessary and never useless for its acquisition.

Rousseau, Political Economy

78 We know for ourselves that we must put up with a bad government when it is there; the question is how to find a good one.

Rousseau, Social Contract, II, 6

79 You say with pride, "My people are my subjects" Granted, but what are you? The subject of your ministers. And your ministers, what are they? The subjects of their clerks, their mistresses, the servants of their servants. Grasp all, usurp all, and then pour out your silver with both hands;

set up your batteries, raise the gallows and the wheel; make laws, issue proclamations, multiply your spies, your soldiers, your hangmen, your prisons, and your chains. Poor little men, what good does it do you? You will be no better served, you will be none the less robbed and deceived, you will be no nearer absolute power. You will say continually, "It is our will," and you will continually do the will of others.

Rousseau, Emile, 11

80 *Dr. Johnson.* Let us... now consider what the people would really gain by a general abolition of the right of patronage. What is most to be desired by such a change is, that the country should be supplied with better ministers. But why should we suppose that the parish will make a wiser choice than the patron? ... It may be urged, that though the parish might not choose better ministers, they would at least choose ministers whom they like better, and who would therefore officiate with greater efficacy. That ignorance and perverseness should always obtain what they like, was never considered as the end of government; of which it is the great and standing benefit, that the wise see for the simple, and the regular act for the capricious. But that this argument supposes the people capable of judging, and resolute to act according to their best judgements, though this be sufficiently absurd, it is not all its absurdity. It supposes not only wisdom, but unanimity in those, who upon no other occasions are unanimous or wise.

Boswell, Life of Johnson (May 1, 1773)

81 Like the modesty affected by Augustus, the state maintained by Diocletian was a theatrical representation; but it must be confessed that, of the two comedies, the former was of a much more liberal and manly character than the latter. It was the aim of the one to disguise, and the object of the other to display, the unbounded power which the emperors possessed over the Roman world.

Ostentation was the first principle of the new system instituted by Diocletian. The second was division. He divided the empire, the provinces, and every branch of the civil as well as military administration. He multiplied the wheels of the machine of government, and rendered its operations less rapid but more secure. Whatever advantages and whatever defects might attend these innovations, they must be ascribed in a very great degree to the first inventor.

Gibbon, Decline and Fall of the Roman Empire, XIII

82 Julian recollected with terror the observation of his master Plato, that the government of our flocks and herds is always committed to beings of a superior species; and that the conduct of nations requires and deserves the celestial powers of the Cods or of the Genii. From this principle he justly concluded that the man who presumes to reign should aspire to the perfection of the divine nature; that he should purify his soul from her mortal and terrestrial part; that he should extinguish his appetites, enlighten his understanding, regulate his passions, and subdue the wild beast which, according to the lively metaphor of Aristotle, seldom fails to ascend the throne of a despot. The throne of Julian, which the death of Constanlius fixed on an independent basis, was the scat of reason, of virtue, and perhaps of vanity. He despised

the honours, renounced the pleasures, and discharged with incessant diligence the duties of his exalted station: and there were few among his subjects who would have consented to relieve him from the weight of the diadem, had they been obliged to submit their time and their actions to the rigorous laws which their philosophic emperor imposed on himself.

Gibbon, Decline and Fall of the Roman Empire, XXII

83 To secure any degree of sobriety in the propositions made by the leaders in any public assembly, they ought to respect, in some degree perhaps to fear, those whom they conduct. To be led any otherwise than blindly, the followers must be qualified, if not for actors, at least for judges; they must also be judges of natural weight and authority. Nothing can secure a steady and moderate conduct in such assemblies, but that the body of them should be respectably composed, in point of condition in life, of permanent property, of education, and of such habits as enlarge and liberalize the understanding.

Burke, Reflections on the Revolution in France

84 AU persons possessing any portion of power ought to be strongly and awfully impressed with an idea that they act in trust: and that they are to account for their conduct in that trust to the one great Master, Author, and Founder of society.

Burke, Reflections on the Revolution in France

85 Magnanimity in politics is not seldom the truest wisdom; and a great empire and little minds go ill together.

Burke, Speech on Conciliation with the Colonies (Mar. 22, 1775)

86 True politics can never take a step, without having previously rendered homage to morality; united with this, it is no longer a difficult or complicated art; morality cuts the knot which politics is incapable of untying, whenever they are in opposition to each other. The rights of man ought to be religiously respected, should sovereigns in rendering it make the greatest sacrifices. One cannot compromise here between right and utility; politics must bend the knee before morality; but by this means it may also expect insensibly to attain to an eminence, where it will shine with an immortal glory.

Kant, Perpetual Peace, Appendix, 1

87 In politics, as in religion, it is equally absurd to aim at making proselytes by fire and sword. Heresies in either can rarely be cured by persecution.

Hamilton, Federalist I

88 The science of politics... like most other sciences, has received great improvement. The efficacy of various principles is now well understood, which were either not known at all, or imperfectly known to the ancients. The regular distribution of power into distinct departments; the introduction of legislative balances and checks; the institution of courts composed of judges holding their offices during good behaviour; the representation of the people in the legislature by deputies of their own election: these are wholly new discoveries, or have made their principal progress towards perfection in modern times. They are means, and powerful means, by which

the excellences of republican government may be retained and its imperfections lessened or avoided. To this catalogue of circumstances that tend to the amelioration of popular systems of civil government, I shall venture, however novel it may appear to some, to add one more, on a principle which has been made the foundation of an objection to the new Constitution; I mean the enlargement of the orbit within which such systems are to revolve, either in respect to the dimensions of a single State, or to the consolidation of several smaller States into one great Confederacy.

Hamilton, Federalist 9

89 Experience has instructed us that no skill in the science of government has yet been able to discriminate and define, with sufficient certainty, its three great provinces—the legislative, executive, and judiciary; or even the privileges and powers of the different legislative branches. Questions daily occur in the course of practice which prove the obscurity which reigns in these subjects, and which puzzle the greatest adepts in political science.

Madison, Federalist 37

90 There is nothing so apt to agitate the passions of mankind as personal considerations, whether they relate to ourselves or to others, who are to be the objects of our choice or preference. Hence, in every exercise of the power of appointing to offices by an assembly of men, we must expect to see a full display of all the private and party likings and dislikes, partialities and antipathies, attachments and animosities, which are felt by those who compose the assembly. The choice which may at any time

happen to be made under such circumstances will of course be the result either of a victory gained by one party over the other or of a compromise between the parties. In either case, the intrinsic merit of the candidate will be too often out of sight. In the first, the qualifications best adapted to uniting the suffrages of the party will be more considered than those which fit the person for the station. In the last, the coalition will commonly turn upon some interested equivalent: "Give us the man we wish for this office, and you shall have the one you wish for that." This will be the usual condition of the bargain. And it will rarely happen that the advancement of the public service will be the primary object either of party victories or of party negotiations.

Hamilton, Federalist 76

- 91 The three ends which a statesman ought to propose to himself in the government of a nation, are — 1. Security to possessors; 2. Facility to acquirers; and 3. Hope to all.

Coleridge, Table-Talk (June 25, 1831)

- 92 Only that will which obeys law is free; for it obeys itself—it is independent and so free. When the state or our country constitutes a community of existence; when the subjective will of man submits to laws—the contradiction between liberty and necessity vanishes.

Hegel, Philosophy of History, Introduction, 3

- 93 Men are not corrupted by the exercise of power or debased by the habit of obedience, but by the exercise of a power which they believe to be illegitimate, and by

obedience to a rule which they consider to be usurped and oppressive.

Tocqueville, Democracy in America, Intro.

- 94 Government has come to be a trade, and is managed solely on commercial principles. A man plunges into politics to make his fortune, and only cares that the world shall last his days.

Emerson, Letter to Thomas Carlyle (Oct. 7, 1835)

- 95 Head winds are far more prevalent than winds from astern. . . For the most part the commodore on the quarterdeck gets his atmosphere at secondhand from the sailors on the forecastle. He thinks he breathes it first; but not so. In much the same way do the commonalty lead their leaders in many other things, at the same time that the leaders little suspect it.

Melville, Moby Dick, I

- 96 Unjust laws exist: shall we be content to obey them, or shall we endeavor to amend them, and obey them until we have succeeded, or shall we transgress them at once? Men generally, under such a government as this, think that they ought to wait until they have persuaded the majority to alter them. They think that, if they should resist, the remedy would be worse than the evil. But it is the fault of the government itself that the remedy is worse than the evil. It makes it worse.

Thoreau, Civil Disobedience

- 97 The government does not concern me much, and I shall bestow the fewest possible thoughts on it. It is not many

moments that I live under a government, even in this world. If a man is thought-free, fancy-free, imagination-free, that which is not never for a long time appearing to be to him, unwise rulers or reformers cannot fatally interrupt him.

Thoreau, Civil Disobedience

98 Politics is, as it were, the gizzard of society, full of grit and gravel, and the two political parties are its two opposite halves—sometimes split into quarters, it may be, which grind on each other. Not only individuals, but states, have thus a confirmed dyspepsia.

Thoreau, Life Without Principle

99 I do not allow myself to suppose that either the convention or the League have concluded to decide that I am either the greatest or best man in America, but rather they have concluded that it is not best to swap horses while crossing the river, and have further concluded that I am not so poor a horse that they might not make a botch of it in trying to swap.

*Lincoln, Speech to the National Union League
Delegation (June 9, 1864)*

100 While, in the morality of the best Pagan nations, duty to the State holds even a disproportionate place, infringing on the just liberty of the individual; in purely Christian ethics, that grand department of duty is scarcely noticed or acknowledged. It is in the Koran, not the New Testament, that we read the maxim—"A ruler who appoints any man to an office, when there is in his dominions another man better qualified for it, sins

against God and against the State." What little recognition the idea of obligation to the public obtains in modern morality is derived from Greek and Roman sources, not from Christian; as, even in the morality of private life, whatever exists of magnanimity, highmindedness, personal dignity, even the sense of honour, is derived from the purely human, not the religious part of our education, and never could have grown out of a standard of ethics in which the only worth, professedly recognised, is that of obedience.

Mill, On Liberty, II

101 To determine the point at which evils, so formidable to human freedom and advancement, begin, or rather at which they begin to predominate over the benefits attending the collective application of the force of society, under its recognised chiefs, for the removal of the obstacles which stand in the way of its well-being; to secure as much of the advantages of centralised power and intelligence as can be had without turning into governmental channels too great a proportion of the general activity—is one of the most difficult and complicated questions in the art of government. It is, in a great measure, a question of detail, in which many and various considerations must be kept in view, and no absolute rule can be laid down. But I believe that the practical principle in which safety resides, the ideal to be kept in view, the standard by which to test all arrangements intended for overcoming the difficulty, may be conveyed in these words; the greatest dissemination of power consistent with efficiency; but the greatest possible centralisation of information, and diffusion of it from the centre.

Mill, On Liberty, V

102 The power in society which has any tendency to convert itself into political power is not power quiescent, power merely passive, but active power; in other words, power actually exerted; that is to say, a very small portion of all the power in existence. Politically speaking, a great part of all power consists in will. How is it possible, then, to compute the elements of political power, while we omit from the computation anything which acts on the will? To think that because those who wield the power in society wield in the end that of government, therefore it is of no use to attempt to influence the constitution of the government by acting on opinion, is to forget that opinion is itself one of the greatest active social forces. One person with a belief is a social power equal to ninety-nine who have only interests. They who can succeed in creating a general persuasion that a certain form of government, or social fact of any kind, deserves to be preferred, have made nearly the most important step which can possibly be taken towards ranging the powers of society on its side.

Mill, Representative Government, I

103 In quiet and untroubled times it seems to every administrator that it is only by his efforts that the whole population under his rule is kept going, and in this consciousness of being indispensable every administrator finds the chief reward of his labor and efforts. While the sea of history' remains calm the ruler-administrator in his frail bark, holding on with a boat hook to the ship of the people and himself moving, naturally imagines that his efforts move the ship he is holding on to. But as soon as a

storm arises and the sea begins to heave and the ship to move, such a delusion is no longer possible. The ship moves independently with its own enormous motion, the boat hook no longer reaches the moving vessel, and suddenly the administrator, instead of appearing a ruler and a source of power, becomes an insignificant, useless, feeble man.

Tolstoy, War and Peace, XI, 25

104 Politics is largely governed by sententious platitudes which are devoid of truth.

Russell, Unpopular Essays, VII

10.3 Government ITS NATURE, NECESSITY, AND FORMS

The distinction made by certain writers between a state of nature and a civil society or commonwealth (discussed in quotations in Section 10.1) turns on the absence or presence of government and its institutions, mainly the enactment and enforcement of laws and the adjudication of disputes by judicial tribunals or courts. The absence of government is anarchy. It would, therefore, appear to be the case that the presence of government is essential or indispensable to the existence of the state or commonwealth, and to the civil peace that is identical with civil society.

That is the view which predominates in the passages assembled here. The opposing view, advanced by the proponents of anarchy, is not well represented, though some

indications of it will be found in quotations from Thoreau and Emerson. For other indications of it, and for considerations relevant to this fundamental issue about government, the reader should turn to Section 13.1 on Freedom in Society and Section 14.3 on The Conditions of Peace.

A large number of quotations name and classify diverse forms of government. In an early instance of this type of discussion reported by Herodotus, the principal differentiation is made in terms of whether government is by the one, the few, or the many; and it is in such terms that Plato and Aristotle, and others after them, distinguish such forms of government as monarchy, aristocracy, and democracy, or propose a mixed regime that combines government by the one, the few, and the many. When a further criterion is introduced—whether government is for the private benefit of the ruler or for the public good of the ruled—differentiation is made between good and bad government by the one (monarchy vs. tyranny), good and bad government by the few (aristocracy vs. oligarchy), and good and bad government by the many (polity vs. democracy).

Some political philosophers, including those already mentioned, dismiss the foregoing classification of the forms of government as superficial, and propose instead the basic distinction between a government of laws and a government of men—between constitutional or republican government, on the one hand, and absolute or despotic government, on the other. When this is made the pivotal distinction, such terms as monarchy, tyranny, aristocracy, oligarchy, and democracy take on different meanings, as the reader will see by examining the passages below with this in mind. Thus, for example, an absolute monarchy may be benevolent or

tyrannical; a constitutional government may be aristocratic, oligarchical, or democratic according to the qualifications it sets up for citizenship and public office; and most republics would appear to have the characteristics of the mixed regime, involving the one, the few, and the many in different functions or departments of government. On all these matters, the reader will find additional quotations in subsequent sections of this chapter, especially Sections 10.4, 10.5, and 10.6.

Other matters treated here include the division of the branches or functions of government into the legislative, the judicial, and the executive; questions concerning the primacy of the legislative and the prerogatives of the executive; and the issue concerning the limitations, if any, that should be imposed upon the authority and power of government. One bit of wisdom on this moot question is expressed in Abraham Lincoln's memorable statement that government should do for the people whatever they cannot do for themselves.

■ ■ ■

- 1 The conspirators met together to consult about the situation of affairs. At this meeting speeches were made, to which many of the Greeks give no credence, but they were made nevertheless. Otanes recommended that the management of public affairs should be entrusted to the whole nation. "To me," he said, "it seems advisable, that we should no longer have a single man to rule over us—the rule of one is neither good nor pleasant. Ye cannot have forgotten to what lengths Cambyses went in his

haughty tyranny, and the haughtiness of the Magi ye have yourselves experienced. How indeed is it possible that monarchy should be a well-adjusted thing, when it allows a man to do as he likes without being answerable? Such licence is enough to stir strange and unwonted thoughts in the heart of the worthiest of men. Give a person this power, and straightway his manifold good things puff him up with pride, while envy is so natural to human kind that it cannot but arise in him. But pride and envy together include all wickedness—both of them leading on to deeds of savage violence. True it is that kings, possessing as they do all that heart can desire, ought to be void of envy; but the contrary is seen in their conduct towards the citizens. They are jealous of the most virtuous among their subjects, and wish their death; while they take delight in the meanest and basest, being ever ready to listen to the tales of slanderers. A king, besides, is beyond all other men inconsistent with himself. Pay him court in moderation, and he is angry because you do not show him more profound respect—show him profound respect, and he is offended again, because (as he says) you fawn on him. But the worst of all is, that he sets aside the laws of the land, puts men to death without trial, and subjects women to violence. The rule of the many, on the other hand, has, in the first place, the fairest of names, to wit, *isonomy*; and further it is free from all those outrages which a king is wont to commit. There, places are given by lot, the magistrate is answerable for what he does, and measures rest with the commonalty. I vote, therefore, that we do away with monarchy, and raise the people to power. For the people are all in all."

Such were the sentiments of Otanes. Megabyzus spoke next, and advised the setting up of an oligarchy:—"In all that Otanes has said to persuade you to put down monarchy," he observed, "I fully concur; but his recommendation that we should call the people to power seems to me not the best advice. For there is nothing so void of understanding, nothing so full of wantonness, as the unwieldy rabble. It were folly not to be borne, for men, while seeking to escape the wantonness of a tyrant, to give themselves up to the wantonness of a rude unbridled mob. The tyrant, in all his doings, at least knows what he is about, but a mob is altogether devoid of knowledge; for how should there be any knowledge in a rabble, untaught, and with no natural sense of what is right and fit? It rushes wildly into state affairs with all the fury of a stream swollen in the winter, and confuses everything. Let the enemies of the Persians be ruled by democracies; but let us choose out from the citizens a certain number of the worthiest, and put the government into their hands. For thus both we ourselves shall be among the governors, and power being entrusted to the best men, it is likely that the best counsels will prevail in the state."

This was the advice which Megabyzus gave, and after him Darius came forward, and spoke as follows:—"All that Megabyzus said against democracy was well said, I think; but about oligarchy he did not speak advisedly; for take these three forms of government—democracy, oligarchy, and monarchy—and let them each be at their best, I maintain that monarchy far surpasses the other two. What government can possibly be better than that of the very best man in the whole state? The counsels of such a man are like himself, and so he governs the mass of the

people to their heart's content; while at the same time his measures against evil-doers are kept more secret than in other states. Contrariwise, in oligarchies, where men vie with each other in the service of the commonwealth, fierce enmities are apt to arise between man and man, each wishing to be leader, and to carry his own measures; whence violent quarrels come, which lead to open strife, often ending in bloodshed. Then monarchy is sure to follow; and this too shows how far that rule surpasses all others. Again, in a democracy, it is impossible but that there will be malpractices: these malpractices, however, do not lead to enmities, but to close friendships, which are formed among those engaged in them, who must hold well together to carry on their villainies. And so things go on until a man stands forth as champion of the commonalty, and puts down the evil-doers. Straightway the author of so great a service is admired by all, and from being admired soon comes to be appointed king; so that here too it is plain that monarchy is the best government. Lastly, to sum up all in a word, whence, I ask, was it that we got the freedom which we enjoy?—did democracy give it us, or oligarchy, or a monarch? As a single man recovered our freedom for us, my sentence is that we keep to the rule of one. Even apart from this, we ought not to change the laws of our forefathers when they work fairly; for to do so is not well."

Such were the three opinions brought forward at this meeting; the four other Persians voted in favour of the last. Otanes, who wished to give his countrymen a democracy, when he found the decision against him, arose a second time, and spoke thus before the assembly;—"Brother conspirators, it is plain that the king who is to be chosen will be one of ourselves, whether we make the

choice by casting lots for the prize, or by letting the people decide which of us they will have to rule over them, in or any other way. Now, as I have neither a mind to rule nor to be ruled, I shall not enter the lists with you in this matter. I withdraw, however, on one condition—none of you shall claim to exercise rule over me or my seed for ever." The six agreed to these terms, and Otanes withdrew and stood aloof from the contest. And still to this day the family of Otanes continues to be the only free family in Persia; those who belong to it submit to the rule of the king only so far as they themselves choose; they are bound, however, to observe the law's of the land like the other Persians.

Herodotus, History, III, 80-83

- 2 *Eleatic Stranger*. Monarchy divides into royalty and tyranny; the rule of the few into aristocracy, which has an auspicious name, and oligarchy; and democracy or the rule of the many, which before was one, must now be divided.

Young Socrates. On what principle of division?

Str. On the same principle as before, although the name is now discovered to have a twofold meaning. For the distinction of ruling with law or without law, applies to this as well as to the rest.

Y. Soc. Yes.

Str. The division made no difference when we were looking for the perfect State, as we show'd before. But now' that this has been separated off, and, as we said, the others alone are left for us, the principle of law and the absence of law will bisect them all.

Y. Soc. That would seem to follow, from what has been said.

Str. Then monarchy, when bound by good prescriptions or laws, is the best of all the six, and when lawless is the most bitter and oppressive to the subject.

Y. Soc. True.

Str. The government of the few, which is intermediate between that of the one and many, is also intermediate in good and evil; but the government of the many is in every respect weak and unable to do either any great good or any great evil, when compared with the others, because the offices are too minutely subdivided and too many hold them. And this therefore is the worst of all lawful governments, and the best of all lawless ones. If they are all without the restraints of law, democracy is the form in which to live is best; if they are well ordered, then this is the last which you should choose, as royalty, the first form, is the best, with the exception of the seventh, for that excels them all, and is among States what God is among men.

Plato, Statesman, 302B

- 3 The distinction which is made between the king and the statesman is as follows: When the government is personal, the ruler is a king; when, according to the rules of the political science, the citizens rule and are ruled in turn, then he is called a statesman.

Aristotle, Politics, 1252a13

- 4 The rule of a master is not a constitutional rule, and ... all the different kinds of rule are not, as some affirm, the same with each other. For there is one rule exercised over subjects who are by nature free, another over subjects who are by nature slaves. The rule of a household is a

monarchy, for every house is under one head: whereas constitutional rule is a government of freemen and equals.

Aristotle, Politics, 1255b16

5 The words constitution and government have the same meaning, and the government, which is the supreme authority in states, must be in the hands of one, or of a few, or of the many. The true forms of government, therefore, are those in which the one, or the few, or the many, govern with a view to the common interest; but governments which rule with a view to the private interest, whether of the one, or of the few, or of the many, are perversions. For the members of a state, if they are truly citizens, ought to participate in its advantages. Of forms of government in which one rules, we call that which regards the common interests, kingship or royalty; that in which more than one, but not many, rule, aristocracy; and it is so called, either because the rulers are the best men, or because they have at heart the best interests of the state and of the citizens. But when the citizens at large administer the state for the common interest, the government is called by the generic name,—a constitution. And there is a reason for this use of language. One man or a few may excel in virtue; but as the number increases it becomes more difficult for them to attain perfection in every kind of virtue, though they may in military virtue, for this is found in the masses. Hence in a constitutional government the fighting-men have the supreme power, and those who possess arms are the citizens.

Of the above-mentioned forms, the perversions are as follows:—of royalty, tyranny; of aristocracy, oligarchy; of

constitutional government, democracy. For tyranny is a kind of monarchy which has in view the interest of the monarch only; oligarchy has in view the interest of the wealthy; democracy, of the needy: none of them the common good of all.

Aristotle, Politics, 1279a25

- 6 If we call the rule of many men, who are all of them good, aristocracy, and the rule of one man royalty, then aristocracy will be better for states than royalty, whether the government is supported by force or not, provided only that a number of men equal in virtue can be found.

Aristotle, Politics, 1286b4

- 7 Democracies are safer and more permanent than oligarchies, because they have a middle class which is more numerous and has a greater share in the government; for when there is, no middle class, and the poor greatly exceed in number, troubles arise, and the state soon comes to an end...

These considerations will help us to understand why most governments are either democratical or oligarchical. The reason is that the middle class is seldom numerous in them, and whichever party, whether the rich or the common people, transgresses the mean and predominates, draws the constitution its own way, and thus arises either oligarchy or democracy. There is another reason—the poor and the rich quarrel with one another, and whichever side gets the better, instead of establishing a just or popular government, regards political supremacy as the prize of victory, and the one party sets up a democracy and the other an oligarchy.

Aristotle, Politics, 1296a14

- 8 All constitutions have three elements, concerning which the good lawgiver has to regard what is expedient for each constitution. When they are well-ordered, the constitution is well-ordered, and as they differ from one another, constitutions differ. There is one element which deliberates about public affairs; secondly that concerned with the magistracies—the questions being, what they should be, over what they should exercise authority, and what should be the mode of electing to them; and thirdly that which has judicial power.

Aristotle, Politics, 1297b37

- 9 The forms of government are four—democracy, oligarchy, aristocracy, monarchy. The supreme right to judge and decide always rests, therefore, with either a part or the whole of one or other of these governing powers.

A Democracy is a form of government under which the citizens distribute the offices of state among themselves by lot, whereas under oligarchy there is a property qualification, under aristocracy one of education. By education I mean that education which is laid down by the law; for it is those who have been loyal to the national institutions that hold office under an aristocracy. These are bound to be looked upon as 'the best men', and it is from this fact that this form of government has derived its name ('the rule of the best') Monarchy, as the word implies, is the constitution in which one man has authority over all. There are two forms of monarchy: kingship, which is limited by prescribed conditions, and 'tyranny', which is not limited by anything.

Aristotle, Rhetoric, 1365b29

- 10 The end of democracy is freedom; of oligarchy, wealth; of aristocracy, the maintenance of education and national institutions; of tyranny, the protection of the tyrant.

Aristotle, Rhetoric, 1366a4

- 11 Sovereignty in a state is thrown like a ball from kings to tyrants, from tyrants to aristocrats (or to the people at large), and finally to an oligarchy or to another tyrant. No single type of government lasts very long. This being the case, I regard monarchy as the best of the three basic types of government. But a moderate, mixed type of government, combining all three elements, is even better. There should be a monarchical element in the state. The leading citizens ought also to have some power. And the people themselves should have some say in running the affairs of the nation. This kind of constitution promotes a high degree of equality—something free men cannot do without for long. Such a constitution also provides stability. The three basic forms of government too easily degenerate into their corresponding perversions: monarchy into despotism, aristocracy into an oligarchy, and democracy into mob rule or anarchy. These forms often change to new types, but a mixed constitution does not unless grievous errors are made in governing. There appears no reason to change the form of government, if all the citizens have a feeling of security. Nor does this form have an opposite perversion into which it can easily slide.

Cicero, Republic, I, 44

- 12 All nations and cities are ruled by the people, the nobility, or by one man. A constitution, formed by selection out of these elements ... is easy to commend but not to produce; or, if it is produced, it cannot be lasting.

Tacitus, Annals, IV, 33

- 13 Two points are to be observed concerning the right ordering of rulers in a state or nation. One is that all should take some share in the government, for this form of constitution ensures peace among the people, commends itself to all, and is guarded by all.... The other point is to be observed in respect of the kinds of government, or the different ways in which the constitutions are established.... The best form of government is in a state or kingdom, where one is given the power to preside over all, while under him are others having governing powers; and yet a government of this kind is shared by all, both because all are eligible to govern, and because the rulers are chosen by all. For this is the best form of polity, being partly kingdom, since there is one at the head of all; partly aristocracy, in so far as a number of persons are set in authority; partly democracy, that is, government by the people, in so far as the rulers can be chosen from the people, and the people have the right to choose their rulers.

Aquinas, Summa Theologica, I-II, 105, 1

- 14 If an unjust government is carried on by one man alone, who seeks his own benefit from his rule and not the good of the multitude subject to him, such a ruler is called a *tyrant* —a word derived from *strength* —because he

oppresses by might instead of ruling by justice. Thus among the ancients all powerful men were called tyrants. If an unjust government is carried on, not by one but by several, and if they be few, it is called an *oligarchy*, that is, the rule of a few. This occurs when a few, who differ from the tyrant only by the fact that they are more than one, oppress the people by means of their wealth. If, finally, the bad government is carried on by the multitude, it is called a *democracy*, i.e. control by the populace, which comes about when the plebeian people by force of numbers oppress the rich. In this way the whole people will be as one tyrant.

Aquinas, On Kingship, I, 1

- 15 All those who have written upon civil institutions demonstrate (and history is full of examples to support them) that whoever desires to found a state and give it laws, must start with assuming that all men are bad and ever ready to display their vicious nature, whenever they may find occasion for it. If their evil disposition remains concealed for a time, it must be attributed to some unknown reason; and we must assume that it lacked occasion to show itself; but time, which has been said to be the father of all truth, does not fail to bring it to light.

Machiavelli, Discourses, I, 3

- 16 Not in theory, but in truth, the best and most excellent government for each nation is the one under which it has preserved its existence. Its form and essential fitness depend on habit. We are prone to be discontented with the present state of things. But I maintain, nevertheless, that to wish for the government of a few in a democratic

state, or another type of government in a monarchy, is foolish and wrong,

Montaigne, Essays, III, 9, Of Vanity

17 *Gonzalo*. I' the commonwealth I would by contraries
Execute all things; for no kind of traffic
Would I admit; no name of magistrate;
Letters should not be known; riches, poverty,
And use of service, none; contract, succession.
Bourn, bound of land, tilth, vineyard, none;
No use of metal, corn, or wine, or oil;
No occupation; all men idle, all;
And women too, but innocent and pure;
No sovereignty—

Sebastian. Yet he would be king on't.

Antonio. The latter end of his commonwealth forgets
the beginning.

Gon. All things in common nature should produce
Without sweat or endeavor. Treason, felony.
Sword, pike, knife, gun, or need of any engine,
Would I not have; but nature should bring forth,
Of it own kind, all foison, all abundance.
To feed my innocent people.

Seb. No marrying 'mong his subjects?

Ant. None, man; all idle. Whores and knaves.

Gon. I would with such perfection govern, sir,
To excel the golden age,

Shakespeare, Tempest, II, i, 144

18 When any of the four pillars of government are mainly
shaken or weakened (which are religion, justice, counsel,
and treasure), men had need to pray for fair weather.

Bacon, Of Seditions and Troubles

- 19 It is not in the power of man to devise any form of government free from imperfections and dangers.

Grotius, Rights of War and Peace, Bk. I, III, 8

- 20 Desire of knowledge, and arts of peace, inclineth men to obey a common power; for such desire containeth a desire of leisure, and consequently protection from some other power than their own.

Hobbes, Leviathan, I, 11

- 21 The power to coin money, to dispose of the estate and persons of infant heirs, to have pre-emption in markets, and all other statute prerogatives may be transferred by the sovereign, and yet the power to protect his subjects be retained. But if he transfer the militia, he retains the judicature in vain, for want of execution of the laws; or if he grant away the power of raising money, the militia is in vain; or if he give away the government of doctrines, men will be frightened into rebellion with the fear of spirits. And so if we consider any one of the said rights, we shall presently see that the holding of all the rest will produce no effect in the conservation of peace and justice, the end for which all Commonwealths are instituted. And this division is it whereof it is said, a kingdom divided in itself cannot stand: for unless this division precede, division into opposite armies can never happen.

Hobbes, Leviathan, 11, 18

- 22 The difference of Commonwealths consisteth in the difference of the sovereign, or the person representative of all and every one of the multitude. And because the

sovereignty is either in one man, or in an assembly of more than one; and into that assembly either every man hath right to enter, or not every one, but certain men distinguished from the rest; it is manifest there can be but three kinds of Commonwealth. For the representative must needs be one man, or more; and if more, then it is the assembly of all, or but of a part. When the representative is one man, then is the Commonwealth a monarchy; when an assembly of all that will come together, then it is a democracy, or popular Commonwealth; when an assembly of a part only, then it is called an aristocracy. Other kind of Commonwealth there can be none: for either one, or more, or all, must have the sovereign power (which I have shown to be indivisible) entire.

There be other names of government in the histories and books of policy; as tyranny and oligarchy; but they are not the names of other forms of government, but of the same forms misliked. For they that are discontented under monarchy call it tyranny; and they that are displeased with aristocracy call it oligarchy; so also, they which find themselves grieved under a democracy call it anarchy, which signifies want of government; and yet I think no man believes that want of government is any new kind of government; nor by the same reason ought they to believe that the government is of one kind when they like it, and another when they mislike it or are oppressed by the governors.

Hobbes, Leviathan, II, 19

- 23 The sovereign power, whether placed in one man, as in monarchy, or in one assembly of men, as in popular and aristocratical Commonwealths, is as great as possibly

men can be imagined to make it. And though of so unlimited a power, men may fancy many evil consequences, yet the consequences of the want of it, which is perpetual war of every man against his neighbour, are much worse.

Hobbes, Leviathan, II, 20

24 *Temporal* and *spiritual* government are but two words brought into the world to make men see double and mistake their lawful sovereign. It is true that the bodies of the faithful, after the resurrection, shall be not only spiritual, but eternal; but in this life they are gross and corruptible. There is therefore no other government in this life, neither of state nor religion, but temporal; nor teaching of any doctrine lawful to any subject which the governor both of the state and of the religion forbiddeth to be taught. And that governor must be *one*; or else there must needs follow faction and civil war in the Commonwealth between the Church and State; between spiritualists and temporalists; between the sword of justice and the shield of faith; and, which is more, in every Christian man's own breast between the Christian and the man.

Hobbes, Leviathan, III, 39

25 We have defined an aristocratic dominion as that which is held not by one man, but by certain persons chosen out of the multitude, whom we shall henceforth call patricians. I say expressly, "that which is held by certain persons chosen." For the chief difference between this and a democracy is, that the right of governing depends in an aristocracy on election only, but in a democracy for

the most part on some right either congenital or acquired by fortune. . . . And therefore, although in any dominion the entire multitude be received into the number of the patricians, provided that right of theirs is not inherited, and does not descend by some law to others, the dominion will for all that be quite an aristocracy, because none are received into the number of the patricians save by express election.... We must observe a very great difference, which exists between the dominion which is conferred on one man and that which is conferred on a sufficiently large council. For, in the first place, the power of one man is . . . , very inadequate to support the entire dominion; but this no one, without manifest absurdity, can affirm of a sufficiently large council. For, in declaring the council to be sufficiently large, one at the same time denies, that it is inadequate to support the dominion. A king, therefore, is altogether in need of counsellors, but a council like this is not so in the least. In the second place, kings are mortal, but councils are everlasting. And so the power of the dominion which has once been transferred to a large enough council never reverts to the multitude.... Thirdly, a king's dominion is often on sufferance, whether from his minority, sickness, or old age, or from other causes; but the power of a council of this kind, on the contrary, remains always one and the same. In the fourth place, one man's will is very fluctuating and inconstant; and, therefore, in a monarchy, all law is, indeed, the explicit will of the king... but not every will of the king ought to be law; but this cannot be said of the will of a sufficiently numerous council. For since the council itself, as we have just shown, needs no counsellors, its every explicit will ought to be law. And hence we conclude, that the dominion conferred upon a

large enough council is absolute, or approaches nearest to the absolute. For if there be any absolute dominion, it is, in fact, that which is held by an entire multitude.

Spinoza, Political Treatise, VIII, 1-3

26 I easily grant that civil government is the proper remedy for the inconveniences of the state of Nature, which must certainly be great where men may be judges in their own case, since it is easy to be imagined that he who was so unjust as to do his brother an injury will scarce be so just as to condemn himself for it.

Locke, II Civil Government, II, 13

27 The great and chief end ... of men uniting into commonwealths, and putting themselves under government, is the preservation of their property.

Locke, II Civil Government, IX, 124

28 In the state of Nature there are many things wanting. Firstly, there wants an established, settled, known law, received and allowed by common consent to be the standard of right and wrong, and the common measure to decide all controversies between them. For though the law of Nature be plain and intelligible to all rational creatures, yet men, being biased by their interest, as well as ignorant for want of study of it, are not apt to allow of it as a law binding to them in the application of it to their particular cases.

Secondly, in the state of Nature there wants a known and indifferent judge, with authority to determine all differences according to the established law. For every one in that state being both judge and executioner of the

law of Nature, men being partial to themselves, passion and revenge is very apt to carry them too far, and with too much heat in their own cases, as well as negligence and unconcernedness, make them too remiss in other men's.

Thirdly, in the state of Nature there often wants power to back and support the sentence when right, and to give it due execution. They who by any injustice offended will seldom fail where they are able by force to make good their injustice. Such resistance many times makes the punishment dangerous, and frequently destructive to those who attempt it.

Locke, II Civil Government, IX, 124-126

29 The legislative cannot transfer the power of making laws to any other hands, for it being but a delegated power from the people, they who have it cannot pass it over to others. The people alone can appoint the form of the commonwealth, which is by constituting the legislative, and appointing in whose hands that shall be. And when the people have said, "We will submit, and be governed by laws made by such men, and in such forms," nobody else can say other men shall make laws for them; nor can they be bound by any laws but such as are enacted by those whom they have chosen and authorised to make laws for them.

Locke, II Civil Government, XI, 141

30 In well-ordered commonwealths, where the good of the whole is so considered as it ought, the legislative power is put into the hands of divers persons who, duly assembled, have by themselves, or jointly with others, a

power to make laws, which when they have done, being separated again, they are themselves subject to the laws they have made; which is a new and near tie upon them to take care that they make them for the public good.

Locke, II Civil Government, XII, 143

- 31 Where the laws cannot be executed it is all one as if there were no laws, and a government without laws is, I suppose, a mystery in politics inconceivable to human capacity, and inconsistent with human society.

Locke, II Civil Government, XIX, 219

- 32 A government is like everything else: to preserve it we must love it.

Montesquieu, Spirit of Laws, IV, 5

- 33 Republics end with luxury; monarchies with poverty.

Montesquieu, Spirit of Laws, VII, 4

- 34 In all governments, there is a perpetual intestine struggle, open or secret, between Authority and Liberty; and neither of them can ever absolutely prevail in the contest.

Hume, Of the Origin of Government

- 35 The legislative power belongs to the people, and can belong to it alone. It may, on the other hand, readily be seen, from the principles laid down above, that the executive power cannot belong to the generality as legislature or Sovereign, because it consists wholly of particular acts which fall outside the competency of the

law, and consequently of the Sovereign, whose acts must always be laws.

The public force therefore needs an agent of its own to bind it together and set it to work under the direction of the general will, to serve as a means of communication between the State and the Sovereign, and to do for the collective person more or less what the union of soul and body does for man. Here we have what is, in the State, the basis of government, often wrongly confused with the Sovereign, whose minister it is.

What then is government? An intermediate body set up between the subjects and the Sovereign, to secure their mutual correspondence, charged with the execution of the laws and the maintenance of liberty, both civil and political.

Rousseau, Social Contract, III, 1

36 It is not good for him who makes the laws to execute them.

Rousseau, Social Contract, III, 4

37 A people that would always govern well would not need to be governed.

Rousseau, Social Contract, III, 4

38 Law being purely the declaration of the general will, it is clear that, in the exercise of the legislative power, the people cannot be represented; but in that of the executive power, which is only the force that is applied to give the law effect, it both can and should be represented.

Rousseau, Social Contract, III, 15

39 *Johnson*. I would not give half a guinea to Vtvc under one form of government rather than another. It is of no moment to the happiness of an individual.

Boswell, Life of Johnson (March 31, 1772)

40 Talking of different governments, *Johnson*. "The more contracted that power is, the more easily it« destroyed. A country governed by a despot is an inverted cone. Government there cannot be so firm, as when it rests upon a broad basis gradually contracted, as the government of Great Britain, which is founded on the parliament, then is in the privy council, then in the King." *Boswell*. "Power, when contracted into the person of a despot, may be easily destroyed, as the prince may be cut off. So Caligula wished that the people of Rome had but one neck, that he might cut them off at a blow." *Oglethorpe*. "It was of the Senate he wished that. The Senate by its usurpation controuled both the Emperour and the people. And don't you think that we see too much of that in our own Parliament?"

Boswell, Life of Johnson (Apr. 14, 1778)

41 When the Judicial is united to the executive power, it is scarce possible that justice should not frequently be sacrificed to what is vulgarly called politics. The persons entrusted with the great interests of the state may, even without any corrupt views, sometimes imagine it necessary to sacrifice to those interests the rights of a private man. But upon the impartial administration of justice depends the liberty of every individual, the sense which he has of his own security. In order to make every individual feel himself perfectly secure in the possession

of every right which belongs to him, it is not only necessary that the judicial should be separated from the executive power, but that it should be rendered as much as possible independent of that power. The judge should not be liable to be removed from his office according to the caprice of that power. The regular payment of his salary should not depend upon the good-will or even upon the good economy of that power.

Adam Smith, Wealth of Nations, V, 1

- 42 Sometimes it is said that man cannot be trusted with the government of himself. Can he, then, be trusted with the government of others? Or have we found angels in the forms of kings to govern him? Let history answer this question.

Jefferson, First Inaugural Address

- 43 A wise and frugal government, which shall restrain men from injuring one another, which shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned: this is the sum of good government.

Jefferson, First Inaugural Address

- 44 The two Antonines... governed the Roman world forty-two years, with the same invariable spirit of wisdom and virtue. Although Pius had two sons, he preferred the welfare of Rome to the interest of his family, gave his daughter Faustina in marriage to young Marcus, obtained from the senate the tribunitian and proconsular powers, and with a noble disdain, or rather ignorance of jealousy,

associated him to all the labours of government. Marcus [Aurelius], on the other hand, revered the character of his benefactor, loved him as a parent, obeyed him as his sovereign, and, after he was no more, regulated his own administration by the example and maxims of his predecessor. Their united reigns are possibly the only period of history in which the happiness of a great people was the sole object of government.

Gibbon, Decline and Fall of the Roman Empire, III

- 45 Administration of justice and of the finances [are] the two objects which, in a state of peace, comprehend almost all the respective duties of the sovereign and of the people; of the former, to protect the citizens who are obedient to the laws; of the latter, to contribute the share of their property which is required for the expenses of the state.

Gibbon, Decline and Fall of the Roman Empire, XVII

- 46 The three powers in the state as regards their relations to each other, are... *coordinate* with one another as so many moral persons, and the one is thus the complement of the other in the way of completing the constitution of the state; they are likewise *subordinate* to one another, so that the one cannot at the same time usurp the function of the other by whose side it moves, each having its own principle and maintaining its authority in a particular person, but under the condition of the will of a superior; and further, by the *union* of both these relations, they assign distributively to every subject in the state his own rights.

Considered as to their respective dignity, the three powers may be thus described. The will of the sovereign

legislator, in respect of what constitutes the external mine and thine, is to be regarded as irreprehensible; the executive function of the supreme ruler is to be regarded as irresistible; and the judicial sentence of the supreme judge is to be regarded as irreversible, being beyond appeal.

Kant, Science of Right, 48

47 The idea of a national government involves in it, not only an authority over the individual citizens, but an indefinite supremacy over all persons and things, so far as they are objects of lawful government. Among a people consolidated into one nation, this supremacy is completely vested in the national legislature.

Madison, Federalist 39

48 In a government where numerous and extensive prerogatives are placed in the hands of an hereditary monarch, the executive department is very justly regarded as the source of danger, and watched with all the jealousy which a zeal for liberty ought to inspire. In a democracy, where a multitude of people exercise in person the legislative functions, and are continually exposed, by their incapacity for regular deliberation and concerted measures, to the ambitious intrigues of their executive magistrates, tyranny may well be apprehended, on some favourable emergency, to start up in the same quarter. But in a representative republic, where the executive magistracy is carefully limited, both in the extent and the duration of its power; and where the legislative power is exercised by an assembly which is inspired, by a supposed influence over the people, with

an intrepid confidence in its own strength; which is sufficiently numerous to feel all the passions which actuate a multitude, yet not so numerous as to be incapable of pursuing the objects of its passions, by means which reason prescribes; it is against the enterprising ambition of this department that the people ought to indulge all their jealousy and exhaust all their precautions.

Madison, Federalist 48

49 What is government itself but the greatest of all reflections on human nature? If men were angels, no government would be necessary.

Hamilton or Madison, Federalist 51

50 A good government implies two things: first, fidelity to the object of government, which is the happiness of the people; secondly, a knowledge of the means by which that object can be best attained. Some governments are deficient in both these qualities; most governments are deficient in the first.

Hamilton or Madison, Federalist 62

51 No government, any more than an individual, will long be respected without being truly respectable; nor be truly respectable without possessing a certain portion of order and stability.

Hamilton or Madison, Federalist 62

52 The state as a political entity is... cleft into three substantive divisions:

(a) the power to determine and establish the universal—the Legislature;

{b) the power to subsume single cases and the spheres of particularity under the universal—the Executive;

(c) the power of subjectivity, as the will with the power of ultimate decision—the Crown. In the crown, the different powers are bound into an individual unity which is thus at once the apex and basis of the whole, i.e. of constitutional monarchy.

Hegel, Philosophy of Right, 273

53 A distinction must be made when aristocracies and democracies accuse each other of facilitating corruption. In aristocratic governments, those who are placed at the head of affairs are rich men, who are desirous only of power. In democracies, statesmen are poor and have their fortunes to make. The consequence is that in aristocratic states the rulers are rarely accessible to corruption and have little craving for money, while the re-verse is the case in democratic nations.

But in aristocracies, as those who wish to attain the head of affairs possess considerable wealth, and as the number of persons by whose assistance they may rise is comparatively small, the government is, if I may so speak, put up at auction. In democracies, on the contrary, those who are covetous of power are seldom wealthy, and the number of those who confer power is extremely great. Perhaps in democracies the number of men who might be bought is not smaller, but buyers are rarely to be found; and, besides, it would be necessary to buy so many persons at once that the attempt would be useless.

Tocqueville, Democracy in America, I, 13

54 Aristocracies are infinitely more expert in the science of legislation than democracies ever can be. They are possessed of a self-control that protects them from the errors of temporary excitement; and they form far-reaching designs, which they know how to mature till a favorable opportunity arrives. Aristocratic government proceeds with the dexterity of art; it understands how to make the collective force of all its laws converge at the same time to a given point. Such is not the case with democracies, whose laws are almost always ineffective or inopportune. The means of democracy are therefore more imperfect than those of aristocracy, and the measures that it unwittingly adopts are frequently opposed to its own cause; but the object it has in view is more useful.

Tocqueville, Democracy in America, I, 14

55 The less government we have the better—the fewer laws, and the less confided power. The antidote to this abuse of formal government is the influence of private character, the growth of the Individual; the appearance of The principal to supersede the proxy; the appearance of the wise man; of whom the existing government is, it must be owned, but a shabby imitation.

Emerson, Politics

56 The only government that I recognize—and it matters not how few are at the head of it, or how small its army—is that power that establishes justice in the land, never that which establishes Injustice. What shall we think of a government to which all the truly brave and just men in

the land are enemies, standing between it and those whom it oppresses?

Thoreau, Plea for Captain John Brown

57 I heartily accept the motto, "That government is best which governs least"; and I should like to see it acted up to more rapidly and systematically. Carried out, it finally amounts to this, which also I believe, "That government is best which governs not at all"; and when men are prepared for it, that will be the kind of government which they will have. Government is at best but an expedient; but most governments are usually, and all governments are sometimes, inexpedient.

Thoreau, Civil Disobedience

58 I went to the store the other day to buy a bolt for our front door, for, as I told the storekeeper, the Governor was coming here. 'Aye,' said he, 'and the Legislature too.' 'Then I will take two bolts,' said I. He said that there had been a steady demand for bolts and locks of late, for our protectors were coming.

Thoreau, Journal (Sept, 8, 1859)

59 The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do for themselves in their separate and individual capacities. In all that the people can individually do as well for themselves, government ought not to interfere.

Lincoln, Fragment on Government (July 1, 1854)

60 The . . . most cogent reason for restricting the interference of government is the great evil of adding unnecessarily to its power. Every function superadded to those already exercised by the government causes its influence over hopes and fears to be more widely diffused, and converts, more and more, the active and ambitious part of the public into hangers-on of the government, or of some party which aims at becoming the government. If the roads, the railways, the banks, the insurance offices, the great joint-stock companies, the universities, and the public charities, were all of them branches of the government; if, in addition, the municipal corporations and local boards, with all that now devolves on them, became departments of the central administration; if the employees of all these different enterprises were appointed and paid by the government, and looked to the government for every rise in life; not all the freedom of the press and popular constitution of the legislature would make this or any other country free otherwise than in name. And the evil would be greater, the more efficiently and scientifically the administrative machinery was constructed—the more skilful the arrangements for obtaining the best qualified hands and heads with which to work it.

Mill, On Liberty, V

61 The proper functions of a government are not a fixed thing, but different in different states of society; much more extensive in a backward than in an advanced state.

Mill, Representative Government, II

62 The interest of the monarch, or the interest of the aristocracy either collective or that of its individual members, is promoted, or they themselves think that it will be promoted, by conduct opposed to that which the general interest of the community requires. The interest, for example, of the government is to tax heavily: that of the community is to be as little taxed as the necessary expenses of good government permit. The interest of the king, and of the governing aristocracy, is to possess, and exercise, unlimited power over the people; to enforce, on their part, complete conformity to the will and preferences of the rulers. The interest of the people is to have as little control exercised over them in any respect as is consistent with attaining the legitimate ends of government. The interest, or apparent and supposed interest, of the king or aristocracy is to permit no censure of themselves, at least in any form which they may consider either to threaten their power, or seriously to interfere with their free agency. The interest of the people is that there should be full liberty of censure on every public officer, and on every public act or measure. The interest of a ruling class, whether in an aristocracy or an aristocratic monarchy, is to assume to themselves an endless variety of unjust privileges, sometimes benefiting their pockets at the expense of the people, sometimes merely tending to exalt them above others, or, what is the same thing in different words, to degrade others below themselves. If the people are disaffected, which under such a government they are very likely to be, it is the interest of the king or aristocracy to keep them at a low level of intelligence and education, foment dissensions among them, and even prevent them from being too well off, lest they should "wax fat, and kick";

agreeably to the maxim of Cardinal Richelieu in his celebrated *Testament Politique*. All these things are for the interest of a king or aristocracy, in a purely selfish point of view, unless a sufficiently strong counter-interest is created by the fear of provoking resistance. All these evils have been, and many of them still are, produced by the sinister interests of kings and aristocracies, where their power is sufficient to raise them above the opinion of the rest of the community; nor is it rational to expect, as a consequence of such a position, any other conduct.

Mill, Representative Government, VI

63 Where the sentiment of nationality exists in any force, there is a *prima facie* case for uniting all the members of the nationality under the same government, and a government to themselves apart. This is merely saying that the question of government ought to be decided by the governed. One hardly knows what any division of the human race should be free to do if not to determine with which of the various collective bodies of human beings they choose to associate themselves.

Mill, Representative Government, XVI

64 It is already a common, and is rapidly tending to become the universal, condition of the more backward populations, to be either held in direct subjection by the more advanced, or to be under their complete political ascendancy; there are in this age of the world few more important problems than how to organise this rule, so as to make it a good instead of an evil to the subject people; providing them with the best attainable present government, and with the conditions most favourable to

future permanent improvement. But the mode of fitting the government for this purpose is by no means so well understood as the conditions of good government in a people capable of governing themselves. We may even say that it is not understood at all.

Mill, Representative Government, XVIII

65 The government of a people by itself has a meaning and a reality; but such a thing as government of one people by another does not and cannot exist. One people may keep another as a warren or preserve for its own use, a place to make money in, a human cattle farm to be worked for the profit of its own inhabitants. But if the good of the governed is the proper business of a government, it is utterly impossible that a people should directly attend to it. The utmost they can do is to give some of their best men a commission to look after it; to whom the opinion of their own country can neither be much of a guide in the performance of their duty, nor a competent judge of the mode in which it has been performed.

Mill, Representative Government, XVIII

66 The ends of government are as comprehensive as those of the social union. They consist of all the good, and all the immunity from evil, which the existence of government can be made either directly or indirectly to bestow.

Mill, Principles of Political Economy, Bk. V, II, 2

67 Government neither subsists nor arises because it is good or useful, but solely because it is inevitable.

10.4 Government of and by the People REPUBLIC AND DEMOCRACY

The kind of government being discussed in this section has been variously characterized as constitutional government, duly constituted government, limited and responsible government, a government of laws, lawful government, *de jure* government (or government by right rather than by might), government with the consent of the governed, and government based on the sovereignty of the people. While most of the authors quoted here are advocates or defenders of such government, usually regarding it as the only just or the only legitimate form of rule, they differ among themselves about the provisions that constitutional government should make for popular participation either through citizenship and suffrage or through election to public office.

The issue debated here can be expressed in the questions: Which portion or portions of the total population of the state shall be regarded as "the people" in the strict political sense of "qualified participants" in affairs of state? Which shall be treated as wards of the state, to be ruled for their own good, rather than as members of the ruling class? To understand these questions, it is necessary to understand the constitution that sets up a republic as an arrangement of offices, each given a certain limited authority to be exercised by men only in virtue of their being officeholders, selected or elected from the body of men who are admitted to citizenship. Hence the qualifications for citizenship and

for the other offices of government become the critical consideration in differentiating one constitution from another. Section 10.5 on Citizenship contains quotations relevant to this point.

The opponents of democracy argue for republics in which suffrage is restricted, the most frequent insistence being that the citizens should be men of property, although race, gender, education, and religion have also been defended as disqualifying criteria. The reader will also find a rejection of democracy that is based on the identification of it with direct participation on the part of the citizens, as in the republics of ancient Greece. The writers of *The Federalist* argue against direct democracy and for republican government, understood by them as consisting in government not directly by the people, but by their representatives.

The proponents of democracy differ among themselves on how far they would extend suffrage. In the ancient world, the advocates of democracy as against oligarchy proposed that, among men born free, suffrage and public office should be open to poor and rich alike; but they had no qualms about excluding slaves, for example. As late as the eighteenth century such writers as Locke, Rousseau, and Kant combined their advocacy of constitutional government with an acceptance of disfranchised classes in the population. The reader will find that J. S. Mill, writing in the middle of the nineteenth century, is the first among political theorists to argue for universal suffrage, including the enfranchisement of women.

One other basic issue appears in this section—justification of rule by the majority. It is enlightened by Rousseau's insight that unanimity is required for the establishment of majority rule. Allowing the majority to

prevail does not preclude misrule by the majority or repression of minorities. This raises the difficult question of what safeguards can be set up to prevent misrule by the majority without at the same time nullifying majority rule itself.

■ ■ ■

1 *Theseus*. One moment, stranger.

Your start was wrong, seeking a master here.
This city is free, and ruled by no one man.
The people reign, in annual succession.
They do not yield the power to the rich;
The poor man has an equal share in it.

Herald. That one point gives the better of the game
To me. The town I come from is controlled
By one man, not a mob. And there is no one
To puff it up with words, for private gain,
Swaying it this way, that way. Such a man
First flatters it with wealth of favors; then
He does it harm, but covers up his blunders
By blaming other men, and goes scot-free.
The people is no right judge of arguments;
Then how can it give right guidance to a city?
A poor man, working hard, could not attend
To public matters, even if ignorance
Were not his birthright. When a wretch, a nothing,
Obtains respect and power from the people
By talk, his betters sicken at the sight.

Euripides, Suppliant Women, 403

2 *Athenagoras*. It will be said, perhaps, that democracy is neither wise nor equitable, but that the holders of property are also the best fitted to rule. I say, on the contrary, first, that the word *demos*, or people, includes the whole state, oligarchy only a part; next, that if the best guardians of property are the rich, and the best counsellors wise, none can hear and decide so well as the many; and that all these talents, severally and collectively, have their just place in a democracy.

Thucydides, Peloponnesian War, VI, 39

3 *Soaates*. Democracy comes into being after the poor have conquered their opponents, slaughtering some and banishing some, while to the remainder they give an equal share of freedom and power; and this is the form of government in which the magistrates are commonly elected by lot.

Adeimantus. Yes ... that is the nature of democracy, whether the revolution has been effected by arms, or whether fear has caused the opposite party to withdraw.

And now what is their manner of life, and what sort of a government have they? for as the government is, such will be the man.

Clearly, he said.

In the first place, are they not free; and is not the city full of freedom and frankness—a man may say and do what he likes?

'Tis said so, he replied.

And where freedom is, the individual is clearly able to order for himself his own life as he pleases?

Clearly.

Then in this kind of State there will be the greatest variety of human natures?

There will.

This, then, seems likely to be the fairest of States, being like an embroidered robe which is spangled with every sort of flower. And just as women and children think a variety of colours to be of all things most charming, so there are many men to whom this State, which is spangled with the manners and characters of mankind, will appear to be the fairest of States.

Yes.

Yes, my good Sir, and there will be no better in which to look for a government.

Why?

Because of the liberty which reigns there—they have a complete assortment of constitutions; and he who has a mind to establish a State, as we have been doing, must go to a democracy as he would to a bazaar at which they sell them, and pick out the one that suits him; then, when he has made his choice, he may found his State.

He will be sure to have patterns enough.

And there being no necessity, I said, for you to govern in this State, even if you have the capacity, or to be governed, unless you like, or go to war when the rest go to war, or to be at peace when others are at peace, unless you are so disposed— there being no necessity also, because some law forbids you to hold office or be a dicast, that you should not hold office or be a dicast, if you have a fancy—is not this a way of life which for the moment is supremely delightful?

For the moment, yes.

And is not their humanity to the condemned in some cases quite charming? Have you not observed how, in a democracy, many persons, although they have been sentenced to death or exile, just stay where they are and

walk about the world—the gentleman parades like a hero, and nobody sees or cares?

Yes, he replied, many and many a one.

See too, I said, the forgiving spirit of democracy, and the "don't care" about trifles, and the disregard which she shows of all the fine principles which we solemnly laid down at the foundation of the city—as when we said that, except in the case of some rarely gifted nature, there never will be a good man who has not from his childhood been used to play amid things of beauty and make of them a joy and a study—how grandly does she trample all these fine notions of ours under her feet, never giving a thought to the pursuits which make a statesman, and promoting to honour any one who professes to be the people's friend.

Yes, she is of a noble spirit.

These and other kindred characteristics are proper to democracy, which is a charming form of government, full of variety and disorder, and dispensing a sort of equality to equals and unequals alike.

We know her well.

Plato, Republic, VIII, 557A

4 *Socrates*. Democracy has her own good, of which the insatiable desire brings her to dissolution?

Adeimantus. What good?

Freedom, I replied; which, as they tell you in a democracy, is the glory of the State—and that therefore in a democracy alone will the freeman of nature deign to dwell.

Yes; the saying is in everybody's mouth.

I was going to observe, that the insatiable desire of this and the neglect of other things introduces the

change in democracy, which occasions a demand for tyranny.

How so?

When a democracy which is thirsting for freedom has evil cup-bearers presiding over the feast, and has drunk too deeply of the strong wine of freedom, then, unless her rulers are very amenable and give a plentiful draught, she calls them to account and punishes them, and says that they are cursed oligarchs.

Yes, he replied, a very common occurrence.

Yes, I said; and loyal citizens are insultingly termed by her slaves who hug their chains and men of naught; she would have subjects who are like rulers, and rulers who are like subjects: these are men after her own heart, whom she praises and honours both in private and public. Now in such a State, can liberty have any limit?

Certainly not.

By degrees the anarchy finds a way into private houses, and ends by getting among the animals and infecting them.

How do you mean?

I mean that the father grows accustomed to descend to the level of his sons and to fear them and the son is on a level with his father, he having no respect or reverence for either of his parents; and this is his freedom, and the metic is equal with the citizen and the citizen with the metic, and the stranger is quite as good as either.

Yes, he said, that is the way.

And these are not the only evils, I said—there are several lesser ones: In such a state of society the master fears and flatters his scholars, and the scholars despise their masters and tutors; young and old are all alike; and the young man is on a level with the old, and is ready to

compete with him in word or deed; and old men condescend to the young and are full of pleasantry and gaiety; they are loth to be thought morose and authoritative, and therefore they adopt the manners of the young.

Quite true, he said.

The last extreme of popular liberty is when the slave bought with money, whether male or female, is just as free as his or her purchaser; nor must I forget to tell of the liberty and equality of the two sexes in relation to each other.

Why not, as Aeschylus says, utter the word which rises to our lips?

That is what I am doing, I replied; and I must add that no one who does not know would believe, how much greater is the liberty which the animals who are under the dominion of man have in a democracy than in any other State: for truly, the she-dogs, as the proverb says, are as good as their she-mistresses, and the horses and asses have a way of marching along with all the rights and dignities of freemen; and they will run at any body who comes in their way if he does not leave the road clear for them: and all things are just ready to burst with liberty.

When I take a country walk, he said, I often experience what you describe. You and I have dreamed the same thing.

And above all, I said, and as the result of all, see how sensitive the citizens become; they chafe impatiently at the least touch of authority and at length, as you know, they cease to care even for the laws, written or unwritten; they will have no one over them.

Yes, he said, I know it too well.

Such, my friend, I said, is the fair and glorious beginning out of which springs tyranny.

Plato, Republic, VIII, 562A

- 5 *Athenian Stranger*. The state in which the law is above the rulers, and the rulers are the inferiors of the law, has salvation, and every blessing which the Gods can confer.

Plato, Laws, IV, 715B

- 6 If the people are not utterly degraded, although individually they may be worse judges than those who have special knowledge—as a body they are as good or better.

Aristotle, Politics, 1282a15

- 7 As a feast to which all the guests contribute is better than a banquet furnished by a single man, so a multitude is a better judge of many things than any individual.

Again, the many are more incorruptible than the few.... The individual is liable to be overcome by anger or by some other passion, and then his judgement is necessarily perverted; but it is hardly to be supposed that a great number of persons would all get into a passion and go wrong at the same moment.

Aristotle, Politics, 1286a28

- 8 It must not be assumed, as some are fond of saying, that democracy is simply that form of government in which the greater number are sovereign, for in oligarchies, and indeed in every government, the majority rules; nor again is oligarchy that form of government in which a few are sovereign....We should rather say that democracy is the

form of government in which the free are rulers, and oligarchy in which the rich; it is only an accident that the free are the many and the rich are the few. Otherwise a government in which the offices were given according to stature ... or according to beauty, would be an oligarchy; for the number of tall or good-looking men is small. And yet oligarchy and democracy are not sufficiently distinguished merely by these two characteristics of wealth and freedom. Both of them contain many other elements, and therefore we must carry our analysis further, and say that the government is not a democracy in which the freemen, being few in number, rule over the many who are not free. . . . Neither is it a democracy when the rich have the government because they exceed in number.... But the form of government is a democracy when the free, who are also poor and the majority, govern, and an oligarchy when the rich and the noble govern, they being at the same time few in number.

Aristotle, Politics, 1290a30

- 9 Of forms of democracy first comes that which is said to be based strictly on equality. In such a democracy the law says that it is just for the poor to have no more advantage than the rich; and that neither should be masters, but both equal. For if liberty and equality... are chiefly to be found in democracy, they will be best attained when all persons alike share in the government to the utmost. And since the people are the majority, and the opinion of the majority is decisive, such a government must necessarily be a democracy. Here then is one sort of democracy. There is another, in which the magistrates are elected according to a certain property qualification, but a low one; he who has the required amount of property has a

share in the government, but he who loses his property loses his rights. Another kind is that in which all the citizens who are under no disqualification share in the government, but still the law is supreme. In another, everybody, if he be only a citizen, is admitted to the government, but the law is supreme as before, A fifth form of democracy, in other respects the same, is that in which, not the law, but the multitude, have the supreme power, and supersede the law by their decrees. This is a state of affairs brought about by the demagogues.

Aristotle, Politics, 1291b30

- 10 There are various ways in which all may share in the government; they may deliberate, not all in one body, but by turns, as in the constitution of Telecles the Milesian. There are other constitutions in which the boards of magistrates meet and deliberate, but come into office by turns, and are elected out of the tribes and the very smallest divisions of the state, until every one has obtained office in his turn. the citizens, on the other hand, are assembled only for the purposes of legislation, and to consult about the constitution, and to hear the edicts of the magistrates. In another variety of democracy the citizens form one assembly, but meet only to elect magistrates, to pass laws, to advise about war and peace, and to make scrutinies. Other matters are referred severally to special magistrates, who are elected by vote or by lot out of all the citizens. Or again, the citizens meet about election to offices and about scrutinies, and deliberate concerning war or alliances while other matters are administered by the magistrates, who, as far as is possible, are elected by vote. I am speaking of those magistrates in which special knowledge is required. A

fourth form of democracy is when all the citizens meet to deliberate about everything, and the magistrates decide nothing, but only make the preliminary inquiries; and that is the way in which the last and worst form of democracy, corresponding, as we maintain, to the close family oligarchy and to tyranny, is at present administered. All these modes are democratical.

Aristotle, Politics, 1298a11

- 11 In democracies of the more extreme type there has arisen a false idea of freedom which is contradictory to the true interests of the state. For two principles are characteristic of democracy, the government of the majority and freedom. Men think that what is just is equal; and that equality is the supremacy of the popular will; and that freedom means the doing what a man likes. In such democracies every one lives as he pleases.

... But this is all wrong; men should not think it slavery to live according to the rule of the constitution; for it is their salvation.

Aristotle, Politics, 1310a24

- 12 The voice of the people has something divine; else how could so many agree in one thing?

Marvel not if the vulgar speak truer than the great, for they speak safer.

Bacon, Advancement of Learning, Bk. VI, III, 9

- 13 There never was any government so purely popular, as not to require the exclusion of the poor, of strangers, women, and minors from the public councils.

Grotius, Rights of War and Peace, Bk. I, III, 8

- 14 A democracy, in effect, is no more than an aristocracy of orators, interrupted sometimes with the temporary monarchy of one orator.

Hobbes, Elements of Law, Pt. II, II, 5

- 15 The majority is the best way, because it is visible and has strength to make itself obeyed. Yet it is the opinion of the least able.

Pascal, Pensées, XIV, 878

- 16 To make the people fittest to choose, and the chosen fittest to govern, will be to mend our corrupt and faulty education, to teach the people faith, not without virtue, temperance, modesty, sobriety, parsimony, justice; not to admire wealth or honor; to hate turbulence and ambition; to place every one his private welfare and happiness in the public peace, liberty, and safety.

Milton, Ready and Easy Way

- 17 Political power is that power which every man having in the state of Nature has given up into the hands of the society, and therein to the governors whom the society hath set over itself, with this express or tacit trust, that it shall be employed for their good and the preservation of their property. Now this power, which every man has in the state of Nature, and which he parts with to the society in all such cases where the society can secure him, is to use such means for the preserving of his own property as he thinks good and Nature allows him; and to punish the breach of the law of Nature in others so as (according to the best of his reason) may most conduce to the preservation of himself and the rest of mankind; so

that the end and measure of this power, when in every man's hands, in the state of Nature, being the preservation of all of his society—that is, all mankind in general—it can have no other end or measure, when in the hands of the magistrate, but to preserve the members of that society in their lives liberties, and possessions, and so cannot be an absolute, arbitrary power over their lives and fortunes, which are as much as possible to be preserved; but a power to make laws, and annex such penalties to them as may tend to the preservation of the whole, by cutting off those parts, and those only, which are so corrupt that they threaten the sound and healthy, without which no severity is lawful. And this power has its original only from compact and agreement and the mutual consent of those who make up the community.

Locke, II Civil Government, XV, 171

18 Perhaps it will be said that the people being ignorant and always discontented, to lay the foundation of government in the unsteady opinion and uncertain humour of the people, is to expose it to certain ruin; and no government will be able long to subsist if the people may set up a new legislative whenever they take offence at the old one. To this I answer, quite the contrary. People are not so easily got out of their old forms as some are apt to suggest. They are hardly to be prevailed with to amend the acknowledged faults in the frame they have been accustomed to. And if there be any original defects, or adventitious ones introduced by time or corruption, it is not an easy thing to get them changed, even when all the world sees there is an opportunity for it.

Locke, II Civil Government, XIX, 223

19 The people, in whom the supreme power resides, ought to have the management of everything within their reach; that which exceeds their abilities must be conducted by their ministers.

But they cannot properly be said to have their ministers, without the power of nominating them: it is, therefore, a fundamental maxim in this government, that the people should choose their ministers—that is, their magistrates.

Montesquieu, Spirit of Laws, II, 2

20 The people are extremely well qualified for choosing those whom they are to entrust with part of their authority. They have only to be determined by things to which they cannot be strangers, and by facts that are obvious to sense. They can tell when a person has fought many battles, and been crowned with success; they are, therefore, capable of electing a general. They can tell when a judge is assiduous in his office, gives general satisfaction, and has never been charged with bribery: this is sufficient for choosing a praetor. They are struck with the magnificence or riches of a fellow-citizen; no more is requisite for electing an edile. These are facts of which they can have better information in a public forum than a monarch in his palace. But are they capable of conducting an intricate affair, of seizing and improving the opportunity and critical moment of action? No; this surpasses their abilities.

Montesquieu, Spirit of Laws, II, 2

21 In republican governments, men are all equal; equal they are also in despotic governments: in the former, because

they are everything; in the latter, because they are nothing.

Montesquieu, Spirit of Laws, VI, 2

22 The principle of democracy is corrupted not only when the spirit of equality is extinct, but likewise when they fall into a spirit of extreme equality, and when each citizen would fain be upon a level with those whom he has chosen to command him. Then the people, incapable of bearing the very power they have delegated, want to manage everything themselves, to debate for the senate, to execute for the magistrate, and to decide for the judges.

Montesquieu, Spirit of Laws, VIII, 2

23 The great advantage of representatives is their capacity of discussing public affairs. For this the people collectively are extremely unfit, which is one of the chief inconveniences of a democracy.

Montesquieu, Spirit of Laws, XI, 6

24 Ordinarily there is no comparison between the crimes of the great who are always ambitious, and the crimes of the people who always want, and can want only liberty and equality. These two sentiments, Liberty and Equality, do not lead direct to calumny, rapine, assassination, poisoning, the devastation of one's neighbours' lands, etc.; but ambitious might and the mania for power plunge into all these crimes whatever be the time, whatever be the place.

Popular government is in itself, therefore, less iniquitous, less abominable than despotic power.

The great vice of democracy is certainly not tyranny and cruelty: there have been mountain-dwelling republicans, savage, ferocious; but it is not the republican spirit that made them so, it is nature.

The real vice of a civilized republic is in the Turkish fable of the dragon with many heads and the dragon with many tails. The many heads hurt each other, and the many tails obey a single head which wants to devour everything.

Democracy seems suitable only to a very little country, and further it must be happily situated. Small though it be, it will make many mistakes, because it will be composed of men. Discord will reign there as in a monastery; but there will be no St. Bartholomew, no Irish massacres, no Sicilian vespers, no inquisition, no condemnation to the galleys for having taken some water from the sea without paying for it, unless one supposes this republic composed of devils in a corner of hell.

One questions every day whether a republican government is preferable to a king's government? The dispute ends always by agreeing that to govern men is very difficult.

Voltaire, Philosophical Dictionary: Democracy

- 25 The general will is always right and tends to the public advantage; but it does not follow that the deliberations of the people are always equally correct. Our will is always for our own good, but we do not always see what that is; the people is never corrupted, but it is often deceived, and on such occasions only does it seem to will what is bad.

Rousseau, Social Contract, II, 3

26 I . . . give the name "Republic" to every State that is governed by laws, no matter what the form of its administration may be: for only in such a case does the public interest govern, and the *res publica* rank as a *reality*. Every legitimate government is republican.

Rousseau, Social Contract, II, 6

27 If we take the term in the strict sense, there never has been a real democracy, and there never will be. It is against the natural order for the many to govern and the few to be governed.

Rousseau, Social Contract, III, 4

28 There is no government so subject to civil wars and intestine agitations as democratic or popular government, because there is none which has so strong and continual a tendency to change to another form, or which demands more vigilance and courage for its maintenance as it is.

Rousseau, Social Contract, III, 4

29 Were there a people of gods, their government would be democratic. So perfect a government is not for men.

Rousseau, Social Contract, III, 4

30 There is but one law which, from its nature, needs unanimous consent. This is the social compact; for civil association is the most voluntary of all acts. Every man being born free and his own master, no one, under any pretext whatsoever, can make any man subject without his consent. To decide that the son of a slave is born a slave is to decide that he is not born a man.

If then there are opponents when the social compact is made, their opposition does not invalidate the contract, but merely prevents them from being included in it. They are foreigners among citizens. When the State is instituted, residence constitutes consent; to dwell within its territory is to submit to the Sovereign.

Apart from this primitive contract, the vote of the majority always binds all the rest. This follows from the contract itself. But it is asked how a man can be both free and forced to conform to wills that are not his own. How are the opponents at once free and subject to laws they have not agreed to?

I retort that the question is wrongly put. The citizen gives his consent to all the laws, including those which are passed in spite of his opposition, and even those which punish him when he dares to break any of them. The constant will of all the members of the State is the general will; by virtue of it they are citizens and free. When in the popular assembly a law is proposed, what the people is asked is not exactly whether it approves or rejects the proposal, but whether it is in conformity with the general will, which is their will. Each man, in giving his vote, states his opinion on that point; and the general will is found by counting votes. When therefore the opinion that is contrary to my own prevails, this proves neither more nor less than that I was mistaken, and that what I thought to be the general will was not so. If my particular opinion had carried the day I should have achieved the opposite of what was my will; and it is in that case that I should not have been free.

This presupposes, indeed, that all the qualities of the general will still reside in the majority: when they cease

to do so, whatever side a man may take, liberty is no longer possible.

Rousseau, Social Contract, IV, 2

- 31 The basis of our political systems is the right of the people to make and to alter their constitutions of government. But the constitution which at any time exists, till changed by an explicit and authentic act of the whole people, is sacredly obligatory upon all. The very idea of the power and the right of the people to establish government presupposes the duty of every individual to obey the established government.

Washington, Farewell Address

- 32 In every government on earth is some trace of human weakness, some germ of corruption and degeneracy, which cunning will discover, and wickedness insensibly open, cultivate and improve. Every government degenerates when trusted to the rulers of the people alone. The people themselves therefore are its only safe depositories. And to render even them safe, their minds must be improved to a certain degree. This indeed is not all that is necessary, though it be essentially necessary. An amendment of our constitution must here come in aid of the public education. The influence over government must be shared among all the people. If every individual which composes their mass participates of the ultimate authority, the government will be safe; because the corrupting the whole mass will exceed any private resources of wealth; and public ones can not be provided but by levies on the people. In this case every man would have to pay his own price.

Jefferson, Notes on Virginia, XIV

33 I am persuaded myself that the good sense of the people will always be found to be the best army. They may be led astray for a moment, but will soon correct themselves.

The people are the only censors of their governors; and even their errors will tend to keep these to the true principles of their institution. To punish these errors too severely would be to suppress the only safeguard of the public liberty.

Jefferson, Letter to Edward Carrington (Jan. 16, 1787)

34 All... will bear in mind this sacred principle, that though the will of the majority is in all cases to prevail, that will to be rightful must be reasonable; that the minority possess their equal rights, which equal law must protect, and to violate would be oppression.

Jefferson, First Inaugural Address

35 There is a natural aristocracy among men. The grounds of this are virtue and talents. Formerly, bodily powers gave place among the *aristoi*. But since the invention of gunpowder has armed the weak as well as the strong with missile death, bodily strength, like beauty, good humor, politeness, and other accomplishments, has become but an auxiliary ground of distinction.

There is also an artificial aristocracy, founded on wealth and birth, without either virtue or talents; for with these it would belong to the first class. The natural aristocracy I consider as the most precious gift of nature, for the instruction, the trusts, and government of society. And, indeed, it would have been inconsistent in Creation to have formed man for the social state and not to have

provided virtue and wisdom enough to manage the concerns of the society. May we not even say that that form of government is the best which provides the most effectually for a pure selection of these natural *aristoi* into the offices of government? The artificial aristocracy is a mischievous ingredient in government, and provision should be made to prevent its ascendancy.

Jefferson, Letter to John Adam (Oct. 28, 1813)

36 To deliver an opinion, is the right of all men; that of constituents is a weighty and respectable opinion, which a representative ought always to rejoice to hear; and which he ought always most seriously to consider. But authoritative instructions; mandates issued, which the member is bound blindly and implicitly to obey, to vote, and to argue for, though contrary to the clearest conviction of his judgment and conscience,—these are things utterly unknown to the laws of this land, and which arise from a fundamental mistake of the whole order and tenor of our constitution.

Parliament is not a congress of ambassadors from different and hostile interests; which interests each must maintain, as an agent and advocate, against other agents and advocates; but parliament is a deliberative assembly of one nation, with one interest, that of the whole; where, not local purposes, not local prejudices, ought to guide, but the general good, resulting from the general reason of the whole. You choose a member indeed; but when you have chosen him, he is not member for Bristol, but he is a member of parliament. If the local constituent should have an interest, or should form an hasty opinion, evidently opposite to the real good of the rest of the

community, the member for that place ought to be as far, as any other, from any endeavour to give it effect.

Burke, Speech at Bristol (Nov. 3, 1774)

37 Where popular authority is absolute and unrestrained, the people... are, themselves, in a great measure, their own instruments.... They are less under responsibility to one of the greatest controlling powers on earth, the sense of fame and estimation.... Their own approbation of their own acts has to them the appearance of a public judgment in their favour. A perfect democracy is therefore the most shameless thing in the world. As it is the most shameless, it is also the most fearless. No man apprehends in his person that he can be made subject to punishment.

Burke, Reflections on the Revolution in France

38 A democracy... is the most complex of all the forms of the state, for it has to begin by uniting the will of all so as to form a people; and then it has to appoint a sovereign over this common union, which sovereign is no other than the united will itself.

Kant, Science of Right, 51

39 The problem of a constitution is solvable even to a nation of devils (I shall be forgiven what is offensive in the expression) if this people is but endowed with understanding.

Kant, Perpetual Peace, Supplement I

40 After an unequivocal experience of the inefficiency of the subsisting federal government, you are called upon to

deliberate on a new Constitution for the United States of America. The subject speaks its own importance; comprehending in its consequences nothing less than the existence of the Union, the safety and welfare of the parts of which it is composed, the fate of an empire in many respects the most interesting in the world. It has been frequently remarked that it seems to have been reserved to the people of this country, by their conduct and example, to decide the important question, whether societies of men are really capable or not of establishing good government from reflection and choice, or whether they are forever destined to depend for their political constitutions on accident and force. If there be any truth in the remark, the crisis at which we are arrived may with propriety be regarded as the era in which that decision is to be made; and a wrong election of the part we shall act may, in this view, deserve to be considered as the general misfortune of mankind.

Hamilton, Federalist 1

- 41 It is not a new observation that the people of any country (if, like the Americans, intelligent and well-informed) seldom adopt and steadily persevere for many years in an erroneous opinion respecting their interests.

Jay, Federalist 3

- 42 A pure democracy, by which I mean a society consisting of a small number of citizens, who assemble and administer the government in person, can admit of no cure for the mischiefs of faction. A common passion or interest will, in almost every case, be felt by a majority of the whole; a communication and concert result from the

form of government itself; and there is nothing to check the inducements to sacrifice the weaker party or an obnoxious individual. Hence it is that such democracies have ever been spectacles of turbulence and contention; have ever been found incompatible with personal security or the rights of property; and have in general been as short in their lives as they have been violent in their deaths. Theoretic politicians, who have patronised this species of government, have erroneously supposed that by reducing mankind to a perfect equality in their political rights, they would, at the same time, be perfectly equalised and assimilated in their possessions, their opinions, and their passions.

A republic, by which I mean a government in which the scheme of representation takes place, opens a different prospect, and promises the cure for which we are seeking. Let us examine the points in which it varies from pure democracy, and we shall comprehend both the nature of the cure and the efficacy which it must derive from the Union.

The two great points of difference between a democracy and a republic are: first, the delegation of the government, in the latter, to a small number of citizens elected by the rest; secondly, the greater number of citizens, and greater sphere of country, over which the latter may be extended.

The effect of the first difference is, on the one hand, to refine and enlarge the public views, by passing them through the medium of a chosen body of citizens, whose wisdom may best discern the true interest of their country, and whose patriotism and love of justice will be least likely to sacrifice it to temporary or partial considerations.

Under such a regulation, it may well happen that the public voice, pronounced by the representatives of the people, will be more consonant to the public good than if pronounced by the people themselves, convened for the purpose. On the other hand, the effect may be inverted. Men of factious tempers, of local prejudices, or of sinister designs, may, by intrigue, by corruption, or by other means, first obtain the suffrages, and then betray the interests, of the people. The question resulting is, whether small or extensive republics are more favourable to the election of proper guardians of the public weal; and it is clearly decided in favour of the latter by two obvious considerations:

In the first place, it is to be remarked that, however small the republic may be, the representatives must be raised to a certain number, in order to guard against the cabals of a few; and that, however large it may be, they must be limited to a certain number, in order to guard against the confusion of a multitude. Hence the number of representatives in the two cases not being in proportion to that of the two constituents, and being proportionally greater in the small republic, it follows that, if the proportion of fit characters be not less in the large than in the small republic, the former will present a greater option, and consequently a greater probability of a fit choice.

In the next place, as each representative will be chosen by a greater number of citizens in the large than in the small republic, it will be more difficult for unworthy candidates to practise with success the vicious arts by which elections are too often carried; and the suffrages of the people being more free, will be more likely to centre

in men who possess the most attractive merit and the most diffusive and established character.

Madison, Federalist 10

43 In a democracy the people meet and exercise the government in person; in a republic, they assemble and administer it by their representatives and agents. A democracy, consequently, will be confined to a small spot. A republic may be extended over a large region.

Madison, Federalist 14

44 As the natural limit of a democracy is that distance from the central point which will just permit the most remote citizens to assemble as often as their public functions demand, and will include no greater number than can join in those functions; so the natural limit of a republic is that distance from the centre which will barely allow the representatives to meet as often as may be necessary for the administration of public affairs.

Madison, Federalist 14

45 It is said to be necessary that all classes of citizens should have some of their own number in the representative body, in order that their feelings and interests may be the better understood and attended to. But we have seen that this will never happen under any arrangement that leaves the votes of the people free. Where this is the case, the representative body, with too few exceptions to have any influence on the spirit of the government, will be composed of landholders, merchants, and men of the learned professions.

Hamilton, Federalist 35

46 Nothing can be more fallacious than to found our political calculations on arithmetical principles. Sixty or seventy men may be more properly trusted with a given degree of power than six or seven. But it does not follow that six or seven hundred would be proportionably a better depository. And if we carry on the supposition to six or seven thousand, the whole reasoning ought to be reversed. The truth is, that in all cases a certain number at least seems to be necessary to secure the benefits of free consultation and discussion, and to guard against too easy a combination for improper purposes; as, on the other hand, the number ought at most to be kept within a certain limit, in order to avoid the confusion and intemperance of a multitude. In all very numerous assemblies, of whatever character composed, passion never fails to wrest the sceptre from reason. Had every Athenian citizen been a Socrates, every Athenian assembly would still have been a mob.

Hamilton or Madison, Federalist 55

47 The aim of every political constitution is, or ought to be, first to obtain for rulers men who possess most wisdom to discern, and most virtue to pursue, the common good of the society; and in the next place, to take the most effectual precautions for keeping them virtuous whilst they continue to hold their public trust. The elective mode of obtaining rulers is the characteristic policy of republican government. The means relied on in this form of government for preventing their degeneracy are numerous and various. The most effectual one is such a limitation of the term of appointments as will maintain a proper responsibility to the people.

Hamilton or Madison, Federalist 57

48 It is a misfortune incident to republican government, though in a less degree than to other governments, that those who administer it may forget their obligations to their constituents, and prove unfaithful to their important trust. In this point of view, a senate, as a second branch of the legislative assembly, distinct from, and dividing the power with, a first, must be in all cases a salutary check on the government. It doubles the security to the people, by requiring the concurrence of two distinct bodies in schemes of usurpation or perfidy, where the ambition or corruption of one would otherwise be sufficient. This is a precaution founded on such clear principles, and now so well understood in the United States, that it would be more than superfluous to enlarge on it. I will barely remark, that as the improbability of sinister combinations will be in proportion to the dissimilarity in the genius of the two bodies, it must be politic to distinguish them from each other by every circumstance which will consist with a due harmony in all proper measures, and with the genuine principles of republican government.

Hamilton or Madison, Federalist 62

49 It is a just observation that the people commonly *intend* the PUBLIC GOOD. This often applies to their very errors. But their good sense would despise the adulator who should pretend that they always *reason right* about the *means* of promoting it. They know from experience that they sometimes err; and the wonder is that they so seldom err as they do, beset, as they continually are, by the wiles of parasites and sycophants, by the snares of

the ambitious, the avaricious, the desperate, by the artifices of men who possess their confidence more than they deserve it, and of those who seek to possess rather than to deserve it.

Hamilton, Federalist 71

50 A constitution is not just something manufactured; it is the work of centuries, it is the Idea, the consciousness of rationality so far as that consciousness is developed in a particular nation. No constitution, therefore, is just the creation of its subjects.

Hegel, Philosophy of Right, Additions, Par. 274

51 Public opinion is the unorganized way in which a people's opinions and wishes are made known. What is actually made authoritative in the state must operate in an organized manner as the parts of the constitution do. But at all times public opinion has been a great power and it is particularly so in our day when the principle of subjective freedom has such importance and significance. What is to be authoritative nowadays derives its authority, not at all from force, only to a small extent from habit and custom, really from insight and argument.

Hegel, Philosophy of Right, Additions, Par. 316

52 To those for whom the word "democracy" is synonymous with disturbance, anarchy, spoliation, and murder, I have attempted to show that democracy may be reconciled with respect for property, with deference for rights, with safety to freedom, with reverence for religion; that, if democratic government fosters less than another some of

the finer possibilities of the human spirit, it has its great and noble aspects; and that perhaps, after all, it is the will of God to bestow a lesser grade of happiness upon all men than to grant a greater share of it to a smaller number and to bring a few to the verge of perfection. I have undertaken to demonstrate to them that, whatever their opinion on this point may be, it is too late to deliberate; that society is advancing and dragging them along with it toward equality of conditions; that the sole remaining alternative lies between evils henceforth irresistible; that the question is not whether aristocracy or democracy can be maintained but whether we are to live under a democratic society, devoid indeed of poetry and greatness, but at least orderly and moral, or under a democratic society, lawless and depraved, abandoned to the frenzy of revolution or subjected to a yoke heavier than any of those which have crushed mankind since the fall of the Roman Empire.

Tocqueville, Letter to Eugene Stoffels (Feb, 21, 1835)

- 53 I confess that in America I saw more than America; I sought there the image of democracy itself, with its inclinations, its character, its prejudices, and its passions, in order to learn what we have to fear or to hope from its progress.

Tocqueville, Democracy in America, Intro.

- 54 Democracy not only lacks that soundness of judgment which is necessary to select men really deserving of their confidence, but often have not the desire or the inclination to find them out. It cannot be denied that democratic institutions strongly tend to promote the

feeling of envy in the human heart; not so much because they afford to everyone the means of rising to the same level with others as because those means perpetually disappoint the persons who employ them. Democratic institutions awaken and foster a passion for equality which they can never entirely satisfy.

Tocqueville, Democracy in America, I, 13

- 55 A democracy can obtain truth only as the result of experience; and many nations may perish while they are awaiting the consequences of their errors.

Tocqueville, Democracy in America, I, 13

- 56 Governments usually perish from impotence or from tyranny. In the former case, their power escapes from them; it is wrested from their grasp in the latter. Many observers who have witnessed the anarchy of democratic states have imagined that the government of those states was naturally weak and impotent. The truth is that when war is once begun between parties, the government loses its control over society. But I do not think that a democratic power is naturally without force or resources; say, rather, that it is almost always by the abuse of its force and the misemployment of its resources that it becomes a failure. Anarchy is almost always produced by its tyranny or its mistakes but not by its want of strength.

It is important not to confuse stability with force, or the greatness of a thing with its duration. In democratic republics the power that directs society is not stable, for it often changes hands and assumes a new direction. But whichever way it turns, its force is almost irresistible. The governments of the American republics appear to me to

be as much centralized as those of the absolute monarchies of Europe, and more energetic than they are. I do not, therefore, imagine that they will perish from weakness.

If ever the free institutions of America are destroyed, that event may be attributed to the omnipotence of the majority, which may at some future time urge the minorities to desperation and oblige them to have recourse to physical force. Anarchy will then be the result, but it will have been brought about by despotism.

Tocqueville, Democracy in America, I, 15

57 I think... that the species of oppression by which democratic nations are menaced is unlike anything that ever before existed in the world; our contemporaries will find no prototype of it in their memories. I seek in vain for an expression that will accurately convey the whole of the idea I have formed of it; the old words *despotism* and *tyranny* are inappropriate: the thing itself is new, and since I cannot name, I must attempt to define it.

I seek to trace the novel features under which despotism may appear in the world. The first thing that strikes the observation is an innumerable multitude of men, all equal and alike, incessantly endeavoring to procure the petty and paltry pleasures with which they glut their lives. Each of them, living apart, is as a stranger to the fate of all the rest; his children and his private friends constitute to him the whole of mankind. As for the rest of his fellow citizens, he is close to them, but he does not see them; he touches them, but he does not feel them; he exists only in himself and for himself alone; and if his kindred still remain to him, he may be said at any rate to have lost his country.

Above this race of men stands an immense and tutelary power, which takes upon itself alone to secure their gratifications and to watch over their fate. That power is absolute, minute, regular, provident, and mild. It would be like the authority of a parent if, like that authority, its object was to prepare men for manhood; but it seeks, on the contrary, to keep them in perpetual childhood: it is well content that the people should rejoice, provided they think of nothing but rejoicing. For their happiness such a government willingly labors, but it chooses to be the sole agent and the only arbiter of that happiness; it provides for their security, foresees and supplies their necessities, facilitates their pleasures, manages their principal concerns, directs their industry, regulates the descent of property, and subdivides their inheritances: what remains, but to spare them all the care of thinking and all the trouble of living?

Thus it every day renders the exercise of the free agency of man less useful and less frequent; it circumscribes the will within a narrower range and gradually robs a man of all the uses of himself, The principle of equality has prepared men for these things; it has predisposed men to endure them and often to look on them as benefits.

Tocqueville, Democracy in America, Vol. II, IV, 6

58 We may naturally believe that it is not the singular prosperity of the few, but the greater well-being of all that is most pleasing in the sight of the Creator and Preserver of men. What appears to me to be man's decline is, to His eye, advancement; what afflicts me is acceptable to Him. A state of equality is perhaps less elevated, but it is more just: and its justice constitutes its

greatness and its beauty. I would strive, then, to raise myself to this point of the divine contemplation and thence to view and to judge the concerns of men.

Tocqueville, Democracy in America, Vol. II, IV, 8

59 There are two different modes in which the sense of the community may be taken: one, simply by the right of suffrage, unaided; the other, by the right through a proper organism. Each collects the sense of the majority. But one regards numbers only and considers the whole community as a unit, having but one common interest throughout, and collects the sense of the greater number of the whole as that of the community. The other, on the contrary, regards interests as well as numbers—considering the community as made up of different and conflicting interests as far as the action of the government is concerned—and takes the sense of each, through its majority or appropriate organ, and the united sense of all as the sense of the entire community. The former of these I shall call the numerical or absolute majority; and the latter, the concurrent or constitutional majority. I call it the constitutional majority, because it is an essential element in every constitutional government—be its form what it may. So great is the difference, politically speaking, between the two majorities that they cannot be confounded without leading to great and fatal errors; and yet the distinction between them has been so entirely overlooked that, when the term *majority* is used in political discussions, it is applied exclusively to designate the numerical—as if there were no other. Until this distinction is recognized, and better understood, there will continue to be great liability to error in properly constructing constitutional governments, especially of

the popular form, and of preserving them when properly constructed. Until then, the latter will have a strong tendency to slide, first, into the government of the numerical majority and, finally, into absolute government of some other form.

J. C. Calhoun, Disquisition on Government

60 The practical reason why, when the power is once in the hands of the people, a majority are permitted, and for a long period continue, to rule is not because they are most likely to be in the right, nor because this seems fairest to the minority, but because they are physically the strongest. But a government in which the majority rule in all cases cannot be based on justice, even as far as men understand it. Can there not be a government in which majorities do not virtually decide right and wrong, but conscience?—in which majorities decide only those questions to which the rule of expediency is applicable? Must the citizen ever for a moment, or in the least degree, resign his conscience to the legislator? Why has every man a conscience, then? I think that we should be men first, and subjects afterward. It is not desirable to cultivate a respect for the law, so much as for the right. the only obligation which I have a right to assume is to do at any time what I think right.

Thoreau, Cult Disobedience

61 The authority of government, even such as I am willing to submit to—for I will cheerfully obey those who know and can do better than I, and in many things even those who neither know nor can do so well—is still an impure one: to be strictly just, it must have the sanction and consent of

the governed. It can have no pure right over my person and property but what I concede to it. The progress from an absolute to a limited monarchy, from a limited monarchy to a democracy, is a progress toward a true respect for the individual. Even the Chinese philosopher was wise enough to regard the individual as the basis of the empire. Is a democracy, such as we know it, the last improvement possible in government? Is it not possible to take a step further toward recognizing and organizing the rights of man? There will never be a really free and enlightened state until the state comes to recognize the individual as a higher and independent power, from which all its own power and authority are derived, and treats him accordingly. I please myself with imagining a state at last which can afford to be just to all men, and to treat the individual with respect as a neighbor; which even would not think it inconsistent with its own repose if a few were to live aloof from it, not meddling with it, nor embraced by it, who fulfilled all the duties of neighbors and fellow men. A state which bore this kind of fruit, and suffered it to drop off as fast as it ripened, would prepare the way for a still more perfect and glorious state, which also I have imagined, but not yet anywhere seen.

Thoreau, Civil Disobedience

62 No man is good enough to govern another man without that other's consent. I say this is the leading principle—the sheet anchor of American republicanism.

Lincoln, Speech at Peoria, Ill. (Oct. 16, 1854)

63 Plainly, the central idea of secession is (he essence of anarchy. A majority, held in restraint by constitutional

checks, and limitations, and always changing easily with deliberate changes of popular opinions and sentiments, is the only true sovereign of a free people. Whoever rejects it does, of necessity, fly to anarchy or to despotism. Unanimity is impossible; the rule of a minority, as a permanent arrangement, is wholly inadmissible; so that, rejecting the majority principle, anarchy, or despotism in some form, is all that is left.

Lincoln, First Inaugural Address

64 Fourscore and seven years ago our fathers brought forth on this continent a new nation conceived in liberty and dedicated to the proposition that all men are created equal. Now we are engaged in a great civil war testing whether that nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field as a final resting place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this. But, in a larger sense, we cannot dedicate, we cannot consecrate, we cannot hallow this ground. The brave men, living and dead, who struggled here have consecrated it far above our poor power to add or detract. The world will little note nor long remember what we say here, but it can never forget what they did here. It is for us the living rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead

shall not have died in vain, that this nation under God shall have a new birth of freedom, and that government of the people, by the people, for the people, shall not perish from the earth.

Lincoln, Gettysburg Address

63 At present individuals are lost in the crowd. In politics it is almost a triviality to say that public opinion now rules the world. The only power deserving the name is that of masses, and of governments while they make themselves the organ of the tendencies and instincts of masses. This is as true in the moral and social relations of private life as in public transactions. Those whose opinions go by the name of public opinion are not always the same sort of public: in America they are the whole white population; in England, chiefly the middle class. But they are always a mass, that is to say, collective mediocrity. And what is a still greater novelty, the mass do not now take their opinions from dignitaries in Church or State, from ostensible leaders, or from books. Their thinking is done for them by men much like themselves, addressing them or speaking in their name, on the spur of the moment, through the newspapers.

Mill, On Liberty, III

66 No government by a democracy or a numerous aristocracy, either in its political acts or in the opinions, qualities, and tone of mind which it fosters, ever did or could rise above mediocrity, except in so far as the sovereign Many have let themselves be guided (which in their best times they always have done) by the counsels

and influence of a more highly gifted and instructed One or Few.

Mill, On Liberty, III

67 One of the greatest dangers ... of democracy, as of all other forms of government, lies in the sinister interest of the holders of power: it is the danger of class legislation; of government intended for (whether really effecting it or not) the immediate benefit of the dominant class, to the lasting detriment of the whole. And one of the most important questions demanding consideration, in determining the best constitution of a representative government, is how to provide efficacious securities against this evil.

If we consider as a class, politically speaking, any number of persons who have the same sinister interest—that is, whose direct and apparent interest points towards the same description of bad measures; the desirable object would be that no class, and no combination of classes likely to combine, should be able to exercise a preponderant influence in the government.

Mill, Representative Government, VI

68 All trust in constitutions is grounded on the assurance they may afford, not that the depositaries of power will not, but that they cannot, misemploy it. Democracy is not the ideally best form of government unless this weak side of it can be strengthened; unless it can be so organised that no class, not even the most numerous, shall be able to reduce all but itself to political insignificance, and direct the course of legislation and administration by its exclusive class interest. The problem is, to find the means

of preventing this abuse, without sacrificing the characteristic advantages of popular government.

Mill, Representative Government, VIII

69 Among the foremost benefits of free government is that education of the intelligence and of the sentiments which is carried down to the very lowest ranks of the people when they are called to take a part in acts which directly affect the great interests of their country.

Mill, Representative Government, VIII

70 Whoever, in an otherwise popular government, has no vote, and no prospect of obtaining it, will either be a permanent malcontent, or will feel as one whom the general affairs of society do not concern; for whom they are to be managed by others; who "has no business with the laws except to obey them," nor with public interests and concerns except as a looker-on. What he will know or care about them from this position may partly be measured by what an average woman of the middle class knows and cares about politics, compared with her husband or brothers.

Independently of all these considerations, it is a personal injustice to withhold from any one, unless for the prevention of greater evils, the ordinary privilege of having his voice reckoned in the disposal of affairs in which he has the same interest as other people. If he is compelled to pay, if he may be compelled to fight, if he is required implicitly to obey, he should be legally entitled to be told what for; to have his consent asked, and his opinion counted at its worth, though not at more than its worth. There ought to be no pariahs in a full-grown and

civilised nation; no persons disqualified, except through their own default. Every one is degraded, whether aware of it or not, when other people, without consulting him, take upon themselves unlimited power to regulate his destiny. And even in a much more improved state than the human mind has ever yet reached, it is not in nature that they who are thus disposed of should meet with as fair play as those who have a voice. Rulers and ruling classes are under a necessity of considering the interests and wishes of those who have the suffrage; but of those who are excluded, it is in their option whether they will do so or not, and, however honestly disposed, they are in general too fully occupied with things which they must attend to, to have much room in their thoughts for anything which they can with impunity disregard. No arrangement of the suffrage, therefore, can be permanently satisfactory in which any person or class is peremptorily excluded; in which the electoral privilege is not open to all persons of full age who desire to obtain it.

Mill, Representative Government, VIII

- 71 All human beings have the same interest in good government; the welfare of all is alike affected by it, and they have equal need of a voice in it to secure their share of its benefits. If there be any difference, women require it more than men, since, being physically weaker, they are more dependent on law and society for protection.

Mill, Representative Government, VIII

- 72 The majority of the male sex are, and will be all their lives, nothing else than labourers in cornfields or manufactories; but this does not render the suffrage less

desirable for them, nor their claim to it less irresistible, when not likely to make a bad use of it. Nobody pretends to think that woman would make a bad use of the suffrage. The worst that is said is that they would vote as mere dependents, at the bidding of their male relations. If it be so, so let it be. If they think for themselves, real good will be done, and if they do not, no harm. It is a benefit to human beings to take off their fetters, even if they do not desire to walk.

Mill, Representative Government, VIII

73 I have said that the new and more democratic force which is now superseding our old middle-class Liberalism cannot yet be rightly judged. It has its main tendencies still to form. We hear promises of its giving us administrative reform, law reform, reform of education, and I know not what; but those promises come rather from its advocates, wishing to make a good plea for it and to justify it for superseding middle-class Liberalism, than from clear tendencies which it has itself yet developed. But meanwhile it has plenty of well-intentioned friends against whom culture may with advantage continue to uphold steadily its ideal of human perfection; that this is *an inward spiritual activity, having for its characters increased sweetness, increased light, increased life, increased sympathy*. Mr. Bright, who has a foot in both worlds, the world of middle-class Liberalism and the world of democracy, but who brings most of his ideas from the world of middle-class Liberalism in which he was bred, always inclines to inculcate that faith in machinery to which, as we have seen, Englishmen are so prone, and which has been the bane of middle-class Liberalism. . . . It is the same fashion of teaching a man to value himself

not on what he is, not on his progress in sweetness and light, but on the number of the railroads he has constructed, or the bigness of the tabernacle he has built. Only the middle classes are told they have done it all with their energy, self-reliance, and capital, and the democracy are told they have done it all with t eh hands and sinews. But teaching the democracy to put its trust in achievements of this kind is merely training them to be Philistines to take the place of the Philistines whom they are superseding; and they too, like the middle class, will be encouraged to sit down at the banquet of the future without having on a wedding garment, and nothing excellent can then come from them. Those who know their besetting faults, those who have watched them and listened to them, or those who will read the instructive account recently given of them by one of themselves, the *Journeyman Engineer*, will agree that the idea which culture sets before us of perfection—an increased spiritual activity, having for its characters increased sweetness, increased light, increased life, increased sympathy - is an idea which the new democracy needs far more than the idea of the blessedness of the franchise, or the wonderfulness of its own industrial performances.

Arnold, Culture and Anarchy, I

74 Democracy substitutes election by the incompetent many for appointment by the corrupt few.

Shaw, Man and Superman, Maxims for Revolutionists

75 The question I would raise concerns why we prefer democratic and humane arrangements to those which are autocratic and harsh. And by "why," I mean the *reason* for

preferring them, not just the *causes* which lead us to the preference. One *cause* may be that we have been taught not only in the schools but by the press, the pulpit, the platform, and our laws and law-making bodies that democracy is the best of all social institutions. We may have so assimilated this idea from our surroundings that it has become an habitual part of our mental and moral make-up. But similar causes have led other persons in different surroundings to widely varying conclusions—to prefer fascism, for example. The cause for our preference is not the same thing as the reason why we *should* prefer it.

It is not my purpose here to go in detail into the reason. But I would ask a single question: Can we find any reason that does not ultimately come down to the belief that democratic social arrangements promote a better quality of human experience, one which is more widely accessible and enjoyed, than do non-democratic and anti-democratic forms of social life?

Dewey, Experience and Education, III

76 No estimate of the effects of culture upon the elements that now make up freedom begins to be adequate that does not take into account the moral and religious splits that are found in our very make-up as persons. The problem of creation of genuine democracy cannot be successfully dealt with in theory or in practice save as we create intellectual and moral integration out of present disordered conditions. Splits, divisions, between attitudes emotionally and congenially attuned to the past and habits that are forced into existence because of the necessity of dealing with present conditions are a chief cause of continued profession of devotion to democracy

by those who do not think nor act day by day in accord with the moral demands of the profession. The consequence is a further weakening of the enviroing conditions upon which genuine democracy occurs, whether the division is found in business men, in clergymen, in educators or in politicians. The serious threat to our democracy is not the existence of foreign totalitarian states. It is the existence within our own personal attitudes and within our own institutions of conditions similar to those which have given a victory to external authority, discipline, uniformity and dependence upon The Leader in foreign countries. The battlefield is also accordingly here—within ourselves and our institutions.

Dewey, Freedom and Culture, II

10.5 Citizenship

Constitutional government and citizenship come into existence simultaneously; until the advent of republics, men either lived in subjection to despots or in enslavement by tyrants. The citizen is a politically free man, as the subject and the slave are not; being a constituent of government, having suffrage and access to public office, having a voice in government either directly or by representation, and being self-governing; as a member of the ruling class, the citizen is both ruler and ruled. Whether all adult human beings should be admitted to citizenship, as a matter of justice or natural right, is the central question in the dispute about democracy. The reader will find much that is relevant to this issue in Section 10.4 on Government of And By The People: Republic And Democracy.

That issue is, of course, apparent in this section also. In addition, there is discussion of the office of citizenship itself, its privileges and duties; enumerations of the characteristics desirable in a citizen; attempts to define the ideal of a good citizen and to distinguish what is involved in being a good citizen and in being a good man. The last point poses the problem that confronts a virtuous man who happens to be a citizen in a bad society.

...

- 1 *Ion*. I pray my mother is Athenian,
So that through her I may have rights of speech.
For when a stranger comes into a city
Of pure blood, though in name a citizen,
His mouth remains a slave: he has no right
Of speech.

Euripides, Ion, 671

- 2 *Eleatic Stranger*. No citizen should do anything contrary to the laws, and any infringement of them should be punished with death and the most extreme penalties.

Plato, Statesman, 297B

- 3 *Athenian Stranger*. There is something over and above law which lies in a region between admonition and law, and has several times occurred to us in the course of discussion; for example, in the education of very young children there were things, as we maintain, which are not to be defined, and to regard them as matters of positive law is a great absurdity. Now, our laws and the whole constitution of our state having been thus delineated, the praise of the virtuous citizen is not complete when he is described as the person who serves the laws best and obeys them most, but the higher form of praise is that which describes him as the good citizen who passes through life undefiled and is obedient to the words of the legislator, both when he is giving laws and when he assigns praise and blame. This is the truest word that can be spoken in praise of a citizen; and the true legislator ought not only to write his laws, but also to interweave with them all such things as seem to him honourable and dishonourable. And the perfect citizen ought to seek to

strengthen these no less than the principles of law which are sanctioned by punishments.

Plato, Laws, VII, 822B

- 4 The principle of compensation... is the salvation of states. Even among freemen and equals this is the principle which must be maintained, for they cannot all rule together, but must change at the end of year or some other period of time or in some other succession. The result is that upon this plan they all govern; just as if shoemakers and carpenters were to exchange their occupations, and the same persons did not always continue shoemakers and carpenters. And since it is better that this should be so in politics as well, it is clear that while there should be continuance of same persons in the power where it is possible, yet where this is not possible by reason of the natural equality of the citizens, and at the same time it is just that all should share in the government (whether to govern be a good thing or a bad), an approximation to this is that equals should in turn retire from office and should, apart from official position, be treated alike. Thus the one party rule and the others are ruled in turn, as if they were no longer the same persons.

Aristotle, Politics, 1261a30

- 5 A state is composite, like any other whole made up of many parts;—these are the citizens, who compose it. It is evident, therefore, that we must begin by asking, Who is the citizen, and what is the meaning of the term? For here . . . there may be a difference of opinion. He who is a citizen in a democracy will often not be a citizen in an

oligarchy. Leaving out of consideration those who have been made citizens, or who have obtained the name of citizen in any other accidental manner, we may say, first, that a citizen is not a citizen because he lives in a certain place, for resident aliens and slaves share in the place; nor is he a citizen who has no legal right except that of suing and being sued; for this right may be enjoyed under the provisions of a treaty. . . . The citizen whom we are seeking to define is a citizen in the strictest sense, against whom no such exception be taken, and his special characteristic is that he shares in the administration of justice, and in offices. Now of offices some are discontinuous, and the same persons are not allowed to hold them twice, or can only hold them after a fixed interval; others have no limit of time,—for example, the office of dicast or ecclesiast. It may, indeed, be argued that these are not magistrates at all, and that their functions give them no share in the government. But surely it is ridiculous to say that those who have the supreme power do not govern. Let us not dwell further upon this, which is a purely verbal question; what we want is a common term including both dicast and ecclesiast. Let us for the sake of distinction, call it 'indefinite office', and we will assume that those who share in such office are citizens. This is the most comprehensive definition of a citizen, and best suits all those who are generally so called. . . .

The citizen ... of necessity differs under each form of government; and our definition is best adapted to the citizen of a democracy; but not necessarily to other states. For in some states the people are not acknowledged, nor have they any regular assembly, but only extraordinary ones; and suits are distributed by

sections among the magistrates. At Lacedaemon, for instance, the Ephors determine suits about contracts, which they distribute among themselves, while the elders are judges of homicide, and other causes are decided by other magistrates. . . . We may, indeed, modify our definition of the citizen so as to include these states. In them it is the holder of a definite, not of an indefinite office, who legislates and judges, and to some or all such holders of definite offices is reserved the right of deliberating or judging about some things or about all things. The conception of the citizen now begins to clear up.

He who has the power to take part in the deliberative or judicial administration of any state is said by us to be a citizen of that state; and, speaking generally, a state is a body of citizens sufficing for the purposes of life.

Aristotle, Politics, 1274b38

- 6 There is a rule . . . which is exercised over freemen and equals by birth—a constitutional rule, which the ruler must learn by obeying, as he would learn the duties of general of cavalry by being under the orders of a general of cavalry, or the duties of a general of infantry by being under the orders of a general of infantry, and by having had the command of a regiment and of a company. It has been well said that ‘he who has never learned to obey cannot be a good commander’. The two are not the same, but the good citizen ought to be capable of both; he should know how to govern like a freeman, and how to obey like a freeman—these are the virtues of a citizen. And, although the temperance and justice of a ruler are distinct from those of a subject, the virtue of a good man will include both; for the virtue of the good man who is

free and also a subject, for example, his justice, will not be one but will comprise distinct kinds, the one qualifying him to rule, the other to obey.

Aristotle, Politics, 1277b8

- 7 In the perfect state the good man is absolutely the same as the good citizen; whereas in other states the good citizen is only good relatively to his own form of government.

Aristotle, Politics, 1293b4

- 8 First among the materials required by the statesman is population: he will consider what should be the number and character of the citizens, and then what should be the size and character of the country. Most persons think that a state in order to be happy ought to be large; but even if they are right, they have no idea what is a large and what a small state. For they judge of the size of the city by the number of the inhabitants; whereas they ought to regard, not their number, but their power. A city too, like an individual, has a work to do; and that city which is best adapted to the fulfilment of its work is to be deemed greatest, in the same sense of the word great in which Hippocrates might be called greater, not as a man, but as a physician, than some one else who was taller. And even if we reckon greatness by numbers, we ought not to include everybody, for there must always be in cities a multitude of slaves and sojourners and foreigners; but we should include those only who are members of the state, and who form an essential part of it. The number of the latter is a proof of the greatness of a city; but a city which produces numerous artisans and comparatively

few soldiers cannot be great, for a great city is not to be confounded with a populous one.

Aristotle, Politics, 1326a5

9 Since we are here speaking of the best form of government, i.e. that under which the state will be most happy (and happiness, as has been already said, cannot exist without virtue), it clearly follows that in the state which is best governed and possesses men who are just absolutely, and not merely relatively to the principle of the constitution, the citizens must not lead the life of mechanics or tradesmen, for such a life is ignoble and inimical to virtue. Neither must they be husbandmen, since leisure is necessary both for the development of virtue and the performance of political duties.

Again, there is in a state a class of warriors, and another of councillors, who advise about the expedient and determine matters of law, and these seem in an especial manner parts of a state. Now, should these two classes be distinguished, or are both functions to be assigned to the same persons? Here again there is no difficulty in seeing that both functions will in one way belong to the same, in another, to different persons. To different persons in so far as these employments are suited to different primes of life, for the one requires wisdom and the other strength. But on the other hand, since it is an impossible thing that those who are able to use or to resist force should be willing to remain always in subjection, from this point of view the persons are the same; for those who carry arms can always determine the fate of the constitution. It remains therefore that both functions should be entrusted by the ideal constitution to the same persons, not, however, at the same time, but in

the order prescribed by nature, who has given to young men strength and to older men wisdom. Such a distribution of duties will be expedient and also just, and is founded upon a principle of conformity to merit. Besides, the ruling class should be the owners of property, for they are citizens, and the citizens of a state should be in good circumstances; whereas mechanics or any other class which is not a producer of virtue have no share in the state. This follows from our first principle, for happiness cannot exist without virtue, and a city is not to be termed happy in regard to a portion of the citizens, but in regard to them all. And clearly property should be in their hands, since the husbandmen will of necessity be slaves or barbarian Periocci.

Aristotle, Politics, 1328b33

- 10 Never in reply to the question, to what country you belong, say that you are an Athenian or a Corinthian, but that you are a citizen of the world. For why do you say that you are an Athenian, and why do you not say that you belong to the small nook only into which your poor body was cast at birth? Is it not plain that you call yourself an Athenian or Corinthian from the place which has a greater authority and comprises not only that small nook itself and all your family, but even the whole country from which the stock of your progenitors is derived down to you? He then who has observed with intelligence the administration of the world, and has learned that the greatest and supreme and the most comprehensive community is that which is composed of men and God, and that from God have descended the seeds not only to my father and grandfather, but to all beings which are generated on the earth and are

produced . . . , why should not such a man call himself a citizen of the world?

Epictetus, Discourses, I,9

- 11 What... does the character of a citizen promise? To hold nothing as profitable to himself; to deliberate about nothing as if he were detached from the community, but to act as the hand or foot would do, if they had reason and understood the constitution of nature, for they would never put themselves in motion nor desire anything otherwise than with reference to the whole.

Epictetus, Discourses, II, 10

- 12 In the consulship of Aulus Vitellius and Lucius Vipstanus the question of filling up the Senate was discussed, and the chief men of Gallia Comata, as it was called, who had long possessed the rights of allies and of Roman citizens, sought the privilege of obtaining public offices at Rome. There was much talk of every kind on the subject, and it was argued before the emperor with vehement opposition. "Italy," it was asserted, "is not so feeble as to be unable to furnish its own capital with a senate. Once our native-born citizens sufficed for peoples of our own kin, and we are by no means dissatisfied with the Rome of the past. To this day we cite examples, which under our old customs the Roman character exhibited as to valour and renown. Is it a small thing that Veneti and Insubres have already burst into the Senate-house, unless a mob of foreigners, a troop of captives, so to say, is now forced upon us? What distinctions will be left for the remnants of our noble houses, or for any impoverished senators from Latium? Every place will be crowded with these

millionaires, whose ancestors of the second and third generations at the head of hostile tribes destroyed our armies with fire and sword, and actually besieged the divine Julius at Alesia. These are recent memories. What if there were to rise up the remembrance of those who fell in Rome's citadel and at her altar by the hands of these same barbarians! Let them enjoy indeed the title of citizens, but let them not vulgarise the distinctions of the Senate and the honours of office."

These and like arguments failed to impress the emperor. He at once addressed himself to answer them, and thus harangued the assembled Senate. "My ancestors, the most ancient of whom was made at once a citizen and a noble of Rome, encourage me to govern by the same policy of transferring to this city all conspicuous merit, wherever found. And indeed I know, as facts, that the Julii came from Alba, the Coruncanii from Camerium, the Porcii from Tusculum, and not to inquire too minutely into the past, that new members have been brought into the Senate from Etruria and Lucania and the whole of Italy, that Italy itself was at last extended to the Alps, to the end that not only single persons but entire countries and tribes might be united under our name. We had unshaken peace at home; we prospered in all our foreign relations, in the days when Italy beyond the Po was admitted to share our citizenship, and when, enrolling in our ranks the most vigorous of the provincials, under colour of settling our legions throughout the world, we recruited our exhausted empire. Are we sorry that the Balbi came to us from Spain, and other men not less illustrious from Narbon Gaul? Their descendants are still among us, and do not yield to us in patriotism.

What was the ruin of Sparta and Athens, but this, that mighty as they were in war, they spurned from them as aliens those whom they had conquered? Our founder Romulus, on the other hand was so wise that he fought as enemies and then hailed as fellow-citizens several nations on the very same day. Strangers have reigned over us. That freedmen's sons should be intrusted with public offices is not, as many wrongly think, a sudden innovation, but was a common practice in the old commonwealth. But, it will be said, we have fought Senones. I suppose then that the Volsci and AEqui never stood in array against us. Our city was taken by the Gauls. Well, we also gave hostages to the Etruscans, and passed under the yoke of Samnites. On the whole, if you review all our wars, never has one been finished in a shorter time than that with the Gauls. Thenceforth they have preserved an unbroken and loyal peace. United as they now are with us by manners, education, and intermarriage, let them bring us their gold and their wealth rather than enjoy it in isolation. Everything, Senators, which we now hold to be of the highest antiquity, was once new. Plebeian magistrates came after patrician; Latin magistrates after patrician; magistrates of other Italian peoples after Latin. This practice too will establish itself, and what we are this day justifying by precedents, will be itself a precedent."

Tacitus, Annals, XI, 23-24

13 My nature is rational and social; and my city and country, so far as I am Antoninus, is Rome, but so far as I am a man, it is the world.

Marcus Aurelius, Meditations, VI, 44

- 14 The life of a citizen is happy, who continues a course of action which is advantageous to his fellow-citizens, and is content with whatever the state may assign to him.

Marcus Aurelius, Meditations, X, 6

- 15 As the Philosopher [Aristotle] says, a man is said to be a citizen in two ways: first, absolutely; secondly, in a restricted sense. A man is a citizen absolutely if he has all the rights of citizenship, for instance, the right of debating or voting in the popular assembly. On the other hand, any man may be called citizen in a restricted sense only, if he dwells within the state—even common people or children or old men, who are not fit to enjoy power in matters pertaining to the common good.

Aquinas, Summa Theologica, I—II, 105, 3

- 16 Men are not born fit for citizenship, but must be made so.

Spinoza, Political Treatise, V, 2

- 17 Submitting to the laws of any country, living quietly and enjoying privileges and protection under them, makes not a man a member of that society; it is only a local protection and homage due to and from all those who, not being in a state of war, come within the territories belonging to any government, to all parts whereof the force of its law extends. But this no more makes a man a member of that society, a perpetual subject of that commonwealth, than it would make a man a subject to another in whose family he found it convenient to abide for some time, though, whilst he continued in it, he were obliged to comply with the laws and submit to the government he found there. And thus we see that

foreigners by living all their lives under another government and en-joying the privileges and protection of it, though they are bound, even in conscience, to submit to its administration as far forth as any denizen, yet do not thereby come to be subjects or members of that commonwealth. Nothing can make any man so but his actually entering into it by positive engagement and express promise and compact.

Locke, II Civil Government, VIII, 122

- 18 There can be no patriotism without liberty, no liberty without virtue, no virtue without citizens; create citizens, and you have everything you need; without them, you will have nothing but debased slaves, from the rulers of the State downwards. To form citizens is not the work of a day; and in order to have men it is necessary to educate them when they are children.

Rousseau, Political Economy

- 19 Most people mistake a town for a city, and a townsman for a citizen. They do not know that houses make a town, but citizens a city. The same mistake long ago cost the Carthaginians dear. I have never read of the title of citizens being given to the subjects of any prince, not even the ancient Macedonians or the English of to-day, though they are nearer liberty than any one else. The French alone everywhere familiarly adopt the name of citizens, because, as can be seen from their dictionaries, they have no idea of its meaning; otherwise they would be guilty in usurping it, of the crime of *lese-majeste*: among them, the name expresses a virtue, and not a right. When Bodin spoke of our citizens and townsmen,

he fell into a bad blunder in taking the one class for the other. M. d'Alembert has avoided the error, and, in his article on Geneva, has clearly distinguished the four orders of men (or even five, counting mere foreigners) who dwell in our town, of which two only compose the Republic. No other French writer, to my knowledge, has understood the real meaning of the word citizen.

Rousseau, Social Contract, I, 6, fn.

- 20 Suppose the State is composed of ten thousand citizens. The Sovereign can only be considered collectively and as a body; but each member, as being a subject, is regarded as an individual: thus the Sovereign is to the subject as ten thousand to one, i.e., each member of the State has as his share only a ten-thousandth part of the sovereign authority, although he is wholly under its control. If the people numbers a hundred thousand, the condition of the subject undergoes no change, and each equally is under the whole authority of the laws, while his vote, being reduced to a hundred-thousandth part, has ten times less influence in drawing them up. The subject therefore remaining always a unit, the relation between him and the Sovereign increases with the number of the citizens. From this it follows that, the larger the State, the less the liberty.

Rousseau, Social Contract, III, 1

- 21 As soon as public service ceases to be the chief business of the citizens, and they would rather serve with their money than with their persons the State is not far from its fall. When it is necessary to march out to war, they pay troops and stay at home: when it is necessary to meet in

council they name deputies and stay at home. By reason of idleness and money, they end by having soldiers to enslave their country and representatives to sell it....

The better the constitution of a State is, the more do public affairs encroach on private in the minds of the citizens. Private affairs are even of much less importance, because the aggregate of the common happiness furnishes a greater proportion of that of each individual, so that there is less for him to seek in particular cares. In a well-ordered city every man flies to the assemblies: under a bad government no one cares to stir a step to get to them, because no one is interested in what happens there, because it is foreseen that the general will will not prevail, and lastly because domestic cares are all-absorbing. Good laws lead to the making of better ones; bad ones bring about worse. As soon as any man says of the affairs of the State *What does it matter to me?* the State may be given up for lost.

Rousseau, Social Contract, III, 15

22 It was a maxim of ancient jurisprudence, that as a slave had not any country of his own, he acquired with his liberty an admission into the political society of which his patron was a member. The consequences of this maxim would have prostituted the privileges of the Roman city to a mean and promiscuous multitude. Some seasonable exceptions were therefore provided; and the honourable distinction was confined to such slaves only, as for just causes, and with the approbation of the magistrate, should receive a solemn and legal manumission. Even these chosen freed-men obtained no more than the private rights of citizens, and were rigorously excluded from civil or military honours. Whatever might be the

merit or fortune of their sons, *they* likewise were esteemed unworthy of a seat in the senate; nor were the traces of a servile origin allowed to be completely obliterated till the third or fourth generation.

Gibbon, Decline and Fall of the Roman Empire, II

- 23 The members of a civil society... united for the purpose of legislation, and thereby constituting a state, are called its *citizens*; and there are three juridical attributes that inseparably belong to them by right. These are:—1. constitutional freedom. as the right of every citizen to have to obey no other law than that to which he has given his consent or approval; 2. civil equality, as the right of the citizen to recognise no one as a superior among the people in relation to himself, except in so far as such a one is as subject to *his* moral power to impose obligations, as that other has power to impose obligations upon him; and 3. political independence, as the right to owe his existence and continuance in society not to the arbitrary will of another, but to his own rights and powers as a member of the commonwealth, and, consequently, the possession of a civil personality, which cannot be represented by any other than himself.

Kant, Science of Right, 46

- 24 The capability of voting by possession of the suffrage properly constitutes the political qualification of a citizen as a member of the state. But this, again, presupposes the independence or self-sufficiency of the individual citizen among the people, as one who is not a mere incidental part of the commonwealth, but a member of it acting of his own will in community with others. The last

of the three qualities involved necessarily constitutes the distinction between *active* and *passive* citizenship although the latter conception appears to stand in contradiction to the definition of a citizen as such. The following examples may serve to remove this difficulty. The apprentice of a merchant or tradesman, a servant who is not in the employ of the state, a minor, all women, and, generally, every one who is compelled to maintain himself not according to his own industry, but as it is arranged by others (the state excepted), are without civil personality, and their existence is only, as it were, incidentally included in the state. The woodcutter whom I employ on my estate; the smith in India who carries his hammer, anvil, and bellows into the houses where he is engaged to work in iron, as distinguished from the European carpenter or smith, who can offer the independent products of his labour as wares for public sale; the resident tutor as distinguished from the schoolmaster; the ploughman as distinguished from the farmer and such like, illustrate the distinction in question. In all these cases, the former members of the contrast are distinguished from the latter by being mere subsidiaries of the commonwealth and not active independent members of it, because they are of necessity commanded and protected by others, and consequently possess no political self-sufficiency in themselves. Such dependence on the will of others and the consequent inequality are, however, not inconsistent with the freedom and equality of the individuals as men helping to constitute the people. Much rather is it the case that it is only under such conditions that a people can become a state and enter into a civil constitution. But all are not equally qualified to exercise the right of suffrage under the

constitution, and to be full citizens of the state, and not mere passive subjects under its protection. For, although they are entitled to demand to be treated by all the other citizens according to laws of natural freedom and equality, as passive parts of the state, it does not follow that they' ought themselves to have the right to deal with the state as active members of it, to reorganize it, or to take action by way of introducing certain laws. All they have a right in their circumstances to claim may be no more than that whatever be the mode in which the positive law's are enacted, these laws must not be contrary' to the natural laws that demand the freedom of all the people and the equality that is conformable thereto; and it must therefore be made possible for them to raise themselves from this passive condition in the state to the condition of active citizenship.

Kant, Science of Right, 46

25 I think that we should be men first, and subjects afterward.

Thoreau, Civil Disobedience

26 It is a great discouragement to an individual, and a still greater one to a class, to be left out of the constitution; to be reduced to plead from outside the door to the arbiters of their destiny, not taken into consultation within. the maximum of the invigorating effect of freedom upon the character is only obtained when the person acted on either is, or is looking forward to becoming, a citizen as fully privileged as any other.

Mill, Representative Government, III

27 If a noble and civilised democracy is to subsist, the common citizen must be something of a saint and something of a hero. We see therefore how justly flattering and profound, and at the same time how ominous, was Montesquieu's saying that the principle of democracy is virtue.

Santayana, Life of Reason, U, 5

10.6 Despotism and Tyranny

Until fairly recently in the tradition of Western politics, monarchies, kingships, or autocracies have been the rule, and republics the exception. A single man seated on a throne and holding the sceptre of sovereignty has been the prevalent image of the ruler. In fact, for many centuries the words "prince" or "king" and "sovereign" were interchangeable. Our English word "king" carries the meaning that once attached to the Greek word *tyrannis* as well as to the Latin word *rex*. The tyrant was a monarch with absolute power; and the word "despot" derives from a Greek word that designates the rule of a master over his slaves.

With the beginnings of political philosophy in the writings of Plato and Aristotle, these terms take on the meanings they have for us today. A tyrant is a ruler who exploits for his own interests the subjects in his power; tyranny is the archetype of misrule, whether the power of government is in the hands of the one, the few, or the many. An elite can also misrule in a manner that deserves the appellation "tyrannical"; and since the beginnings of popular government and extensions of the franchise in the

nineteenth century, there has been much concern about "the tyranny of the majority."

The reader will find relevant materials on this in Section 10.4.

Despotism, as contrasted with tyranny, is sometimes qualified by the term "benevolent." Both despotism and tyranny signify absolute power—government without the consent of the governed and with no participation on their part. But when such absolute power is exercised with some regard for the rights and welfare of the ruled, in a quasi-paternalistic manner, the despot is said to be benevolent.

The reader will find the authors quoted here in opposition on many points, some defending absolute monarchy as the ideal form of government or, as in the case of Hobbes, the only legitimate form of government; and some, like Locke and Rousseau, saying that absolute monarchy is not a form of civil government at all and has no legitimacy. The reader will also find a discussion of the question whether benevolent despotism is ever justified by the uncivilized or politically immature condition of the people over whom and for whose benefit it is exercised. For the condition of those subject to tyrannical or despotic rule and for their response to it, the reader should turn to Section 10.7 on Slavery and Section 10.9 on Revolution.

■ ■ ■

1 As a roaring lion, and a ranging bear; so is a wicked ruler over the poor people.

The prince that wanteth understanding is also a great oppressor; but he that hateth covetousness shall prolong

his days.

Proverbs 28:15-16

- 2 Her princes in the midst thereof are like wolves ravening the prey, to shed blood, and to destroy souls, to get dishonest gain.

Ezekiel 22:27

- 3 *Nestor*. Nor... think to match your strength with the king, since never equal with the rest is the portion of honour of the sceptred king to whom Zeus gives magnificence. Even though you are the stronger man, and the mother who bore you was immortal, yet is this man greater who is lord over more than you rule.

Homer, Iliad, I, 277

- 4 *Chorus*. Death is a softer thing by far than tyranny.

Aeschylus, Agamemnon, 1365

- 5 Pisistratus, at a time when there was civil contention in Attica between the party of the Sea-coast headed by Megacles the son of Alcmaeon, and that of the Plain headed by Lycurgus, one of the Aristoloids, formed the project of making himself tyrant, and with this view created a third party. Gathering together a band of partisans, and giving himself out for the protector of the Highlanders, he contrived the following stratagem. He wounded himself and his mules, and then drove his chariot into the market-place, professing to have just escaped an attack of his enemies, who had attempted his life as he was on his way into the country. He besought the people to assign him a guard to protect his person,

reminding them of the glory which he had gained when he led the attack upon the Megarians, and took the town of Nisaea, at the same time performing many other exploits. The Athenians, deceived by his story, appointed him a band of citizens to serve as a guard, who were to carry clubs instead of spears, and to accompany him wherever he went. Thus strengthened, Pisistratus broke into revolt and seized the citadel. In this way he acquired the sovereignty of Athens, which he continued to hold without disturbing the previously existing offices or altering any of the laws. He administered the state according to the established usages, and his arrangements were wise and salutary.

Herodotus, History, I, 59

- 6 *Theseus*. Naught is more hostile to a city than a despot; where he is, there are in the first place no laws common to all, but one man is tyrant, in whose keeping and in his alone the law resides, and in that case equality is at an end.

Euripides, Suppliants, 429

- 7 Wherever there were tyrants, their habit of providing simply for themselves, of looking solely to their personal comfort and family aggrandizement, made safety the great aim of their policy, and prevented anything great proceeding from them; though they would each have their affairs with their immediate neighbours.

Thucydides, Peloponnesian War, I, 17

- 8 *Polus*. Then you would not wish to be a tyrant?
Socrates. Not if you mean by tyranny what I mean.

Pol. I mean... the power of doing whatever seems good to you in a state, killing, banishing, doing in all things as you like.

Plato, Gorgias, 469B

9 *Socrates.* How then does a protector begin to change into a tyrant? Clearly when he does what the man is said to do in the tale of the Arcadian temple of Lycaean Zeus.

Adeimantus. What tale?

The tale is that he who has tasted the entrails of a single human victim minced up with the entrails of other victims is destined to become a wolf. Did you never hear it?

O yes.

And the protector of the people is like him; having a mob entirely at his disposal, he is not restrained from shedding the blood of kinsmen; by the favourite method of false accusation he brings them into court and murders them, making the life of man to disappear, and with unholy tongue and lips tasting the blood of his fellow citizen; some he kills and others he banishes, at the same time hinting at the abolition of debts and partition of lands: and after this, what will be his destiny? Must he not either perish at the hands of his enemies, or from being a man become a wolf— that is, a tyrant?

Inevitably.

This, I said, is he who begins to make a party against the rich?

The same.

After a while he is driven out, but comes back, in spite of his enemies, a tyrant full grown.

Plato, Republic, VIII, 565B

10 [Socrates said] He who is the real tyrant, whatever men may think, is the real slave, and is obliged to practise the greatest adulation and servility, and to be the flatterer of the vilest of mankind. He has desires which he is utterly unable to satisfy, and has more wants than any one, and is truly poor, if you know how to inspect the whole soul of him: all his life long he is beset with fear and is full of convulsions, and distractions, even as the State which he resembles: and surely the resemblance holds?

Very true, he (Adeimantus) said.

Moreover, as we were saying before, he grows worse from having power: he becomes and is of necessity more jealous, more faithless, more unjust, more friendless, more impious, than he was at first; he is the purveyor and cherisher of every sort of vice, and the consequence is that he is supremely miserable, and that he makes everybody else as miserable as himself.

No man of any sense will dispute your words.

Come then, I said, and as the general umpire in theatrical contests proclaims the result, do you also decide who in your opinion is first in the scale of happiness, and who second, and in what order the others follow: there are five of them in all— they are the royal, timocratical, oligarchical, democratical, tyrannical.

The decision will be easily given, he replied; they shall be choruses coming on the stage, and I must judge them in the order in which they enter, by the criterion of virtue and vice, happiness and misery.

Need we hire a herald, or shall I announce, that the son of Ariston [the best] has decided that the best and justest is also the happiest, and that this is he who is the most royal man and king over himself; and that the worst and most unjust man is also the most miserable, and that

this is he who being the greatest tyrant of himself is also the greatest tyrant of his State?

Make the proclamation yourself, he said.

And shall I add, "whether seen or unseen by gods and men"?

Let the words be added.

Plato, Republic, IX, 579B

- 11 A man is not a king unless he is sufficient to himself and excels his subjects in all good things; and such a man needs nothing further; therefore he will not look to his own interests but to those of his subjects; for a king who is not like that would be a mere titular king. Now tyranny is the very contrary of this; the tyrant pursues his own good. And it is clearer in the case of tyranny that it is the worst deviation-form; but it is the contrary of the best that is worst. Monarchy passes over into tyranny; for tyranny is the evil form of one-man rule and the bad king becomes a tyrant.

Aristotle, Ethics, 1160b3

- 12 The appointment of a king is the resource of the better classes against the people, and he is elected by them out of their own number, because either he himself or his family excel in virtue and virtuous actions; whereas a tyrant is chosen from the people to be their protector against the notables, and in order to prevent them from being injured. History shows that almost all tyrants have been demagogues who gained the favour of the people by their accusation of the notables. At any rate this was the manner in which the tyrannies arose in the days when cities had increased in power. Others which were

older originated in the ambition of kings wanting to overstep the limits of their hereditary power and become despots. Others again grew out of the class which were chosen to be chief magistrates; for in ancient times the people who elected them gave the magistrates, whether civil or religious, a long tenure. Others arose out of the custom which oligarchies had of making some individual supreme over the highest offices. In any of these ways an ambitious man had no difficulty, if he desired, in creating a tyranny, since he had the power in his hands already, either as king or as one of the officers of state.

Aristotle, Politics, 1310b8

- 13 Kingly rule is little affected by external causes, and is therefore lasting; it is generally destroyed from within. And there are two ways in which the destruction may come about; when the members of the royal family quarrel among themselves, and when the kings attempt to administer the state too much after the fashion of a tyranny, and to extend their authority contrary to the law. Royalties do not now come into existence; where such forms of government arise, they are rather monarchies or tyrannies. For the rule of a king is over voluntary subjects, and he is supreme in all important matters; but in our own day men are more upon an equality, and no one is so immeasurably superior to others as to represent adequately the greatness and dignity of the office. Hence mankind will not, if they can help, endure it, and any one who obtains power by force or fraud is at once thought to be a tyrant. In hereditary monarchies a further cause of destruction is the fact that kings often fall into contempt, and, although possessing not tyrannical power, but only royal dignity, are apt to outrage others. Their overthrow is

then readily effected; for there is an end to the king when his subjects do not want to have him, but the tyrant lasts, whether they like him or not.

Aristotle, Politics, 1312b39

14 As to tyrannies, they are preserved in two most opposite ways. One of them is the old traditional method in which most tyrants administer their government. Of such arts Periander of Corinth is said to have been the great master, and many similar devices may be gathered from the Persians in the administration of their government. There are firstly the prescriptions mentioned some distance back, for the preservation of a tyranny, in so far as this is possible; viz. that the tyrant should lop off those who are too high; he must put to death men of spirit; he must not allow common meals, clubs, education, and the like; he must be upon his guard against anything which is likely to inspire either courage or confidence among his subjects; he must prohibit literary assemblies or other meetings for discussion, and he must take every means to prevent people from knowing one another (for acquaintance begets mutual confidence). Further, he must compel all persons staying in the city to appear in public and live at his gates; then he will know what they are doing: if they are always kept under, they will learn to be humble. In short, he should practise these and the like Persian and barbaric arts, which all have the same object. A tyrant should also endeavour to know what each of his subjects says or does, and should employ spies, like the 'female detectives' at Syracuse, and the eavesdroppers whom Hiero was in the habit of sending to any place of resort or meeting; for the fear of informers prevents people from speaking their minds, and if they do, they

are more easily found out. Another art of the tyrant is to sow quarrels among the citizens; friends should be embroiled with friends, the people with the notables, and the rich with one another. Also he should impoverish his subjects; he thus provides against the maintenance of a guard by the citizens, and the people, having to keep hard at work, are prevented from conspiring. The Pyramids of Egypt afford an example of this policy; also the offerings of the family of Cypselus, and the building of the temple of Olympian Zeus by the Peisistratidae and the great Polycratean monuments at Samos: all these works were alike intended to occupy the people and keep them poor. Another practice of tyrants is to multiply taxes, after the manner of Dionysius at Syracuse, who contrived that within five years his subjects should bring into the treasury their whole property. The tyrant also fond of making war in order that his subjects may have something to do and be always in want of a leader. And whereas the power of a king is preserved by his friends, the characteristic of a tyrant is to distrust his friends, because he knows that all men want to overthrow him, and they above all have the power.

Aristotle, Politics, 1313a34

- 13 By the standard of popular opinion, I cannot imagine what greater boon could fall to a man than to be a king. But when I begin to consider the question from the point of view of the standard of truth, then I can think of nothing more disadvantageous than to have risen to such a height by means of injustice. For can it be regarded as an advantage to anyone to be confronted with all sorts of reasons for worry, anxiety, and fear day in and day out, and to live a life beset from all sides with plots and perils?

Cicero, De Officiis, III, 21

- 16 A kingdom is the best form of government of the people, so long as it is not corrupt. But since the power granted to a king is so great, it easily degenerates into tyranny, unless he to whom this power is given be a very virtuous man; for “it is only the virtuous man that conducts himself well in the midst of prosperity,” as [Aristotle] observes.

Aquinas, Summa Theologica, I—II, 105, 1

- 17 A tyrannical government is not just, because it is directed, not to the common good, but to the private good of the ruler. . . . Consequently there is no sedition in disturbing a government of this kind, unless indeed the tyrant’s rule be disturbed so inordinately that his subjects suffer greater harm from the consequent disturbance than from the tyrant’s government. Indeed it is the tyrant rather that is guilty of sedition, since he encourages discord and sedition among his subjects, that he may lord over them more securely.

Aquinas, Summa Theologica, II—II, 42, 2

- 18 The government of tyrants . . . cannot last long because it is hateful to the multitude, and what is against the wishes of the multitude cannot be long preserved.

Aquinas, On Kingship, I, 10

- 19 Between a tyrant and a usurping chief
And any outlawed man or errant thief,
It's just the same, there is no difference.
One told to Alexander this sentence:
That, since the tyrant is of greater might,

By force of numbers, to slay men outright
And burn down house and home even as a plane,
Lo! for that he's a captain, that's certain;
And since the outlaw has small company
And may not do so great a harm as he,
Nor bring a nation into such great grief,
Why, he's called but an outlaw or a thief.

Chaucer, Canterbury Tales: Manciple's Tale

20 He who obtains sovereignty by the assistance of the nobles maintains himself with more difficulty than he who comes to it by the aid of the people, because the former finds himself with many around him who consider themselves his equals, and because of this he can neither rule nor manage them to his liking. But he who reaches sovereignty by popular favour finds himself alone, and has none around him, or few, who are not prepared to obey him. Besides this, one cannot by fair dealing, and without injury to others, satisfy the nobles, but you can satisfy the people, for their object is more righteous than that of the nobles, the latter wishing to oppress, whilst the former only desire not to be oppressed.

Machiavelli, Prince, IX

21 *Richmond.* More than I have said, loving countrymen,
The leisure and enforcement of the time
Forbids to dwell upon: yet remember this,
God and our good cause fight upon our side;
The prayers of holy saints and wronged souls,
Like high-rear'd bulwarks, stand before our faces;
Richard except, those whom we fight against
Had rather have us win than him they follow:

For what is he they follow? truly, gentlemen,
A bloody tyrant and a homicide;
One raised in blood, and one in blood establish'd;
One that made means to come by what he hath,
And slaughter'd those that were the means to help him
A base foul stone, made precious by the foil
Of England's chair, where he is falsely set;
One that hath ever been God's enemy:
Then, if you fight against God's enemy,
God will in justice ward you as his soldiers;
If you do sweat to put a tyrant down,
You sleep in peace, the tyrant being slain.

Shakespeare, Richard III, V, iii, 237

22 *King Richard*. For God's sake, let us sit upon the ground
And tell sad stories of the death of kings:
How some have been deposed; some slain in war;
Some haunted by the ghosts they have deposed;
Some poison'd by their wives; some sleeping kill'd;
All murder'd: for within the hollow crown
The rounds the mortal temples of a king
Keeps Death his court and there the antic sits,
Scoffing his state and grinning at his pomp,
Allowing him a breath, a little scene,
To monarchize, be fear'd, and kill with looks,
Infusing him with self and vain conceit,
As if this flesh which walls about our life
Were brass impregnable, and humour'd thus
Comes at the last and with a little pin
Bores through his castle wall, and farewell king!

Shakespeare, Richard II, III, ii, 155

23 *Pandulph*. A sceptre snatch'd with an unruly hand
Must be as boisterously maintain'd as gain'd;
And he that stands upon a slippery place
Makes nice of no vile hold to slay him up.

Shakespeare, King John, III, iv, 135

24 *King Henry*. What infinite heart's-case
Must kings neglect, that private men enjoy!
And what have kings, that privates have not too.
Save ceremony, save general ceremony?
And what art thou, thou idol Ceremony?
What kind of god art thou, that suffer'st more
Of mortal griefs than do thy worshippers?
What are thy rents? what are thy comings in?
O Ceremony, show me but thy worth!
What is thy soul of adoration?
Art thou aught else but place, degree, and form,
Creating awe and fear in other men?
Wherein thou art less happy being fear'd
Than they in fearing.
What drink'st thou oft, instead of homage sweet,
But poison'd flattery? O, be sick, great greatness,
And bid thy Ceremony give thee cure!
Think'st thou the fiery fever will go out
With titles blown from adulation?
Will it give place to flexure and low bending?
Canst thou, when thou command'st the beggar's knee.
Command the health of it? No, thou proud dream.
That play'st so subtly with a king's repose;
I am a king that find thee, and I know
'Tis not the balm, the sceptre, and the ball,
The sword, the mace, the crown imperial,
The intertissued robe of gold and pearl.

The farced title running 'fore the King,
The throne he sits on, nor the tide of pomp
That beats upon the high shore of this world,
No, not all these, thrice-gorgeous Ceremony,
Not all these, laid in bed majestical,
Can sleep so soundly as the wretched slave,
Who with a body fill'd and vacant mind
Gets him to rest, cramm'd with distressful bread;
Never sees horrid night, the child of hell,
But, like a lackey, from the rise to set
Sweats in the eye of Phaebus and all night
Sleeps in Elysium; next day after dawn,
Doth rise and help Hyperion to his horse,
And follows so the ever-running year,
With profitable labour, to his grave:
And, but for ceremony, such a wretch,
Winding up days with toil and nights with sleep,
Had the fore-hand and vantage of a king.
The slave, a member of the country's peace,
Enjoys it; but in gross brain little wots
What watch the King keeps to maintain the peace,
Whose hours the peasant best advantages.

Shakespeare, Henry V, IV, i, 253

25 *Brutus*. As Caesar loved me, I weep for him; as he was fortunate, I rejoice at it; as he was valiant, I honour him: but, as he was ambitious, I slew him. There is tears for his love; joy for his fortune; honour for his valour; and death for his ambition.

Shakespeare, Caesar, III, ii, 25

26 *Menteith*. What does the tyrant?

Caithness. Great Dunsinane he strongly fortifies.
Some say he's mad; others that lesser hate him
Do call it valiant fury; but, for certain,
He cannot buckle his distemper'd cause
Within the belt of rule.

Angus. Now does he feel
His secret murders sticking on his hands;
Now minutely revolts upbraid his faith-breach;
Those he commands move only in command,
Nothing in love; now does he feel his title
Hang loose about him, like a giant's robe
Upon a dwarfish thief.

Shakespeare, Macbeth, V, ii, 11

27 *Macduff*. Turn, hell-hound, turn!

Macbeth. Of all men else I have avoided thee.
But get thee back; my soul is too much charged
With blood of thine already.

Macd. I have no words;
My voice is in my sword. Thou bloodier villain
Than terms can give thee out!

They fight.

Macb. Thou lovest labour.
As easy mayst thou the intricate air
With thy keen sword impress as make me bleed.
Let fall thy blade on vulnerable crests;
I bear a charmed life, which must not yield
To one of woman born.

Macd. Despair thy charm;
And let the angel whom thou still hast served
Tell thee, Macduff was from his mother's womb
Untimely ripp'd.

Macb. Accursed be that tongue that tells me so,
For it hath cow'd my better part of man!
And be these juggling fiends no more believed
That palter with us in a double sense;
That keep the word of promise to our ear,
And break it to our hope. I'll not fight with thee.

Macd. Then yield thee, coward.
And live to be the show and gaze o' the time!
We'll have thee, as our rarer monsters are,
Painted upon a pole, and underwrit,
"Here may you see the tyrant."

Macb. I will not yield,
To kiss the ground before young Malcolm's feet
And to be baited with the rabble's curse.
Though Birnam wood be come to Dunsinane,
And thou opposed, being of no woman born,
Yet I will try the last. Before my body
I throw my warlike shield. Lay on, Macduff,
And damn'd be him that first cries, "Hold, enough!"

Shakespeare, Macbeth, V, viii, 4

28 *Pericles*. Tis time to fear when tyrants seem to kiss.

Shakespeare, Pericles, I, ii, 79

29 *Wolsey*. O, how wretched
Is that poor man that hangs on princes' favours!
There is, betwixt that smile we would aspire to,
That sweet aspect of princes, and their ruin,
More pangs and fears than wars or women have;
And when he falls, he falls like Lucifer,
Never to hope again.

Shakespeare, Henry VIII, III, ii, 366

30 It is a miserable state of mind to have few things to desire and many things to fear; and yet that commonly is the case of kings.

Bacon, Of Empire

31 Princes are like to heavenly bodies, which cause good or evil times; and which have much veneration, but no rest.

Bacon, Of Empire

32 I put for a general inclination of all mankind a perpetual and restless desire of power after power, that ceaseth only in death. And the cause of this is not always that a man hopes for a more intensive delight than he has already attained to, or that he cannot be content with a moderate power, but because he cannot assure the power and means to live well, which he hath present, without the acquisition of more. And from hence it is that kings, whose power is greatest, turn their endeavours to the assuring it at home by laws, or abroad by wars: and when that is done, there succeedeth a new desire; in some, of fame from new conquest; in others, of ease and sensual pleasure; in others, of admiration, or being flattered for excellence in some art or other ability of the mind.

Hobbes, Leviathan, I, 11

33 In a body politic, if the representative be one man, whatsoever he does in the person of the body which is not warranted in his letters, nor by the laws, is his own act, and not the act of the body, nor of any other member thereof besides himself: because further than his letters or the laws limit, he representeth no man's person, but his own. But what he does according to these is the act of

every one: for of the act of the sovereign every one is author, because he is their representative unlimited; and the act of him that recedes not from the letters of the sovereign is the act of the sovereign, and therefore every member of the body is author of it.

Hobbes, Leviathan, II, 22

- 34 The name of tyranny signifieth nothing more nor less than the name of sovereignty, be it in one or many men, saving that they that use the former word are understood to be angry with them they call tyrants; I think the toleration of a professed hatred of tyranny is a toleration of hatred to Commonwealth in general, and another evil seed, not differing much from the former.

Hobbes, Leviathan, IV, Review and Conclusion

- 35 Tyranny consists in the desire of universal power beyond its scope.

There are different assemblies of the strong, the fair, the sensible, the pious, in which each man rules at home, not elsewhere. And sometimes they meet, and the strong and the fair foolishly fight as to who shall be master, for their mastery is of different kinds. They do not understand one another, and their fault is the desire to rule everywhere. Nothing can effect this, not even might, which is of no use in the kingdom of the wise, and is only mistress of external actions. So these expressions are false and tyrannical: "I am fair, therefore I must be feared. I am strong, therefore I must be loved. I am ..."

Tyranny is the wish to have in one way what can only be had in another. We render different duties to different

merits; the duty of love to the pleasant; the duty of fear to the strong; duty of belief to the learned.

We must render these duties; it is unjust to refuse them, and unjust to ask others. And so it is false and tyrannical to say, "He is not strong, therefore I will not esteem him; he is not able, therefore I will not fear him."

Pascal, Pensees, V, 332

36 *Michael*. Reason in man obscur'd, or not obeyd,
Immediately inordinate desires
And upstart Passions catch the Government
From Reason, and to servitude reduce
Man till then free. Therefore since hee permits
Within himself unworthie Powers to reign
Over free Reason, God in Judgement just
Subjects him from without to violent Lords;
Who oft as undeservedly enthrall
His outward freedom: Tyrannic must be,
Though to the Tyrant thereby no excuse.

Milton, Paradise Lost, XII, 86

37 That people must needs be mad or strangely infatuated that build the chief hope of their common happiness or safety on a single person; who, if he happen to be good, can do no more than another man; if to be bad, hath in his hands to do more evil without check than millions of other men.

Milton, Ready and Easy Way

38 It is lawful, and hath been held so through all ages, for any, who have the power, to call to account a tyrant or

wicked king, and after due conviction, to depose and put him to death.

Milton, Tenure of Kings and Magistrates

39 To say kings are accountable to none but God, is the overturning of all law and government. For if they may refuse to give account, then all covenants made with them at coronation, all oaths are in vain, and mere mockeries, all laws which they swear to keep, made to no purpose: for if the king fear not God (as how many of them do not?) we hold then our lives and estates by the tenure of his mere grace and mercy, as from a god, not a mortal magistrate—a position that none but court parasites or men besotted would maintain.

Milton, Tenure of Kings and Magistrates

40 They are much mistaken, who suppose that one man can by himself hold the supreme right of a commonwealth. For the only limit of right... is power. But the power of one man is very inadequate to support so great a load. And hence it arises, that the man, whom the multitude has chosen king, looks out for himself generals, or counsellors, or friends, to whom he entrusts his own and the common welfare; so that the dominion, which is thought to be a perfect monarchy, is in actual working an aristocracy, not, indeed, an open but a hidden one, and therefore the worst of all.

Spinoza, Political Treatise, VI, 5

41 It is evident that absolute monarchy, which by some men is counted for the only government in the world, is indeed inconsistent with civil society, and so can be no form of

civil government at all. For the end of civil society being to avoid and remedy those inconveniencies of the state of Nature which necessarily follow from every man's being judge in his own case, by setting up a known authority to which every one of that society may appeal upon any injury received, or controversy that may arise, and which every one of the society ought to obey. Wherever any persons are who have not such an authority to appeal to, and decide any difference between them there, those persons are still in the state of Nature. And so is every absolute prince in respect of those who are under his dominion.

Locke, II Civil Government, VII, 90

42 As usurpation is the exercise of power which another hath a right to, so tyranny is the exercise of power beyond right, which nobody can have a right to; and this is making use of the power any one has in his hands, not for the good of those who are under it, but for his own private, separate advantage. When the governor, however entitled makes not the law, but his will, the rule, and his commands and actions are not directed to the preservation of the properties of his people, but the satisfaction of his own ambition, revenge, covetousness, or any other irregular passion., . .

It is a mistake to think this fault is proper only to monarchies. Other forms of government are liable to it as well as that; for wherever the power that is put in any hands for the government of the people and the preservation of their properties is applied to other ends, and made use of to impoverish, harass, or subdue them to the arbitrary and irregular commands of those that

have it, there it presently becomes tyranny, whether those that thus use it are one or many....

Wherever law ends, tyranny begins.

Locke, II Civil Government, XVIII, 199-202

43 *Jones*. I know but of one solid objection to absolute monarchy. The only defect in which excellent constitution seems to be, the difficulty of finding any man adequate to the office of an absolute monarch: for this indispensably require three qualities very difficult, as it appears from history, to be found in princely natures; first, a sufficient quantity of moderation in the prince, to be contented with all the power which is possible for him to have. 2ndly, Enough of wisdom to know his own happiness. And, 3rdly, Goodness sufficient to support the happiness of others, when not only compatible with, but instrumental to his own.

Now if an absolute monarch, with all these great and rare qualifications, should be allowed capable of conferring the greatest good on society; it must be surely granted, on the contrary, that absolute power, vested in the hands of one who is deficient in them all, is likely to be attended with no less a degree of evil.

In short, our own religion furnishes us with adequate ideas of the blessing, as well as curse, which may attend absolute power. The pictures of heaven and of hell will place a very lively image of both before our eyes; for though the prince of the latter can have no power, but what he originally derives from the omnipotent Sovereign in the former, yet it plainly appears from Scripture, that absolute power in his infernal dominions is granted to their diabolical ruler. This is indeed the only absolute power which can by Scripture be derived from heaven. If,

therefore, the several tyrannies upon earth can prove any title to a Divine authority, it must be derived from this original grant to the prince of darkness; and these subordinate deputations must consequently come immediately from him whose stamp they so expressly bear.

To conclude, as the examples of all ages show us that mankind in general desire power only to do harm, and, when they obtain it, use it for no other purpose; it is not consonant with even the least degree of prudence to hazard an alteration, where our hopes are poorly kept in countenance by only two or three exceptions out of a thousand instances to alarm our fears. In this case it will be much wiser to submit to a few inconveniences arising from the dispassionate deafness of laws, than to remedy them by applying to the passionate open ears of a tyrant.

Fielding, Tom Jones, XII, 12

- 44 It is not enough to have intermediate powers in a monarchy; there must be also a depositary of the laws. This depositary can only be the judges of the supreme courts of justice, who promulgate the new laws, and revive the obsolete. The natural ignorance of the nobility, their indolence and contempt of civil government, require that there should be a body invested with the power of reviving and executing the laws, which would be otherwise buried in oblivion. The princess council are not a proper depositary. They are naturally the depositary of the momentary will of the prince, and not of the fundamental laws. Besides, the prince's council is continually changing; it is neither permanent nor numerous; neither has it a sufficient share of the confidence of the people; consequently it is capable of

setting them right in difficult conjunctures, or of reducing them to proper obedience.

Despotic governments, where there are no fundamental laws, have no such kind of depositary. Hence it is that religion has generally so much influence in those countries, because it forms a kind of permanent depositary; and if this cannot be said of religion, it may of the customs that are respected instead of laws.

Montesquieu, Spirit of Laws, II, 4

- 45 Honour is far from being the principle of despotic government: mankind being here all upon a level, no one person can prefer himself to another; and as on the other hand they are all slaves, they can give themselves no sort of preference.

Montesquieu, Spirit of Laws, III, 8

- 46 As virtue is necessary in a republic, and in a monarchy honour, so fear is necessary in a despotic government: with regard to virtue, there is no occasion for it, and honour would be extremely dangerous.

Here the immense power of the prince devolves entirely upon those whom he is pleased to entrust with the administration. Persons capable of setting a value upon themselves would be likely to create disturbances. Fear must therefore depress their spirits, and extinguish even the least sense of ambition.

Montesquieu, Spirit of Laws III, 9

- 47 Luxury is . . . absolutely necessary in monarchies; as it is also in despotic states. In the former, it is the use of liberty; in the latter, it is the abuse of servitude. A slave

appointed by his master to tyrannise over other wretches of the same condition, uncertain of enjoying tomorrow the blessings of to-day, has no other felicity than that of glutting the pride, the passions, and voluptuousness of the present moment,

Montesquieu, Spirit of Laws, VII, 4

48 In despotic governments women do not introduce, but are themselves an object of, luxury. They must be in a state of the most rigorous servitude. Every one follows the spirit of the government, and adopts in his own family the customs he sees elsewhere established. As the laws are very severe and executed on the spot, they are afraid lest the liberty of women should expose them to danger. Their quarrels, indiscretions, repugnancies, jealousies, piques, and that art, in fine, which little souls have of interesting great ones, would be attended there with fatal consequences.

Montesquieu, Spirit of Laws, VII, 9

49 There are two sorts of tyranny: one real, which arises from oppression; the other is seated in opinion, and is sure to be felt whenever those who govern establish things shocking to the existing ideas of a nation.

Montesquieu, Spirit of Laws, XIX, 3

50 One gives the name of tyrant to the sovereign who knows no laws but those of this caprice, who takes his subjects' property, and who afterwards enrols them to go to take the property of his neighbours. There are none of these tyrants in Europe.

One distinguishes between the tyranny of one man and that of many. The tyranny of many would be that of a body which invaded the rights of other bodies, and which exercised despotism in favour of the laws corrupted by it. Nor are there any tyrants of this sort in Europe.

Under which tyranny would you like to live? Under neither; but if I had to choose, I should detest the tyranny of one man less than that of many. A despot always has his good moments; an assembly of despots never. If a tyrant does me an injustice, I can disarm him through his mistress, his confessor or his page; but a company of grave tyrants is inaccessible to all seductions. When it is not unjust, it is at the least hard, and never does it bestow favours.

Voltaire, Philosophical Dictionary: Tyranny

- 51 The strongest is never strong enough to be always the master, unless he transforms strength into right, and obedience into duty. Hence the right of the strongest, which, though to all seeming meant ironically, is really laid down as a fundamental principle. But are we never to have an explanation of this phrase? Force is a physical power, and I fail to see what moral effect it can have. To yield to force is an act of necessity, not of will—at the most, an act of prudence. In what sense can it be a duty?

Suppose for a moment that this so-called "right" exists. I maintain that the sole result is a mass of inexplicable nonsense. For, if force creates right, the effect changes with the cause: every force that is greater than the first succeeds to its right. As soon as it is possible to disobey with impunity, disobedience is legitimate; and, the strongest being always in the right, the only thing that matters is to act so as to become the

strongest. But what kind of right is that which perishes when force fails? If we must obey perforce, there is no need to obey because we ought; and if we are not forced to obey, we are under no obligation to do so. Clearly, the word "right" adds nothing to force: in this connection, it means absolutely nothing.

Obey the powers that be. If this means yield to force, it is a good precept, but superfluous: I can answer for its never being violated. All power comes from God, I admit; but so does all sickness: does that mean that we are forbidden to call in the doctor? A brigand surprises me at the edge of a wood: must I not merely surrender my purse on compulsion; but, even if I could withhold it, am I in conscience bound to give it up? For certainly the pistol he holds is also a power.

Let us then admit that force does not create right, and that we are obliged to obey only legitimate powers.

Rousseau, Social Contract, I, 3

52 A people, says Grotius, can give itself to a king. Then, according to Grotius, a people is a people before it gives itself. The gift is itself a civil act, and implies public deliberation. It would be better, before examining the act by which a people gives itself to a king, to examine that by which it has become a people; for this act, being necessarily prior to the other, is the true foundation of society.

Rousseau, Social Contract, I, 5

53 Kings desire to be absolute, and men are always crying out to them from afar that the best means of being so is to get themselves loved by their people. This precept is

all very well, and even in some respects very true. Unfortunately, it will always be derided at court. The power which comes of a people's love is no doubt the greatest; but it is precarious and conditional, and princes will never rest content with it. The best kings desire to be in a position to be wicked, if they please, without forfeiting their mastery: political sermonisers may tell them to their hearts' content that, the people's strength being their own, their first interest is that the people should be prosperous, numerous and formidable; they are well aware that this is untrue. Their first personal interest is that the people should be weak, wretched, and unable to resist them. I admit that, provided the subjects remained always in submission, the prince's interest would indeed be that it should be powerful in order that its power, being his own, might make him formidable to his neighbours; but, this interest being merely secondary and subordinate, and strength being incompatible with submission, princes naturally give the preference always to the principle that is more to their immediate advantage.

Rousseau, Social Contract, III, 6

- 54 For a monarchical State to have a chance of being well governed, its population and extent must be proportionate to the abilities of its governor. It is easier to conquer than to rule.

Rousseau, Social Contract, III, 6

- 55 If, according to Plato, the "king by nature" is such a rarity, how often will nature and fortune conspire to give him a crown? And, if royal education necessarily corrupts

those who receive it, what is to be hoped from a series of men brought up to reign? It is, then, wanton self-deception to confuse royal government with government by a good king. To see such government as it is in itself, we must consider it as it is under princes who are incompetent or wicked: for either they will come to the throne wicked or incompetent, or the throne will make them so.

Rousseau, Social Contract, III, 6

56 Instead of governing subjects to make them happy, despotism makes them wretched in order to govern them.

Rousseau, Social Contract, III, 8

57 *Johnson*. If a sovereign oppresses his people to a great degree, they will rise and cut off his head. There is a remedy in human nature against tyranny, that will keep us safe under every form of government.

Boswell, Life of Johnson (Mar. 31, 1772)

58 *Johnson*. "Why, Sir, absolute princes seldom do any harm. But they who are governed by them are governed by chance. There is no security for good government."

Cambridge. "There have been many sad victims to absolute government." *Johnson*. "So, Sir, have there been to popular factions." *Boswell*. "The question is, which is worst, one wild beast or many?"

Boswell, Life of Johnson (April 18, 1775)

59 There is not a crowned head in Europe whose talents or merit would entitle him to be elected a vestryman by the people of any parish in America.

Jefferson, Letter to Washington (May 2, 1788)

60 I have sworn upon the altar of God, eternal hostility against every form of tyranny over the mind of man.

Jefferson, Letter to Benjamin Rush (Sept. 23, 1800)

61 The obvious definition of a monarchy seems to be that of a state, in which a single person, by whatsoever name he may be distinguished, is entrusted with the execution of the laws, the management of the revenue, and the command of the army. But, unless public liberty is protected by intrepid and vigilant guardians, the authority of so formidable a magistrate will soon degenerate into despotism. The influence of the clergy, in an age of superstition, might be usefully employed to assert the rights of mankind; but so intimate is the connection between the throne and the altar, that the banner of the church has very seldom been seen on the side of the people. A martial nobility and stubborn commons, possessed of arms, tenacious of property, and collected into constitutional assemblies, form the only balance capable of preserving a free constitution against enterprises of an aspiring prince.

Gibbon, Decline and Fall of the Roman Empire, III

62 Of the various forms of government which have prevailed in the world, an hereditary monarchy seems to present the fairest scope for ridicule. Is it possible to relate, without an indignant smile, that, on the father's decease, the property of a nation, like that of a drove of oxen, descends to his infant son, as yet unknown to mankind and to himself; and that the bravest warriors and the wisest statesmen, relinquishing their natural right to

empire, approach the royal cradle with bended knees and protestations of inviolable fidelity? Satire and declamation may paint these obvious topics in the most dazzling colours, but our more serious thoughts will respect a useful prejudice, that establishes a rule of succession, independent of the passions of mankind; and we shall cheerfully acquiesce in any expedient which deprives the multitude of the dangerous, and indeed the ideal, power of giving themselves a master.

Gibbon, Decline and Fall of the Roman Empire, VII

- 63 The generality of princes, if they were stripped of their purple and cast naked into the world, would immediately sink to the lowest rank of society, without a hope of emerging from their obscurity.

Gibbon, Decline and Fall of the Roman Empire, XXII

- 64 Kings will be tyrants from policy, when subjects are rebels from principle.

Burke, Reflections on the Revolution in France

- 65 Tyrants seldom want pretexts.

Burke, Letter to a Member of the National Assembly

- 66 The accumulation of all powers, legislative, executive, and judiciary, in the same hands, whether of one, a few, or many, and whether hereditary, self-appointed, or elective, may justly be pronounced the very definition of tyranny.

Madison, Federalist 47

67 Salemenes. Think'st thou there is no tyranny but that
Of blood and chains? The despotism of vice,
The weakness and the wickedness of luxury,
The negligence, the apathy, the evils
Of sensual sloth—produce ten thousand tyrants.
Whose delegated cruelty surpasses
The worst acts of one energetic master,
However harsh and hard in his own bearing.

Byron, Sardanapalus, I, ii, 113

68 Strip your Louis Quatorze of his king-gear, and there is
left nothing but a poor forked raddish with a head
fantastically carved.

Carlyle, The Hero as Man of Letters

69 God said, I am tired of kings,
I suffer them no more;
Up to my ear the morning brings
The outrage of the poor.

Emerson, Boston Hymn

70 Even despotism does not produce its worst effects, so
long as individuality exists under it; and whatever
crushes individuality is despotism, by whatever name it
may be called, and whether it professes to be enforcing
the will of God or the injunctions of men.

Mill, On Liberty, III

71 A people may prefer a free government, but if, from
indolence, or carelessness, or cowardice, or want of public
spirit, they are unequal to the exertions necessary for
preserving it; if they will not fight for it when it is directly

attacked; if they can be deluded by the artifices used to cheat them out of it; if by momentary discouragement, or temporary panic, or a fit of enthusiasm for an individual, they can be induced to lay their liberties at the feet even of a great man, or trust him with powers which enable him to subvert their institutions; in all these cases they are more or less unfit for liberty: and though it may be for their good to have had it even for a short time, they are unlikely long to enjoy it. Again, a people may be unwilling or unable to fulfil the duties which a particular form of government requires of them. A rude people, though in some degree alive to the benefits of civilised society, may be unable to practise the forbearance which it demands: their passions may be too violent, or their personal pride too exacting, to forego private conflict, and leave to the laws the avenging of their real or supposed wrongs. In such a case, a civilised government, to be really advantageous to them, will require to be in a considerable degree despotic: to be one over which they do not themselves exercise control, and which imposes a great amount of forcible restraint upon their actions.

Mill, Representative Government, I

- 72 A people in a state of savage independence, in which every one lives for himself, exempt, unless by fits, from any external control, is practically incapable of making any progress in civilisation until it has learnt to obey. The indispensable virtue, therefore, in a government which establishes itself over a people of this sort is, that it make itself obeyed. To enable it to do this, the constitution of the government must be nearly, or quite, despotic. A constitution in any degree popular, dependent on the voluntary surrender by the different members of the

community of their individual freedom of action, would fail to enforce the first lesson which the pupils, in this stage of their progress, require. Accordingly, the civilisation of such tribes, when not the result of juxtaposition with others already civilised, is almost always the work of an absolute ruler.

Mill, Representative Government, II

73 I am far from condemning, in cases of extreme exigency, the assumption of absolute power in the form of a temporary dictatorship. Free nations have, in times of old, conferred such power by their own choice, as a necessary medicine for diseases of the body politic which could not be got rid of by less violent means. But its acceptance, even for a time strictly limited, can only be excused, if. . . the dictator employs the whole power he assumes in removing the obstacles which debar the nation from the enjoyment of freedom. A good despotism is an altogether false ideal, which practically (except as a means to some temporary purpose) becomes the most senseless and dangerous of chimeras. Evil for evil, a good despotism, in a country at all advanced in civilisation, is more noxious than a bad one; for it is far more relaxing and enervating to the thoughts, feelings, and energies of the people.

Mill, Representative Government, III

74 There are, as we have already seen, conditions of society in which a vigorous despotism is in itself the best mode of government for training the people in what is specifically wanting to render them capable of a higher civilisation. There are others in which the mere fact of despotism has indeed no beneficial effect, the lessons which it teaches

having already been only too completely learnt; but in which, there being no spring of spontaneous improvement in the people themselves, their almost only hope of making any steps in advance depends on the chances of a good despot. Under a native despotism, a good despot is a rare and transitory accident: but when the dominion they are under is that of a more civilised people, that people ought to be able to supply it constantly. The ruling country ought to be able to do for its subjects all that could be done by a succession of absolute monarchs, guaranteed by irresistible force against the precariousness of tenure attendant on barbarous despotisms, and qualified by their genius to anticipate all that experience has taught to the more advanced nation. Such is the ideal rule of a free people over a barbarous or semi-barbarous one. We need not expect to see that ideal realised; but unless some approach to it is, the rulers are guilty of a dereliction of the highest moral trust which can devolve upon a nation: and if they do not even aim at it, they are selfish usurpers, on a par in criminality with any of those whose ambition and rapacity have sported from age to age with the destiny of masses of mankind.

Mill, Representative Government, XVIII

75 By and by, when they was asleep and snoring, Jim says:

"Don't it s'prise you de way dem kings carries on, Huck?"

"No," I say, "it don't."

"Why don't it, Huck?"

"Well, it don't, because it's in the breed. I reckon they're all alike."

"But, Huck, dese kings o'ourn is reglar rapscallions; dat's jist what dey is; dey's reglar rapscallions."

"Well, that's what I'm a-saying; all kings is mostly rapscallions, as fur as I can make out."

Mark Twain, Huckleberry Finn, XXIII

10.7 Slavery

The meaning of slavery can be summed up by the negation of liberty, equality, property, and rights. Slavery is a deprivation of freedom, the subordination of one man to another as inferior to superior, the condition of being completely propertyless because one's whole being is the property of another, and a status totally devoid of rights. The reader will, therefore, find that the discussion of slavery in this section involves notions treated elsewhere: in Section 11.1 on Property, in Section 12.3 on Rights—Natural and Civil, in Section 13.1 on Freedom in Society, and in Section 13.3 on Equality. The reader will also find relevant materials in Section 10.6 on Despotism and Tyranny.

The passages quoted here define slavery; distinguish different types of slavery; contrast the economic roles of the slave and the artisan, the feudal serf, the peasant, and the proletariat; discuss the policies of masters in the treatment of their slaves; and regard the institution of slavery as one of the consequences of sin. The crucial question, however, concerns the justice of slavery.

One justification of slavery maintains that, as a matter of fact, some men are by nature slaves and, therefore, should be ruled for the benefit of those who are by nature free. Another justification applies only to those who are taken

prisoners in a just war and, having forfeited their lives, can therefore be justly enslaved. Still another turns on regarding slaves as something less than human and, therefore, without human rights.

The condemnation of slavery as intrinsically unjust and a clear violation of man's natural rights to life, liberty, and the pursuit of happiness rests on the affirmation of human equality, the equality of men as men overshadowing their inequalities in all other respects. Rousseau's comment on Aristotle's doctrine of natural slavery calls attention to the central question of fact: Are those who appear to be slavish by nature merely men who have been born into slavery and have had their characters conditioned by their treatment as slaves? If, in fact, no men are by nature slaves, then Aristotle must be counted among those who condemn the enslavement of men as being contrary to nature and, therefore, unjust.

■ ■ ■

- 1 Of the children of the strangers that do sojourn among you, of them shall ye buy, and of their families that are with you, which they begat in your land; and they shall be your possession.

Leviticus 25:45

- 2 *Eumaios*. Zeus who views the wide world takes away half the manhood of a man, that day he goes into captivity and slavery.

Homer, Odyssey, XVII, 321

- 3 *Servant*. He is a poor thing who does not feel as his masters do, grieve in their grief, be happy in their happiness. I, though I wear the name of lackey, yet aspire to be counted in the number of the generous slaves, for I do not have the name of liberty but have the heart. Better this, than for a single man to have the double evil of an evil spirit and to be named by those about him as a slave.

Euripides, Helen, 726

- 4 *Callicles*. The suffering of injustice is not the part of a man, but of a slave, who indeed had better die than live; since when he is wronged and trampled upon, he is unable to help himself, or any other about whom he cares.

Plato, Gorgias, 483A

- 5 *Athenian Stranger*. The right treatment of slaves is to behave properly to them, and to do to them, if possible, even more justice than to those who are our equals; for he w'ho naturally and genuinely reverences justice, and hates injustice, is discovered in his dealings with any class of men to whom he can easily be unjust And he who in regard to the natures and actions of his slaves is undefiled by impiety and injustice, will best sow the seeds of virtue in them; and this may be truly said of every master, and tyrant, and to every other having authority in relation to his inferiors.

Plato, Laws, VI, 777B

- 6 Now instruments are of various sorts; some are living, others lifeless; in the rudder, the pilot of a ship has a lifeless, in the look-out man, a living instrument; for in

the arts the servant is a kind of instrument. Thus, too, a possession is an instrument for maintaining life. And so, in the arrangement of the family, a slave is a living possession, and property a number of such instruments; and the servant is himself an instrument which takes precedence of all other instruments. For if every instrument could accomplish its own work, obeying or anticipating the will of others... if... the shuttle would weave and the plectrum touch the lyre without a hand to guide them, chief workmen would not want servants, nor masters slaves.

Aristotle, Politics, 1253b27

- 7 The master is only the master of the slave; he does not belong to him, whereas the slave is not only the slave of his master, but wholly belongs to him. Hence we see what is the nature and office of a slave; he who is by nature not his own but another's man, is by nature a slave; and he may be said to be another's man who, being a human being, is also a possession. And a possession may be defined as an instrument of action, separable from the possessor.

But is there any one thus intended by nature to be a slave, and for whom such a condition is expedient and right, or rather is not all slavery a violation of nature? There is no difficulty in answering this question, on grounds both of reason and of fact. For that some should rule and others be ruled is a thing not only necessary, but expedient; from the hour of their birth, some are marked out for subjection, others for rule.

Aristotle, Politics, 1254a12

8 We may firstly observe in living creatures both a despotical and a constitutional rule; for the soul rules the body with a despotical rule, whereas the intellect rules the appetites with a constitutional and royal rule. And it is clear that the rule of the soul over the body, and of the mind and the rational element over the passionate, is natural and expedient; whereas the equality of the two or the rule of the inferior is always hurtful. The same holds good of animals in relation to men; for tame animals have a better nature than wild, and all tame animals are better off when they are ruled by man; for then they are preserved. Again, the male is by nature superior, and the female inferior; and the one rules, and the other is ruled; this principle, of necessity, extends to all mankind. Where then there is such a difference as that between soul and body, or between men and animals (as in the case of those whose business is to use their body, and who can do nothing better), the lower sort are by nature slaves, and it is better for them as for all inferiors that they should be under the rule of a master. For he who can be and therefore is, another's, and he who participates in rational principle enough to apprehend, but not to have, such a principle, is a slave by nature. Whereas the lower animals cannot even apprehend a principle; they obey their instincts. And indeed the use made of slaves and of tame animals is not very different; for both with their bodies minister to the needs of life. Nature would like to distinguish between the bodies of freemen and slaves, making the one strong for servile labour, the other upright, and although useless for such services, useful for political life in the arts both of war and peace. But the opposite often happens—that some have the souls and others have the bodies of freemen. And doubtless if men

differed from one another in the mere forms of their bodies as much as the statues of the Gods do from men, all would acknowledge that the inferior class should be slaves of the superior. And if this is true of the body, how much more just that a similar distinction should exist in the soul? but the beauty of the body is seen, whereas the beauty of the soul is not seen. It is clear, then, that some men are by nature free, and others slaves, and that for these latter slavery is both expedient and right.

Aristotle, Politics, 1254b2

- 9 What difference does it make how many masters a man has? Slavery is only one, and yet the person who refuses to let the thought of it affect him is a free man no matter how great the swarm of masters around him.

Seneca, Letters to Lucilius, 28

- 10 'They're slaves,' people say. No. They're human beings. 'They're slaves.' But they share the same roof as ourselves. 'They're slaves.' No, they're friends, humble friends. 'They're slaves.' Strictly speaking they're our fellow-slaves, if you once reflect that fortune has as much power over us as over them.

Seneca, Letters to Lucilius, 47

- 11 How about reflecting that the person you call your slave traces his origin back to the same stock as yourself, has the same good sky above him, breathes as you do, lives as you do, dies as you do? It is as easy for you to see in him a free-born man as for him to see a slave in you.

Seneca, Letters to Lucilius, 47

12 Effort is free once it is towards a fully recognised good; the involuntary is, precisely, motion away from a good and towards the enforced, towards something not recognised as a good; servitude lies in being powerless to move towards one's good, being debarred from the preferred path in a menial obedience. Hence the shame of slavery is incurred not when one is held from the hurtful but when the personal good must be yielded in favour of another's.

Plotinus, Sixth Ennead, VIII, 4

13 He did not intend that His rational creature, who was made in His image, should have dominion over anything but the irrational creation—not man over man, but man over the beasts. And hence the righteous men in primitive times were made shepherds of cattle rather than kings of men, God intending thus to teach us what the relative position of the creatures is, and what the desert of sin; for it is with justice, we believe, that the condition of slavery is the result of sin. And this is why we do not find the word "slave" in any part of Scripture until righteous Noah branded the sin of his son with this name. It is a name, therefore, introduced by sin and not by nature. The origin of the Latin word for slave is supposed to be found in the circumstance that those who by the law of war were liable to be killed were sometimes preserved by their victors, and were hence called servants. And these circumstances could never have arisen save through sin. For even when we wage a just war, our adversaries must be sinning; and every victory, even though gained by wicked men, is a result of the first judgment of God, who humbles the vanquished either for the sake of removing or of punishing their sins. Witness

that man of God, Daniel, who, when he was in captivity, confessed to God his own sins and the sins of his people, and declares with pious grief that these were the cause of the captivity. The prime cause, then, of slavery is sin, which brings man under the dominion of his fellow—that which does not happen save by the judgment of God, with Whom is no unrighteousness, and Who knows how to award fit punishments to every variety of offence. But our Master in heaven says, "Every one who doeth sin is the servant of sin." And thus there are many wicked masters who have religious men as their slaves, and who are yet themselves in bondage; "for of whom a man is overcome, of the same is he brought in bondage." And beyond question it is a happier thing to be the slave of a man than of a lust; for even this very lustful ruling, to mention no others, lays waste men's hearts with the most ruthless dominion. Moreover, when men are subjected to one another in a peaceful order, the lowly position does as much good to the servant as the proud position does harm to the master. But by nature, as God first created us, no one is the slave either of man or of sin. This servitude is, however, penal, and is appointed by that law which enjoins the preservation of the natural order and forbids its disturbance; for if nothing had been done in violation of that law, there would have been nothing to restrain by penal servitude. And therefore the apostle admonishes slaves to be subject to their masters, and to serve them heartily and with good-will, so that, if they cannot be freed by their masters, they may themselves make their slavery in some sort free, by serving not in crafty fear, but in faithful love, until all unrighteousness pass away, and all principality and every human power be brought to nothing, and God be all in all.

Augustine, City of God, XIX, 15

- 14 Subjection is twofold. One is servile, by virtue of which a superior makes use of a subject for his own benefit, and this kind of subjection began after sin. There is another kind of subjection, which is called economic or civil, whereby the superior makes use of his subjects for their own benefit and good; and this kind of subjection existed even before sin.

Aquinas, Summa Theologica, I, 92, 1

- 15 A slave differs from a free man in that the latter "has the disposal of himself," as is stated in the beginning of [Aristotle's] *Metaphysics*, but a slave is ordered to another. So that one man is master of another as his slave when he refers the one whose master he is, to his own—namely, the master's, use. And since every man's proper good is desirable to himself, and consequently it is a grievous matter to anyone to yield to another what ought to be one's own, therefore such dominion implies of necessity a pain inflicted on the subject. And therefore in the state of innocence such a mastership could not have existed between man and man.

Aquinas, Summa Theologica, I, 96, 4

- 16 The master of the servant is master also of all he hath, and may exact the use thereof; that is to say, of his goods, of his labour, of his servants, and of his children, as often as he shall think fit. For he holdeth his life of his master by the covenant of obedience; that is, of owning and authorising whatsoever the master shall do. And in case the master, if he refuse, kill him, or cast him into bonds, or otherwise punish him for his disobedience, he is

himself the author of the same, and cannot accuse him of injury.

Hobbes, Leviathan, II, 20

- 17 Freedom from absolute, arbitrary power is so necessary to, and closely joined with, a man's preservation, that he cannot part with it but by what forfeits his preservation and life together. For a man, not having the power of his own life, cannot by compact or his own consent enslave himself to any one, nor put himself under the absolute, arbitrary power of another to take away his life when he pleases. Nobody can give more power than he has himself, and he that cannot take away his own life cannot give another power over it....

The perfect condition of slavery ... is nothing else but the state of war continued between a lawful conqueror and a captive, for if once compact enter between them, and make an agreement for a limited power on the one side, and obedience on the other, the state of war and slavery ceases as long as the compact endures; for, as has been said, no man can by agreement pass over to another that which he hath not in himself—a power over his own life.

Locke, II Civil Government, IV, 22-23

- 18 There is another sort of servant which by a peculiar name we call slaves, who being captives taken in a just war are, by the right of Nature, subjected to the absolute dominion and arbitrary power of their masters. These men having, as I say, forfeited their lives and, with it, their liberties, and lost their estates, and being in the state of slavery, not capable of any property, cannot in

that state be considered as any part of civil society, the chief end whereof is the preservation of property.

Locke, II Civil Government, VII, 85

- 19 Slavery, properly so called, is the establishment of a right which gives to one man such a power over another as renders him absolute master of his life and fortune. The state of slavery is in its own nature bad. It is neither useful to the master nor to the slave; not to the slave, because he can do nothing through a motive of virtue; nor to the master, because by having an unlimited authority over his slaves he insensibly accustoms himself to the want of all moral virtues, and thence becomes fierce, hasty, severe, choleric, voluptuous, and cruel.

Montesquieu, Spirit of Laws, XV, 1

- 20 Were I to vindicate our right to make slaves of the negroes, these should be my arguments:

The Europeans, having extirpated the Americans, were obliged to make slaves of the Africans, for clearing such vast tracts of land.

Sugar would be too dear if the plants which produce it were cultivated by any other than slaves.

These creatures are all over black, and with such a flat nose that they can scarcely be pitied.

It is hardly to be believed that God, who is a wise Being, should place a soul, especially a good soul, in such a black ugly body.

It is so natural to look upon colour as the criterion of human nature, that the Asiatics, among whom eunuchs are employed, always deprive the blacks of their resemblance to us by a more opprobrious distinction.

The colour of the skin may be determined by that of the hair, which, among the Egyptians, the best philosophers in the world, was of such importance that they put to death all the red-haired men who fell into their hands.

The negroes prefer a glass necklace to that gold which polite nations so highly value. Can there be a greater proof of their wanting common sense?

It is impossible for us to suppose these creatures to be men, because, allowing them to be men, a suspicion would follow that we ourselves are not Christians.

Weak minds exaggerate too much the wrong done to the Africans. For were the case as they state it, would the European powers, who make so many needless conventions among themselves, have failed to enter into a general one, in behalf of humanity and compassion?

Montesquieu, Spirit of Laws, XV, 5

- 21 In moderate governments it is a point of the highest importance that there should not be a great number of slaves. The political liberty of those states adds to the value of civil liberty; and he who is deprived of the latter is also bereft of the former. He sees the happiness of a society, of which he is not so much as a member; he sees the security of others fenced by laws, himself without any protection. He perceives that his master has a soul, capable of enlarging itself: while his own labours under a continual depression. Nothing more assimilates a man to a beast than living among freedmen, himself a slave. Such people as these are natural enemies of society; and their number must be dangerous.

Montesquieu, Spirit of Laws, XV, 12

22 Man is born free; and everywhere he is in chains. One thinks himself the master of others, and still remains a greater slave than they.

Rousseau, Social Contract, 1,2

23 Aristotle... had said that men are by no means equal naturally, but that some are born for slavery, and others for dominion.

Aristotle was right; but he took the effect for the cause. Nothing can be more certain than that every man born in slavery is born for slavery. Slaves lose everything in their chains, even the desire of escaping from them: they love their servitude, <is the comrades of Ulysses loved their brutish condition. If then there are slaves by nature, it is because there have been slaves against nature. Force made the first slaves, and their cowardice perpetuated the condition.

Rousseau, Social Contrary I, 2

24 The right of conquest has no foundation other than the right of the strongest. If war does not give the conqueror the right to massacre the conquered peoples, the right to enslave them cannot be based upon a right which does not exist. No one has a right to kill an enemy except when he cannot make him a slave, and the right to enslave him cannot therefore be derived from the right to kill him. It is accordingly an unfair exchange to make him buy at the price of his liberty his life, over which the victor holds no right. Is it not clear that there is a vicious circle in founding the right of life and death on the right of slavery, and the right of slavery on the right of life and death?

Rousseau, Social Contract, I, 4

25 Is liberty maintained only by the help of slavery? It may be so. Extremes meet. Everything that is not in the course of nature has its disadvantages, civil society most of all. There are some unhappy circumstances in which we can only keep our liberty at others' expense, and where the citizen can be perfectly free only when the slave is most a slave. Such was the case with Sparta. As for you, modern peoples, you have no slaves, but you are slaves yourselves; you pay for their liberty with your own. It is in vain that you boast of this preference; I find in it more cowardice than humanity.

I do not mean by all this that it is necessary to have slaves, or that the right of slavery is legitimate: I am merely giving the reasons why modern peoples, believing themselves to be free, have representatives, while ancient peoples had none. In any case, the moment a people allows itself to be represented, it is no longer free: it no longer exists.

Rousseau, Social Contract, III, 15

26 After supper I accompanied him [Johnson] to his apartment, and at my request he dictated to me an argument in favour of the negro who was then claiming his liberty, in an action in the Court of Session in Scotland. He had always been very zealous against slavery in every form, in which I, with all deference, thought that he discovered "a zeal without knowledge." Upon one occasion, when in company with some very grave men at Oxford, his toast was, "Here's to the next insurrection of the negroes in the West Indies." His violent prejudice against our West Indian and American settlers

appeared whenever there was an opportunity. Towards the conclusion of his *Taxation no Tyranny*, he says, "how is it that we hear the loudest yelps for liberty among the drivers of negroes?"...

The argument dictated by Dr. Johnson was as follows:

—

"It must be agreed that in most ages many countries have had part of their inhabitants in a state of slavery; yet it may be doubted whether slavery can ever be supposed the natural condition of man. It is impossible not to conceive that men in their original state were equal; and very difficult to imagine how one would be subjected to another but by violent compulsion. An individual may, indeed, forfeit his liberty by a crime; but he cannot by that crime forfeit the liberty of his children. What is true of a criminal seems true likewise of a captive. A man may accept life from a conquering enemy on condition of perpetual servitude; but it is very doubtful whether he can entail that servitude on his descendants; for no man can stipulate without commission for another. The condition which he himself accepts, his son or grandson perhaps would have rejected. If we should admit, what perhaps may with more reason be denied, that there are certain relations between man and man which may make slavery necessary and just, yet it can never be proved that he who is now suing for his freedom ever stood in any of those relations. He is certainly subject by no law, but that of violence, to his present master; who pretends no claim to his obedience, but that he bought him from a merchant of slaves, whose right to sell him never was examined. . . The sum of the argument is this:—No man is by nature the property of another: The defendant is,

therefore, by nature free: The rights of nature must be some way forfeited before they can be justly taken away: That the defendant has by any act forfeited the rights of nature we require to be proved; and if no proof of such forfeiture can be given, we doubt not but the justice of the court will declare him free."

I record Dr. Johnson's argument fairly upon this particular case; where, perhaps, he was in the right. But I beg leave to enter my most solemn protest against his general doctrine with respect to the *Slave Trade*. For I will resolutely say—that his unfavourable notion of it was owing to prejudice, and imperfect or false information. The wild and dangerous attempt which has for some time been persisted in to obtain an act of our Legislature, to abolish so very important and necessary a branch of commercial interest, must have been crushed at once, had not the insignificance of the zealots who vainly took the lead in it, made the vast body of Planters, Merchants, and others, whose immense properties are involved in that trade, reasonably enough suppose that there could be no danger. The encouragement which the attempt has received excites my wonder and indignation: and though some men of superiour abilities have supported it; whether from a love of temporary popularity, when prosperous; or a love of general mischief, when desperate, my opinion is unshaken. To abolish a status, which in all ages God has sanctioned, and man has continued, would not only be robbery to an innumerable class of our fellow-subjects; but it would be extreme cruelty to the African Savages, a portion of whom it saves from massacre, or intolerable bondage in their own country, and introduces into a much happier state of life; especially now when their passage to the West Indies and

their treatment there is humanely regulated. To abolish that trade would be to —*shut the gates of mercy on mankind.*

Boswell, Life of Johnson (Sept. 23, 1777)

27 There must doubtless be an unhappy influence on the manners of our people produced by the existence of slavery among us. The whole commerce between master and slave is a perpetual exercise of the most boisterous passions, the most unremitting despotism on the one part, and degrading submissions on the other. Our children see this, and learn to imitate it; for man is an imitative animal. This quality is the germ of all education in him. From his cradle to his grave he is learning to do what he sees others do. If a parent could find no motive either in his philanthropy or his self-love, for restraining the intemperance of passion towards his slave, it should always be a sufficient one that his child is present. But generally it is not sufficient. The parent storms, the child looks on, catches the lineaments of wrath, puts on the same airs in the circle of smaller slaves, gives a loose to the worst of passions, and thus nursed, educated, and daily exercised in tyranny, cannot but be stamped by it with odious peculiarities. The man must be a prodigy who can retain his manners and morals undepraved by such circumstances. And with what execration should the statesman be loaded, who, permitting one half the citizens thus to trample on the rights of the other, transforms those into despots, and these into enemies, destroys the morals of the one part, and the *amor patriae* of the other. For if a slave can have a country in this world, it must be any other in preference to that in which he is born to live and labor for another; in which he must

lock up the faculties of his nature, contribute as far as depends on his individual endeavors to the evanishment of the human race, or entail his own miserable condition on the endless generations proceeding from him. With the morals of the people, their industry also is destroyed. For in a warm climate, no man will labor for himself who can make another labor for him. This is so true, that of the proprietors of slaves a very small proportion indeed are ever seen to labor. And can the liberties of a nation be thought secure when we have removed their only firm basis, a conviction in the minds of the people that these liberties are of the gift of God? That they are not to be violated but with his wrath? Indeed I tremble for my country when I reflect that God is just; that his justice cannot sleep forever; that considering numbers, nature and natural means only, a revolution of the wheel of fortune, an exchange of situation is among possible events; that it may become probable by supernatural interference! The Almighty has no attribute which can take side with us in such a contest.

Jefferson, Notes on Virginia, XVIII

28 In the free states of antiquity the domestic slaves were exposed to the wanton rigour of despotism. The perfect settlement of the Roman empire was preceded by ages of violence and rapine. The slaves consisted, for the most part, of barbarian captives, taken in thousands by the chance of war purchased at a vile price, accustomed to a life of independence, and impatient to break and to revenge their fetters. Against such internal enemies, whose desperate insurrections had more than once reduced the republic to the brink of destruction the most severe regulations, and the most cruel treatment, seemed

almost justified by the great law of self-preservation. But when the principal nations of Europe, Asia, and Africa, were united under the laws of one sovereign, the source of foreign supplies flowed with much less abundance, and the Romans were reduced to the milder but more tedious method of propagation. In their numerous families, and particularly in their country estates, they encouraged the marriage of their slaves. The sentiments of nature, the habits of education, and the possession of a dependent species of property, contributed to alleviate the hardships of servitude. The existence of a slave became an object of greater value, and though his happiness still depended on the temper and circumstances of the master, the humanity of the latter, instead of being restrained by fear, was encouraged by the sense of his own interest. The progress of manners was accelerated by the virtue or policy of the emperors; and by the edicts of Hadrian and the Antonines, the protection of the laws was extended to the most abject part of mankind. The jurisdiction of life and death over the slaves, a power long exercised and often abused, was taken out of private hands, and reserved to the magistrates alone. The subterraneous prisons were abolished; and, upon a just complaint of intolerable treatment, the injured slave obtained either his deliverance, or a less cruel master.

Gibbon, Decline and Fall of the Roman Empire, 11

- 29 No individual in the state can indeed be entirely without dignity; for he has at least that of being a citizen, except when he has lost his civil status by a crime. As a criminal he is still maintained in life, but he is made the mere instrument of the will of another, whether it be the state or a particular citizen. In the latter position, in which he

could only be placed by a juridical judgement, he would practically become a *slave*, and would belong as property to another, who would be not merely his master but his owner. Such an owner would be entitled to exchange or alienate him as a thing, to use him at will except for shameful purposes, and to *dispose of his powers*, but not of his life and members. No one can bind himself to such a condition of dependence, as he would thereby cease to be a person, and it is only as a person that he can make a contract.

Kant, Science of Right, 49

- 30 Even if by committing a crime [a person] has *personally* become subjected to another, this subject-condition does not become *hereditary*; for lie has only brought it upon himself by his own wrongdoing. Neither can one who has been begotten by a slave be claimed as property on the ground of the cost of his rearing, because such rearing is an absolute duty naturally incumbent upon parents; and in case the parents be slaves, it devolves upon their masters or owners, who, in undertaking the possession of such subjects, have also made themselves responsible for the performance of their duties.

Kant, Science of Right, 49

- 31 Let the case of the slaves be considered, as it is in truth, a peculiar one. Let the compromising expedient of the Constitution be mutually adopted, which regards them as inhabitants, but as debased by servitude below the equal level of free inhabitants; which regards the slave as divested of two-fifths of the man.

Hamilton or Madison, Federalist 54

32 To adhere to man's absolute freedom—one aspect of the matter—is *eo ipso* to condemn slavery. Yet if a man is a slave, his own will is responsible for his slavery, just as it is its will which is responsible if a people is subjugated. Hence the wrong of slavery lies at the door not simply of enslavers or conquerors but of the slaves and the conquered themselves. Slavery occurs in man's transition from the state of nature to genuinely ethical conditions; it occurs in a world where a wrong is still right. At that stage wrong has validity and so is necessarily in place.

Hegel, Philosophy of Right, Additions, Par. 57

33 Mr. [Henry] Clay said to me: "In our Southern states there are a great many districts where white people cannot get acclimatized and where the blacks live and prosper. I imagine that in time the black population of the South, as it becomes free, will concentrate in that portion of the American territory, and the white population, on the other hand, will gradually move out. In that way a population will be formed entirely descended from the Africans, which will be able to have its own nationality and to enjoy its own laws. I can see no other solution to the great question of slavery, I do not think that the blacks will ever mingle sufficiently completely with the white to form a single people with them. The introduction of this foreign race is anyhow the one great plague of America."

Tocqueville, Journey to America (Sept. 18, 1831)

34 Interview with Mr. [John Quincy] Adams (the former President)....

Do you look on slavery as a great plague for the United States?

Yes, certainly. That is the root of almost all the troubles of the present and fears for the future.

Do the Southerners realize that state of affairs?

Yes, at the bottom of their hearts. But it is a truth that they will not admit, although they are clearly preoccupied about it. Slavery has altered the whole slate of society in the South. There the whites form a class to themselves which has all the ideas, all the passions, all the prejudices of an aristocracy. But do not be mistaken; nowhere is equality between the whites so complete as in the South. Here we have great equality before the law, but it simply does not affect our ways of life. There are upper classes and working classes. Every white man in the South is an equally privileged being whose destiny it is to make the Negroes work without working himself. You cannot conceive how far the idea that work is shameful has entered into the spirit of the Americans of the South. Any undertaking in which the Negroes cannot serve in a subordinate role is sure not to succeed in that part of the Union. All those who trade in a large way in Charleston and the towns have come from New England.

I remember a Southern congressman who was dining with me in Washington, and who could not conceal his surprise at seeing white servants serving us at table. He said to Mrs. Adams; "I feel that it is degrading the human race to have white men for servants. When one of them comes to change my plate, I am always tempted to offer him my place at table." From the idleness in which the whites in the South live spring great differences in their character. They devote themselves to bodily exercises, to hunting and races. They are strongly built, brave, and

very honorable; they are more touchy about "points of honor" than people anywhere else; duels are frequent.

Do you think that actually it is impossible to do without Negroes in the South?

I am convinced to the contrary, Europeans cultivate the land in Greece and in Sicily; why should they not do so in Virginia or the Caroli-nas? It is not hotter there.

Is the number of slaves increasing?

It is diminishing in all the provinces to the east of the Delaware because there wheat and tobacco are grown, and for those crops Negroes are more hindrance than help. So they are sent from there to the provinces where cotton and sugar are grown; in those provinces their numbers increase. In the states of the West where they have been introduced, their numbers remain small.

Tocqueville, Journey to America (Oct. 1, 1831)

35 I hold that, in the present state of civilization, where two races of different origin and distinguished by color and other physical differences, as well as intellectual, are brought together, the relation now existing in the slaveholding states between the two is, instead of an evil, a good—a positive good. I feel myself called upon to speak freely upon the subject, where the honor and interests of those I represent are involved. I hold, then, that there never has yet existed a wealthy and civilized society in which one portion of the community did not, in point of fact, live on the labor of the other. Broad and general as is this assertion, it is fully borne out by history.

J. C. Calhoun, Speech on the Reception of Abolitionist Petitions (Feb. 1837)

36 If you put a chain around the neck of a slave, the other end fastens itself around your own.

Emerson, Compensation

37 What of it, if some old hunks of a sea-captain orders me to get a broom and sweep down the decks? What does that indignity amount to, weighed, I mean, in the scales of the New Testament? Who is not a slave? Tell me that. Well, then, however the old sea-captains may order me about—however they may thump and punch me about, I have the satisfaction of knowing that it is all right: that everybody else is one way or other served in much the same way—either in a physical or metaphysical point of view, that is; and so the universal thump is passed round, and all hands should rub each other's shoulder-blades, and be content.

Melville, Moby Dick, I

38 Although volume upon volume is written to prove slavery a very good thing, we never hear of the man who wishes to take the good of it, by being a slave himself.

Lincoln, Fragment on Slavery (July 1, 1854)

39 If A can prove, however conclusively, that he may of right enslave B, why may not B snatch the same argument and prove equally that he may enslave A?

You say A is white, and B is black. It is color, then; the lighter having the right to enslave the darker? Take care. By this rule, you are to be slave to the first man you meet with a fairer skin than your own.

You do not mean color exactly? You mean the whites are intellectually the superiors of the blacks, and

therefore have the right to enslave them? Take care again. By this rule, you are to be slave to the first man you meet with an intellect superior to your own.

But, say you, it is a question of interest; and if you can make it your interest, you have the right to enslave another. Very well. And if he can make it his interest, he has the right to enslave you.

Lincoln, Fragment on Slavery (July /, 1854)

40 If we shall suppose that American slavery is one of those offenses which, in the providence of God must needs come, but which, having continued through His appointed time, He now wills to remove, and that He gives to both North and South this terrible war as the woe due to those by whom the offense came, shall we discern therein any departure from those divine attributes which the believers in a living God always ascribe to Him? Fondly do we hope—fervently do we pray—that this mighty scourge of war may speedily pass away. Yet, if God wills that it continue, until all the wealth piled by the bondman's two hundred and fifty years of unrequited toil shall be sunk, and until every drop of blood drawn with the lash shall be paid by another drawn with the sword, as was said three thousand years ago, so still it must be said "the judgments of the Lord are true and righteous altogether."

Lincoln, Second Inaugural Address

41 In slave labour, even that part of the working day in which the slave is only replacing the value of his own means of existence, in which, therefore, in fact, he works

for himself alone, appears as labour for his master. All the slave's labour appears as unpaid labour.

Marx, Capital, Vol. I, VI, 19

42 In this and most other civilised countries ... an engagement by which a person should sell himself, or allow himself to be sold, as a slave, would be null and void; neither enforced by law nor by opinion. The ground for thus limiting his power of voluntarily disposing of his own lot in life, is apparent, and is very clearly seen in this extreme case. The reason for not interfering, unless for the sake of others, with a person's voluntary acts, is consideration for his liberty. His voluntary choice is evidence that what he so chooses is desirable, or at least endurable, to him, and his good is on the whole best provided for by allowing him to take his own means of pursuing it. But by selling himself for a slave, he abdicates his liberty; he foregoes any future use of it beyond that single act. He therefore defeats, in his own case, the very purpose which is the justification of allowing him to dispose of himself. He is no longer free; but is thenceforth in a position which has no longer the presumption in its favour, that would be afforded by his voluntarily remaining in it. The principle of freedom cannot require that he should be free not to be free. It is not freedom to be allowed to alienate his freedom.

Mill, On Liberty, V

43 All mankind is divided, as it was at all times and is still, into slaves and freemen; for whoever has not two-thirds of his day for himself is a slave, be he otherwise whatever he likes, statesman, merchant, official, or scholar.

Nietzsche, Human, All-Too-Human, 283

44 In the relation of master to slave the master does not; make a point of the need that he has for the other; he has in his grasp the power of satisfying this need through his own action; whereas the slave, in his dependent condition, his hope and fear, is quite conscious of the need he has for his master. Even if the need is at bottom equally urgent for both, it always works in favor of the oppressor and against the oppressed.

Simone de Beauvoir, The Second Sex, Intro.

10.8 Classes and Class Conflict

The notion of the class struggle or class conflict was not invented by Karl Marx, though it is often attributed to him, as is also the conception of a classless society. The reader will find a passage from the *Republic* in which Plato declares that there are two cities, not one, the city of the rich and the city of the poor; and they are forever in conflict with one another. The reader will also find a statement by Aristotle setting forth his conception of the ideal polity as one that approximates classlessness through the overwhelming preponderance of a middle class, neither rich nor poor.

Toynbee's observation that war and class are the twin evils that have plagued all historic civilizations and brought their downfall is corroborated by much that is said in (the quotations gathered below. Among the class divisions mentioned, the two that have exerted the greatest divisiveness upon society are, first, the chasm that separates the haves from the have-nots, the rich from the poor, the

propertied class from the unpropertied; and the second, the one that sets a ruling class apart from a subject class, those with political power and privileges and those excluded from active participation in political life.

The acceptance of class divisions and class conflict is not confined to the ancients. The reader will find it in quotations drawn from Montesquieu, Rousseau, and even from Thomas Jefferson, who, in proposing an educational system for Virginia, thought of the children as divided into those who were destined for labor and those who were destined for leisure and learning. The reader will also find a quotation from the tenth *Federalist* paper, in which Madison argues that since factions and factional conflict cannot be eliminated from society, the best we can hope to do is to find ways of remedying or attenuating their baneful effects.

A class-structured society promotes and preserves inequalities of treatment, status, and opportunity. Hence those who advocate a universal equality of conditions favor the ideal of a classless society. For other relevant discussion, the reader is referred to Section 11.2 on Wealth and Poverty, Section 13.3 on Equality, Section 10.4 on Government of and by the People: Republic and Democracy, and Section 10.9 on Revolution.

■ ■ ■

- 1 *Theseus*. The classes of citizens are three. The rich
Are useless, always lusting after more.
Those who have not, and live in want, are a menace,
Ridden with envy and fooled by demagogues;
Their malice stings the owners. Of the three,

The middle part saves cities; it guards the order
A community establishes.

Euripides, Suppliant Women, 238

- 2 Any city, however small, is in fact divided into two, one the city of the poor, the other of the rich; these are at war with one another; and in either there are many smaller divisions, and you would be altogether beside the mark if you treated them all as a single State.

Plato, Republic, IV, 422B

- 3 The city of Hippodamus was composed of 10,000 citizens divided into three parts,—one of artisans, one of husbandmen, and a third of armed defenders of the state. He also divided the land into three parts, one sacred, one public, the third private:— the first was set apart to maintain the customary worship of the gods, the second was to support the warriors, the third was the property of the husbandmen.

Aristotle, Politics, 1267b30

- 4 States... are composed, not of one, but of many elements. One element is the food-producing class, who are called husbandmen; a second, the class of mechanics who practise the arts without which a city cannot exist;—of these arts some are absolutely necessary, others contribute to luxury or to the grace of life. The third class is that of traders, and by traders I mean those who are engaged in buying and selling, whether in commerce or in retail trade. A fourth class is that of the serfs or labourers. The warriors make up the fifth class, and they

are as necessary as any of the others, if the country is not to be the slave of every invader.

Aristotle, Politics, 1290b38

- 5 All claim to possess political ability, and think that they are quite competent to fill most offices. But the same persons cannot be rich and poor at the same time. For this reason the rich and the poor are regarded in an especial sense as parts of a state. Again, because the rich are generally few in number, while the poor are many, they appear to be antagonistic, and as the one or the other prevails they form the government. Hence arises the common opinion that there are two kinds of government—democracy and oligarchy.

Aristotle, Politics, 1291b5

- 6 The best political community is formed by citizens of the middle class, and... those states are likely to be well-administered, in which the middle class is large, and stronger if possible than both the other classes, or at any rate than either singly; for the addition of the middle class turns the scale, and prevents either of the extremes from being dominant. Great then is the good fortune of a state in which the citizens have a moderate and sufficient property; for where some possess much, and the others nothing, there may arise an extreme democracy, or a pure oligarchy; or a tyranny may grow out of either extreme,—either out of the most rampant democracy, or out of an oligarchy; but it is not so likely to arise out of the middle constitutions and those akin to them.

Aristotle, Politics, 1295b35

7 Every kingdom divided against itself is brought to desolation; and every city or house divided against itself shall not stand.

Matthew 12:25

8 Of all his measures the most commended %%'as his distribution of the people by their trades into companies or guilds; for as the city consisted, or rather did not consist of, but was divided into, two different tribes, the diversity between which could not be effaced and in the meantime prevented all unity and caused perpetual tumult and ill-blood, reflecting how hard substances that do not readily mix when in the lump may, by being beaten into powder, in that minute form be combined, he [Numa Pompilius] resolved to divide the whole population into a number of small divisions, and thus hoped, by introducing other distinctions, to obliterate the original and great distinction, which would be lost among the smaller. So, distinguishing the whole people by the several arts and trades, he formed the companies of musicians, goldsmiths, carpenters, dyers, shoemakers, skimmers, braziers, and potters; and all other handicraftsmen he composed and reduced into a single company, appointing every one their proper courts, councils, and religious observances. In this manner all factious distinctions began, for the first time, to pass out of use, no person any longer being either thought of or spoken of under the notion of a Sabine or a Roman, a Romulian or a Tatian; and the new division became a source of general harmony and intermixture.

Plutarch, Numa Pompilius

9 The Athenians, now the Cylonian sedition was over and the polluted gone into banishment, fell into their old quarrels about the government, there being as many different parties as there were diversities in the country. The Hill quarter favoured democracy, the Plain, oligarchy, and those that lived by the Seaside stood for a mixed sort of government, and so hindered either of the other parties from prevailing. And the disparity of fortune between the rich and the poor, at that time, also reached its height; so that the city seemed to be in a truly dangerous condition, and no other means for freeing it from disturbances and settling it to be possible but a despotic power. All the people were indebted to the rich; and either they tilled their land for their creditors, paying them a sixth part of the increase, and were, therefore, called Hectemorii and Thetes, or else they engaged their body for the debt, and might be seized, and either sent into slavery at home, or sold to strangers; some (for no law forbade it) were forced to sell their children, or fly their country to avoid the cruelty of their creditors; but the most part and the bravest of them began to combine together and encourage one another to stand to it, to choose a leader, to liberate the condemned debtors, divide the land, and change the government.

Plutarch, Solon

10 *Don Quixote*. All the Lineages and Descents of Mankind, are reduceable to these four Heads: First, Of those, who from a very small and obscure Beginning, have rais'd themselves to a spreading and prodigious Magnitude. Secondly, Of those who deriving their Greatness from a noble Spring, still preserve the Dignity and Character of their original Splendor. A Third, are those who, though

they had large Foundations, have ended in a Point like a Pyramid, which by little and little dwindle as it were into nothing, or next to nothing, in comparison of its Basis. Others there are (and those are the Bulk of Mankind) who have neither had a good Beginning, nor a rational Continuance, and whose Ending shall therefore be obscure; such are the common People, the *Plebeian* Race. The *Ottoman* Family is an Instance of the first Sort, having deriv'd their present Greatness from the poor Beginning of a base-born Shepherd. Of the second Sort, there are many Princes who being born such, enjoy their Dominions by Inheritance, and leave them to their Successors without Addition or Dimunution. Of the third Sort, there is an infinite Number of Examples; for all the *Pharaohs* and *Ptolomies* of Egypt, your *Caesars* of Rome, and all the Swarm (if I may use that Word) of Princes, Monarchs, Lords, *Medes*, *Assyrians*, *Persians*, *Greeks* and *Barbarians*: All these Families and Empires have ended in a Point, as well as those who gave rise to 'em: for it were impossible at this Day to find any of their Descendants, or if we cou'd find 'em, it would be in a poor groveling Condition. As for the Vulgar, I say nothing of 'em, more than that they are thrown in as Cyphers to increase the Number of Mankind, without deserving any other Praise.

Cervantes, Don Quixote, II, 6

- 11 There are four classes of men who pay the debts of the state; the proprietors of the land, those engaged in trade, the labourers and artificers, and, in fine, the annuitants either of the state or of private people. Of these four classes the last, in a case of necessity one would imagine, ought least to be spared, because it is a class entirely passive, while the state is supported by the active vigour

of the other three. But as it cannot be higher taxed, without destroying the public confidence, of which the state in general and these three classes in particular have the utmost need; as a breach in the public faith cannot be made on a certain number of subjects without seeming to be made on all; as the class of creditors is always the most exposed to the projects of ministers, and always in their eye, and under their immediate inspection, the state is obliged to give them a singular protection, that the part which is indebted may never have the least advantage over that which is the creditor.

Montesquieu, Spirit of Laws, XXII, 18

- 12 Every political society is composed of other smaller societies of different kinds, each of which has its interests and its rules of conduct: but those societies which everybody perceives, because they have an external and authorised form, are not the only ones that actually exist in the State: all individuals who are united by a common interest compose as many others, either transitory or permanent, whose influence is none the less real because it is less apparent, and the proper observation of whose various relations is the true knowledge of public morals and manners. The influence of all these tacit or formal associations causes, by the influence of their will, as many different modifications of the public will. The will of these particular societies has always two relations; for the members of the association, it is a general will; for the great society, it is a particular will; and it is often right with regard to the first object, and wrong as to the second. An individual may be a devout priest, a brave soldier, or a zealous senator, and yet a bad citizen. A particular resolution may be advantageous to the smaller

community, but pernicious to the greater. It is true that particular societies being always subordinate to the general society in preference to others, the duty of a citizen takes precedence of that of a senator, and a man's duty, of that of a citizen: but unhappily personal interest is always found in inverse ratio to duty, and increases in proportion as the association grows narrower, and the engagement less sacred; which irrefragably proves that the most general will is always the most just also, and that the voice of the people is in fact the voice of God.

Rousseau, Political Economy

- 13 It is on the middle classes alone that the whole force of the law is exerted; they are equally powerless against the treasures of the rich and the penury of the poor. The first mocks them, the second escapes them. The one breaks the meshes, the other passes through them.

Rousseau, Political Economy

- 14 are not all the advantages of society for the rich and powerful? Are not all lucrative posts in their hands? are not all privileges and exemptions reserved for them alone? Is not the public authority always on their side? If a man of eminence robs his creditors, or is guilty of other knaveries, is he not always assured of impunity? are not the assaults, acts of violence, assassinations, and even murders committed by the great, matters that are hushed up in a few months, and of which nothing more is thought? But if a great man himself is robbed or insulted, the whole police force is immediately in motion, and woe even to innocent persons who chance to be suspected. If he has to pass through any dangerous road, the country'

is up in arms to escort him. If the axle-tree of his chaise breaks, everybody flies to his assistance. If there is a noise at his door, he speaks but a word, and all is silent. If he is incommoded by the crowd, he waves his hand and every one makes way. If his coach is met on the road by a wagon, his servants are ready to beat the driver's brains out, and fifty honest pedestrians going quietly about their business had better be knocked on the head than an idle jackanapes be delayed in his coach. Yet all this respect costs him not a farthing: it is the rich man's right, and not what he buys with his wealth. How different is the ease of the poor man! the more humanity owes him, the more society denies him. Every door is shut against him, even when he has a right to its being opened: and if ever he obtains justice, it is with much greater difficulty than others obtain favours. If the militia is to be raised or the highway to be mended, he is always given the preference; he always bears the burden which his richer neighbour has influence enough to get exempted from. On the least accident that happens to him, everybody avoids him: if his cart be overturned in the road, so far is he from receiving any assistance, that he is lucky if he does not get horse-whipped by the impudent lackeys of some young Duke; in a word, all gratuitous assistance is denied to the poor when they need it, just because they cannot pay for it. I look upon any poor man as totally undone, if he has the misfortune to have an honest heart, a fine daughter, and a powerful neighbour.

Rousseau, Political Economy

- 15 I mentioned that old Mr. Sheridan complained of the ingratitude of Mr. Wedderburne and General Fraser, who had been much obliged to him when they were young

Scotchmen entering upon life in England. *Johnson*. "Why, Sir, a man is very apt to complain of the ingratitude of those who have risen far above him. A man when he gets into a higher sphere, into other habits of life, cannot keep up all his former connections. Then, Sir, those who knew him formerly upon a level with themselves, may think that they ought still to be treated as on a level, which cannot be; and an acquaintance in a former situation may bring out things which it would be very disagreeable to have mentioned before higher company, though, perhaps, every body knows of them." He placed this subject in a new light to me, and shewed that a man who has risen in the world, must not be condemned too harshly for being distant to former acquaintance, even though he may have been much obliged to them. It is, no doubt, to be wished that a proper degree of attention should be shewn by great men to their early friends. But if either from obtuse insensibility to difference of situation, or presumptuous forwardness, which will not submit even to an exterior observance of it, the dignity of high place cannot be preserved, when they are admitted into the company of those raised above the state in which they once were, encroachment must be repelled, and the kinder feelings sacrificed.

Boswell, Life of Johnson (Mar. 28, 1776)

- 16 Men may live together in society with some tolerable degree of security, though there is no civil magistrate to protect them from the injustice of those passions. But avarice and ambition in the rich, in the poor the hatred of labour and the love of present ease and enjoyment, are the passions which prompt to invade property, passions

much more steady in their operation, and much more universal in their influence.

Adam Smith, Wealth of Nations, V, I

- 17 Civil government, so far as it is instituted for the security of property, is in reality instituted for the defence of the rich against the poor, or of those who have some property against those who have none at all.

Adam Smith, Wealth of Nations, V, I

- 18 At the discharging of the pupils from the elementary schools, the two classes separate—those destined for labor will engage in the business of agriculture or enter into apprenticeships to such handicraft art as may be their choice; their companions, destined to the pursuits of science, will proceed to the college, which will consist first of general schools and second of professional schools. The general schools will constitute the second grade of education.

The learned class may still be subdivided into two sections; first, those who are destined for learned professions, as a means of livelihood; and second, the wealthy, who, possessing independent fortunes, may aspire to share in conducting the affairs of the nation or to live with usefulness and respect in the private ranks of life. Both of these sections will require instruction in all the higher branches of science; the wealthy to qualify them for either public or private life; the professional section will need those branches especially which are the basis of their future profession, and a general knowledge of the others as auxiliary to that and necessary to their standing and associating with the scientific class.

Jefferson, Letter to Peter Carr (Sept. 7, 1814)

19 Most of the crimes which disturb the internal peace of society are produced by the restraints which the necessary, but unequal, laws of property have imposed on the appetites of mankind, by confining to a few the possession of those objects that are coveted by many. Of all our passions and appetites, the love of power is of the most imperious and unsociable nature, since the pride of one man requires the submission of the multitude. In the tumult of civil discord, the laws of society lose their force, and their place is seldom supplied by those of humanity. The ardour of contention, the pride of victory, the despair of success, the memory of past injuries, and the fear of future dangers, all contribute to inflame the mind, and to silence the voice of pity. From such motives almost every page of history has been stained with civil blood.

Gibbon, Decline and Fall of the Roman Empire, IV

20 When Caesar subdued the Gauls, that great nation was already divided into three orders of men; the clergy, the nobility, and the common people. The first governed by superstition, the second by arms, but the third and last was not of any weight or account in their public councils. It was very natural for the plebeians, oppressed by debt or apprehensive of injuries, to implore the protection of some powerful chief, who acquired over their persons and property the same absolute rights as, among the Greeks and Romans, a master exercised over his slaves. The greatest part of the nation was gradually reduced in a state of servitude; compelled to perpetual labour on the estates of the Gallic nobles, and confined to the soil, either by the real weight of fetters, or by the no less cruel

and forcible restraints of the laws. During the long series of troubles which agitated Gaul, from the reign of Gallienus to that of Diocletian, the condition of those servile peasants was peculiarly miserable; and they experienced at once the complicated tyranny of their masters, of the barbarians, of the soldiers, and of the officers of the revenue.

Their patience was at last provoked into despair. On every side they rose in multitudes, armed with rustic weapons, and with irresistible fury. The ploughman became a foot soldier, the shepherd mounted on horseback, the deserted villages and open towns were abandoned to the flames, and the ravages of the peasants equalled those of the fiercest barbarians. They asserted the natural rights of men, but they asserted those rights with the most savage cruelty. The Gallic nobles, justly dreading their revenge, either took refuge in the fortified cities, or fled from the wild scene of anarchy. The peasants reigned without control; and two of their most daring leaders had the folly and rashness to assume the Imperial ornaments. Their power soon expired at the approach of the legions. The strength of union and discipline obtained an easy victory over a licentious and divided multitude. A severe retaliation was inflicted on the peasants who were found in arms: the affrighted remnant returned to their respective habitations, and their unsuccessful effort for freedom served only to confirm their slavery. So strong and uniform is the current of popular passions, that we might almost venture, from very scanty materials, to relate the particulars of this war; but we are not disposed to believe that the principal leaders, AElanus and Amandus, were Christians, or to insinuate that the rebellion, as it happened in the time of

Luther, was occasioned by the abuse of those benevolent principles of Christianity which inculcate the natural freedom of mankind.

Gibbon, Decline and Fall of the Roman Empire, XIII

- 21 Such is the constitution of civil society, that, whilst a few persons are distinguished by riches, by honours, and by knowledge, the body of the people is condemned to obscurity, ignorance, and poverty.

Gibbon, Decline and Fall of the Roman Empire, XV

- 22 Those who contend for a simple democracy, or a pure republic, actuated by the sense of the majority and operating within narrow limits, assume or suppose a case which is altogether fictitious. They found their reasoning on the idea that the people composing the society enjoy not only an equality of political rights but that they have all precisely the same interests and the same feelings in every respect. Were this in reality the case, their reasoning would be conclusive. The interest of the majority would be that of the minority, also; the decisions could only turn on mere opinion concerning the good of the whole, of which the major voice would be the safest criterion; and within a small sphere, this voice could be most easily collected and the public affairs most accurately managed.

We know, however, that no society ever did, or can, consist of so homogeneous a mass of citizens. In the savage state, indeed, an approach is made toward it, but in that state little or no government is necessary'. In all civilized societies distinctions are various and unavoidable. A distinction of property results from that

very protection which a free government gives to unequal faculties of acquiring it. There will be rich and poor; creditors and debtors; a landed interest, a monied interest, a mercantile interest, a manufacturing interest. These classes may again be subdivided according to the different productions of different situations and soils, and according to different branches of commerce and of manufactures. In addition to these natural distinctions, artificial ones will be founded on accidental differences in political, religious, or other opinions, or an attachment to the persons of leading individuals. However erroneous or ridiculous these grounds of dissension and faction may appear to the enlightened statesman or the benevolent philosopher, the bulk of mankind, who are neither statesmen nor philosophers, will continue to view them in a different light.

Madison, Letter to Jefferson (Oct, 24, 1787)

- 23 By a faction, I understand a number of citizens, whether amounting to a majority or minority of the whole, who are united and actuated by some common impulse of passion, or of interest, adverse to the rights of other citizens, or to the permanent and aggregate interests of the community.

There are two methods of curing the mischiefs of faction: the one, by removing its causes; the other, by controlling its effects.

There are again two methods of removing the causes of faction: the one, by destroying the liberty which is essential to its existence; the other, by giving to every citizen the same opinions, the same passions, and the same interests....

The second expedient is as impracticable as the first would be unwise. As long as the reason of man continues fallible, and he is at liberty to exercise it, different opinions will be formed. As long as the connection subsists between his reason and his self-love, his opinions and his passions will have a reciprocal influence on each other; and the former will be objects to which the latter will attach themselves. The diversity in the faculties of men, from which the rights of property originate, is not less an insuperable obstacle to a uniformity of interests. The protection of these faculties is the first object of government. From the protection of different and unequal faculties of acquiring property, the possession of different degrees and kinds of property immediately results; and from the influence of these on the sentiments and views of the respective proprietors, ensues a division of the society into different interests and parties.

The latent causes of faction are thus sown in the nature of man; and we see them everywhere brought into different degrees of activity, according to the different circumstances of civil society, A zeal for different opinions concerning religion, concerning government, and many other points, as well of speculation as of practice; an attachment of different leaders ambitiously contending for pre-eminence and power; or to persons of other descriptions whose fortunes have been interesting to the human passions, have, in turn, divided mankind into parties, inflamed them with mutual animosity, and rendered them much more disposed to vex and oppress each other than to cooperate for their common good. So strong is this propensity of mankind to fall into mutual animosities, that where no substantial occasion presents itself, the most frivolous and fanciful distinctions have

been sufficient to kindle their unfriendly passions and excite their most violent conflicts. But the most common and durable source of factions has been the various and unequal distribution of property. Those who hold and those who are without property have ever formed distinct interests in society. Those who are creditors, and those who are debtors, fall under a like discrimination. A landed interest, a manufacturing interest, a mercantile interest, a moneyed interest, with many lesser interests, grow up of necessity in civilised nations, and divide them into different classes, actuated by different sentiments and views. The regulation of these various and interfering interests forms the principal task of modern legislation, and involves the spirit of party and faction in the necessary and ordinary operations of the government....

It is in vain to say that enlightened statesmen will be able to adjust these clashing interests, and render them all subservient to the public good. Enlightened statesmen will not always be at the helm. Nor, in many cases, can such an adjustment be made at all without taking into view indirect and remote considerations, which will rarely prevail over the immediate interest which one party may find in disregarding the rights of another or the good of the whole.

The inference to which we are brought is, that the causes of faction cannot be removed, and that relief is only to be sought in the means of controlling its *effects*.

Madison, Federalist 10

- 24 It is of great importance in a republic not only to guard the society against the oppression of its rulers, but to guard one part of the society against the injustice of the other part. Different interests necessarily exist in different

classes of citizens. If a majority be united by a common interest, the rights of the minority will be insecure. There are but two methods of providing against this evil: the one by creating a will in the community independent of the majority—that is, of the society itself; the other, by comprehending in the society so many separate descriptions of citizens as will render an unjust combination of a majority of the whole very improbable, if not impracticable.

Hamilton or Madison, Federalist 51

- 25 It appears that a society constituted according to the most beautiful form that imagination can conceive, with benevolence for its moving principle, instead of self-love, and with every evil disposition in all its members corrected by reason and not force, would, from the inevitable laws of nature, and not from any original depravity of man, in a very short period degenerate into a society constructed upon a plan not essentially different from that which prevails in every known state at present; I mean a society divided into a class of proprietors, and a class of laborers, and with self-love the main spring of the great machine.

Malthus, Population, X

- 26 The ways and means of sharing in the capital of society are left to each man's particular choice, but the subdivision of civil society into different general branches is a necessity. The family is the first precondition of the state, but class divisions are the second. The importance of the latter is due to the fact that although private persons are self-seeking, they are compelled to direct

their attention to others. Here then is the root which connects self-seeking to the universal, i.e. to the state, whose care it must be that this tic is a hard and fast one.

In our day agriculture is conducted on methods devised by reflective thinking, i.e. like a factory. This has given it a character like that of industry and contrary to its natural one. Still, the agricultural class will always retain a mode of life which is patriarchal and the substantial frame of mind proper to such a life. The member of this class accepts unreflectively what is given him and takes what he gets, thanking God for it and living in faith and confidence that this goodness will continue. What comes to him suffices him; once it is consumed, more comes again. This is the simple attitude of mind not concentrated on the struggle for riches. It may be described as the attitude of the old nobility which just ate what there was. So far as this class is concerned, nature does the major part, while individual effort is secondary. In the business class, however, it is intelligence which is the essential thing, and natural products can be treated only as raw materials.

In the business class, the individual is thrown back on himself, and this feeling of self-hood is most intimately connected with the demand for law and order. The sense of freedom and order has therefore arisen above all in tow'ns. The agricultural class, on the other hand, has little occasion to think of itself; what it obtains is the gift of a stranger, of nature. Its feeling of dependence is fundamental to it, and with this feeling there is readily associated a willingness to submit to whatever may befall it at other men's hands. The agricultural class is thus more inclined to subservience, the business class to freedom.

When we say that a man must be a "somebody," we mean that he should belong to some specific social class, since to be a somebody means to have substantive being. A man with no class is a mere private person and his universality is not actualized. On the other hand, the individual in his particularity may take himself as the universal and presume that by entering a class he is surrendering himself to an indignity. This is the false idea that in attaining a determinacy necessary to it, a thing is restricting and surrendering itself.

Hegel, Philosophy of Right, Additions, Pars. 201-207

- 27 The middle class, to which civil servants belong, is politically conscious and the one in which education is most prominent. For this reason it is also the pillar of the state so far as honesty and intelligence are concerned. A state without a middle class must therefore remain on a low level.

Hegel, Philosophy of Right, Additions, Par. 297

- 28 On the whole, the class of landed property owners is divided into an educated section and a section of farmers. But over against both of these sorts of people there stands the business class, which is dependent on needs and concentrated on their satisfaction, and the civil servant class, which is essentially dependent on the state. The security and stability of the agricultural class may be still further increased by the institution of primogeniture, though this institution is desirable only from the point of view of politics, since it entails a sacrifice for the political end of giving the eldest son a life of independence.

Hegel, Philosophy of Right, Additions, Par. 306

29 "It's always best on these occasions to do what the mob do."

"But suppose there are two mobs?" suggested Mr. Snodgrass.

"Shout with the largest," replied Mr. Pickwick.

Dickens, Pickwick Papers, XIII

30 The *Manifesto* being our joint production, I consider myself bound to state that the fundamental proposition which forms its nucleus belongs to Marx. That proposition is: That in every historical epoch the prevailing mode of economic production and exchange, and the social organization necessarily following from it, form the basis upon which is built up, and from which alone can be explained, the political and intellectual history of that epoch; that, consequently, the whole history of mankind (since the dissolution of primitive tribal society, holding land in common ownership) has been a history of class struggles, contests between exploiting and exploited, ruling and oppressed classes; that the history of these class struggles forms a series of evolutions in which, nowadays, a stage has been reached where the exploited and oppressed class—the proletariat— cannot attain its emancipation from the sway of the exploiting and ruling class—the bourgeoisie— without at the same time, and once and for all, emancipating society at large from all exploitation, oppression, class distinctions and class struggles.

This proposition, which in my opinion is destined to do for history what Darwin's theory has done for biology, we, both of us, had been gradually approaching for some

years before 1845. How far I had independently progressed towards it is best shown by my *Condition of the Working Class in England*. But when I again met Marx at Brussels in the spring of 1845, he had it already worked out, and put it before me in terms almost as clear as those in which I have stated it here.

Engels, Communist Manifesto, Pref.

- 31 The history of all hitherto existing society is the history of class struggles.

Marx and Engels, Communist Manifesto, I

- 32 The bourgeoisie has played a most revolutionary role in history.

The bourgeoisie, wherever it has got the upper hand, has put an end to all feudal, patriarchal, idyllic relations. It has pitilessly torn asunder the motley feudal ties that bound man to his "natural superiors," and has left no other bond between man and man than naked self-interest, than callous "cash payment." It has drowned the most heavenly ecstasies of religious fervour, of chivalrous enthusiasm, of philistine sentimentalism, in the icy water of egotistical calculation. It has resolved personal worth into exchange value, and in place of the numberless indefeasible chartered freedoms has set up that single, unconscionable freedom—Free Trade. In one word, for exploitation, veiled by religious and political illusions, it has substituted naked, shameless, direct, brutal exploitation.

Marx and Engels, Communist Manifesto, I

33 The essential condition for the existence and sway of the bourgeois class is the formation and augmentation of capital; the condition for capital is wage labour. Wage labour rests exclusively on competition between the labourers. The advance of industry, whose involuntary promoter is the bourgeoisie, replaces the isolation of the labourers, due to competition, by their revolutionary combination, due to association. The development of modern industry, therefore, cuts from under its feet the very foundation on which the bourgeoisie produces and appropriates products. What the bourgeoisie, therefore, produces above all are its own grave-diggers. Its fall and the victory of the proletariat are equally inevitable.

Marx and Engels, Communist Manifesto, I

34 Political power, properly so called, is merely the organized power of one class for oppressing another. If the proletariat during its contest with the bourgeoisie is compelled by the force of circumstances to organize itself as a class; if by means of a revolution it makes itself the ruling class and, as such, sweeps away by force the old conditions of production, then it will, along with these conditions, have swept away the conditions for the existence of class antagonisms and of classes generally, and will thereby have abolished its own supremacy as a class.

In place of the old bourgeois society, with its classes and class antagonisms, we shall have an association in which the free development of each is the condition for the free development of all.

Marx and Engels, Communist Manifesto, II

35 The reason why, in any tolerable constituted society, justice and the general interest mostly in the end carry their point, is that the separate and selfish interests of mankind are almost always divided; some are interested in what is wrong, but some, also, have their private interest on the side of what is right: and those who are governed by higher considerations, though too few and weak to prevail against the whole of the others, usually after sufficient discussion and agitation become strong enough to turn the balance in favour of the body of private interests which is on the same side with them. The representative system ought to be so constituted as to maintain this state of things: it ought not to allow any of the various sectional interests to be so powerful as to be capable of prevailing against truth and justice and the other sectional interests combined.

Mill, Representative Government, VI

36 I... contend for the principle of plural voting. I do not propose the plurality as a thing in itself undesirable, which, like the exclusion of part of the community from the suffrage, may be temporarily tolerated while necessary to prevent greater evils. I do not look upon equal voting as among the things which are good in themselves, provided they can be guarded against inconveniences. I look upon it as only relatively good; less objectionable than inequality of privilege grounded on irrelevant or adventitious circumstances, but in principle wrong, because recognising a wrong standard, and exercising a bad influence on the voter's mind. It is not useful, but hurtful, that the constitution of the country should declare ignorance to be entitled to as much political power as knowledge. The national

institutions should place all things that they are concerned with before the mind of the citizen in the light in which it is for his good that he should regard them: and as it is for his good that he should think that every one is entitled to some influence, but the better and wiser to more than others, it is important that this conviction should be professed by the State, and embodied in the national institutions.

Mill, Representative Government, VIII

37 *Napoleon*. There are three sorts of people in the world: the low people, the middle people, and the high people. The low people and the high people are alike in one thing: they have no scruples, no morality. The low are beneath morality, the high above it. I am not afraid of either of them; for the low are unscrupulous without knowledge, so that they make an idol of me; whilst the high are unscrupulous without purpose, so that they go down before my will. Look you: I shall go over all the mobs and all the courts of Europe as a plough goes over a field. It is the middle people who are dangerous: they have both knowledge and purpose. But they, too, have their weak point. They are full of scruples: chained hand and foot by their morality and respectability.

Shaw, The Man of Destiny

38 War and Class have been with us ever since the first civilizations emerged above the level of primitive human life some five or six thousand years ago, and they have always been serious complaints. Of the twenty or so civilizations known to modern Western historians, all except our own appear to be dead or moribund, and,

when we diagnose each case, *in extremis* or *post mortem*, we invariably find that the cause of death has been either War or Class or some combination of the two.

Toynbee, Civilization on Trial, II

10.9 Revolution

As indicated in passages drawn from the historians of antiquity and from the ancient political philosophers, revolution and civil strife were regarded as a regular part of normal political life. The conception of a society so constituted that it might be exempt from revolutionary action, either by force or by fraud, was projected as an almost utopian idea. Insofar as injustice, class conflicts, and an inequality of conditions abound in the very imperfect societies that exist, revolution is always and everywhere brewing.

Some of the writers quoted here attempt to distinguish different types of revolution, to specify the causes productive of revolution, and to consider what those in power can do to prevent themselves from being overthrown. Others among the authors represented concern themselves mainly with the defense of rebellion or revolution as a drastic remedy that is justified when relief from oppression or injustice cannot be achieved in any other way. They suggest that it is the tyrant who is the rebel, the lawless one, rather than his mistreated subjects. When they speak of a "right of revolution" or a "right of rebellion," they are, in effect, asserting that revolutions are justifiable under certain circumstances. They are opposed in this conviction by

others who deny that resistance to established authority can ever be justified.

The discussion of revolution in this section is for the most part concerned with political upheavals or insurrections. For related matters, the reader is referred to other sections in this chapter on Politics, especially Section 10.6 on Despotism and Tyranny and Section 10.8 on Classes and Class Conflict; and to Section 12.3 on Rights-Natural and Civil and Section 14.1 on Warfare and the State of War. However, certain passages from Karl Marx included here touch on revolutions that affect the economic organization of society; and in this connection the reader is referred to Section 11.1 on Property, Section 11.2 on Wealth and Poverty, and Section 11.3 on Labor.

■ ■ ■

- 1 The sufferings [in the Hellenic countries] which revolution entailed... were many and terrible, such as have occurred and always will occur, as long as the nature of mankind remains the same.

... Words had to change their ordinary' meaning and to take that which was now given them. Reckless audacity came to be considered the courage of a loyal ally; prudent hesitation, specious cowardice; moderation was held to be a cloak for unmanliness; ability to see all sides of a question, inaptness to act on any. Frantic violence became the attribute of manliness; cautious plotting, a justifiable means of self-defence. The advocate of extreme measures was always trustworthy; his opponent a man to be suspected. To succeed in a plot was to have a

shrewd head, to divine a plot a still shrewder; but to try to provide against having to do either was to break up your party and to be afraid of your adversaries. In fine, to forestall an intending criminal, or to suggest the idea of a crime where it was wanting, was equally commended, until even blood became a weaker tie than party, from the superior readiness of those united by the latter to dare everything without reserve; for such associations had not in view the blessings derivable from established institutions but were formed by ambition for their overthrow; and the confidence of their members in each other rested less on any religious sanction than upon complicity in crime. The fair proposals of an adversary were met with jealous precautions by the stronger of the two, and not with a generous confidence. Revenge also was held of more account than self-preservation. Oaths of reconciliation, being only proffered on either side to meet an immediate difficulty, only held good so long as no other weapon was at hand; but when opportunity offered, he who first ventured to seize it and to take his enemy off his guard, thought this perfidious vengeance sweeter than an open one, since, considerations of safety apart, success by treachery won him the palm of superior intelligence.

Thucydides, Peloponnesian War, III, 82

- 2 If [a man's country] should appear to him to be following a policy which is not a good one, he should say so, provided that his words are not likely either to fall on deaf ears or to lead to the loss of his own life. But force against his native land he should not use in order to bring about a change of constitution, when it is not possible for the best constitution to be introduced without driving men

into exile or putting them to death; he should keep quiet and offer up prayers for his own welfare and for that of his country.

Plato, Seventh Letter

- 3 Inferiors revolt in order that they may be equal, and equals that they may be superior. Such is the state of mind which creates revolutions.

Aristotle, Politics, 1302a29

- 4 Revolutions are effected in two ways, by force and by fraud. Force may be applied either at the time of making the revolution or afterwards. Fraud, again, is of two kinds; for sometimes the citizens are deceived into acquiescing in a change of government, and afterwards they are held in subjection against their will.... In other cases the people are persuaded at first, and afterwards, by a repetition of the persuasion, their goodwill and allegiance are retained.

Aristotle, Politics, 1304b7

- 5 Among ourselves the sons of the ruling class in an oligarchy live in luxury, but the sons of the poor are hardened by exercise and toil, and hence they are both more inclined and better able to make a revolution.

Aristotle, Politics, 1310a22

- 6 If to provide itself with a king belongs to the right of a given multitude, it is not unjust that the king be deposed or have his power restricted by that same multitude if, becoming a tyrant, he abuses the royal power. It must not be thought that such a multitude is acting unfaithfully in

deposing the tyrant, even though it had previously subjected itself to him in perpetuity, because he himself has deserved that the covenant with his subjects should not be kept, since, in ruling the multitude, he did not act faithfully as the office of a king demands.

Aquinas, On Kingship, 1,6

- 7 Men change their rulers willingly, hoping to better themselves, and this hope induces them to take up arms against him who rules: wherein they are deceived, because they afterwards find by experience they have gone from bad to worse.

Machiavelli, Prince, 111

- 8 He who becomes master of a city accustomed to freedom and does not destroy it, may expect to be destroyed by it, for in rebellion it has always the watchword of liberty and its ancient privileges as a rallying point, which neither time nor benefits will ever cause it to forget. And what ever you may do or provide against, they never forget that name or their privileges unless they are disunited or dispersed, but at every chance they immediately rally to them.

Machiavelli, Prince, V

- 9 It ought to be remembered that there is nothing more difficult to take in hand, more perilous to conduct, or more uncertain in its success, than to take the lead in the introduction of a new order of things. Because the innovator has for enemies all those who have done well under the old conditions, and lukewarm defenders in those who may do well under the new. This coolness

arises partly from fear of the opponents, who have the laws on their side, and partly from the incredulity of men, who do not readily believe in new things until they have had a long experience of them. Thus it happens that whenever those who are hostile have the opportunity to attack they do it like partisans, whilst the others defend lukewarmly, in such wise that the prince is endangered along with them.

It is necessary, therefore, if we desire to discuss this matter thoroughly, to inquire whether these innovators can rely on themselves or have to depend on others: that is to say, whether, to consummate their enterprise, have they to use prayers or can they use force? In the first instance they always succeed badly, and never compass anything; but when they can rely on themselves and use force, then they are rarely endangered. Hence it is that all armed prophets have conquered, and the unarmed ones have been destroyed. Besides the reasons mentioned, the nature of the people is variable, and whilst it is easy to persuade them, it is difficult to fix them in that persuasion. And thus it is necessary to take such measures that, when they believe no longer, it may be possible to make them believe by force.

Machiavelli, Prince, VI

- 10 A prince ought to have two fears, one from within, on account of his subjects, the other from without, on account of external powers. From the latter he is defended by being well armed and having good allies, and if he is well armed he will have good friends, and affairs will always remain quiet within when they are quiet without, unless they should have been already disturbed by conspiracy; and even should affairs outside

be disturbed, if he has carried out his preparations and has lived as I have said, as long as he does not despair, he will resist every attack....

But concerning his subjects, when affairs outside are disturbed he has only to fear that they will conspire secretly, from which a prince can easily secure himself by avoiding being hated and despised, and by keeping the people satisfied with him, which it is most necessary for him to accomplish.... And one of the most efficacious remedies that a prince can have against conspiracies is not to be hated and despised by the people, for he who conspires against a prince always expects to please them by his removal; but when the conspirator can only look forward to offending them, he will not have the courage to take such a course, for the difficulties that confront a conspirator are infinite.. . . On the side of the conspirator, there is nothing but fear, jealousy, prospect of punishment to terrify him; but on the side of the prince there is the majesty of the principality, the laws, the protection of friends and the state to defend him; so that, adding to all these things the popular goodwill, it is impossible that any one should be so rash as to conspire. For whereas in general the conspirator has to fear before the execution of his plot, in this case he has also to fear the sequel to the crime; because on account of it he has the people for an enemy, and thus cannot hope for any escape....

For this reason I consider that a prince ought to reckon conspiracies of little account when his people hold him in esteem; but when it is hostile to him, and bears hatred towards him, he ought to fear everything and everybody. And well-ordered states and wise princes have taken every care not to drive the nobles to desperation, and to

keep the people satisfied and contented, for this is one of the most important objects a prince can have.

Machiavelli, Prince, XIX

- 11 Those who give the first shock to a state are apt to be the first ones swallowed up in its ruin. The fruits of the trouble rarely go to the one who has stirred it up; he beats and disturbs the water for other fishermen.

Montaigne, Essays, I, 23, Of Custom

- 12 It takes a lot of self-love and presumption to have such esteem for one's own opinions that to establish them one must overthrow the public peace and introduce so many inevitable evils, and such a horrible corruption of morals, as civil wars and political changes bring with them in a matter of such weight—and introduce them into one's own country. Isn't it bad management to encourage so many certain and known vices in order to combat contested and debatable errors? Is there any worse kind of vices than those which attack our conscience and our understanding of one another?

Montaigne, Essays, I, 23, Of Custom

- 13 *Menenius*. There was a time when all the body's members
Rebell'd against the belly, thus accused it:
That only like a gulf it did remain
I' the midst o' the body, idle and unactive.
Still cupboarding the viand, never bearing
Like labour with the rest, where the other instruments
Did see and hear, devise, instruct, walk, feel,
And mutually participate, did minister

Unto the appetite and affection common
Of the whole body. The belly answer'd—

1st Citizen. Well, sir, what answer made the belly? .

Men. Sir, I shall tell you. With a kind of smile,
Which ne'er came from the lungs, but even thus—
For, look you, I may make the belly smile
As well as speak—it tauntingly replied
To the discontented members, the mutinous parts
That envied his receipt; even so most fitly
As you malign our senators for that
They are not such as you.

1st Cit. Your belly's answer? What?
The kingly-crowned head, the vigilant eye,
The counsellor heart, the arm our soldier,
Our steed the leg, the tongue our trumpeter.
With other muniments and petty helps
In this our fabric, if that they—

Men. What then?

'Fore me, this fellow speaks: What then? what then

1st Cit. Should by the cormorant belly be restrain'd.
Who is the sink o' the body—

Men. Well, what then?

1st Cit. The former agents, if they did complain,
What could the belly answer?

Men. I will tell you;

If you'll bestow a small—of what you have little—
Patience awhile, you'll hear the Ally's answer.

1st Cit. Ye're long about it.

Men. Note me this, good friend;
Your most grave belly was deliberate,
Not rash like his accusers, and thus answer'd;
"True is it, my incorporate friends," quoth he,
"That I receive the general food at first,

Which you do live upon; and fit it is,
Because I am the store-house and the shop
Of the whole body. But, if you do remember,
I send it through the rivers of your blood,
Even to the court, the heart, to the seat o' the brain;
And, through the cranks and offices of man,
The strongest nerves and small inferior veins
From me receive that natural competency
Whereby they live; and though that all at once,
You, my good friends"—this says the belly, mark me—

1st Cit. Ay, sir; well, well.

Men. "Though all at once cannot
See what I do deliver out to each,
Yet I can make my audit up, that all
From me do back receive the flour of all,
And leave me but the bran." What say you to't?

1st Cit. It was an answer. How apply you this?

Men. The senators of Rome are this good belly,
And you the mutinous members; for examine
Their counsels and their cares, digest things rightly
Touching the weal o' the common, you shall find
No public benefit which you receive
But it proceeds or comes from them to you
And no way from yourselves. What do you think,
You, the great toe of this assembly?

1st Cit. I the great toe! Why the great toe?

Men. For that, being one o' the lowest, basest, poorest,
Of this most wise rebellion, thou go'st foremost;
Thou rascal, that art worst in blood to run,
Lead'st first to win some vantage.

Shakespeare, Coriolanus, I, i, 99

- 14 In civil matters even a change for the better is suspected on account of the commotion it occasions, for civil government is supported by authority, unanimity, fame, and public opinion, and not by demonstration.

Bacon, Novum Organum, I, 90

- 15 Shepherds of people had need know the kalendars of tempests in state; which are commonly greatest when things grow to equality; as natural tempests are greatest about the *AEquinocxia*. And as there are certain hollow blasts of wind and secret swellings of seas before a tempest, so are there in states. . . . Libels and licentious discourses against the state when they are frequent and open; and in like sort false news, often running up and down, to the disadvantage of the state, and hastily embraced; are amongst the signs of troubles.

Bacon, Of Seditions and Troubles

- 16 The causes and motives of seditions are: innovation in religion; taxes; alteration of laws and customs; breaking of privileges; general oppression; advancement of unworthy persons; strangers; dearths; disbanded soldiers; factions grown desperate; and whatsoever, in offending people, joineth and knitteth them in a common cause.

Bacon, Of Seditions and Troubles

- 17 The infliction of what evil soever on an innocent man that is not a subject, if it be for the benefit of the Commonwealth, and without violation of any former covenant, is no breach of the law of nature. For all men that are not subjects are either enemies, or else they

have ceased from being so by some precedent covenants. But against enemies, whom the Commonwealth judgeth capable to do them hurt, it is lawful by the original right of nature to make war; wherein the sword judgeth not, nor doth the victor make distinction of nocent and innocent as to the time past, nor has other respect of mercy than as it conduceth to the good of his own people. And upon this ground it is that also in subjects who deliberately deny the authority of the Commonwealth established, the vengeance is lawfully extended, not only to the fathers, but also to the third and fourth generation not yet in being, and consequently innocent of the fact for which they are afflicted: because the nature of this offence consisteth in the renouncing of subjection, which is a relapse into the condition of war commonly called rebellion; and they that so offend, suffer not as subjects, but as enemies. For rebellion is but war renewed.

Hobbes, Leviathan, 11, 28

- 18 The art of opposition and of revolution is to unsettle established customs, sounding them even to their source, to point out their want of authority and justice. We must, it is said, get back to natural and fundamental laws of the State, which an unjust custom has abolished. It is a game certain to result in the loss of all; nothing will be just on the balance. Yet people readily lend their ear to such arguments. They shake off the yoke as soon as they recognise it; and the great profit by their ruin and by that of these curious investigators of accepted customs. But from a contrary mistake men sometimes think they can justly do everything which is not without an example. That is why the wisest of legislators said that it was

necessary to deceive men for their own good.... We must not see the fact of usurpation; law was once introduced without reason, and has become reasonable. We must make it regarded as authoritative, eternal, and conceal its origin, if we do not wish that it should soon come to an end.

Pascal, Paisees, V, 294

- 19 A civil state, which has not done away with the causes of seditions, where war is a perpetual object of fear, and where, lastly, the laws are often broken, differs but little from the mere state of nature, in which everyone lives after his own mind at the great risk of his life.

Spinoza, Political Treatise, V, 2

- 20 The inhabitants of any country, who are descended and derive a title to their estates from those who are subdued, and had a government forced upon them, against their free consents, retain a right to the possession of their ancestors, though they consent not freely to the government, whose hard conditions were, by force, imposed on the possessors of that country. For the first conqueror never having had a title to the land of that country, the people, who are the descendants of, or claim under those who were forced to submit to the yoke of a government by constraint, have always a right to shake it off, and free themselves from the usurpation or tyranny the sword hath brought in upon them, till their rulers put them under such a frame of government as they willingly and of choice consent to (which they can never be supposed to do, till either they are put in a full state of liberty to choose their government and governors, or at

least till they have such standing laws to which they have, by themselves or their representatives, given their free consent, and also till they are allowed their due property, which is so to be proprietors of what they have that nobody can take away any part of it without their own consent, without which, men under any government are not in the state of free men, but are direct slaves under the force of war).

Locke, II Civil Government, XVI, 192

- 21 Whensoever... the legislative shall transgress this fundamental rule of society, and either by ambition, fear, folly, or corruption, endeavour to grasp themselves, or put into the hands of any other, an absolute power over the lives, liberties, and estates of the people, by this breach of trust they forfeit the power the people had put into their hands for quite contrary ends, and it devolves to the people, who have a right to resume their original liberty, and by the establishment of a new legislative (such as they shall think fit), provide for their own safety and security, which is the end for which they are in society.

Locke, II Civil Government, XIX, 222

- 22 Revolutions happen not upon every little mismanagement in public affairs. Great mistakes in the ruling part, many wrong and inconvenient laws, and all the slips of human frailty will be borne by the people without mutiny or murmur. But if a long train of abuses, prevarications, and artifices, all tending the same way, make the design visible to the people, and they cannot but feel what they lie under, and see whither they are

going, it is not to be wondered that they should then rouse themselves, and endeavour to put the rule into such hands which may secure to them the ends for which government was at first erected, and without which, ancient names and specious forms are so far from being better, that they are much worse than the state of Nature or pure anarchy; the inconveniencies being all as great and as near, but the remedy farther off and more difficult.

Locke, II Civil Government, XIX, 225

- 23 The popular insurrection that ends in the death or deposition of a Sultan is as lawful an act as those by which he disposed, the day before, of the lives and fortunes of his subjects. As he was maintained by force alone, it is force alone that overthrows him. Thus everything takes place according to the natural order; and, whatever may be the result of such frequent and precipitate revolutions, no one man has reason to complain of the injustice of another, but only of his own ill-fortune or indiscretion.

Rousseau, Origin of Inequality, 11

- 24 When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

Jefferson, Declaration of Independence

25 Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and, accordingly, all experience hath shown, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But, when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security.

Jefferson, Declaration of Independence

26 I hold it that a little rebellion now and then is a good thing, and as necessary in the political world as storms in the physical. Unsuccessful rebellions, indeed, generally establish the encroachments on the rights of the people which have produced them. An observation of this truth should render honest republican governors so mild in their punishment of rebellions as not to discourage them too much. It is a medicine necessary for the sound health of government.

Jefferson, Letter to James Madison (Jan. 30, 1787)

27 General rebellions and revolts of an whole people never were encouraged, now or at any time. They are always provoked.

Burke, Letter to the Sheriffs of Bristol (Apr. 3, 1777)

28 Resistance on the part of the people to the supreme legislative power of the state is in no case legitimate; for it is only by submission to the universal legislative will,

that a condition of law and order is possible. Hence there is no right of sedition, and still less of rebellion, belonging to the people.

Kant, Science of Right, 49

- 29 It is the duty of the people to bear any abuse of the supreme power, even then though it should be considered to be unbearable. And the reason is that any resistance of the highest legislative authority can never but be contrary to the law, and must even be regarded as tending to destroy the whole legal constitution.

Kant, Science of Right, 49

- 30 When on the success of a revolution a new constitution has been founded, the unlawfulness of its beginning and of its institution cannot release the subjects from the obligation of adapting themselves, as good citizens, to the new order of things; and they are not entitled to refuse honourably to obey the authority that has thus attained the power in the state.

Kant, Science of Right, 49

- 31 Why is the experiment of an extended republic to be rejected, merely because it may comprise what is new? Is it not the glory of the people of America, that, whilst they have paid a decent regard to the opinions of former times and other nations, they have not suffered a blind veneration for antiquity, for custom, or for names, to overrule the suggestions of their own good sense, the knowledge of their own situation, and the lessons of their own experience? To this manly spirit, posterity will be indebted for the possession, and the world for the

example, of the numerous innovations displayed on the American theatre, in favour of private rights and public happiness. Had no important step been taken by the leaders of the Revolution for which a precedent could not be discovered, no government established of which an exact model did not present itself, the people of the United States might, at this moment, have been numbered among the melancholy victims of misguided councils, must at best have been labouring under the weight of some of those forms which have crushed the liberties of the rest of mankind. Happily for America, happily, we trust, for the whole human race, they pursued a new and more noble course. They accomplished a revolution which has no parallel in the annals of human society. They reared the fabrics of governments which have no model on the face of the globe.

Madison, Federalist 14

- 32 If the representatives of the people betray their constituents, there is then no resource left but in the exertion of that original right of self-defence which is paramount to all positive forms of government, and which against the usurpations of the national rulers, may be exerted with infinitely better prospect of success than against those of the rulers of an individual State. In a single State, if the persons intrusted with supreme power become usurpers, the different parcels, subdivisions, or districts of which it consists, having no distinct government in each, can take no regular measures for defence. The citizens must rush tumultuously to arms, without concert, without system, without resource; except in their courage and despair. The usurpers,

clothed with the forms of legal authority, can too often crush the opposition in embryo. The smaller the extent of the territory, the more difficult will it be for the people to form a regular or systematic plan of opposition, and the more easy will it be to defeat their early efforts. Intelligence can be more speedily obtained of their preparations and movements, and the military force in the possession of the usurpers can be more rapidly directed against the part where the opposition has begun. In this situation there must be a peculiar coincidence of circumstances to insure success to the popular resistance.

Hamilton, Federalist 28

33 The political condition of France... [before the French Revolution] presents nothing but a confused mass of privileges altogether contravening thought and reason—an utterly irrational state of things, and one with which the greatest corruption of morals, of spirit was associated—an empire characterized by destitution of right, and which, when its real state begins to be recognized, becomes shameless destitution of right. The fearfully heavy burdens that pressed upon the people, the embarrassment of the government to procure for the court the means of supporting luxury and extravagance, gave the first impulse to discontent. The new spirit began to agitate men's minds; oppression drove men to investigation. It was perceived that the sums extorted from the people were not expended in furthering the objects of the state, but were lavished in the most unreasonable fashion. The entire political system appeared one mass of injustice. The change was

necessarily violent, because the work of transformation was not undertaken by the government.

Hegel, Philosophy of History, Pt. IV, III, 3

34 Amid the ruins which surround me shall I dare to say that revolutions are not what I most fear for coming generations? If men continue to shut themselves more closely within the narrow circle of domestic interests and to live on that kind of excitement, it is to be apprehended that they may ultimately become inaccessible to those great and powerful public emotions which perturb nations, but which develop them and recruit them. When property becomes so fluctuating and the love of property so restless and so ardent, I cannot but fear that men may arrive at such a state as to regard every new theory as a peril, every innovation as an irksome toil, every social improvement as a stepping-stone to revolution, and so refuse to move altogether for fear of being moved too far. I dread, and I confess it, lest they should at last so entirely give way to a cowardly love of present enjoyment as to lose sight of the interests of their future selves and those of their descendants and prefer to glide along the easy current of life rather than to make, when it is necessary, a strong and sudden effort to a higher purpose.

It is believed by some that modern society will be always changing its aspect; for myself, I fear that it will ultimately be too invariably fixed in the same institutions, the same prejudices, the same manners, so that mankind will be stopped and circumscribed; that the mind will swing backwards and forwards forever without begetting fresh ideas; that man will waste his strength in bootless

and solitary trifling, and, though in continual motion, that humanity will cease to advance.

Tocqueville, Democracy in America, Vol. II, III, 21

35 If there is any period one would desire to be born in, is it not the age of Revolution; when the old and the new stand side by side and admit of being compared; when the energies of all men are searched by fear and by hope; when the historic glories of the old can be compensated by the rich possibilities of the new era? This time, like all times, is a very good one, if we but know what to do with it.

Emerson, The American Scholar

36 By the rude bridge that arched the flood,
Their flag to April's breeze unfurled,
Here once the embattled farmers stood
And fired the shot heard round the world.

Emerson, Concord Hymn

37 All men recognize the right of revolution; that is, the right to refuse allegiance to, and to resist, the government, when its tyranny or its inefficiency are great and unendurable.

Thoreau, Civil Disobedience

38 Any people anywhere, being inclined and having the power, have the *right* to rise up, and shake off the existing government, and form a new one that suits them better. This is a most valuable,—a most sacred right—a right, which we hope and believe, is to liberate the world. Nor is this right confined to cases in which the whole

people of an existing government, may choose to exercise it. Any portion of such people that *can, may* revolutionize, and make their *own*, of so much of the territory as they inhabit. More than this, a *majority* of any portion of such people may revolutionize, putting down a *minority*, intermingled with, or near about them, who may oppose their movement.

Lincoln, Speech on the Mexican War (Jan 12, 1848)

- 39 This country, with its institutions, belongs to the people who inhabit it. Whenever they shall grow weary of the existing government, they can exercise their constitutional right of amending it or their revolutionary right to dismember or overthrow it.

Lincoln, First Inaugural Address

- 40 Let the ruling classes tremble at a Communist revolution. The proletarians have nothing to lose but their chains. They have a world to win.

Workingmen of all countries, unite!

Marx and Engels, Communist Manifesto, IV

- 41 *Pierre*. Every violent reform deserves censure, for it quite fails to remedy evil while men remain what they are, and also because wisdom needs no violence.

Tolstoy, War and Peace, VI, 7

- 42 All who achieve real distinction in life begin as revolutionists. The most distinguished persons become more revolutionary as they grow older, though they are commonly supposed to become more conservative owing to their loss of faith in conventional methods of reform.

*Shaw, Man and Superman, Revolutionist's Handbook,
Preface*

43 Even if for every hundred correct things we did we committed ten thousand mistakes, our revolution would still be—and it will be in the judgment of history-- great and invincible; for this is the first time that not a minority, not the rich alone, not the educated alone, but the real masses, the overwhelming majority of the of the working people are themselves building a new life and are by their own experience solving the most difficult problems of socialist organisation.

Lenin, Letter to American Workers (Aug. 20,1918)

Chapter 11

ECONOMICS

Chapter 11 is divided into six sections: 11.1 Property, 11.2 Wealth and Poverty, 11.3 Labor, 11.4 Money, 11.5 Trade, Commerce, and Industry, and 11.6 Taxation.

It is not surprising that, among the great writers, the economists Adam Smith and Karl Marx should be the two most frequently represented in this chapter. However, many others, among them notably Plato, Aristotle, Locke, Rousseau, and J. S. Mill, contribute insights and observations that broaden and deepen the consideration of economic matters, especially in relation to the pursuit of happiness, virtue and vice, justice and rights, and law and government.

In its Greek origin, economics was conceived as the science or art of household management, concerned largely with the acquisition by the family of its supply of consumable goods and with the husbanding of its resources. The labor power involved in the domestic production of wealth was largely that of the household's slaves. Though production by independent artisans existed, and though retail trade within the community and commerce between cities flourished, these were not thought to be subjects of concern to economics.

In the eighteenth century, the science became transformed into the much broader study of national wealth and, as the phrase "political economy" indicates, economic questions became matters of public policy, one of the chief

concerns of government. With this broadening in the scope of economics, such subjects as those treated in Sections 11.3 to 11-6—labor; money; trade, commerce, and industry; and taxation— raised problems and involved considerations that had had no place in ancient economic thought.

The nature of property, the role of wealth and poverty in human life, and, to some extent, the function of money receive attention from ancient and medieval authors, as well as modern writers, though their approach to such subjects is strikingly different. For one thing, the notion of capital— both capital goods in the form of instruments of production and financial capital—does not enter into the ancient discussion of property, wealth, or industry; for another, such matters as the distribution of wealth, the division of labor, free trade, and state control or regulation of economic processes are barely mentioned, if touched on at all.

Political economy, involving the government's role in the economic sphere, necessarily treats of matters that are also covered in Chapter 10 on Politics. Political economy was also once regarded as a branch of moral philosophy, along with ethics and politics, dealing with questions of value and policy and laying down prescriptions about what ought to be done with regard to the production, exchange, and distribution of wealth. There is, therefore, some overlapping in the matters treated in this chapter and in Chapter 9 on Ethics. Certain subjects of economic interest, such as economic justice, economic freedom, and economic equality, are treated in other contexts; economic justice in Section 12.2; economic freedom in Section 13.1; and economic equality in Section 13.3, and also in Section 10.8 on Classes and Class Conflict.

...

11.1 Property

Four subjects dominate this section. One, of course, is the nature of property itself. What can we truly or rightly call our own? What constitutes property? Is property to be equated with the possession of material things or does it extend to other things as well—anything that belongs to the individual by right? On the broader view, a person's life, liberty and even labor power are one's property, as well as one's physical possessions or one's estates.

A second and closely related question concerns the origin of property and the basis of the right to own it. If there were no property, everything would be common to all—the exclusive possession of none. Those who take the broader view of property mentioned above distinguish between natural and acquired property, and make the rightful acquisition of property—the exclusive possession of that which was originally common—depend on one's application to the common of something that is proper to oneself and by right one's own—the labor power of one's mind and body. This labor theory of acquired property or of the right to property was first enunciated by Locke. It is also found in statements by Rousseau and Gibbon and bears an interesting relation to the theories of property rights developed by Kant and Hegel.

The third and fourth themes that run through Section 11.1 are also closely related. One is the proposal, first advanced by Plato and first questioned by Aristotle, that in

an ideal society all the external things that constitute wealth should be held and used in common by the citizens or guardians of the state. This is often mistakenly referred to as "the community of property," for what is held and used in common cannot be property. The other related theme is Marx's proposal—central to the *Communist Manifesto* — that the ownership of the means of production should be transferred from private hands to the state or the community as a whole. This, too, is often mistakenly referred to as "the abolition of private property." The object of attack is the private ownership of capital—the instruments of production— not other forms of private property, such as consumable goods.

For the consideration of property in a noneconomic sense as signifying everything that belongs to an individual by right— one's life and liberty as well as one's estates—the reader is referred to Section 12.3 on Rights—Natural and Civil; and for the purely economic consideration of property, the reader will find additional materials in Section 11.2 on Wealth and Poverty. Property as a qualification for citizenship and suffrage is discussed in Section 10.5 on Citizenship.

■ ■ ■

1 Thou shall not remove thy neighbour's landmark, which they of old time have set in thine inheritance, which thou shalt inherit in the land that the Lord thy God giveth thee to possess it,

Deuteronomy 19:14

2 *Socrates*. In our city the language of harmony and concord will be more often heard than in any other. As I was describing before, when any one is well or ill, the universal word will be "with me it is well" or "it is ill."

Glaucon. Most true.

And agreeably to this mode of thinking and speaking, were we not saying that they will have their pleasures and pains in common?

Yes, and so they will.

And they will have a common interest in the same thing which they will alike call "my own," and having this common interest they will have a common feeling of pleasure and pain?

Yes, far more so than in other States.

And the reason of this, over and above the general constitution of the State, will be that the guardians will have a community of women and children?

That will be the chief reason.

And this unity of feeling we admitted to be the greatest good, as was implied in our own comparison of a well-ordered State to the relation of the body and the members, when affected by pleasure or pain?

That we acknowledged, and very rightly.

Then the community of wives and children among our citizens is clearly the source of the greatest good to the State?

Certainly.

And this agrees with the other principle which we were affirming—that the guardians were not to have houses or lands or any other property; their pay was to be their food, which they were to receive from the other citizens, and they were to have no private expenses; for we

intended them to preserve their true character of guardians.

Right, he replied.

Both the community of property and the community of families, as I am saying, tend to make them more truly guardians; they will not tear the city in pieces by differing about "mine" and "not mine"; each man dragging any acquisition which he has made into a separate house of his own, where he has a separate wife and children and private pleasures and pains; but all will be affected as far as may be by the same pleasures and pains because they are all of one opinion about what is near and dear to them, and therefore they all tend towards a common end.

Plato, Republic, V, 463B

- 3 Property should be private, but the use of it common; and the special business of the legislator is to create in men this benevolent disposition.... How immeasurably greater is the pleasure, when a man feels a thing to be his own; for surely the love of self is a feeling implanted by nature and not given in vain, although selfishness is rightly censured; this, however, is not the mere love of self, but the love of self in excess, like the miser's love of money; for all, or almost all, men love money and other such objects in a measure. And further, there is the greatest pleasure in doing a kindness or service to friends or guests or companions, which can only be rendered when a man has private property. These advantages are lost by excessive unification of the state. The exhibition of two virtues, besides, is visibly annihilated in such a state: first, temperance towards women (for it is an honourable action to abstain from another's wife for temperance

sake); secondly, liberality in the matter of property. No one, when men have all things in common, will any longer set an example of liberality or do any liberal action; for liberality consists in the use which is made of property. Such legislation may have a specious appearance of benevolence; men readily listen to it, and are easily induced to believe that in some wonderful manner everybody will become everybody's friend, especially when some one is heard denouncing the evils now existing, in states, suits about contracts, convictions for perjury, flatteries of rich men and the like, which are said to arise out of the possession of private property. These evils, however, are due to a very different cause—the wickedness of human nature. Indeed, we see That there is much more quarrelling among those who have all things in common, though there are not many of them when compared with the vast numbers who have private property.

Aristotle, Politics, 1263a38

- 4 Private ownership does not derive from nature. Property becomes private either through long occupancy (such as with people who settled an unoccupied territory long ago), or through conquest (as in the case of land taken in war), or by due process of law, barter, or allotment.

Cicero, De Officiis, I, 7

- 5 If we all seized the property of our neighbors and grabbed from one another what we could make use of, the bonds of human society would necessarily crumble.

Cicero, De Officiis, III, 5

6 As heaven is for the gods, so the earth has been given to mankind, and lands uninhabited are common to all.

Tacitus, Annals, XIII, 55

7 God has sovereign dominion over all things: and He, according to His providence, directed certain things to the sustenance of man's body. For this reason man has a natural dominion over things, as regards the power to make use of them.

Aquinas, Summa Theologica, II-II, 66, 1

8 Two things are competent to man in respect of exterior things. One is the power to procure and dispense them, and in this regard it is lawful for man to possess property. Moreover this is necessary, to human life for three reasons. First because every man is more careful to procure what is for himself alone than that which is common to many or to all: since each one would shirk the labor and leave to another that which concerns the community, as happens where there is a great number of servants. Secondly, because human affairs are conducted in more orderly fashion if each man is charged with taking care of some particular thing himself, whereas there would be confusion if everyone had to look after any one thing indeterminately. Thirdly, because a more peaceful state is ensured to man if each one is contented with his own. Hence it is to be observed that quarrels arise more frequently where there is no division of the things possessed.

Aquinas, Summa Theologica, II-II, 66, 2

- 9 Man ought to possess external things, not as his own, but as common, so that, to wit, he is ready to communicate them to others in their need.

Aquinas, Summa Theologica, II-II, 66, 2

- 10 Community of goods is ascribed to the natural law, not that the natural law dictates that all things should be possessed in common and that nothing should be possessed as one's own: but because the division of possessions is not according to the natural law, but rather arose from human agreement which belongs to positive law. Hence the ownership of possessions is not contrary to the natural law, but an addition thereto devised by human reason.

Aquinas, Summa Theologica, II-II, 66, 2

- 11 *King Richard*. Nothing can we call our own but death
And that small model of the barren earth
Which serves as paste and cover to our bones.

Shakespeare, Richard II, III, ii, 152

- 12 *Antonio*. I pray you, think you question with the Jew:
You may as well go stand upon the beach
And bid the main flood bate his usual height;
You may as well use question with the wolf
Why he hath made the ewe bleat for the lamb;
You may as well forbid the mountain pines
To wag their high tops and to make no noise,
When they are fretten with the gusts of heaven;
You may as well do any thing most hard,
As seek to soften that—than which what's harder?—
His Jewish heart: therefore, I do beseech you,

Make no more offers, use no farther means,
But with all brief and plain conveniency
Let me have judgement and the Jew his will.

Bassanio. For thy three thousand ducats here is six.

Shylock. If every ducat in six thousand ducats
Were in six parts and every part a ducat,
I would not draw them; I would have my bond.

Duke. How shall thou hope for mercy, rendering none?

Shy. What judgement shall I dread, doing no wrong?
You have among you many a purchased slave,
Which, like your asses and your dogs and mules,
You use in abject and in slavish parts,
Because you bought them: shall I say to you,
Let them be free, marry them to your heirs?
Why sweat they under burthens? let their beds
Be made as soft as yours and let their palates
Be season'd with such viands? You will answer
"The slaves are ours": so do I answer you:
The pound of flesh, which I demand of him,
Is dearly bought; 'tis mine and I will have it.
If you deny me, fie upon your law!

Shakespeare, Merchant of Venice, IV, i, 70

- 13 Property, as now in use, was at first a creature of the human will. But, after it was established, one man was prohibited by the law of nature from seizing the property of another against his will.

Grotius, Rights of War and Peace, Bk. I, I, 10

- 14 As nothing can naturally be produced, except from some materials before in existence, it follows that, if those materials were our own, the possession of them under

any new shape, or commodity is only a *continuation* of our former property; if they belonged to no one, our possession comes under the class of title by occupancy; but if they were another's, no improvement of ours can by the law of nature give us a right of property therein.

Grotius, Rights of War and Peace, Bk. 11, III, I

- 15 The nutrition of a Commonwealth consisteth in the plenty and distribution of materials conducing to life: in concoction or preparation, and, when concocted, in the conveyance of it by convenient conduits to the public use.

As for the plenty of matter, it is a thing limited by nature to those commodities which, from the two breasts of our common mother, land and sea, God usually either freely giveth or for labour selleth to mankind....

The distribution of the materials of this nourishment is the constitution of *mine*, and thine, and his; that is to say, in one word, *propriety*; and belongeth in all kinds of Commonwealth to the sovereign power. For where there is no Commonwealth, there is, as hath been already shown, a perpetual war of every man against his neighbour; and therefore everything is his that getteth it and keepeth it by force; which is neither propriety nor community, but uncertainty.

Hobbes, Leviathan, II, 24

- 16 The propriety which a subject hath in his lands consisteth in a right to exclude all other subjects from the use of them; and not to exclude their sovereign, be it an assembly or a monarch. For seeing the sovereign, that is to say, the Commonwealth (whose person he

representeth), is understood to do nothing but in order to the common peace and security, this distribution of lands is to be understood as done in order to the same: and consequently, whatsoever distribution he shall make in prejudice thereof is contrary to the will of every subject that committed his peace and safety to his discretion and conscience, and therefore by the will of every one of them is to be reputed void.

Hobbes, Leviathan, II, 24

- 17 Though the earth and all inferior creatures be common to all men, yet every man has a "property" in his own "person." This nobody has any right to but himself. The "labour" of his body and the "work" of his hands, we may say, are properly his. Whatsoever, then, he removes out of the state that Nature hath provided and left it in, he hath mixed his labour with it, and joined to it something that is his own, and thereby makes it his property. It being by him removed from the common state Nature placed it in, it hath by this labour something annexed to it that excludes the common right of other men. For this "labour" being the unquestionable property of the labourer, no man but he can have a right to what that is once joined to, at least where there is enough, and as good left in common for others.

He that is nourished by the acorns he picked up under an oak, or the apples he gathered from the trees in the wood, has certainly appropriated them to himself. Nobody can deny but the nourishment is his. I ask, then, when did they begin to be his? when he digested? or when he ate? or when he boiled? or when he brought them home? or when he picked them up? And it is plain, if the first gathering made them not his, nothing else could. That

labour put a distinction between them and common. That added something to them more than Nature, the common mother of all, had done, and so they became his private right. And will anyone say he had no right to those acorns or apples he thus appropriated because he had not the consent of all mankind to make them his? Was it a robbery thus to assume to himself what belonged to all in common? If such a consent as that was necessary, man had starved, notwithstanding the plenty God had given him. We see in commons, which remain so by compact, that it is the taking any part of what is common, and removing it out of the state Nature leaves it in, which begins the property, without which the common is of no use. And the taking of this or that part does not depend on the express consent of all the commoners. Thus, the grass my horse has bit, the turfs my servant has cut, and the ore I have digged in any place, where I have a right to them in common with others, become my property without the assignation or consent of anybody, the labour that was mine, removing them out of that common state they were in, hath fixed my property in them.

Locke, II Civil Government, V, 26-27

18 the measure of property Nature well set, by the extent of men's labour and the conveniency of life. No man's labour could subdue or appropriate all, nor could his enjoyment consume more than a small part; so that it was impossible for any man, this way, to entrench upon the right of another or acquire to himself a property to the prejudice of his neighbour, who would still have room for as good and as large a possession (after the other had taken out his) as before it was appropriated. Which measure did confine every man's possession to a very

moderate proportion, and such as he might appropriate to himself without injury to anybody in the first ages of the world, when men were more in danger to be lost, by wandering from their company, in the then vast wilderness of the earth than to be straitened for want of room to plant in.

Locke, II Civil Government, V, 35

- 19 This I dare boldly affirm , . . every man should have as much as he could make use of, would hold still in the world, without straitening anybody, since there is land enough in the world to suffice double the inhabitants, had not the invention of money, and the tacit agreement of men to put a value on it, introduced (by consent) larger possessions and a right to them.

Locke, II Civil Government, V, 36

- 20 Since gold and silver, being little useful to the life of man, in proportion to food, raiment, and carriage, has its value only from the consent of men—whereof labour yet makes in great part the measure—it is plain that the consent of men have agreed to a disproportionate and unequal possession of the earth—I mean out of the bounds of society and compact; for in governments the laws regulate it; they having, by consent, found out and agreed in a way how a man may, rightfully and without injury possess more than he himself can make use of by receiving gold and silver, which may continue long in a man's possession without decaying for the overplus, and agreeing those metals should have a value.

Locke, II Civil Government, V, 50

21 The difference of rank, birth, and condition established in monarchical governments is frequently attended with distinctions in the nature of property; and the laws relating to the constitution of this government may augment the number of these distinctions. Hence, among us goods are divided into real estates, purchases, dowries, paraphernalia, paternal and maternal inheritances; movables of different kinds; estates held in fee-simple, or in tail; acquired by descent or conveyance; allodial, or held by soccage; ground rents; or annuities. Each sort of goods is subject to particular rules, which must be complied with in the disposal of them. These things must needs diminish the simplicity of the law.

Montesquieu, Spirit of Laws, VI, I

22 Whenever the public good happens to be the matter in question, it is not for the advantage of the public to deprive an individual of his property, or even to retrench the least part of it by a law, or a political regulation.

Montesquieu, Spirit of Laws, XXVI, 15

23 During the ardour of new enthusiasms, when every principle is inflamed into extravagance, the community of goods has frequently been attempted; and nothing but experience of its inconveniences, from the returning or disguised selfishness of men, could make the imprudent fanatics adopt anew the ideas of justice and of separate property. So true is it that this virtue derives its existence entirely from its necessary use to the intercourse and social state of mankind.

Hume, Concerning Principles of Morals, III

24 Few enjoyments are given us from the open and liberal hand of nature; but by art, labour, and industry, we can extract them in great abundance. Hence the ideas of property become necessary in all civil society.

Hume, Concerning Principles of Morals, 111

25 The first man who, having enclosed a piece of ground, bethought himself of saying This is mine, and found people simple enough to believe him, was the real founder of civil society.

Rousseau, Origin of Inequality, II

26 The cultivation of the earth necessarily brought about its distribution; and property, once recognised, gave rise to the first rules of justice; for, to secure each man his own, it had to be possible for each to have something. Besides, as men began to look forward to the future, and all had something to lose, every one had reason to apprehend that reprisals would follow any injury he might do to another. This origin is so much the more natural, as it is impossible to conceive how property can come from anything but manual labour: for what else can a man add to things which he does not originally create, so as to make them his own property? It is the husbandman's labour alone that, giving him a title to the produce of the ground he has tilled, gives him a claim also to the land itself, at least till harvest, and so, from year to year, a constant possession which is easily transformed into property.

Rousseau, Origin of Inequality, II

27 Insatiable ambition, the thirst of raising their respective fortunes, not so much from real want as from the desire to surpass others, inspired all men with a vile propensity to injure one another, and with a secret jealousy, which is the more dangerous, as it puts on the mask of benevolence, to carry its point with greater security. In a word, there arose rivalry and competition on the one hand, and conflicting interests on the other, together with a secret desire on both of profiting at the expense of others. All these evils were the first effects of property, and the inseparable attendants of growing inequality.

Rousseau, Origin of Inequality, II

28 In general, to establish the right of the first occupier over a plot of ground, the following conditions are necessary; first, The land must not yet be inhabited; secondly, a man must occupy only the amount he needs for his subsistence; and, in the third place, possession must be taken, not by an empty ceremony, but by labour and cultivation, the only sign of proprietorship that should be respected by others, in default of a legal title.

Rousseau, Social Contract, I, 9

29 One of the chief characteristics of the golden age, of the age in which neither care nor danger had intruded on mankind, is the community of possessions. Strife and fraud were totally excluded, and every turbulent passion was stilled by plenty and equality. Such were indeed happy times; but such times can return no more. Community of possession must include spontaneity of production; for what is obtained by labour will be of right the property of him by whose labour it is gained.

Johnson, Rambler No. 131

30 There seems (said he [Johnson],) to be in authours a stronger right of property than that by occupancy; a metaphysical right, a right, as it were, of creation, which should from its nature be perpetual; but the consent of nations is against it, and indeed reason and the interests of learning are against it; for were it to be perpetual, no book, however useful, could be universally diffused amongst mankind, should the proprietor take it into his head to restrain its circulation.

Boswell, Life of Johnson (May 8, 1773)

31 The general stock of any country or society is the same with that of all its inhabitants or members, and therefore naturally divides itself into the same three portions, each of which has a distinct function or office.

The first is that portion which is reserved for immediate consumption, and of which the characteristic is, that it affords no revenue or profit. It consists in the stock of food, clothes, household furniture, etc., which have been purchased by their proper consumers, but which are not yet entirely consumed. The whole stock of mere dwelling-houses too, subsisting at any one time in the country', make a part of this first portion. the stock that is laid out in a house, if it is to be the dwelling-house of the proprietor, ceases from that moment to serve in the function of a capital, or to afford any revenue to its owner. A dwelling-house, as such, contributes nothing to the revenue of its inhabitant; and though it is, no doubt, extremely useful to him, it is as his clothes and household furniture are useful to him, which, however, makes a part of his expense, and not of his revenue. If it is to be let to a

tenant for rent, as the house itself can produce nothing, the tenant must always pay the rent out of some other revenue which he derives either from labour, or stock, or land. Though a house, therefore, may yield a revenue to its proprietor, and thereby serve in the function of a capital to him, it cannot yield any to the public, nor serve in the function of a capital to it, and the revenue of the whole body of the people can never be in the smallest degree increased by it. Clothes, and household furniture, in the same manner, sometimes yield a revenue, and thereby serve in the function of a capital to particular persons. In countries where masquerades are common, it is a trade to let out masquerade dresses for a night. Upholsterers frequently let furniture by the month or by the year. Undertakers let the furniture of funerals by the day and by the week. Many people let furnished houses, and get a rent, not only for the use of the house, but for that of the furniture. The revenue, however, which is derived from such things must always be ultimately drawn from some other source of revenue. Of all parts of the stock, either of an individual, or of a society, reserved for immediate consumption, what is laid out in houses is most slowly consumed, A stock of clothes may last several years: a stock of furniture half a century or a century: but a stock of houses, well built and properly taken care of, may last many centuries. Though the period of their total consumption, however, is more distant, they are still as really a stock reserved for immediate consumption as either clothes or household furniture.

The second of the three portions into which the general stock of the society divides itself, is the fixed capital, of which the characteristic is, that it affords a

revenue or profit without circulating or changing masters. It consists chiefly of the four following articles:

First, of all useful machines and instruments of trade which facilitate and abridge labour:

Secondly, of all those profitable buildings which are the means of procuring a revenue, not only to their proprietor who lets them for a rent, but to the person who possesses them and pays that rent for them; such as shops, warehouses, workhouses, farmhouses, with all their necessary buildings; stables, granaries, etc. These are very different from mere dwelling houses. They are a sort of instruments of trade, and may be considered in the same light:

Thirdly, of the improvements of land, of what has been profitably laid out in clearing, draining, enclosing, manuring, and reducing it into the condition most proper for tillage and culture. An improved farm may very justly be regarded in the same light as those useful machines which facilitate and abridge labour, and by means of which an equal circulating capital can afford a much greater revenue to its employer. An improved farm is equally advantageous and more durable than any of those machines, frequently requiring no other repairs than the most profitable application of the farmer's capital employed in cultivating it:

Fourthly, of the acquired and useful abilities of all the inhabitants or members of the society. The acquisition of such talents, by the maintenance of the acquirer during his education, study, or apprenticeship, always costs a real expense, which is a capital fixed and realized, as it were, in his person. Those talents, as they make a part of his fortune, so do they likewise of that of the society to which he belongs. The improved dexterity of a workman

may be considered in the same light as a machine or instrument of trade which facilitates and abridges labour, and which, though it costs a certain expense, repays that expense with a profit.

The third and last of the three portions into which the general stock of the society naturally divides itself, is the circulating capital; of which the characteristic is, that it affords a revenue only by circulating or changing masters.

Adam Smith, Wealth of Nations, II, I

32 Upon equal, or nearly equal profits, most men will choose to employ their capitals rather in the improvement and cultivation of land than either in manufactures or in foreign trade. The man who employs his capital in land has it more under his view and command, and his fortune is much less liable to accidents than that of the trader, who is obliged frequently to commit it, not only to the winds and the waves, but to the more uncertain elements of human folly and injustice, by giving great credits in distant countries to men with whose character and situation he can seldom be thoroughly acquainted. The capital of the landlord, on the contrary, which is fixed in the improvement of his land, seems to be as well secured as the nature of human affairs can admit of. The beauty of the country besides, the pleasures of a country life, the tranquillity of mind which it promises, and wherever the injustice of human laws does not disturb it, the independency which it really affords, have charms that more or less attract everybody; and as to cultivate the ground was the original destination of man, so in every stage of his existence he seems to retain a predilection for this primitive employment.

Adam Smith, Wealth of Nations, III, 1

33 Men who have no property can injure one another only in their persons or reputations. But when one man kills, wounds, beats, or defames another, though he to whom the injury is done suffers, he who does it receives no benefit. It is otherwise with the injuries to property. The benefit of the person who does the injury is often equal to the loss of him who suffers it.

Adam Smith, Wealth of Nations, V, 1

34 Wherever there is great property there is great inequality. For one very rich man there must be at least five hundred poor, and the affluence of the few supposes the indigence of the many. The affluence of the rich excites the indignation of the poor, who are often both driven by want, and prompted by envy, to invade his possessions. It is only under the shelter of the civil magistrate that the owner of that valuable property, which is acquired by the labour of many years, or perhaps of many successive generations, can sleep a single night in security. He is at all times surrounded by unknown enemies, whom, though he never provoked, he can never appease, and from whose injustice he can be protected only by the powerful arm of the civil magistrate continually held up to chastise it. The acquisition of valuable and extensive property, therefore, necessarily requires the establishment of civil government. Where there is no property, or at least none that exceeds the value of two or three days' labour, civil government is not so necessary.

Adam Smith, Wealth of Nations, V, 1

35 The community of goods, which had so agreeably amused the imagination of Plato, and which subsisted in some degree among the austere sect of the Essenians, was adopted for a short time in the primitive church. The fervour of the first proselytes prompted them to sell those worldly possessions which they despised, to lay the price of them at the feet of the apostles, and to content themselves with receiving an equal share out of the general distribution. The progress of the Christian religion relaxed, and gradually abolished, this generous institution, which, in hands less pure than those of the apostles, would too soon have been corrupted and abused by the returning selfishness of human nature; and the converts who embraced the new religion were permitted to retain the possession of their patrimony, to receive legacies and inheritances, and to increase their separate property by all the lawful means of trade and industry.

Gibbon, Decline and Fall of the Roman Empire, XV

36 The original right of property can only be justified by the accident or merit of prior occupancy; and on this foundation it is wisely established by the philosophy of the civilians. The savage who hollow's a tree, inserts a sharp stone into a wooden handle, or applies a string to an elastic branch, becomes in a state of nature the just proprietor of the canoe, the bow, or the hatchet. The materials were common to all; the new form, the produce of his time and simple industry, belongs solely to himself. His hungry brethren cannot, without a sense of their own injustice, extort from the hunter the game of the forest overtaken or slain by his personal strength and dexterity. If his provident care preserves and multiplies the tame

animals, whose nature is tractable to the arts of education, he acquires a perpetual title to the use and service of their numerous progeny, which derives its existence from him alone. If he encloses and cultivates a field for their sustenance and his own, a barren waste is converted into a fertile soil; the seed, the manure, the labour, create a new value, and the rewards of harvest are painfully earned by the fatigues of the revolving year. In the successive states of society, the hunter, the shepherd, the husbandman, may defend their possessions by two reasons which forcibly appeal to the feelings of the human mind: that whatever they enjoy is the fruit of their own industry; and that every man who envies their felicity may purchase similar acquisitions by the exercise of similar diligence. Such, in truth, may be the freedom and plenty of a small colony cast on a fruitful island. But the colony multiplies, while the space still continues the same; the common rights, the equal inheritance of mankind, are engrossed by the bold and crafty; each field and forest is circumscribed by the landmarks of a jealous master; and it is the peculiar praise of the Roman jurisprudence that it asserts the claim of the first occupant to the wild animals of the earth, the air, and the waters. In the progress from primitive equity to final injustice, the steps are silent, the shades are almost imperceptible, and the absolute monopoly is guarded by positive laws and artificial reason. The active, insatiate principle of self-love can alone supply the arts of life and the wages of industry: and as soon as civil government and exclusive property have been introduced, they become necessary to the existence of the human race.

Gibbon. Decline and Fall of the Roman Empire, XLIV

37 The personal title of the first proprietor must be determined by his death; but the possession, without any appearance of change, is peaceably continued in his children, the associates of his toil, and the partners of his wealth. This natural inheritance has been protected by the legislators of every climate and age, and the father is encouraged to persevere in slow and distant improvements, by the tender hope that a long posterity will enjoy the fruits of his labour. The *principle* of hereditary succession is universal; but the *order* has been variously established by convenience or caprice, by the spirit of national institutions, or by some partial example which was originally decided by fraud or violence.

Gibbon, Decline and Fall of the Roman Empire, XLIV

38 I can only call a corporeal thing or an object in space "mine," when, *even although not in physical possession of it*, I am able to assert that I am in possession of it in another real nonphysical sense. Thus, I am not entitled to call an apple *mine* merely because I hold it in my hand or possess it physically; but only when I am entitled to say, "I possess it, although I have laid it out of my hand, and wherever it may lie," In like manner, I am not entitled to say of the ground, on which I may have laid myself down, that therefore it is *mine*; but only when I can rightly assert that it still remains in my possession, although I may have left the spot. For anyone who, in the former appearances of empirical possession, might wrench the apple out of my hand, or drag me away from my resting-place, would, indeed, injure me in respect of the *inner* "mine" of freedom, but not in respect of the external

"mine," unless I could assert That I was in the possession of the object, even when not actually holding it physically. And if I could not do this, neither could I call the apple or the spot mine.

Kant, Science of Right, 4

39 If, by word or deed, I declare my will that some external thing shall be mine, I make a declaration that every other person is obliged to abstain from the use of this object of my exercise of will; and this imposes an obligation which no one would be under, without such a juridical act on my part. But the assumption of this act at the same time involves the admission that I am obliged reciprocally to observe a similar abstention towards every other in respect of what is externally theirs; for the obligation in question arises from a universal rule regulating the external juridical relations. Hence I am not obliged to let alone what another person declares to be externally his, unless every other person likewise secures me by a guarantee that he will act in relation to what is mine, upon the same principle. This guarantee of reciprocal and mutual abstention from what belongs to others does not require a special juridical act for its establishment, but is already involved in the conception of an external obligation of right, on account of the universality and consequently the reciprocity of the obligatoriness arising from a universal Rule. Now a single will, in relation to an external and consequently contingent possession, cannot serve as a compulsory law for all, because that would be to do violence to the freedom which is in accordance with universal laws. Therefore it is only a will that binds every one, and as such a common, collective, and authoritative will, that can furnish a guarantee of security to all. But

the state of men under a universal, external, and public legislation, conjoined with authority and power, is called the civil state. There can therefore be an external mine and thine only in the civil state of society.

Kant, Science of Right, 8

40 the principle of external acquisition . . . , may be expressed thus: "Whatever I bring under my power according to the law of external freedom, of which as an object of my free activity of will I have the capability of making use according to the postulate of the practical reason, and which I will to become mine in conformity with the idea of a possible united common will, *is mine*."

Kant, Science of Right, 10

41 It is ... only by positive transference or conveyance, that a personal right can be acquired; and this is only possible by means of a common will, through which objects come into the power of one or other, so that as one renounces a particular thing which he holds under the common right, the same object when accepted by another, in consequence of a positive act of will, becomes his. Such transference of the *property* of one to another is termed its *alienation*. The act of the united wills of two persons, by which what belonged to one passes to the other, constitutes *contract*.

Kant, Science of Right, 18

42 Property is nothing but a basis of expectation; the expectation of deriving certain advantages from a thing which we are said to possess, in consequence of the relation in which we stand towards it.

There is no image, no painting, no visible trait, which can express the relation that constitutes property. It is not material, it is metaphysical; it is a mere conception of the mind.

Bentham, Theory of Legislation, Principles of the Civil Code, I, 8

- 43 Property and law are born together, and die together. Before laws were made there was no property; take away laws, and property ceases.

Bentham, Theory of Legislation, Principles of the Civil Code, I, 8

- 44 This term [Property], in its particular application, means "that dominion which one man claims and exercises over the external things of the world, in exclusion of every other individual."

In its larger and juster meaning, it embraces everything to which a man may attach a value and have a right; and which leaves to everyone else the like advantage.

In the former sense, a man's land, or merchandise, or money is called his property.

In the latter sense, a man has property in his opinions and the free communication of them.

He has a property of peculiar value in his religious opinions, and in the profession and practice dictated by them.

He has property very dear to him in the safety and liberty of his person.

He has an equal property in the free use of his faculties and free choice of the objects on which to

employ them.

In a word, as a man is said to have a right to his property, he may be equally said to have a property in his rights.

Where an excess of power prevails, property of no sort is duly respected. No man is safe in his opinions, his person, his faculties, or his possessions.

Where there is an excess of liberty, the effect is the same, though from an opposite cause.

Government is instituted to protect property of every sort, as well that which lies in the various rights of individuals, as that which the term particularly expresses. This being the end of government, that alone is *just* government which *impartially* secures to every man whatever is his *own*.

Madison, Property

- 45 A person has as his substantive end the right of putting his will into any and every thing and thereby making it his, because it has no such end in itself and derives its destiny and soul from his will. This is the absolute right of appropriation which man has over all "things".

Hegel, Philosophy of Right, 44

- 46 The principle that a thing belongs to the person who happens to be the first in time to take it into his possession is immediately self-explanatory and superfluous, because a second person cannot take into his possession what is already the property of another.

Hegel, Philosophy of Right, 50

47 My merely partial or temporary use of a thing, like my partial or temporary possession of it (a possession which itself is simply the partial or temporary possibility of using it) is therefore to be distinguished from ownership of the thing itself. If the whole and entire use of a thing were mine, while the abstract ownership was supposed to be someone else's, then the thing as mine would be penetrated through and through by my will, and at the same time there would remain in the thing something impenetrable by me, namely the will, the empty will, of another. As a positive will, I would be at one and the same time objective and not objective to myself in the thing—an absolute contradiction. Ownership therefore is in essence free and complete.

Hegel, Philosophy of Right, 62

48 Single products of my particular physical and mental skill and of my power to act I can alienate to someone else and I can give him the use of abilities for a restricted period, because, on the strength of this restriction, my abilities acquire an external relation to the totality and universality of my being. By alienating the whole of my time, as crystallized in my work, and everything I produced, I would be making into another's property the substance of my being, my universal activity and actuality, my personality.

Hegel, Philosophy of Right, 67

49 When a child begins to move in the midst of the objects that surround him, he is instinctively led to appropriate to himself everything that he can lay his hands upon; he has no notion of the property of others; but as he

gradually learns the value of things and begins to perceive that he may in his turn be despoiled, he becomes more circumspect, and he ends by respecting those rights in others which he wishes to have respected in himself. The principle which the child derives from the possession of his toys is taught to the man by the objects which he may call his own. In America, the most democratic of nations, those complaints against property in general, which are so frequent in Europe, are never heard, because in America there are no paupers. As everyone has property of his own to defend, everyone recognizes the principle upon which he holds it.

Tocqueville, Democracy in America, I, 14

50 If we attentively consider each of the classes of which society is composed, it is easy to see that the passions created by property are keenest and most tenacious among the middle classes. The poor often care but little for what they possess, because they suffer much more from the want of what they have not than they enjoy the little they have. The rich have many other passions besides that of riches to satisfy; and, besides, the long and arduous enjoyment of a great fortune sometimes makes them in the end insensible to its charms. But the men who have a competency, alike removed from opulence and from penury, attach an enormous value to their possessions. As they are still almost within the reach of poverty, they see its privations near at hand and dread them; between poverty and themselves there is nothing but a scanty fortune, upon which they immediately fix their apprehensions and their hopes. Every day increases the interest they take in it, by the constant cares which it occasions; and they are the more attached to it by their

continual exertions to increase the amount. The notion of surrendering the smallest part of it is insupportable to them, and they consider its total loss as the worst of misfortunes.

Now, these eager and apprehensive men of small property constitute the class that is constantly increased by the equality of conditions. Hence in democratic communities the majority of the people do not clearly see what they have to gain by a revolution, but they continually and in a thousand ways feel that they might lose by one.

Tocqueville, Democracy in America, Vol. II, III, 21

51 In a revolution the owners of personal property have more to fear than all others; for, on the one hand, their property is often easy to seize, and, on the other, it may totally disappear at any moment—a subject of alarm to which the owners of real property are less exposed, since, although they may lose the income of their estates, they may hope to preserve the land itself through the greatest vicissitudes. Hence the former are much more alarmed at the symptoms of revolutionary commotion than the latter. Thus nations are less disposed to make revolutions in proportion as personal property is augmented and distributed among them and as the number of those possessing it is increased.

Tocqueville, Democracy in America, Vol. II, in, 21

52 In no country in the world is the love of property more active and more anxious than in the United States; nowhere does the majority display less inclination for

those principles which threaten to alter, in whatever manner, the laws of property.

Tocqueville, Democracy in America, Vol, II, III, 21

53 I laid my bones to, and drudged for the good I possess; it was not got by fraud, nor by luck, but by work, and you must show me a warrant like these stubborn facts in your own fidelity and labor, before I suffer you, on the faith of a few fine words, to ride into my estate, and claim to scatter it as your own.

Emerson, The Conservative

54 Whilst the rights of all as persons are equal, in virtue of their access to reason, their rights in property are very unequal. One man owns his clothes, and another owns a county.

Emerson, Politics

55 There is an instinctive sense, however obscure and yet inarticulate, that the whole constitution of property, on its present tenures, is injurious, and its influence on persons deteriorating and degrading; that truly the only interest for the consideration of the State is persons; that property will always follow persons; that the highest end of government is the culture of men; and that if men can be educated, the institutions will share their improvement and the moral sentiment will write the law of the land.

Emerson, Politics

56 The law may in a mad freak say that all shall have power except the owners of property; they shall have no vote.

Nevertheless, by a higher law, the property will, year after year, write every statute that respects property.

Emerson, Politics

57 Property... has been well compared to snow— "if it fail level to-day, it will be blown into drifts to-morrow."

Emerson, Nature, V

58 In a free and just commonwealth, property rushes from the idle and imbecile to the industrious, brave and persevering.

Emerson, Wealth

59 The highest law gives a thing to him who can use it.

Thoreau, Journal (Nov. 9, 1852)

60 It is plain that commodities cannot go to market and make exchanges of their own account. We must, therefore, have recourse to their guardians, who are also their owners. Commodities are things, and, therefore, without power of resistance against man. If they are wanting in docility he can use force; in other words, he can take possession of them. In order that these objects may enter into relation with each other as commodities, their guardians must place themselves in relation to one another, as persons whose will resides in those objects, and must behave in such a way that each does not appropriate the commodity of the other, and part with his own, except by means of an act done by mutual consent. They must, therefore, mutually recognize in each other the rights of private proprietors.

Marx, Capital, Vol. I, I, 2

61 At first the rights of property seemed to us to be based on a man's own labour. At least, some such assumption was necessary since only commodity owners with equal rights confronted each other, and the sole means by which a man could become possessed of the commodities of others was by alienating his own commodities; and these could be replaced by labour alone. Now, however, property turns out to be the right, on the part of the capitalist, to appropriate the unpaid labour of others or its product, and to be the impossibility, on the part of the labourer, of appropriating his own product. The separation of property from labour has become the necessary consequence of a law that apparently originated in their identity.

Marx, Capital, Vol. I, VII, 24

62 Through however long a series of periodical reproduction and previous accumulation it may have passed, the capital functioning today retains its primal virginity. So long as the laws of exchange are followed in each act of exchange considered individually, the mode of appropriation may be revolutionized without touching property rights derived from commodity production. The same right was valid at a time when the product belonged to the producer, who could only enrich himself by his own labour, exchanging equivalent for equivalent, and is still valid in the capitalist period in which the social wealth becomes to an ever increasing degree the property of those who are in a position to appropriate over and over again the unpaid labour of others.

Marx, Capital, Vol. I, VII, 24

63 The development of capitalist production makes it constantly necessary to keep increasing the amount of the capital laid out in a given industrial undertaking, and competition makes the immanent laws of capitalist production to be felt by each individual capitalist as external coercive laws. It compels him to keep constantly extending his capital, in order to preserve it; but extend it he cannot, except by means of progressive accumulation.

So far, therefore, as his actions are a mere function of capital—endowed as capital is, in his person, with consciousness and a will—his own private consumption is a robbery perpetrated on accumulation, just as in book-keeping by double entry the private expenditure of the capitalist is placed on the debtor side of his account against his capital. To accumulate is to conquer the world of social wealth, to increase the mass of human beings exploited by him, and thus to extend both the direct and the indirect way of the capitalist.

But original sin is at work everywhere. As capitalist production, accumulation, and wealth, become developed, the capitalist ceases to be the mere incarnation of capital. He has a fellow-feeling for his own Adam, and his education gradually enables him to smile at the rage for asceticism, as a mere prejudice of the old-fashioned miser. While the capitalist of the classical type brands individual consumption as a sin against his function, and as "abstinence" from accumulating, the modernized capitalist is capable of upon accumulation as "abstinence" from pleasure.

Marx, Capital, Vol. I, VII, 24

64 The ... thing that interests us is the secret discovered in the new world by the political economy of the old world, and proclaimed on the housetops: that the capitalist mode of production and accumulation, and therefore capitalist private property, have for their fundamental condition the annihilation of self-earned private property'; in other words, the expropriation of the labourer.

Marx, Capital, Vol. I, VIII, 33

65 The distinguishing feature of Communism is not the abolition of property generally, but the abolition of bourgeois property. But modern bourgeois private property is the final and most complete expression of the system of producing and appropriating products that is based on class antagonisms, on the exploitation of the many by the few.

Marx and Engels, Communist Manifesto, II

66 Does wage labour create any property for the labourer? Not a bit. It creates capital, i.e., that kind of property which exploits wage labour and which cannot increase except upon condition of begetting a new supply of wage labour for fresh exploitation. Property in its present form is based on the antagonism of capital and wage labour.

Marx and Engels, Communist Manifesto, II

67 When ... capital is converted into common property, into the property of all members of society, personal property is not thereby transformed into social property. It is only the social character of the property that is changed. It loses its class character.

Marx and Engels, Communist Manifesto, II

68 You are horrified at our intending to do away until private property. But in your existing society private property is already done away with for nine-tenths of the population; its existence for the few is solely due to its non-existence in the hands of those nine-tenths. You reproach us, therefore, with intending to do away with a form of property, the necessary condition for whose existence is the non-existence of any property for the immense majority of society.

In a word, you reproach us with intending to do away with your property. Precisely so; that is just what we intend.

From the moment when labour can no longer be converted into capital, money, or rent—into a social power capable of being monopolised—i.e., from the moment when individual property can no longer be transformed into bourgeois property, into capital; from that moment, you say, individuality vanishes.

You must, therefore, confess that by "individual" you mean no other person than the bourgeois, than the middle class owner of property. This person must, indeed, be swept out of the way and made impossible.

Communism deprives no man of the power to appropriate the products of society; all that it does is to deprive him of the power to subjugate the labour of others by means of such appropriation.

Marx and Engels, Communist Manifesto, II

69 It has been objected that upon the abolition of private property all work will cease and universal laziness will overtake us.

According to this, bourgeois society ought long ago to have gone to the dogs through sheer idleness; for those of its members who work acquire nothing, and those who acquire anything do not work.

Marx and Engels, Communist Manifesto, II

70 If . . . the choice were to be made between Communism with all its chances, and the present state of society with all its sufferings and injustices; if the institution of private property necessarily carried with it as a consequence, that the produce of labour should be apportioned as we now see it, almost in an inverse ratio to the labour—the largest portions to those who have never worked at all, the next largest to those whose work is almost nominal, and so in a descending scale, the remuneration dwindling as the work grows harder and more disagreeable, until the most fatiguing and exhausting bodily labour cannot count with certainty on being able to earn even the necessities of life; if this or Communism were the alternative, all the difficulties, great or small, of Communism would be but as dust in the balance. But to make the comparison applicable, we must compare Communism at its best, with the regime of individual property not as it is, but as it might be made. The principle of private property has never yet had a fair trial in any country.

Mill, Principles of Political Economy, Bk, II, I, 3

71 The laws of property have never yet conformed to the principles on which the justification of private property rests. They have made property of things which never ought to be property, and absolute property where only a

qualified property ought to exist. They have not held the balance fairly between human beings, but have heaped impediments upon some, to give advantage to others; they have purposely fostered inequalities, and prevented all from starting fair in the race. That all should indeed start on perfectly equal terms, is inconsistent with any law of private property: but if as much pains as has been taken to aggravate the inequality of chances arising from the natural working of the principle, had been taken to temper that inequality by every means not subversive of the principle itself; if the tendency of legislation had been to favour the diffusion, instead of the concentration of wealth—to encourage the subdivision of the large masses, instead of striving to keep them together; the principle of individual property would have been found to have no necessary connexion with the physical and social evils which almost all Socialist writers assume to be inseparable from it.

Mill, Principles of Political Economy, Bk. II, I, 3

- 72 Nothing is implied in property but the right of each to his (or her) own faculties, to what he can produce by them, and to whatever he can get for them in a fair market; together with his right to give this to any other person if he chooses, and the right of that other to receive and enjoy it.

Mill, Principles of Political Economy, Bk. II, II, 3

- 73 When the "sacredness of property" is talked of, it should always be remembered, that any such sacredness does not belong in the same degree to landed property. No man made the land. It is the original inheritance of the

whole species. Its appropriation is wholly a question of general expediency. When private property in land is not expedient, it is unjust- It is no hardship to any one, to be excluded from what others have produced: they were not bound to produce it for his use, and he loses nothing by not sharing in what otherwise would not have existed at all. But it is some hardship to be born into the world and to find all nature's gifts previously engrossed, and no place left for the new-comer. To reconcile people to this, after they have once admitted into their minds the idea that any moral rights belong to them as human beings, it will always be necessary to convince them that the exclusive appropriation is good for mankind on the whole, themselves included. But this is what no sane human being could be persuaded of.

Mill, Principles of Political Economy, Bk. II, 11, 6

74 To me it seems almost an axiom that property in land should be interpreted strictly, and that the balance in all cases of doubt should incline against the proprietor. The reverse is the case with property in moveables, and in all things the product of labour: over these, the owner's power both of use and of exclusion should be absolute, except where positive evil to others would result from it: but in the case of land, no exclusive right should be permitted in any individual, which cannot be shown to be productive of positive good. To be allowed any exclusive right at all, over a portion of the common inheritance, while there are others who have no portion, is already a privilege. No quantity of moveable goods which a person can acquire by his labour, prevents others from acquiring the like by the same means; but from the very nature of the case, whoever owns land, keeps others out of the

enjoyment of it. The privilege, or monopoly, is only defensible as a necessary evil; it becomes an injustice when carried to any point to which the compensating good does not follow it.

Mill, Principles of Political Economy, Bk. II, II, 6

75 There is no divine right of property. Nothing is so completely a man's own that he may do what he likes with it. His very limbs, intimately as they belong to him, he may not use to the injury of society, much less his knife, his stick, or "anything that is his." Not only may he not use them malevolently: he must not use them even carelessly and indifferently except at his own peril if harm ensue. Exceptionally dangerous substances, such as poisons and explosives, he can only obtain and possess under exceptionally stringent conditions.

Nevertheless, as it is obviously well that each man should labor without fear of being deprived of the use and enjoyment of the product of their labor—as in the nature of things he would not labor at all without some such incentive, it may be said that a man has a natural right to own the product of his labor. The term natural right, if old fashioned, is as much to the purpose as any modern expression of the same meaning. But this natural right of the individual is still subject to all the limitations imposed by the rights of his fellows.

Shaw, Freedom and the Sink

76 There are three practicable ways of providing for the production of commodities and exchange of services in civilized communities. These three are—

*PRIVATE PROPERTY,
COLLECTIVISM,
COMMUNISM*

The first is a non-socialist system. The other two are socialist.

In all modern States the three are in operation side by side, but as Collectivism and Communism are purposely restricted to those departments of industry in which the Private Property system is practically impossible, the predominating and characteristic method of organizing the industry of the world is at present non-socialist.

As the method of producing and distributing wealth has irresistibly influenced custom, morality, the forms of law and religion, and indeed all social institutions, being only less fundamental than human nature itself, it is important that the three systems should be known and understood as working arrangements, quite apart from their abstract principles. Whoever masters the subject in this way will perceive that discussions as to whether Private Property in the abstract is better or worse than Socialism are as idle as discussions as to whether black in the abstract is better or worse than white. The applicability of either system depends on the nature of the commodity or service to which it is proposed to apply it, on the industrial and moral development of the community—in short, on diverse factors which vary in all possible manners. There is no inconsistency of principle in our present arrangement of Private Enterprise in the medical profession, Collectivism in our postal service, and Communism in our London bridges. If the student, as the outcome of his study, concludes that it would be well to effect such an extension of Collectivism as would make it the predominant and characteristic system in this

country, then he may conveniently call himself a Socialist. But there is no universally applicable abstract principle of Socialism or Individualism by subscribing to which men can claim to be Socialists or Individualists without troubling themselves about economic science or practical industry.

Shaw, Capital and Wages

11.2 Wealth and Poverty

This by far the richest section in this chapter, not only in the range and variety of the passage quoted, but also in the number and character of the authors who contribute to the discussion of its basic themes. As contrasted with the subjects covered in those sections to follow that tend to be more narrowly economic, the discussion of wealth and poverty involves broad psychological, moral, and political considerations as well as strictly economic ones.

Those who ask whether any limit can be placed on the production and acquisition of wealth by an individual or a society find themselves confronted with the apparently limitless reach of human desires. But, acknowledging this fact, they also recognize the harmful effects, both upon the individual and upon society, of setting no limits to the accumulation of wealth. Almost without exception, the great moralists from Plato, Aristotle, and the Roman Stoics to Aquinas, Locke, and Rousseau condemn the insatiable lust for external possessions, but they differ on the question of the indispensability of a modicum of wealth as one of the conditions of earthly happiness. They are also concerned with the obligations of the individual, in justice and in

charity, to avoid injuring others by impoverishing them or by letting their poverty go unrelieved. On these subjects, the Old and the New Testament, the poets, the novelists, and the historians also speak with intensity and eloquence.

On the other hand, poverty itself is praised as well as deplored, not involuntary destitution, but the voluntary poverty that is a virtuous way of life. We find diverse expressions of this point of view in the ancient Stoics, in the Sacred Scriptures, in the Christian theologians, and in modern writers like Thoreau, who voices a disdain for wealth-seeking and a dislike for the burden of possessions that are current in certain sections of our society today. Balanced against this, increasingly as we approach modern times, is the antiphonal voice that denounces the injustice of a vast inequality in the distribution of wealth, and that calls not merely for the relief of the poor but also for the elimination of poverty itself.

To all of this, the economists add their proposals of measures for increasing the wealth of nations and their arguments for and against the control of its production and distribution.

For the consideration of wealth and poverty in relation to the pursuit of happiness and the conduct of life, the reader is referred to Section 9.8 on Happiness, and also Section 9.10 on Virtue and Vice. Treatment of the religious aspect of wealth and poverty will be found in Section 20.8 on Worship and Service, and also in Section 20.13 on Sin and Temptation. The problem of involuntary poverty or destitution raises questions more fully discussed in Section 12.2 on Justice and Injustice and in Section 13.3 on Equality.

■ ■ ■

- 1 And the Lord sent Nathan unto David. And he came unto him, and said unto him, There were two in one city; the one rich, and the other Poor.

The rich man had exceeding many flocks and herds:

But the poor man had nothing, save one little ewe lamb, which he had bought and nourished up: and it grew up together with him, and with his children; it did eat of his own meat, and drank of his own cup, and lay in his bosom, and was unto him as a daughter.

And there came a traveller unto the rich man, and he spared to take of his own flock and of his own herd, to dress for the wayfaring man that was come unto him; but took the poor man's lamb, and dressed it for the man that was come to him.

And David's anger was greatly kindled against the man; and he said to Nathan, As the Lord liveth, the man that hath done this thing shall surely die;

And he shall restore the lamb fourfold, because he did this thing, and because he had no pity.

And Nathan said to David, Thou art the man.

// Samuel 12:1-7

- 2 The rich man's wealth is his strong city; the destruction of the poor is their poverty.

Proverbs 10:15

- 3 The poor is hated even of his own neighbour: but the rich hath many friends.

Proverbs 14:20

4 He that maketh haste to be rich shall not be innocent.

Proverbs 28:20

5 The sleep of a labouring man is sweet, whether he eat little or much; but the abundance of the rich will not suffer him to sleep.

Ecclesiastes 5:12

6 *Swineherd*. Shyness is no asset to a beggar.

Homer, Odyssey, XVII, 352

7 Who bids his gather'd substance gradual grow
Shall see not livid hunger's face of woe.
No bosom pang attends the home-laid store,
But fraught with loss the food without thy door.
'Tis good to take from hoards, and pain to need
What is far from thee:—give the precept heed.

Hesiod, Works and Days

8 *Solon*. He who possesses great store of riches is no nearer happiness than he who has what suffices for his daily needs, unless it so hap that luck attend upon him, and so he continue in the enjoyment of all his good things to the end of life.

Herodotus, History, I, 32

9 'Tis said that gifts tempt even gods; and o'er men's minds gold holds more potent sway than countless words.

Euripides, Medea, 964

10 *Cyclops*. Money's the wise man's religion, little man.
The rest is mere bluff and purple patches.

Euripides, Cyclops, 316

- 11 *Farmer*. In times like these, when wishes soar but power fails,
I contemplate the steady comfort found in gold:
gold you can spend on guests; gold you can pay the doctor
when you get sick. But a small crumb of gold will buy
our daily bread, and when a man has eaten that,
you cannot really tell the rich and poor apart.

Euripides, Electra, 426

- 12 *Pericles*. The real disgrace of poverty [lies] not in owning
to the fact but in declining the struggle against it.

Thucydides, Peloponnesian War, II, 40

- 13 *Socrates*. I do nothing but go about persuading you all,
old and young alike, not to take thought for your persons
or your properties, but first and chiefly to care about the
greatest improvement of the soul.

Plato, Apology, 30A

- 14 *Socrates*. May I ask, Cephalus, whether your fortune was
for the most part inherited or acquired by you?

Cephalus. Acquired! Socrates; do you want to know
how much I acquired? In the art of making money I have
been midway between my father and grandfather: for my
grandfather, whose name I bear, doubled and trebled the
value of his patrimony, that which he inherited being
much what I possess now; but my father Lysanias
reduced the property below what it is at present: and I
shall be satisfied if I leave to these my sons not less but a
little more than I received.

That was why I asked you the question, I replied, because I see that you are indifferent about money, which is a characteristic rather of those who have inherited their fortunes than of those who have acquired them; the makers of fortunes have a second love of money as a creation of their own, resembling the affection of authors for their own poems, or of parents for their children, besides that natural love of it for the sake of use and profit which is common to them and all men. And hence they are very bad company, for they can talk about nothing but the praises of wealth.

That is true, he said.

Yes, that is very true, but may I ask another question? —What do you consider to be the greatest blessing which you have reaped from your wealth?

One, he said, of which I could not expect easily to convince others. For let me tell you, Socrates, that when a man thinks himself to be near death, fears and cares enter into his mind which he never had before; the tales of a world below and the punishment which is exacted there of deeds done here were once a laughing matter to him, but now he is tormented with the thought that they may be true: either from the weakness of age, or because he is now drawing nearer to that other place, he has a clearer view of these things; suspicions and alarms crowd thickly upon him, and he begins to reflect and consider what wrongs he has done to others. And when he finds that the sum of his transgressions is great he will many a time like a child start up in his sleep for fear, and he is filled with dark forebodings. But to him who is conscious of no sin, sweet hope ... is the kind nurse of his age.... The great blessing of riches, I do not say to every man, but to a good man, is, that he has had no occasion to deceive or

to defraud others, either intentionally or unintentionally; and when he departs to the world below he is not in any apprehension about offerings due to the gods or debts which he owes to men. Now to this peace of mind the possession of wealth greatly contributes; and therefore I say, that, setting one thing against another, of the many advantages which wealth has to give, to a man of sense this is in my opinion the greatest.

Plato, Republic, I, 330A

15 *Socrates.* And now, Adeimantus, is our State matured and perfected?

Adeimantus. I think so.

Where, then, is justice, and where is injustice, and in what part of the State did they spring up?

Probably in the dealings of these citizens with one another. I cannot imagine that they are more likely to be found any where else.

I dare say that you are right in your suggestion, I said; we had better think the matter out, and not shrink from the enquiry.

Let us then consider, first of all, what will be their way of life, now that we have thus established them. Will they not produce corn, and wine, and clothes, and shoes, and build houses for themselves? And when they are housed, they will work, in summer, commonly, stripped and barefoot, but in winter substantially clothed and shod. They will feed on barley-meal and flour of wheat, baking and kneading them, making noble cakes and loaves; these they will serve up on a mat of reeds or on clean leaves, themselves reclining the while upon beds strewn with yew or myrtle. And they and their children will feast, drinking of the wine which they have made, wearing

garlands on their heads, and hymning the praises of the gods, in happy converse with one another. And they will take care that their families do not exceed their means; having an eye to poverty or war.

But, said Glaucon, interposing, you have not given them a relish to their meal.

True, I replied, I had forgotten; of course they must have a relish—salt, and olives, and cheese, and they will boil roots and herbs such as country people prepare; for a dessert we shall give them figs, and peas, and beans; and they will roast myrtle-berries and acorns at the fire, drinking in moderation. And with such a diet they may be expected to live in peace and health to a good old age, and bequeath a similar life to their children after them.

Yes, Socrates, he said, and if you were providing for a city of pigs, how else would you feed the beasts?

But what would you have, Glaucon? I replied.

Why, he said, you should give them the ordinary conveniences of life. People who are to be comfortable are accustomed to lie on sofas, and dine off tables, and they should have sauces and sweets in the modern style.

Yes, I said, now I understand: the question which you would have me consider is, not only how a State, but how a luxurious State is created; and possibly there is no harm in this, for in such a State we shall be more likely to see how justice and injustice originate. In my opinion the true and healthy constitution of the State is the one which I have described.

Plato, Republic, 11, 371B

16 *Socrates.* There seem to be two causes of the deterioration of the arts.

Adeimantus. What are they?

Wealth, I said, and poverty.

How do they act?

The process is as follows: When a potter becomes rich, will he, think you, any longer take the same pains with his art?

Certainly not.

He will grow more and more indolent and careless?

Very true.

And the result will be that he becomes a worse potter?

Yes; he greatly deteriorates.

But, on the other hand, if he has no money, and cannot provide himself with tools or instruments, he will not work equally well himself, nor will he teach his sons or apprentices to work equally well.

Certainly not.

Then, under the influence either of poverty or of wealth, workmen and their work are equally liable to degenerate?

This is evident.

Here, then, is a discovery of new evils, I said, against which the guardians will have to watch, or they will creep into the city unobserved.

What evils?

Wealth, I said, and poverty; the one is the parent of luxury' and indolence, and the other of meanness and viciousness, and both of discontent.

Plato, Republic, IV, 421B

- 17 The citizen must indeed be happy and good, and the legislator will seek to make him so; but very rich and very good at the same time he cannot be, not, at least, in the sense in which the many speak of riches. For they mean by "the rich" the few who have the most valuable

possessions, although the owner of them may quite well be a rogue. And if this is true, I can never assent to the doctrine that the rich man will be happy—he must be good as well as rich. And good in a high degree, and rich in a high degree at the same time, he cannot be.

Plato, Laws, V, 742B

- 18 The magnificent man is like an artist; for he can see what is fitting and spend large sums tastefully. ... Now the expenses of the magnificent man are large and fitting. Such, therefore, are also his results; for thus there will be a great expenditure and one that is fitting to its result. Therefore the result should be worthy of the expense, and the expense should be worthy of the result, or should even exceed it. And the magnificent man will spend such sums for honour's sake; for this is common to the virtues. And further he will do so gladly and lavishly; for nice calculation is a niggardly thing. And he will consider how the result can be made most beautiful and most becoming rather than for how much it can be produced and how it can be produced most cheaply. It is necessary, then, that the magnificent man be also liberal. For the liberal man also will spend what he ought and as he ought; and it is in these matters that the greatness implied in the name of the magnificent man—his bigness, as it were—is manifested, since liberality is concerned with these matters; and at an equal expense he will produce a more magnificent work of art. For a possession and a work of art have not the same excellence. The most valuable possession is that which is worth most, for example gold, but the most valuable work of art is that which is great and beautiful (for the contemplation of such a work inspires admiration, and so does

magnificence); and a work has an excellence— viz. magnificence—which involves magnitude. Magnificence is an attribute of expenditures of the kind which we call honourable, for example those connected with the gods— votive offerings, buildings, and sacrifices—and similarly with any form of religious worship, and all those that are proper objects of public-spirited ambition, as when people think they ought to equip a chorus or a trireme, or entertain the city, in a brilliant way. But in all cases... we have regard to the agent as well and ask who he is and what means he has; for the expenditure should be worthy of his means, and suit not only the result but also the producer. Hence a poor man cannot be magnificent, since he has not the means with which to spend large sums fittingly; and he who tries is a fool, since he spends beyond what can be expected of him and what is proper, but it is right expenditure that is virtuous.

Aristotle, Ethics, 1122a34

- 19 Such ... is the magnificent man; the man who goes to excess and is vulgar exceeds ... by spending beyond what is right. For on small objects of expenditure he spends much and displays a tasteless showiness; e.g. he gives a club dinner on the scale of a wedding banquet, and when he provides the chorus for a comedy he brings them on to stage in purple, as they do at Megara. And all such things he will do not for honour's sake but to show off his wealth, and because he thinks he is admired for these things, and where he ought to spend much he spends little and where little, much. The niggardly man on the other hand will fall short in everything, and after spending the greatest sums will spoil the beauty of the result for a trifle, and whatever he is doing he will

hesitate and consider how he may spend least, and lament even that, and think he is doing everything on a bigger scale than he ought.

Aristotle, Ethics, 1123a18

- 20 Happiness... must be some form of contemplation. But, being a man, one will also need external prosperity; for our nature is not self-sufficient for the purpose of contemplation, but our body also must be healthy and must have food and other attention. Still, we must not think that the man who is to be happy will need many things or great things ... for self-sufficiency and action do not involve excess, and we can do noble acts without ruling earth and sea.

Aristotle, Ethics, 1178b32

- 21 Some persons are led to believe that ... the whole idea of their lives is that they ought either to increase their money without limit, or at any rate not to lose it. The origin of this disposition in men is that they are intent upon living only, and not upon living well; and, as their desires are unlimited, they also desire that the means of gratifying them should be without limit.

Aristotle, Politics, 1257b38

- 22 It would be well also to collect the scattered stories of the ways in which individuals have succeeded in amassing a fortune; for all this is useful to persons who value the art of getting wealth. There is the anecdote of Thales the Milesian and his financial device, which involves a principle of universal application, but is attributed to him on account of his reputation for wisdom. He was

reproached for his poverty, which was supposed to show that philosophy was of no use. According to the story, he knew by his skill in the stars while it was yet winter that there would be a great harvest of olives in the coming year; so, having a little money, he gave deposits for the use of all the olive-presses in Chios and Miletus, which he hired at a low price because no one bid against him. When the harvest-time came, and many were wanted all at once and of a sudden, he let them out at any rate which he pleased, and made a quantity of money.

Thus he showed the world that philosophers can easily be rich if they like, but that their ambition IS of another sort. He is supposed to have given a striking proof of his wisdom, but, as I was saying, his device for getting wealth is of universal application, and is nothing but the creation of a monopoly. It is an art often practised by cities when they are in want of money; they make a monopoly of provisions.

There was a man of Sicily, who, having money deposited with him, bought up all the iron from the iron mines; afterwards, when the merchants from their various markets came to buy, he was the only seller, and without much increasing the price he gained 200 per cent. Which when Dionysius heard, he told him that he might take away his money, but that he must not remain at Syracuse, for he thought that the man had discovered a way of making money which was injurious to his own interests. He made the same discovery as Thales; they both contrived to create a monopoly for themselves. And statesmen as well ought to know these things; for a state is often as much in want of money and of such devices for obtaining it as a household, or even more so; hence some public men devote themselves entirely to finance.

Aristotle, Politics, 1259a3

23 The true friend of the people should see that they be not too poor, for extreme poverty lowers the character of the democracy; measures therefore should be taken which will give them lasting prosperity; and as this is equally the interest of all classes, the proceeds of the public revenues should be accumulated and distributed among its poor, if possible, in such quantities as may enable them to purchase a little farm, or, at any rate, make a beginning in trade or husbandry. And if this benevolence cannot be extended to all, money should be distributed in turn according to tribes or other divisions, and in the meantime the rich should pay the fee for the attendance of the poor at the necessary assemblies; and should in return be excused from useless public services.

Aristotle, Politics, 1320a33

24 The constituents of wealth are; plenty of coined money and territory; the ownership of numerous, large, and beautiful estates; also the ownership of numerous and beautiful implements, live stock, and slaves. All these kinds of property are our own, are secure, gentlemanly, and useful. The useful kinds are those that are productive, the gentlemanly kinds are those that provide enjoyment. By 'productive' I mean those from which we get our income; by 'enjoyable', those from which we get nothing worth mentioning except the use of them. the criterion of 'security' is the ownership of property in such places and under such conditions that the use of it is in our power; and it is 'our own' if it is in our own power to dispose of it or keep it. By 'disposing of it' I mean giving it away or selling it. Wealth as a whole consists in using

things rather than in owning them; it is really the activity—that is, the use—of property that constitutes wealth.

Aristotle, Rhetoric, 1361a12

25 What is long established seems akin to what exists by nature; and therefore we feel more indignation at those possessing a given good if they have as a matter of fact only just got it and the prosperity it brings with it. The newly rich give more offence than those whose wealth is of long standing and inherited. The same is true of those who have office or power, plenty of friends, a fine family, etc. We feel the same when these advantages of theirs secure them others. For here again, the newly rich give us more offence by obtaining office through their riches than do those whose wealth is of long standing; and so in all other cases. The reason is that what the latter have is felt to be really their own, but what the others have is not; what appears to have been always what it is is regarded as real, and so the possessions of the newly rich do not seem to be really their own.

Aristotle, Rhetoric, 1367a16

26 Wealthy men are insolent and arrogant, their possession of wealth affects their understanding; they feel as if they had every good thing that exists; wealth becomes a sort of standard of value for everything else, and therefore they imagine there is nothing it cannot buy . . . In a word, the type of character produced by wealth is that of a prosperous fool.

Aristotle, Rhetoric, 1390b33

27 Beware of an inordinate desire for wealth. Nothing is so revealing of narrowness and littleness of soul than love for money. Conversely, there is nothing more honorable or noble than indifference to money, if one doesn't base any; or than genuine altruism and well-doing if one does have it.

Cicero, De Officiis, I, 20

26 Without doubt, the highest privilege of wealth is the opportunity it affords for doing good, without giving up one's fortune.

Cicero, De Officiis, II, 18

29 O happy, if he knew his happy state,
The swain, who, free from business and debate,
Receives his easy food from nature's hand,
And just returns of cultivated land!
No palace, with a lofty gate, he wants,
To admit the tides of early visitants,
With eager eyes devouring, as they pass,
The breathing figures of Corinthian brass.
No statues threaten, from high pedestals;
No Persian arras hides his homely walls,
With antic vests, which, through their shady fold,
Betray the streaks of ill-dissembled gold:
He boasts no wool, whose native white is dyed
With purple poison of Assyrian pride;
No costly drugs of Araby defile,
With foreign scents, the sweetness of his oil:
But easy quiet, a secure retreat,
A harmless life that knows not how to cheat.
With home-bred plenty, the rich owner bless,

And rural pleasures crown his happiness.
Unvexed with quarrels, undisturbed with noise.
The country king his peaceful realm enjoys—
Cool grots, and living lakes, the flowery pride
Of meads, and streams that through the valley glide.
And shady groves that easy sleep invite,
And after toilsome days, a soft repose at night.
Wild beasts of nature in his woods abound;
And youth, of labour patient, plough the ground,
Inured to hardship, and to homely fare.
Nor venerable age is wanting there,
In great examples to the youthful train;
Nor are the gods adored with rites profane.

Virgil, Georgics, II

- 30 *Aeneas*. O sacred hunger of pernicious gold! Virgil,
Georgics What bands of faith can impious lucre hold?

Virgil, Aeneid, III

- 31 Neither sultry summer, nor winter, fire, ocean, sword, can
drive you from gain. You surmount every obstacle, that no
other man may be richer than yourself.

Horace, Satires, I, 1

- 32 Do you wonder that no one tenders you the affection
which you do not merit, since you prefer your money to
everything else?

Horace, Satires, I, 1

- 33 As riches grow, care follows, and a thirst
For more and more.

Horace, Odes, III, 16

34 Poverty's inglorious load

Bids man unheard-of things endure and try;
While Virtue's solitary road
He deems too steep, and cowardly passes by.

Horace, Odes, III, 24

35 It is not the man who has too little who is poor, but the one who hankers after more. What difference does it make how much there is laid away in a man's safe or in his barns, how many head of stock he grazes or how much capital he puts out at interest, if he is always after what is another's and only counts what he has yet to get, never what he has already. You ask what is the proper limit to a person's wealth? First, having what is essential, and second, having what is enough.

Seneca, Letters to Lucilius, 2

36 Imagine that you've piled up all that a veritable host of rich men ever possessed, that fortune has carried you far beyond the bounds of wealth so far as any private individual is concerned, building you a roof of gold and clothing you in royal purple, conducting you to such a height of opulence and luxury that you hide the earth with marble floors—putting you in a position not merely to own, but to walk all over treasures—throw in sculptures, paintings, all that has been produced at tremendous pains by all the arts to satisfy extravagance: all these things will only induce in you a craving for even bigger things. Natural desires are limited; those which spring from false opinions have nowhere to stop, for falsity has no point of termination.

Seneca, Letters to Lucilius, 16

37 For no one is worthy of a god unless he has paid no heed to riches. I am not, mind you, against your possessing them, but I want to ensure that you possess them without tremors; and this you will only achieve in one way, by convincing yourself that you can live a happy life even without them, and by always regarding them as being on the point of vanishing.

Seneca, Letters to Lucilius, 18

38 No man can serve two masters; for either he will hate the one, and love the other; or else he will hold to the one, and despise the other. Ye cannot serve God and mammon.

Therefore I say unto you, Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on. Is not the life more than meat, and the body than raiment?

Behold the fowls of the air: for they sow not, neither do they reap, nor gather into barns; yci your heavenly Father feedeth them. Are yc not much better than they?

Which of you by taking thought can add one cubit unto his stature?

And why take ye thought for raiment? Consider the lilies of the field, how they grow; they toil not, neither do they spin:

And yet I say unto you, That even Solomon in all his glory was not arrayed like one of these.

Wherefore, if God so clothe the grass of the field, which to day is, and to morrow is cast into the oven, shall he not much more clothe you, O ye of little faith?

Therefore take no thought, saying, What shall we eat? or, What shall we drink? or, Wherewithal shall we be clothed?

(For after all these things do the Gentiles seek:) for your heavenly Father knoweth that ye have need of all these things.

But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you.

Take therefore no thought for the morrow; for the morrow shall take thought for the things of itself. Sufficient unto the day is the evil thereof.

Matthew 6:24—34

39 Jesus said unto him, If thou wilt be perfect, go and sell that thou hast, and give to the poor, and thou shalt have treasure in heaven: and come and follow me.

But when the young man heard that saying, he went away sorrowful; for he had great possessions.

Then said Jesus unto his disciples, Verily I say unto you, That a rich man shall hardly enter into the kingdom of heaven.

And again I say unto you, It is easier for a camel to go through the eye of a needle, than for a rich man to enter into the kingdom of God.

When his disciples heard it, they were exceedingly amazed, saying, Who then can be saved?

Matthew 19:21-25

40 It is easier for a camel to go through the eye of a needle, than for a rich man to enter into the kingdom of God.

Mark 10:25

41 And he looked up, and saw the rich men casting their gifts into the treasury.

And he saw also a certain poor widow casting in thither two mites.

And he said, Of a truth I say unto you, that this poor widow hath cast in more than they all:

For all these have of their abundance cast in unto the offerings of God: but she of her penury hath cast in all the living that she had.

Luke 21:1-4

42 The poor always ye have with you; but me ye have not always.

John 12:8

43 There was now no more means of purchasing foreign goods and small wares [in Sparta]; merchants sent no shiploads into Laconian ports; no rhetoric-master, no itinerant fortune-teller, no harlot-monger, or gold or silversmith, engraver, or jeweller, set foot in a country which had no money; so that luxury, deprived little by little of that which fed and fomented it, wasted to nothing and died away of itself. For the rich had no advantage here over the poor, as their wealth and abundance had no road to come abroad by but were shut up at home doing nothing.

Plutarch, Lycurgus

44 There are many to be seen that make a good or a bad use of riches, but it is difficult, comparatively, to meet with one who supports poverty in a noble spirit; those only should be ashamed of it who incurred it against their wills.

Plutarch, Aristides

45 Poverty is dishonourable not in itself, but when it is a proof of laziness, intemperance, luxury, and carelessness; whereas in a person that is temperate, industrious, just, and valiant, and who uses all his virtues for the public good, it shows a great and lofty mind. For he has no time for great matters who concerns himself with petty ones; nor can he relieve many needs of others, who himself has many needs of his own. What most of all enables a man to serve the public is not wealth, but content and independence; which, requiring no superfluity at home, distracts not the mind from the common good.

Plutarch, Aristides and Marcus Cato Compared

46 If you're poor, you're a joke, on each and every occasion.
What a laugh, if your cloak is dirty or torn, if your toga
Seems a little bit soiled, if your shoe has a crack in the
leather,
Or if more than one patch attests to more than one
mending!
Poverty's greatest curse, much worse than the fact of
it, is that
It makes men objects of mirth, ridiculed, humbled,
embarrassed.
'Out of the front-row seats!' they cry when you're out
of money.
Yield your place to the sons of some pimp, the spawn
of some cathouse.
Some slick auctioneer's brat, or the louts some trainer
has fathered
Or the well-groomed boys whose sire is a gladiator.
Such is the law of place, decreed by the nitwitted
Otho;

All the best seats are reserved for the classes who have the most money.

Who can marry a girl if he has less money than she does?

What poor man is an heir, or can hope to be? Which of them ever

Runs for a political job, even the meanest and lowest?

Long before now, all poor Roman descendants of Romans

Ought to have marched out of town in one determined migration.

Men do not easily rise whose poverty hinders their merit.

Juvenal, Satire III

47 Receive wealth or prosperity without arrogance; and be ready to let it go.

Marcus Aurelius, Meditations, VIII, 33

48 Let us suppose a case of two men; for each individual man, like one letter in a language, is as it were the element of a city or kingdom, however far-spreading in its occupation of the earth. Of these two men let us suppose that one is poor, or rather of middling circumstances; the other very rich. But the rich man is anxious with fears, pining with discontent, burning with covetousness, never secure, always uneasy, panting from the perpetual strife of his enemies, adding to his patrimony indeed by these miseries to an immense degree, and by these additions also heaping up most bitter cares. But that other man of moderate wealth is contented with a small and compact estate, most dear to his own family, enjoying the

sweetest peace with his kindred neighbours and friends, in piety religious, benignant in mind, healthy in body, in life frugal, in manners chaste, in conscience secure. I know not whether anyone can be such a fool, that he dare hesitate which to prefer.

Augustine, City of God, IV, 3

- 49 It is not earthly riches which make us or our sons happy; for they must either be lost by us in our lifetime, or be possessed when we are dead, by whom we know not, or perhaps by whom we would not.

Augustine, City of God, V, 18

- 50 It is impossible for man's happiness to consist in wealth. For wealth is two-fold... natural and artificial. Natural wealth is that which serves man as a remedy for his natural wants, such as food, drink, clothing, conveyances, dwellings, and things of this kind, while artificial wealth is that which is not a direct help to nature, as money, but is invented by the art of man for the convenience of exchange and as a measure of things saleable.

Now it is evident that man's happiness cannot consist in natural wealth. For wealth of this kind is sought as a support of human nature; consequently it cannot be man's last end, but rather is ordered to man as to its end. Therefore in the order of nature, all such things are below man, and made for him....

And as to artificial wealth, it is not sought save for the sake of natural wealth, since man would not seek it except that by its means he procures for himself the necessities of life. Consequently much less does it have the character of the last end. Therefore it is impossible for

happiness, which is the last end of man, to consist in wealth.

Aquinas, Summa Theologica, I-II, 2, 1

- 51 Covetousness, as denoting a special sin, is called the root of all sins, in likeness to the root of a tree, in furnishing sustenance to the whole tree. For we see that by riches man acquires the means of committing any sin whatever, and of sating his desire for any sin whatever, since money helps man to obtain all manner of temporal goods.... So that in this sense desire for riches is the root of all sins.

Aquinas, Summa Theologica, I-II, 84, 1

- 52 The privation of one's possessions, or poverty, is a means of perfection, since by doing away with riches we remove certain obstacles to charity; and these are chiefly three. The first is the cares which riches bring with them.... The second is the love of riches, which increases with the possession of wealth. . . . The third is vainglory or elation which results from riches.

Aquinas, Summa Theologica, II-II, 188, 7

- 53 So long as external things are sought or possessed only in a small quantity, and as much as is required for a mere livelihood, such care does not hinder one much, and consequently is not inconsistent with the perfection of Christian life... Yet the possession of much wealth increases the weight of care, which is a great distraction to man's mind and hinders him from giving himself wholly to God's service.

Aquinas, Summa Theologica, II-II, 188, 7

54 And when you me reproach for poverty,
The High God, in Whom we believe, say I,
In voluntary poverty lived His life.
And surely every man, or maid, or wife
May understand that Jesus, Heaven's King,
Would not have chosen vileness of living.
Glad poverty's an honest thing, that's plain,
Which Seneca and other clerks maintain.
Whoso will be content with poverty,
I hold him rich, though not a shirt has he.
And he that covets much is a poor wight,
For he would gain what's all beyond his might
But he that has not, nor desires to have,
Is rich, although you hold him but a knave.

True poverty, it sings right naturally;
Juvenal gaily says of poverty:
'The poor man, when he walks along the way,
Before the robbers he may sing and play.
Poverty's odious good, and, as I guess,
It is a stimulant to busyness;
A great improver, too, of sapience
In him that takes it all with due patience.
Poverty's this, though it seem misery—
Its quality may none dispute, say I.
Poverty often; when a man is low,
Makes him his God and even himself to know.
And poverty's an eye-glass, seems to me,
Through which a man his loyal friends may see.
Since you've received no injury from me,
Then why reproach me for my poverty.'

Chaucer, Canterbury Tales: Wife of Bath's Tale

55 The matter, form, effect, and goal of riches are worthless.
That's why our Lord God generally gives riches to crude
asses to whom he doesn't give anything else.

Luther, Table Talk, 5559

56 *Pantagruel*. Those of a mean spirit and shallow capacity
have not the skill to spend much in a short time.

Rabelais, Gargantua and Pantagruel, III, 2

57 *The Bastard*. Why rail I on this Commodity?
But for because he hath not woo'd me yet:
Not that I have the power to clutch my hand,
When his fair angels would salute my palm;
But for my hand, as unattempted yet,
Like a poor beggar, raileth on the rich.
Well, whiles I am a beggar, I will rail
And say there is no sin but to be rich;
And being rich, my virtue then shall be
To say there is no vice but beggary.
Since kings break faith upon Commodity,
Gain, be my lord, for I will worship thee.

Shakespeare, King John, II, i, 587

58 *Hamlet*. Why should the poor be flatter'd?
No, let the candied tongue lick absurd pomp,
And crook the pregnant hinges of the knee
Where thrift may follow fawning.

Shakespeare, Hamlet, III, ii, 65

59 *Anne Page*. O, what a world of vile ill-favour'd faults
Looks handsome in three hundred pounds a-year!

Shakespeare, Merry Wives of Windsor, III, iv, 32

60 *Iago*. Poor and content is rich and rich enough,
But riches fineless is as poor as winter
To him that ever fears he shall be poor.

Shakespeare, Othello, III, iii, 172

61 *Goneril*. Hear me, my lord.

What need you five and twenty, ten, or five,
To follow in a house where twice so many
Have a command to tend you?

Regan. What need one?

Lear. O, reason not the need. Our basest beggars
are in the poorest thing superfluous.

Allow not nature more than nature needs,
Man's life's as cheap as beast's. Thou art a lady;
If only to go warm were gorgeous.

Why, nature needs not what thou gorgeous wear'st,
Which scarcely keeps thee warm.

Shakespeare, Lear, II, iv, 263

62 *Kent*. Good my lord, enter here.

Lear. Prithee, go in thyself; seek thine own ease.
This tempest will not give me leave to ponder
On things would hurt me more. But I'll go in.
[*To the Fool*] In, boy; go first. You houseless poverty—
Nay, get thee in. I'll pray, and then I'll sleep.
Fool goes in.

Poor naked wretches, wheresoe'er you are,
That bide the pelting of this pitiless storm,
How shall your houseless heads and unfed sides,
Your loop'd and window'd raggedness, defend you
From reasons such as these? O, I have ta'en
Too little care of this! Take physic, pomp;

Expose thyself to feel what wretches feel,
That thou mayst shake the superflux to them,
And show the heavens more just.

Shakespeare, Lear, III, iv, 22

63 *Timon*. [To the gold] O thou sweet king-killer, and dear divorce
'Twixt natural son and sire! thou bright defiler
Of Hymen's purest bed! thou valiant Mars!
Thou ever young, fresh, loved, and delicate wooer.
Whose blush doth thaw the consecrated snow
That lies in Dian's lap! thou visible god,
That solder'st close impossibilities,
And makest them kiss! that speak'st with every tongue,
To every purpose! O thou touch of hearts!
Think, thy slave man rebels, and by thy virtue
Set them into confounding odds, that beasts
May have the world in empire!

Shakespeare, Timon of Athens, IV, iii, 382

64 Riches are for spending, and spending for honour and good actions.

Bacon, Of Expense

65 I cannot call Riches better than the baggage of virtue. The Roman word is better, impedimenta. For as the baggage is to an army, so is riches to virtue. It cannot be spared nor left behind, but it hindereth the march; yea and the care of it sometimes loscth or disturbeth the victory.

Bacon, Of Riches

66 The ways to enrich are many, and most of them foul.

Bacon, Of Riches

67 He that resteth upon gains certain, shall hardly grow to great riches: and he that puts all upon adventures, doth oftentimes break and come to poverty: it is good therefore to guard adventures with certainties that may uphold losses.

Bacon, Of Riches

68 Believe not much them that seem to despise riches; for they despise them that despair of them; and none worse, when they come to them.

Bacon, Of Riches

69 Be not penny-wise; riches have wings, and sometimes they fly away of themselves, sometimes they must be set flying to bring in more.

Bacon, Of Riches

70 *Mammon*, the least erected Spirit that fell
From heav'n, for ev'n in heav'n his looks and thoughts
Were always downward bent, admiring more
The riches of Heav'ns pavement, trod'n Gold,
Then aught divine or holy else enjoy'd
In vision beatific: by him first
Men also, and by his suggestion taught,
Ransack'd the Center, and with impious hands
Rifl'd the bowels of their mother Earth
For Treasures better hid. Soon had his crew
Op'nd into the Hill a spacious wound
And dig'd out ribs of Gold. Let none admire

That riches grow in Hell; that soyle may best
Deserve the pretious bane.

Milton, Paradise Lost, I, 679

- 71 *Satan*. Great acts require great means of enterprise,
Thou art unknown, unfriended, low of birth,
A Carpenter thy Father known, thy self
Bred up in poverty and streights at home;
Lost in a Desert here and hunger-bit;
Which way or from what hope dost thou aspire
To greatness? when Authority deriv'st.
What Followers, what Retinue canst thou gain,
Or at thy heels the dizzy Multitude,
Longer then thou canst feed them on thy cost?
Money brings Honour, Friends, Conquest, and Realms;
What rais'd *Antipater* the *Edomite*,
And his Son *Herod* plac'd on *Juda's* Throne;
(Thy throne) but gold that got him puissant friends?
Therefore, if at great things thou wouldst arrive,
Get Riches first, get Wealth, and Treasure heap,
Not difficult, if thou hearken to me,
Riches are mine. Fortune is in my hand;
They whom I favour thrive in wealth amain,
While Virtue, Valour, Wisdom sit in want.
To whom thus Jesus patiently reply'd;
Yet Wealth without these three is impotent.
To gain dominion or to keep it gain'd.

Milton, Paradise Regained, II, 412

- 72 To assist every one who is needy far surpasses the
strength or profit of a private person, for the wealth of a
private person is altogether insufficient to supply such

wants. Besides, the power of any one man is too limited for him to be able to unite every one with himself in friendship. The care, therefore, of the poor is incumbent on the whole of society and concerns only the general profit.

Spinoza, Ethics, IV, Appendix XVII

73 My master was yet wholly at a loss to understand what motives could incite this race of lawyers to perplex, disquiet, and weary themselves by engaging in a confederacy of injustice, merely for the sake of injuring their fellow-animals; neither could he comprehend what I meant in saying they did it for hire. Whereupon I was at much pains to describe to him the use of *money*, the materials it was made of, and the value of the metals; that when a Yahoo had got a great store of this precious substance, he was able to purchase whatever he had a mind to; the finest cloathing, the noblest houses, great tracts of land, the most costly meats and drinks; and have his choice of the most beautiful females. Therefore since *money* alone, was able to perform all these feats, our Yahoos thought, they could never have enough of it to spend or to save, as they found themselves inclined from their natural bent either to profusion or avarice. That, the rich man enjoyed the fruit of the poor man's labour, and the latter were a thousand to one in proportion to the former. That, the bulk of our people was forced to live miserably, by labouring every day for small wages, to make a few live plentifully.

Swift, Gulliver's Travels, IV, 6

74 In all well-instituted Commonwealths, Care has been taken to limit Men's Possessions; which is done for many Reasons, and among the rest, for one which perhaps is not often considered, That when Bounds are set to Men's Desires, after they have acquired as much as the Laws will permit them, their private Interest is at an End, and they have nothing to do but to take care of the Publick.

Swift, Thoughts on Various Subjects

75 I have already computed the charge of nursing a beggar's child (in which list I reckon all cottagers, labourers, and four-fifths of the farmers) to be about two shillings per annum, rags included.

Swift, A Modest Proposal

76 Some persons of a desponding spirit are in great concern about that vast number of poor people who are aged, diseased, or maimed, and I have been desired to employ my thoughts on what course may be taken to ease the nation of so grievous an encumbrance. But I am not in the least pain upon that matter, because it is very well known that they are every day dying, and rotting, by cold and famine, and filth, and vermin, as fast as can be reasonably expected. And as to the younger labourers, they are now in almost as hopeful a condition. They cannot get work, and consequently pine away for want of nourishment to a degree that if at any time they are accidentally hired to common labour, they have not strength to perform it, and thus the country and themselves are happily delivered from the evils to come.

Swift, A Modest Proposal

77 The wisest man is the likeliest to possess all worldly blessings in an eminent degree; for as that moderation which wisdom prescribes is the surest way to useful wealth, so can it alone qualify us to taste many pleasures. The wise man gratifies every appetite and every passion, while the fool sacrifices ail the rest to pall and satiate one.

Fielding, Tom Jones, VI, 3

78 Matters are so constituted that "nothing out of nothing" is not a truer maxim in physics than in politics; and every man who is greatly destitute of money is on that account entirely excluded from all means of acquiring it.

Fielding, Tom Jones, VII, 2

79 What is the poor pride arising from a magnificent house, a numerous equipage, a splendid table, and from all the other advantages or appearances of fortune, compared to the warm, solid content, the swelling satisfaction, the thrilling transports, and the exulting triumphs, which a good mind enjoys, in the contemplation of a generous, virtuous, noble, benevolent action?

Fielding, Tom Jones, XII, 10

80 Where young ladies bring great fortunes themselves, they have some right to insist on spending what is their own; and on that account I have heard the gentlemen say, a man has sometimes a better bargain with a poor wife, than with a rich one.

Fielding, Tom Jones, XIII, 6

81 There are two sorts of poor; those who are rendered such by the severity of government: these are, indeed, incapable of performing almost any great action, because their indigence is a consequence of their slavery. Others are poor, only because they either despise or know not the conveniences of life; and these are capable of accomplishing great things, because their poverty constitutes a part of their liberty.

Montesquieu, Spirit of Laws, XX, 3

82 When the nation is poor, private poverty springs from the general calamity, and is, if I may so express myself, the general calamity itself. All the hospitals in the world cannot cure this private poverty; on the contrary, the spirit of indolence, which it constantly inspires, increases the general, and consequently the private, misery.

Montesquieu, Spirit of Laws, XXIII, 29

83 Let not Ambition mock their useful toil,
Their homely joys, and destiny obscure;
Nor Grandeur hear with a disdainful smile,
The short and simple annals of the poor.

The boast of heraldry, the pomp of pow'r,
And all that beauty, all that wealth e'er gave,
Awaits alike th' inevitable hour.
The paths of glory lead but to the grave.

Nor you, ye Proud, impute to These the fault,
If Mem'ry o'er their Tomb no Trophies raise,
Where thro' the long-drawn isle and fretted vault
The pealing anthem swells the note of praise.

Can storied urn or animated bust
Back to its mansion call the fleeting breath?
Can Honour's voice provoke the silent dust.
Or Flatt'ry sooth the dull cold ear of Death?

Perhaps in this neglected spot is laid
Some heart once pregnant with celestial fire;
Hands, that the rod of empire might have sway'd,
Or wak'd to extasy the living lyre.

But Knowledge to their eyes her ample page
Rich with the spoils of time did ne'er unroll;
Chill Penury repress'd their noble rage.
And froze the genial current of the soul.

Full many a gem of purest ray serene,
The dark unfathom'd caves of ocean bear:
Full many a flower is born to blush unseen,
And waste its sweetness on the desert air.

Some village-Hampden, that with dauntless breast
The little Tyrant of his fields withstood;
Some mute inglorious Milton here may rest,
Some Cromwell guiltless of his country's blood.

Th' applause of list'ning senates to command,
The threats of pain and ruin to despise,
To scatter plenty o'er a smiling land,
And read their hist'ry in a nation's eyes,

Their lot forbad: nor circumscrib'd alone
Their growing virtues, but their crimes confin'd;

Forbad to wade through slaughter to a throne,
And shut the gates of mercy on mankind,

The struggling pangs of conscious truth to hide.
To quench the blushes of ingenuous shame,
Or heap the shrine of Luxury and Pride
With incense kindled at the Muse's flame.

Far from the madding crowd's ignoble strife.
Their sober wishes never learn'd to stray;
Along the cool sequester'd vale of life
They kept the noiseless tenor of their way.

Gray, Elegy Written in a Country Church-Yard

84 If by luxury one understands everything that is beyond the necessary, luxury is a natural consequence of the progress of the human species; and to reason consequently every enemy of luxury should believe with Rousseau that the state of happiness and virtue for man is that, not of the savage, but of the orang-outang. One feels that it would be absurd to regard as an evil the comforts which all men would enjoy: also, does one not generally give the name of luxury to the superfluities which only a small number of individuals can enjoy. In this sense, luxury is a necessary consequence of property, without which no society can subsist, and of a great inequality between fortunes which is the consequence, not of the right of property, but of bad laws. Moralists should address their sermons to the legislators, and not to individuals, because it is in the order of possible things that a virtuous and enlightened man may have the power to make reasonable laws, and it is not in human nature for all the rich men of a country to

renounce through virtue procuring for themselves for money the enjoyments of pleasure or vanity.

Voltaire, Philosophical Dictionary: Luxury

85 Before the invention of signs to represent riches, wealth could hardly consist in anything but lands and cattle, the only real possessions men can have. But, when inheritances so increased in number and extent as to occupy the whole of the land, and to border on one another, one man could aggrandise himself only at the expense of another; at the same time the supernumeraries, who had been too weak or too indolent to make such acquisitions, and had grown poor without sustaining any loss, because, while they saw everything change around them, they remained still the same, were obliged to receive their subsistence, or steal it, from the rich; and this soon bred, according to their different characters, dominion and slavery, or violence and rapine. The wealthy, on their part, had no sooner begun to taste the pleasure of command, than they disdained all others, and, using their old slaves to acquire new, thought of nothing but subduing and enslaving their neighbours; like ravenous wolves, which, having once tasted human flesh, despise every other food and thenceforth seek only men to devour.

Thus, as the most powerful or the most miserable considered their might or misery as a kind of right to the possessions of others, equivalent, in their opinion, to that of property, the destruction of equality was attended by the most terrible disorders. Usurpations by the rich, robbery by the poor, and the unbridled passions of both, suppressed the cries of natural compassion and the still

feeble voice of justice, and filled men with avarice, ambition and vice.

Rousseau, Origin of Inequality, II

86 Destitute of valid reasons to justify and sufficient strength to defend himself, able to crush individuals with ease, but easily crushed himself by a troop of bandits, one against all, and incapable, on account of mutual jealousy, of joining with his equals against numerous enemies united by the common hope of plunder, the rich man, thus urged by necessity, conceived at length the profoundest plan that ever entered the mind of man: this was to employ in his favour the forces of those who attacked him, to make allies of his adversaries, to inspire them with different maxims, and to give them other institutions as favourable to himself as the law of nature was unfavourable.

Rousseau, Origin of Inequality, II

87 Luxury, which cannot be prevented among men who are tenacious of their own convenience and of the respect paid them by others, soon completes the evil society had begun, and, under the pretence of giving bread to the poor, whom it should never have made such, impoverishes all the rest and sooner or later depopulates the State. Luxury is a remedy much worse than the disease it sets up to cure; or rather it is in itself the greatest of all evils, for every State, great or small: for, in order to maintain all the servants and vagabonds it creates, it brings oppression and ruin on the citizen and the labourer; it is like those scorching winds, which, covering the trees and plants with devouring insects,

deprive useful animals of their subsistence and spread famine and death wherever they blow.

Rousseau, Origin of Inequality, Appendix

88 The losses of the poor are much harder to repair than those of the rich, and... the difficulty of acquisition is always greater in proportion as there is more need for it. "Nothing comes out of nothing," is as true of life as in physics: money is the seed of money, and the first guinea is sometimes more difficult to acquire than the second million.

Rousseau, Political Economy

89 It is one of the misfortunes of the rich to be cheated on all sides; what wonder they think ill of mankind! It is riches that corrupt men, and the rich are rightly the first to feel the defects of the only tool they know. Everything is ill-done for them, except what they do themselves, and they do next to nothing.

Rousseau, Emile, 1

90 In the prospect of poverty there is nothing but gloom and melancholy; the mind and body suffer together; its miseries bring no alleviations; it is a state in which every virtue is obscured, and in which no conduct can avoid reproach; a state in which cheerfulness is insensibility, and dejection sullenness, of which the hardships are without honor, and the labors without reward.

Johnson, Rambler No. 55

91 Wealth is nothing in itself, it is not useful but when it departs from us; its value is found only in that which it

can purchase, which, if we suppose it put to its best use by those that possess it, seems not much to deserve the desire or envy of a wise man. It is certain that, with regard to corporal enjoyment, money can neither open new avenues to pleasure, nor block up the passages of anguish. Disease and infirmity still continue to torture and enfeeble, perhaps exasperated by luxury, or promoted by softness. With respect to the mind, it has rarely been observed, that wealth contributes much to quicken the discernment, enlarge the capacity, or elevate the imagination; but may, by hiring flattery, or laying diligence asleep, confirm error, and harden stupidity.

Johnson, Rambler No. 58

92 Poverty has, in large cities, very different appearances: it is often concealed in splendour, and often in extravagance. It is the care of a very great part of mankind to conceal their indigence from the rest: they support themselves by temporary expedients, and every day is lost in contriving for the morrow.

Johnson, Rasselas, XXV

93 Has Heav'n reserv'd, in pity to the poor,
No pathless waste, or undiscover'd shore?
No secret island in the boundless main?
No peaceful desert yet unclaim'd by Spain?
Quick let us rise, the happy scats explore,
And bear Oppression's insolence no more.
This mournful truth is ev'rywhere confess'd.
Slow rises worth, by poverty depress'd:
But here more slow, where all are slaves to gold,
Where looks are merchandise, and smiles are sold;

Where won by bribes, by flatteries implor'd,
The groom retails the favours of his lord.

Johnson, London, 169

- 94 Poverty takes away so many means of doing good, and produces so much inability to resist evil, both natural and moral, that it is by all virtuous means to be avoided.

Johnson, Letter to James Boswell (June 3, 1782)

- 95 Your economy, I suppose, begins now to be settled; your expences are adjusted to your revenue, and all your people in their proper places. Resolve not to be poor; whatever you have, spend less. Poverty is a great enemy to human happiness; it certainly destroys liberty, and it makes some virtues impracticable, and others extremely difficult.

Johnson, Letter to James Boswell (Dec. 7, 1782)

- 96 *Johnson.* In civilized society, external advantages make us more respected. A man with a good coat upon his back meets with a better reception than he who has a bad one.

Boswell, Life of Johnson (July 20, 1763)

- 97 *Johnson.* When I was running about this town a very poor fellow, I was a great arguer for the advantages of poverty; but I was, at the same time, very sorry to be poor. . . . All the arguments which are brought to represent poverty as no evil, shew it to be evidently a great evil. You never find people labouring to convince you that you may live very happily upon a plentiful fortune.

Boswell, Life of Johnson (July 20, 1763)

98 *Johnson*. (to *Edwards*,) "From your having practised the law long. Sir, I presume you must be rich." *Edwards*. "No, Sir; I got a good deal of money; but I had a number of poor relations to whom I gave a great part of it." *Johnson*. "Sir, you have been rich in the most valuable sense of the word." *Edwards*. "But I shall not die rich." *Johnson*. "Nay, sure. Sir, it is better to live rich than to die rich."

Boswell, Life of Johnson (Apr. 17, 1778)

99 Though the wealth of a country should be very great, yet if it has been long stationary, we must not expect to find the wages of labour very high in it. The funds destined for the payment of wages, the revenue and stock of its inhabitants, may be of the greatest extent; but if they have continued for several centuries of the same, or very nearly of the same extent, the number of labourers employed every year could easily supply, and even more than supply, the number wanted the following year. There could seldom be any scarcity of hands, nor could the masters be obliged to bid against one another in order to get them. The hands, on the contrary, would, in this case, naturally multiply beyond their employment. There would be a constant scarcity of employment, and the labourers would be obliged to bid against one another in order to get it. If in such a country the wages of labour had ever been more than sufficient to maintain the labourer, and to enable him to bring up a family, the competition of the labourers and the interest of the masters would soon reduce them to this lowest rate which is consistent with common humanity.

Adam Smith, Wealth of Nations, I, 8

100 The liberal reward of labour... as it is the necessary effect, so it is the natural symptom of increasing national wealth. The scanty maintenance of the labouring poor, on the other hand, is the natural symptom that things are at a stand, and their starving condition that they are going fast backwards.

Adam Smith, Wealth of Nations, I, 8

101 Is . . . , improvement in the circumstances of the lower ranks of the people to be regarded as an advantage or as an inconveniency to the society? The answer seems at first sight abundantly plain. Servants, labourers, and workmen of different kinds, make up the far greater part of every great political society. But what improves the circumstances of the greater part can never be regarded as an inconveniency to the whole. No society can surely be flourishing and happy, of which the far greater part of the members are poor and miserable. It is but equity, besides, that they who feed, clothe, and lodge the whole body of the people, should have such a share of the produce of their own labour as to be themselves tolerably well fed, clothed, and lodged.

Adam Smith, Wealth of Nations, I, 8

102 The whole annual produce of the land and labour of every country, or what comes to the same thing, the whole price of that annual produce, naturally divides itself... into three parts; the rent of land, the wages of labour, and the profits of stock; and constitutes a revenue to three different orders of people; to those who live by rent, to those who live by wages, and to those who live by profit. These are the three great, original, and constituent

orders of every civilised society, from whose revenue that of every other order is ultimately derived.

Adam Smith, Wealth of Nations, I, 11

103 In all countries where there is tolerable security, every man of common understanding will endeavour to employ whatever stock he can command in procuring either present enjoyment or future profit. If it is employed in procuring present enjoyment, it is a stock reserved for immediate consumption. If it is employed in procuring future profit, it must procure this profit either by staying with him, or by going from him. In the one case it is fixed, in the other it is a circulating capital. A man must be perfectly crazy who, where there is tolerable security, does not employ all the stock which he commands, whether it be his own or borrowed of other people, in some one or other of those three ways.

Adam Smith, Wealth of Nations, II, 1

104 Capitals are increased by parsimony, and diminished by prodigality and misconduct.

Whatever a person saves from his revenue he adds to his capital, and either employs it himself in maintaining an additional number of productive hands, or enables some other person to do so, by lending it to him for an interest, that is, for a share of the profits. As the capital of an individual can be increased only by what he saves from his annual revenue or his annual gains, so the capital of a society, which is the same with that of all the individuals who compose it, can be increased only in the same manner.

Parsimony, and not industry, is the immediate cause of the increase of capital. Industry, indeed, provides the subject which parsimony accumulates. But whatever industry might acquire, if parsimony did not save and store up, the capital would never be the greater.

Adam Smith, Wealth of Nations, II, 3

105 The revenue of an individual may be spent either in things which are consumed immediately, and in which one day's expense can neither alleviate nor support that of another, or it may be spent in things more durable, which can therefore be accumulated, and in which every day's expense may, as he chooses, either alleviate or support and heighten the effect of that of the following day. A man of fortune, for example, may either spend his revenue in a profuse and sumptuous table, and in maintaining a great number of menial servants and a multitude of dogs and horses; or contenting himself with a frugal table and few attendants he may lay out the greater part of it in adorning his house or his country villa, in useful or ornamental buildings, in useful or ornamental furniture, in collecting books, statues, pictures; or in things more frivolous, jewels, baubles, ingenious trinkets of different kinds; or, what is most trifling of all in amassing a great wardrobe of fine clothes, like the favourite and minister of a great prince who died a few years ago. Were two men of equal fortune to spend their revenue, the one chiefly in the one way, the other in the other, the magnificence of the person whose expense had been chiefly in durable commodities, would be continually increasing, every day's expense contributing something to support and heighten the effect of that of the following day; that of the other, on the contrary,

would be no greater at the end of the period than at the beginning. The former, too, would, at the end of the period, be the richer man of the two. He would have a stock of goods of some kind or other, which, though it might not be worth all that it cost, would always be worth something. No trace or vestige of the expense of the latter would remain, and the effects of ten or twenty years profusion would be as completely annihilated as if they had never existed.

Adam Smith, Wealth of Nations, II, 3

106 The expense... that is laid out in durable commodities gives maintenance, commonly, to a greater number of people than that which is employed in the most profuse hospitality. Of two or three hundredweight of provisions, which may sometimes be served up at a great festival, one half, perhaps, is thrown to the dunghill, and there is always a great deal wasted and abused. But if the expense of this entertainment had been employed in setting to work masons, carpenters, upholsterers, mechanics, etc., a quantity of provisions, of equal value, would have been distributed among a still greater number of people who would have bought them in pennyworths and pound weights, and not have lost or thrown away a single ounce of them. In the one way, besides, this expense maintains productive, in the other unproductive hands. In the one way, therefore, it increases, in the other, it does not increase, the exchangeable value of the annual produce of the land and labour of the country.

Adam Smith, Wealth of Nations, II, 3

107 To attempt to increase the wealth of any country, either by introducing or by detaining in it an unnecessary quantity of gold and silver, is as absurd as it would be to attempt to increase the good cheer of private families by obliging them to keep an unnecessary number of kitchen utensils. As the expense of purchasing those unnecessary utensils would diminish instead of increasing either the quantity of goodness of the family provisions, so the expense of purchasing an unnecessary quantity of gold and silver must, in every country, as necessarily diminish the wealth which feeds, clothes, and lodges, which maintains and employs the people. Gold and silver, whether in the shape of coin or of plate, are utensils, it must be remembered, as much as the furniture of the kitchen. Increase the use for them, increase the consumable commodities which are to be circulated, managed, and prepared by means of them, and you will infallibly increase the quantity; but if you attempt, by extraordinary means, to increase the quantity, you will as infallibly diminish the use and even the quantity too, which in those metals can never be greater than what the use requires. Were they ever to be accumulated beyond this quantity, their transportation is so easy, and the loss which attends their lying idle and unemployed so great, that no law could prevent their being immediately sent out of the country.

Adam Smith, Wealth of Nations, IV, I

108 The produce of industry is what it adds to the subject or materials upon which it is employed. In proportion as the value of this produce is great or small, so will likewise be the profits of the employer. But it is only for the sake of profit that any man employs a capital in the support of

industry; and he will always, therefore, endeavour to employ it in the support of that industry of which the produce is likely to be of the greatest value, or to exchange for the greatest quantity either of money or of other goods.

But the annual revenue of every society is always precisely equal to the exchangeable value of the whole annual produce of its industry, or rather is precisely the same thing with that exchangeable value. As every individual, therefore, endeavours as much as he can both to employ his capital in the support of domestic industry, and so to direct that industry that its produce may be of the greatest value; every individual necessarily labours to render the annual revenue of the society as great as he can. He generally, indeed, neither intends to promote the public interest, nor knows how much he is promoting it. By preferring the support of domestic to that of foreign industry, he intends only his own security; and by directing that industry in such a manner as its produce may be of the greatest value, he intends only his own gain, and he is in this, as in many other cases, led by an invisible hand to promote an end which was no part of his intention. Nor is it always the worse for the society than it was no part of it. By pursuing his own interest he frequently promotes that of the society more effectually than when he really intends to promote it. I have never known much good done by those who affected to trade for the public good.

Adam Smith, Wealth of Nations, IV, 2

109 The natural effort of every individual to better his own condition, when suffered to exert itself with freedom and security, is so powerful a principle that it is alone, and

without any assistance, not only capable of carrying on the society to wealth and prosperity, but of surmounting a hundred impertinent obstructions with which the folly of human laws too often incumbers its operations; though the effect of these obstructions is always more or less either to encroach upon its freedom, or to diminish its security.

Adam Smith, Wealth of Nations, IV, 5

110 Every system which endeavours, either by extraordinary encouragements to draw towards a particular species of industry a greater share of the capital of the society than what would naturally go to it, or, by extraordinary restraints, force from a particular species of industry some share of the capital which would otherwise be employed in it, is in reality subversive of the great purpose which it means to promote. It retards, instead of accelerating, the progress of the society towards real wealth and greatness; and diminishes, instead of increasing, the real value of the annual produce of its land and labour.

All systems either of preference or of restraint, therefore, being thus completely taken away, the obvious and simple system of natural liberty establishes itself of its own accord. Every man, as long as he does not violate the laws of justice, is left perfectly free to pursue his own interest his own way, and to bring both his industry and capital into competition with those of any other man, or order of men. The sovereign is completely discharged from a duty, in the attempting to perform which he must always be exposed to innumerable delusions, and for the proper performance of which no human wisdom or knowledge could ever be sufficient; the duty of

superintending the industry of private people, and of directing it towards the employments most suitable to the interest of the society. According to the system of natural liberty, the sovereign has only three duties to attend to; three duties of great importance, indeed, but plain and intelligible to common understandings: first, the duty of protecting the society from violence and invasion of other independent societies; secondly, the duty of protecting, as far as possible, every member of the society from the injustice or oppression of every other member of it, or the duty of establishing an exact administration of justice; and, thirdly, the duty of erecting and maintaining certain public works and certain public institutions which it can never be for the interest of any individual, or small number of individuals, to erect and maintain; because the profit could never repay the expense to any individual or small number of individuals, though it may frequently do much more than repay it to a great society.

Adam Smith, Wealth of Nations, IV, 9

111 The rich, in particular, are necessarily interested to support that order of things which can alone secure them in the possession of their own advantages. Men of inferior wealth combine to defend those of superior wealth in the possession of their property, in order that men of superior wealth may combine to defend them in the possession of theirs.

Adam Smith, Wealth of Nations, V, 1

112 Thirst, hunger, and nakedness are positive evils: but wealth is relative; and a prince, who would be rich in a

private station, may be exposed by the increase of his wants to all the anxiety and bitterness of poverty.

Gibbon, Decline and Fall of the Roman Empire, LXI

113 I am indeed rich, since my income is superior to my expense, and my expense is equal to my wishes.

Gibbon, Autobiography

114 Among the *voluntary* modes of raising... contributions, *lotteries* ought not to be allowed, because they increase the number of those who are poor, and involve danger to the public property. It may be asked whether the relief of the poor ought to be administered out of *current contributions*, so that every age should maintain its own poor; or whether this were better done by means of *permanent funds* and charitable institutions, such as widow's' homes, hospitals, etc.? And if the former method is the better, it may also be considered whether the means necessary are to be raised by a legal assessment rather than by begging, which is generally nigh akin to robbing. The former method must in reality be regarded as the only one that is conformable to the right of the state, which cannot withdraw its connection from any one who has to live. For a legal current provision does not make the profession of poverty a means of gain for the indolent, as is to be feared is the case with pious foundations when they grow with the number of the poor; nor can it be charged with being an unjust or unrighteous burden imposed by the government on the people.

Kant, Science of Right, 49

115 It may at first appear strange, but I believe it is true, that I cannot by means of money raise a poor man and enable him to live much better than he did before, without proportionably depressing others in the same class. If I retrench the quantity of food consumed in my house, and give him what I have cut off, I then benefit him, without depressing any but myself and family, who perhaps, may be well able to bear it. If I turn up a piece of uncultivated land and give him the produce, I then benefit both him and all the members of the society, because what he before consumed is thrown into the common stock, and probably some of the new produce with it. But if I only give him money, supposing the produce of the country to remain the same, I give him a title to a larger share of that produce than formerly, which share he cannot receive without diminishing the shares of others. It is evident that this effect, in individual instances, must be so small as to be totally imperceptible; but still it must exist, as many other effects do which, like some of the insects that people the air, elude our grosser perceptions.

Malthus, Population, V

116 Hard as it may appear in individual instances, dependent poverty ought to be held disgraceful. Such a stimulus seems to be absolutely necessary to promote the happiness of the great mass of mankind, and every general attempt to weaken this stimulus, however benevolent its apparent intention, will always defeat its own purpose. If men are induced to marry from a prospect of parish provision, with little or no chance of maintaining their families in independence, they are not only unjustly tempted to bring unhappiness and dependence upon

themselves and children, but they are tempted, without knowing it, to injure all in the same class with themselves. A laborer who marries without being able to support a family may in some respects be considered as an enemy to all his fellow-laborers.

Malthus, Population, V

117 The poor still have the needs common to civil society, and yet since society has withdrawn from them the natural means of acquisition and broken the bond of the family—in the wider sense of the clan—their poverty leaves them more or less deprived of all the advantages of society, of the opportunity of acquiring skill or education of any kind, as well as of the administration of justice, the public health services, and often even of the consolations of religion, and so forth. The public authority takes the place of the family where the poor are concerned in respect not only of their immediate want but also of laziness of disposition, malignity, and the other vices which arise out of their plight and their sense of wrong.

Hegel, Philosophy of Right, 241

118 When the standard of living of a large mass of people falls below a certain subsistence level... and when there is a consequent loss of the sense of right and wrong, of honesty and the self-respect which makes a man insist on maintaining himself by his own work and effort, the result is the creation of a rabble of paupers. At the same time this brings with it, at the other end of the social scale, conditions which greatly facilitate the concentration of disproportionate wealth in a few hands.

Hegel, Philosophy of Right, 244

119 Poverty in itself does not make men into a rabble; a rabble is created only when there is joined to poverty a disposition of mind, an inner indignation against the rich, against society, against the government, etc. A further consequence of this attitude is that through their dependence on chance men become frivolous and idle, like the Neapolitan *lazzaroni* for example. In this way there is born in the rabble the evil of lacking self-respect enough to secure subsistence by its own labour and yet at the same time of claiming to receive subsistence as its right. Against nature man can claim no right, but once society is established, poverty immediately takes the form of a wrong done to one class by another. The important question of how poverty is to be abolished is one of the most disturbing problems which agitate modern society.

Hegel, Philosophy of Eighty Additions, Par. 244

120 It is difficult, if not impossible, to define the limits which reason should impose on the desire for wealth; for there is no absolute or definite amount of wealth which will satisfy a man. The amount is always relative, that is to say, just so much as will maintain the proportion between what he wants and what he gets; for to measure a man's happiness only by what he gets, and not also by what he expects to get, is as futile as to try to express a fraction which shall have a numerator but no denominator. A man never feels the loss of things which it never occurs to him to ask for; he is just as happy without them; whilst another, who may have a hundred times as much, feels miserable because he has not got the one thing he wants.

In fact, here too, every man has an horizon of his own, and he will expect as much as he thinks it is possible for him to get.

Schopenhauer, Property

121 The man who has been born into a position of wealth comes to look upon it as something without which he could no more live than he could live without air; he guards it as he does his very life; and so he is generally a lover of order, prudent and economical. But the man who has been born into a poor position looks upon it as the natural one, and if by any chance he comes in for a fortune, he regards it as a superfluity, something to be enjoyed or wasted, because, if it comes to an end, he can get on just as well as before, with one anxiety the less.

Schopenhauer, Property

122 As regards our own welfare, there are only two ways in which we can use wealth. We can either spend it in ostentatious pomp, and feed on the cheap respect which our imaginary glory will bring us from the infatuated crowd; or, by avoiding all expenditure that will do us no good, we can let our wealth grow, so that we may have a bulwark against misfortune and want that shall be stronger and better every day.

Schopenhauer, Wisdom of Life: Aphorisms

123 In democratic countries, however opulent a man is supposed to be, he is almost always discontented with his fortune because he finds that he is less rich than his father was, and he fears that his sons will be less rich than himself. Most rich men in democracies are therefore

constantly haunted by the desire of obtaining wealth, and they naturally turn their attention to trade and manufactures, which appear to offer the readiest and most efficient means of success. In this respect they share the instincts of the poor without feeling the same necessities; say, rather, they feel the most imperious of all necessities, that of not sinking in the world.

Tocqueville, Democracy in America, Vol. II, II, 19

124 Men living in democratic times have many passions, but most of their passions either end in the love of riches or proceed from it. The cause of this is not that their souls are narrower, but that the importance of money is really greater at such times. When all the members of a community are independent of or indifferent to each other, the co-operation of each of them can be obtained only by paying for it: this infinitely multiplies the purposes to which wealth may be applied and increases its value. When the reverence that belonged to what is old has vanished, birth, condition, and profession no longer distinguish men, or scarcely distinguish them; hardly anything but money remains to create strongly marked differences between them and to raise some of them above the common level. The distinction originating in wealth is increased by the disappearance or diminution of all other distinctions. Among aristocratic nations money reaches only to a few points on the vast circle of man's desires; in democracies it seems to lead to all.

Tocqueville, Democracy in America, Vol. II, III, 17

125 Brotherhood is Brotherhood or Death, but money always will buy money's worth; in the wreck of human dubitations, this remains indubitable, that Pleasure is pleasant. Aristocracy of Feudal Parchment has passed away with a mighty rushing; and now, by a natural course, we arrive at Aristocracy of the Moneybag.... Apparently a still baser sort of Aristocracy? An infinitely baser; the basest yet known.

Carlyle, French Revolution, IX, 7

126 To be rich is to have a ticket of admission to the masterworks and chief men of each race.

Emerson, Wealth

127 The world is his who has money to go over it.

Emerson, Wealth

128 The pulpit and the press have many commonplaces denouncing the thirst for wealth; but if men should take these moralists at their word and leave off aiming to be rich, the moralists would rush to rekindle at all hazards this love of power in the people, lest civilization should be undone.

Emerson, Wealth

129 Debt, grinding debt, whose iron face the widow, the orphan, and the sons of genius fear and hate— debt, which consumes so much time, which so cripples and disheartens a great spirit with cares that seem so base, is a preceptor whose lessons cannot be foregone, and is needed most by those who suffer from it most.

Emerson, Nature, V

130 Ah! if the rich were rich as the poor fancy riches!

Emerson, Nature

131 "My other piece of advice, Copperfield," said Mr. Micawber, "you know. Annual income twenty pounds, annual expenditure nineteen nineteen six, result happiness. Annual income twenty pounds, annual expenditure twenty pounds ought and six, result misery. The blossom is blighted, the leaf is withered, the god of day goes down upon the dreary scene, and—and, in short, you are forever floored. As I am!"

Dickens, David Copperfield, XII

132 Most of the luxuries, and many of the so-called comforts of life, are not only not indispensable, but positive hindrances to the elevation of mankind. With respect to luxuries and comforts, the wisest have ever lived a more simple and meagre life than the poor. The ancient philosophers, Chinese, Hindoo, Persian, and Greek, were a class than which none has been poorer in outward riches, none so rich in inward. We know not much about them. It is remarkable that we know so much of them as we do. The same is true of the more modern reformers and benefactors of their race. None can be an impartial or wise observer of human life but from the vantage ground of what we should call voluntary poverty. Of a life of luxury the fruit is luxury, whether in agriculture, or commerce, or literature, or art. There are nowadays professors of philosophy, but not philosophers, Yet it is admirable to profess because it was once admirable to live.

Thoreau, Walden: Economy

133 However mean your life is, meet it and live it- do not shun it and call it hard names. It is not so bad as you are. It looks purest when you are richest The faultfinder will find faults even in paradise Love your life, poor as it is. You may perhaps have some pleasant, thrilling, glorious hours, even in a poor-house. The setting sun is reflected from the windows of the almshouse as brightly as from the rich man's abode; the snow melts before its door as early in the spring. I do not see but a quiet mind may live as contentedly there, and have as cheering thoughts, as in a palace. The town's poor seem to me often to live the most independent lives of any. Maybe they are simply great enough to receive without misgiving. Most think that they are above being supported by the town; but it oftener happens that they are not above supporting themselves by dishonest means, which should be more disreputable. Cultivate poverty like a garden herb, like sage. Do not trouble yourself much to get new things, whether clothes or friends. Turn the old; return to them. Things do not change; we change. Sell your clothes and keep your thoughts. God will see that you do not want society. If I were confined to a corner of a garret all my days, like a spider, the world would be just as large to me while I had my thoughts about me. The philosopher said: 'From an army of three divisions one can take away its general, and put it in disorder; from the man the most abject and vulgar one cannot take away his thought.' Do not seek so anxiously to be developed, to subject yourself to many influences to be played on; it is all dissipation. Humility like darkness reveals the heavenly lights. The shadows of poverty and meanness gather around us, 'and lo! creation widens to our view.' we are often reminded that if there were bestowed on us the wealth of Croesus,

our aims must still be the same, and our means essentially the same. Moreover, if you are restricted in your range by poverty, if you cannot buy books and newspapers, for instance, you are but confined to the most significant and vital experiences; you are compelled to deal with the material which yields the most sugar and the most starch. It is life near the bone where it is sweetest. You are defended from being a trifler. No man loses ever on a lower level by magnanimity on a higher. Superfluous wealth can buy superfluities only. Money is not required to buy one necessary of the soul.

Thoreau, Walden: Conclusion

134 All ought to refrain from marriage who cannot avoid abject poverty for their children; for poverty is not only a great evil, but tends to its own increase by leading to recklessness in marriage.

Darwin, Descent of Man, III, 21

135 That some should be rich, shows that others may become rich, and hence is just encouragement to industry and enterprize.

Lincoln, Reply to N.Y. Workingmen's ... Association (Mar. 21, 1864)

136 Use-values become a reality only by use or consumption; they also constitute the substance of all wealth, whatever may be the social form of that wealth.

Marx, Capital, Vol. I, I, 1

137 The product appropriated by the capitalist is a use-value, as yarn, for example, or boots. But, although boots

are, in one sense, the basis of all social progress, and our capitalist is a decided "progressist," yet he does not manufacture boots for their own sake. Use-value is, by no means, the thing [which one values for its own sake] in the production of commodities. Use-values are only produced by capitalists, because, and in so far as, they are the material substratum, the depositaries of exchange-value. Our capitalist has two objects in view: in the first place, he wants to produce a use-value that has a value in exchange, that is to say, an article destined to be sold, a commodity; and secondly, he desires to produce a commodity whose value shall be greater than the sum of the values of the commodities used in its production, that is, of the means of production and the labour power, that he purchased with his good money in the open market. His aim is to produce not only a use-value, but a commodity also; not only use-value, but value; not only value, but at the same time surplus value.

Marx, Capital, Vol. I, III, 7

138 The folly is now patent of the economic wisdom that preaches to the labourers the accommodation of their number to the requirements of capital. The mechanism of capitalist production and accumulation constantly effects this adjustment. The first word of this adaptation is the creation of a relative surplus population, or industrial reserve army. Its last word is the misery of constantly extending strata of the active army of labour, and the dead weight of pauperism.

Marx, Capital, Vol. I, VII, 25

139 Accumulation of wealth at one pole is...at the same time accumulation of misery, agony of toil, slavery, ignorance, brutality, mental degradation, at the opposite pole, i.e., on the side of the class that produces its own product in the form of capital.

Marx, Capital, Vol. I, VII, 25

140 The intimate connection between the pangs of hunger of the most industrious layers of the working class, and the extravagant consumption, coarse or refined, of the rich, for which capitalist accumulation is the basis, reveals itself only when the economic laws are known. It is otherwise with the "housing of the poor." Every unprejudiced observer sees that the greater the centralization of the means of production, the greater is the corresponding heaping together of the labourers within a given space; that therefore, the swifter capitalistic accumulation, the more miserable are the dwellings of the working people, "Improvements" of towns, accompanying the increase of wealth, by the demolition of badly built quarters, the erection of palaces for banks, warehouses, etc., the widening of streets for business traffic, for the carriages of luxury, and for the introduction of tramways, etc., drive away the poor into even worse and more crowded hiding-places.

Marx, Capital, Vol. I, VII, 25

141 The Irish famine of 1846 killed more than a million people, but it killed poor devils only. To the wealth of the country it did not the slightest damage.

Marx, Capital, Vol. I, VII, 25

142 In order to oppress a class certain conditions must be assured to it under which it can, at least, continue its slavish existence. The serf, in the period of serfdom, raised himself to membership in the commune, just as the petty bourgeois, under the yoke of feudal absolutism, managed to develop into a bourgeois. The modern labourer, on the contrary, instead of rising with the progress of industry, sinks deeper and deeper below the conditions of existence of his own class. He becomes a pauper, and pauperism develops more rapidly than population and wealth.

Marx and Engels, Communist Manifesto, I

143 It is argued that whoever does the best he can, deserves equally well, and ought not in justice to be put in a position of inferiority for no fault of his own; that superior abilities have already advantages more than enough, in the admiration they excite, the personal influence they command, and the internal sources of satisfaction attending them, without adding to these a superior share of the world's goods; and that society is bound in justice rather to make compensation to the less favoured, for this unmerited inequality of advantages, than to aggravate it. On the contrary side it is contended, that society receives more from the more efficient labourer; that his services being more useful, society owes him a larger return for them; that a greater share of the joint result is actually his work, and not to allow his claim to it is a kind of robbery; that if he is only to receive as much as others, he can only be justly required to produce as much, and to give a smaller amount of time and exertion, proportioned to his superior efficiency.

Mill, Utilitarianism, V

144 It is essential to the idea of wealth to be susceptible of accumulation: things which cannot, after being produced, be kept for some time before being used, are never, I think, regarded as wealth, since however much of them may be produced and enjoyed, the person benefited by them is no richer, is nowise improved in circumstances.

Mill, Principles of Political Economy, Bk. I, III, 3

145 Neither now nor in former ages have the nations possessing the best climate and soil, been either the richest or the most powerful; but (in so far as regards the mass of the people) generally among the poorest, though, in the midst of poverty, probably on the whole the most enjoying. Human life in those countries can be supported on so little, that the poor seldom suffer from anxiety, and in climates in which mere existence is a pleasure, the luxury which they prefer is that of repose.

Mill, Principles of Political Economy, Bk. I, VII, 3

146 Even in a progressive state of capital, in old countries, a conscientious or prudential restraint on population is indispensable, to prevent the increase of numbers from outstripping the increase of capital, and the condition of the classes who are at the bottom of society from being deteriorated. Where there is not, in the people, or in some very large proportion of them, a resolute resistance to this deterioration—a determination to preserve an established standard of comfort—the condition of the poorest class sinks, even in a progressive state, to the lowest point which they will consent to endure.

Mill, Principles of Political Economy, Bk. IV, VI, 1

147 Whereas it has long been known and declared that the poor have no right to the property of the rich, I wish it also to be known and declared that the rich have no right to the property of the poor.

Ruskin, Unto This Last, III, 54

148 There is no wealth but life. That country is the richest which nourishes the greatest number of noble and happy human beings; that man is richest who, having perfected the functions of his own life to the utmost, has also the widest helpful influence, both personal, and by means of his possessions, over the lives of others.

Ruskin, Unto This Last, IV, 77

149 Never did people believe anything more firmly, than nine Englishmen out of ten at the present day believe that our greatness and welfare are proved by our being so very rich. Now, the use of culture is that it helps us, by means of its spiritual standard of perfection, to regard wealth as but machinery, and not only to say as a matter of words that we regard wealth as but machinery, but really to perceive and feel that it is so. If it were not for this purging effect wrought upon our minds by culture, the whole world, the future as well as the present, would inevitably belong to the Philistines.

Arnold, Culture and Anarchy, I

150 *Father Zossima*. I don't deny that there is sin in the peasants too. And the fire of corruption is spreading visibly, hourly, working from above downwards, The spirit of isolation is coming upon the people too. Money-lenders

and devourers of the commune are rising up. Already the merchant grows more and more eager for rank, and strives to show himself cultured though he has not a trace of culture, and to this end meanly despises his old traditions, and is even ashamed of the faith of his fathers. He visits princes, though he is only a peasant corrupted. The peasants are rotting in drunkenness and cannot shake off the habit. And what cruelty to their wives, to their children even! All from drunkenness! I've seen in the factories children of nine years old, frail, rickety, bent and already depraved. The stuffy workshop, the din of machinery, work all day long, the vile language and the drink, the drink—is that what a little child's heart needs? He needs sunshine, childish play, good examples all about him, and at least a little love.

Dostoevsky, Brothers Karamazov, Pt. II, VI, 3

151 *Father Zossima.* I've been struck all my life in our great people by their dignity, their true and seemly dignity. I've seen it myself, I can testify to it, I've seen it and marvelled at it, I've seen it in spite of the degraded sins and poverty-stricken appearance of our peasantry. They are not servile, and even after two centuries of serfdom they are free in manner and bearing, yet without insolence, and not revengeful and not envious. "You are rich and noble, you are clever and talented, well, be so, God bless you. I respect you, but I know that I too am a man. By the very fact that I respect you without envy I prove my dignity as a man."

Dostoevsky, Brothers Karamazov, Pt. II, VI, 3

152 If you pick up a starving dog and make him prosperous, he will not bite you. This is the principal difference between a dog and a man.

Mark Twain, Pudd'nhead Wilson's Calendar, XVI
